THE International Chess Congress was concluded on 31st July. Dr. Tarrasch, the German champion, with a score of 12 games, has obtained the first prize. The second and third prizes are gained jointly by Herr Makovetz and M. Porges (Hungary), each with 10½ games. The fourth and fifth prizes fall similarly to Herr Marco (Vienna) and Herr Walbrodt, each with 10 games, and the sixth and seventh prizes are shared between Herr von Bardeleben and M. Winawer (Warsaw), each with 9 games. The special prize to the player who obtained the best score against the winners has been gained by Blackburne. Dr. Siegmund Tarrasch, the winner of the Dresden tournament, is a physician in active practice in Nuremberg. He was born in Breslau, and is thirty years of age. He learned chess in the first instance from an elementary book on the game, published in Germany. Later, however, he studied deeply from the profound German Handbook, and with the assistance of that excellent work on chess, and constant practice with the best players he could find, he mastered the intricate science of the game both theoretically as well as practically. Dr. Tarrasch has reduced tournament playing to an exact science. He seldom takes any risk, no matter who his opponent may be. He strives only for one minute advantage in the opening, and advances on his adversaries slowly but surely, taking care always to keep the drawn hand. If, however, at any stage of an encounter, a change presents itself to bring the game to a brilliant termination, by the sacrifice of a piece, or a pawn or two, he seldom fails to see it, and he may be relied upon in such cases to finish the battle in the most artistic expeditious manner. In 1883, the German Chess Association held their biennial congress at Nuremberg. Dr. Tarrasch, then twenty-one years of age, entered his name as a competitor for the Hauptturnier and won the first prize, and his mastership. In the following congress, held two years later in Hamburg, Tarrasch competed with the masters. At the finish he had an equal score with Blackburne, Mason, Weiss, and English, and divided the second, third, fourth, and fifth prizes with them, Gunsberg being first with only

half a point above the others. In the same year he participated in a tournament in Leipzig, but did not win a prize. He played somewhat recklessly, and suffered in consequence. He discovered then, to use his own expression, that to be successful in tournaments it is not only necessary to be a good player, but also to play well. His first great effort was at Breslau in 1887 in the Sixth International Congress of the German Association. In this tournament there were eighteen competitors, and Tarrasch won the first prize without losing a game. Mr. Amos Burn, of Liverpool, was second, Herr Mieses third, and Messrs Bauer, Bardeleben, Gunsberg, and Louis Paulsen, divided third, fourth, fifth, and sixth prizes. Other competitors in the Congress were Messrs. Blackburne, Mason, Alapin, Schiffers, and Taubenhaus, and Herren Schallopp, Metger, Harmonist, Frith, and Berger. Taken altogether, this is one of the strongest teams that ever participated together in any chess contest. In 1890 Dr. Tarrasch went over to Manchester to represent Germany in the International Congress of the British Chess Association. Here again the doctor won the first prize against nineteen opponents without suffering a single defeat. His score at the finish was 15½, Blackburne being second with 12½, Mackenzie and Bird third and fourth with 12, Gunsberg and Mason fifth and sixth with 11½, and Alapin, Von Scheve, and Tinsley seventh with 11 points each. In the Tournament just concluded, Tarrasch lost only one game, against Albin. The Vienna master caught the champion in a variation of the Giuoco Piano opening, which he (Albin) had previously analysed, but with which Tarrasch was evidently not familiar. Tarrasch misjudged the position in the early part of the game, and suffered defeat in consequence. This game only proves that no matter how strong a player may be, he is never infallible at chess. Tarrasch also scored a game in this tournament against Loman, because the latter had exceeded his time. It was proved afterwards that the ending was won for Loman on analysis; but it by no means follows that Tarrasch would have lost the game if it had been played out, for analysis is one thing, actual play over the board is quite another, and, as Mr Steinitz once remarked, when asked if a certain position was a win, 'It depends who plays it.' Now that Dr. Tarrasch has for the third time in succession won an important tournament, chess amateurs will be more eager than ever to see him pitted against some other strong player for a long series of games. What would probably prove of the greatest interest to the majority would be a match between Tarrasch and Lasker, and then to have the final winner of the match play Steinitz for the final championship. Herr Porges, the second prize winner in Dresden, competed for the first time in an international tournament. But he has long been known as one of the best players in Austria. Herr Marco also played for the first time with international masters; but he, like Herr Porges, has for some years enjoyed the reputation of being a very fine player. His performance in Dresden proved that this reputation is well deserved. M. Makovetz first distinguished himself at Graz in 1890, winning first honours in a tournament in which Herr Lasker competed. Herr Bardeleben's record as well as M. Winawer's is well known, and requires little comment. Both are very great tournament experts, and both have gained honours in nearly every contest in which they have taken part. Herr Walbrout, perhaps, is deserving of the greatest praise, for he is a mere boy, and the manner in which he has fought against masters of enormous experience is truly wonderful for one of his age. His victory is highly creditable.

SIR A. GEIKIE AT THE BRITISH ASSOCIATION.

THE *Spectator* says:—"Sir A. Geikie's address to the Edinburgh meeting of the British Association recently delivered, was one of the most popular and interesting for many years. Of course it was concerned with the subject of geology, and gave a very graphic and not too

technical *résumé* of the progress of that science. The most interesting portion of a very brilliant lecture concerned the origin of scenery. Sir A. Geikie brought out very effectively how vast an effect the rush of water has had in sculpturing for us the outlines of the mountains, and in washing away the softer and more friable materials which formerly filled the valleys up to the level of the mountain-summits. He gave a very striking verbal diorama retrospective of the scenery from the Castle Rock of Edinburgh, as the geologist now sees it in his mind's eye. As the busy streets of Edinburgh fade away, copse-wood and forest, with lakes that have long since vanished, gleaming through the woodland, take their place, and a rude canoe pushing to the shore startles the red-deer that have come down to drink. Then, looking further back, the picture changes to an Arctic scene, with great fields of snow, and glaciers in the remote north-west marking the lines of Highland mountains. Going further back, vast sheets of ice full two thousand feet in thickness, fill up the whole midland valley of Scotland, and are seen to creep slowly eastward towards the basin of the North Sea. Then there is a great hiatus which geologists have not yet learned to fill up; and behind that, again, the familiar hills and valleys of the Lothians have utterly disappeared; a great inland sea, marked with long lines of active volcanoes, covers the midland valley, some of these volcanoes several thousand feet in height. It was a remarkable review of revolution in scenery even more gigantic than any revolution which takes place in the habits and customs of men.

MISSIONARY WORK IN THE EARTHQUAKE DISTRICTS.

THE *Kobe Herald* publishes an article about "Matter-of-fact heroes," from which we quote the following, because it seems to us to give honour where honour is due:—

The two missionaries—a man and wife—who were the only foreigners imperilled in Gifu and near by, that fatal morning in October last, have stood manfully at their appointed posts throughout and are found there now. There were several others in Nagoya who doubtless deserve none the less the "well done" of their fellows, with hearts that beat to the impulse of humanity and love, and that can be stirred in admiration of, if they cannot practise, self-sacrifice and sustained heroism, but the cause of these thoughts is the news from Gifu, and at Gifu the loneliness of the despised workers' lot was most accentuated. Nothing more eloquent of true service, no more emphatic disproof of the stock charges we business men are so fond of casting at men and women we drift into treating with disdain because their ways are not our ways, and because their lot and surroundings sometimes help to develop narrowness and intolerance and a want of breadth and sympathy, than the calm, unyielding, unknown bravery with which the lady and gentleman we refer to stood to their posts. What the long and fearful strain was, can never be appreciated except by those who in Nagoya underwent like experience, and those who spent a few days in the torn and wrecked country on errands of succour and mercy. No one who felt the repeated shocks and the awesome sounds of each night and day, weeks after that fearful day of earthquake, fire, and death,—no one who knows the feeling of deep, glad relief of the first night passed beyond that seemingly doomed sphere of seismic force, without the hurried awakening and the rush for the open, will for a moment seek to lessen the force of these words. We are quite well aware that had the foreign workers vacated their posts it would have been fatal to all chances of evangelistic success in after years, but it must be remembered that in times of extreme peril, with minds and wills unnerved by exceptional physical and mental suffering, delicate considerations of duty and of possible consequences are not necessarily and invariably uppermost in one's mind. There is a lesson in the conduct of the missionaries in Aichi and Gifu during and since October of last year which must appeal to the judgment of every intelligent man whose education has not been of a dangerously one-sided character, and who is conscious of the fact that he has sensibilities and emotions as well as the power to think and reason, and the power to will. And it is a lesson which will, we trust, not be lost on the foreign strikers in the field of commerce and trade which has supplied and must supply the sinews of the war of peace whose motive power is persuasiveness and love, and its object the benefit of man.

REFORM OF JAPANESE CUSTOMS.

THE *Choya Shimbum*, in an article on the above subject, expresses the opinion that the present is an opportune moment for making an attempt to improve certain national customs, because of the absence of any strong prevailing anti-foreign or pro-foreign sentiment. The nation, according to our contemporary, is in one of its quiet, receptive moods and will listen to rational proposals. We cannot say much for the definiteness or the novelty of the measures which the *Choya* would see adopted. The first subject dealt with is dress. Regarded from the points

of view of quality, economy, health, and convenience Japanese costume is objectionable. All that can be said for it, is that it is picturesque. But, in our contemporary's opinion, it would be a mistake to substitute western costume for the native dress. There is a want of ease in foreign-made garments to which the Japanese will never be reconciled. A happy medium between the two modes of dress must be found. On Japanese pastimes the *Choya* remarks that they are calculated to increase that love of inactivity of which it is desirable to get rid. *Go, Shogi*, and cards, take the place of such manly exercises as shooting, rowing, riding, and the like, so popular with foreigners. Irregularity, observes our contemporary, is one of our national traits, which calls for reform. Japanese rise and retire to rest at uncertain hours. Their duties and their pleasures alike are governed by no fixed rules. The *Choya* passes severe strictures on the time wasted in the society of *geisha*. The remedy proposed for the above and kindred evils is no other than that universal panacea—the formation of a Society. Let there be called into existence a "Custom Reforming Society," which shall lead the fashion and establish a new standard, and we shall no longer have to complain of our national customs as being behind the age in which we live. Charity cannot flourish without a *Yisen-kai*, and art will languish without a *Bijutsu-kai*, so our customs must be brought under the magic control of that wonderful working instrument of modern times—a Society.

CHINA TRADERS' INSURANCE COMPANY, LIMITED.

THE following is the Report for presentation to the shareholders at the meeting to be held at Hongkong to day:—The directors have now the pleasure to lay before the shareholders a statement of the company's accounts for the year ended April 30th last. The net premia earned amount to \$772,278.92 as against \$721,867.47 collected during the previous twelve months. The working account shows a balance at credit of \$495,185.68, which sum the directors recommend be appropriated in the following manner:—A dividend of 18 per cent. to shareholders, \$108,000.00; a dividend of 15 per cent. on contributions, payable to all contributors of business whether shareholders or not, \$100,000.00; to be transferred to reserve fund, \$50,000.00; to be carried to new account, \$337,185.68—\$495,185.68. The reserve fund, with the above addition, will amount to \$750,000.00. Directors.—Messrs. L. Poesnecker, S. C. Michaelson and B. Schumacker retired from the Board on leaving the Colony, and Messrs. J. Kramer, C. Janzén, and P. Sachse have accepted invitations from the directors to fill the vacancies. These appointments will require the confirmation of the shareholders. Messrs. J. S. Moses and C. Jantzen retire by rotation and offer themselves for re-election. Auditors.—The accounts have been audited by Messrs. T. Arnold and H. U. Jeffries, who offer themselves for re-election.

JAPAN AND PORTUGAL.

THE information relating to alleged communications from Paris to the French Representative in Tokyo respecting Consular jurisdiction over the Portuguese, which we reproduced from the vernacular papers yesterday, turns out to be inaccurate in several important details, and corrections appeared in most of the papers yesterday. According to the revised version of the story, the French *Chargé d'Affaires* telegraphed to his Government to ask what the appointment as Portuguese Consul-General implied, and was informed in reply, "the management and control of the commercial affairs of Portuguese subjects." This account of what took place, the *Nihon* says, was received by it from an employé of the French Legation. The News Agency is responsible for the circulation of the version we gave yesterday.

MURDER OF FIVE PERSONS IN ONE HOUSE.

A CRUEL murder is reported to have been committed at Munawatori, Nakugori, Ibaraki, on the 31st ult. The papers apply the term burglar to the murderer, but the facts stated go to show that private vengeance, and not a desire

to rob, was the incentive to the cruel deed. The bodies of Fukaya Usaburo, the owner of a mill, his second son, and three little daughters were found dead. The room in which the corpses were discovered was covered with blood, and the bodies were all very much lacerated. The mysterious part of the affair was that Fukaya's two eldest daughters, who had been sleeping in the house, escaped unhurt, while their little sisters were butchered in cold blood.

THE HONMOKU MURDER.

The woman, Patter, keeper of a drinking saloon, and said to be the instigator of the tragedy at Honmoku, was arrested on Saturday afternoon last by the Japanese Police Authorities, acting under instructions from the Chief Procurator of the Chihō Saibansho. Messrs. Masujima and Okamura have been retained for the defence. She has since undergone two examinations at the Saibansho, but still maintains her innocence of the charge preferred against her. The Authorities, with her sanction, have decided to sell by auction all the furniture and effects at her grogshop, with the exception of her personal clothing. This undoubtedly is the best means that could be adopted to preserve her property, and the Police consequently removed the effects and the house is now shut up. The man, Schonenberger, is lying at Tobe, awaiting trial. Much further evidence has been forthcoming during the last few days, and the chain of circumstances connecting the various personages in the tragedy is gradually approaching completion.

THE YOKOHAMA SILK MERCHANTS' GUILD.

The *Nichi Nichi Shimbun* regrets that the silk merchants of Yokohama have so little regard for national reputation and interest as to prolong their petty squabbles in the presence of keen foreign competitors. Our contemporary is of opinion that the Governor of Kanagawa has not handled the affair with sufficient skill. What is required is to call the members of the guild together and impress upon them the advisability of sinking minor individual differences for the sake of common interests. An appeal to the better instincts of the merchants should be made. Commands to unite are of little use at such times.

A MONSTER BOY.

It is stated in the vernacular papers that a boy of extraordinary size and weight was born in Yushima, Kanda, Tokyo last October. Though not yet a year old his limbs are of an enormous size and he weighs nearly 100 lbs. As is usual with such prodigies his parents are poor. The father, a crotch-mender by trade, has apprenticed the promising lad to Ikuzuchi Zondaiyu, the retired wrestler, who has predicted that the young Samson will, if he reaches maturity, accomplish feats which will place those of such wrestlers as Akasbi, Niwo, and Tanikaze in the shade.

THE CABINET AND THE GOVERNORS.

On the evening of the 13th inst., the Governors recently summoned to the capital were invited to dinner by Count Ito at his official residence. The party included all the Ministers of State. Before leading the Governors to the dining-room, Count Ito is said to have read them a very wholesome lesson on the duties of their official positions. The speech must have been very unpalatable to many of them, for if report can be trusted, the Minister President condemned in strong language the part said to have been taken by them in the elections of February last.

JAPAN AND PORTUGAL.

The *Kokkai*, the *Fiji Shimpō*, and other papers state that a telegram has been received to the effect that France has been requested by Portugal to endeavour to obtain Consular jurisdiction over the latter's subjects in Japan, but that she refuses to accede to the request, and has communicated this fact to her representative in Tokyo.

A BUDDHIST LIBRARY.

We are glad to observe that an attempt is being made to collect and render accessible to students

Buddhist works which have hitherto been scattered all over the country. Messrs. Matsumoto Junzo and Ouchi Seiran, two Buddhist priests, have been engaged for some years in collecting books, and they have now obtained permission from the Education Society to make use of one of their buildings for a library. This library will be open to visitors at an early date.

THE BANK OF JAPAN.

The amounts of convertible notes and reserves in the Bank of Japan for the week ended the 10th inst. were as follow:—

CONVERTIBLE NOTES.		RESERVE AND SECURITIES.	
YEN.		YEN.	
Notes issued.....	127,894,946	Gold coin and bullion.....	82,710,300
		Silver coin and bullion.....	47,753,774
		Public Loan Bonds.....	14,500,000
		Treasure Bills.....	—
		Government Bills.....	28,000,000
		Other securities.....	—
		Commercial Bills.....	30,330,972
	127,894,946		177,894,946

Of the above total issue of notes, the sum of yen 5,523,376 is in the treasury of the Bank, yen 10,000,000 has been transferred on loan to the Government, and yen 95,771,570 is in actual circulation, the latter showing an increase of yen 1,285,243 as compared with yen 94,486,327 at the end of the previous week.

THE PARCELS POST SYSTEM.

It was announced some time ago that the Department of Communications would be compelled, owing to want of funds, to curtail its original programme, in inaugurating the Parcel Post System. It now appears, according to the *Fiji Shimpō*, that of the 400,000 yen required for the purpose, the Finance Department is only able to spare 50,000 yen out of the means at its disposal this year, a sum which will admit of the system coming into operation in Tokyo alone on the 1st October, the day fixed by the Ordinance. It is estimated that about 800,000 yen will be wanted for extending the service throughout the Empire.

THE LEATHER TANNING COMPANY.

This company, which has its head-quarters in Kobe, found itself obliged, some time ago, to go into voluntary liquidation. A Committee was appointed to confer with the creditors, the principal of whom, the First National Bank, proved so amenable that Mr. Ito Chojiro and six others have now decided to continue the business of the Company with a capital of a hundred thousand yen, two-thirds of which the promoters will furnish. A charter has been applied for, the period named being twenty years.

SIR ROBERT JARDINE.

It is generally rumoured, says the *London and China Express*, that Sir Robert Jardine, of Castle Milk, Dumfriesshire, and Lanrick Castle, Perthshire, is to be raised to the peerage. Sir Robert who was made a baronet by Mr. Gladstone in 1885, sat in Parliament as a Liberal from 1865 until 1886, when he joined the Liberal Unionists. He, in June, resigned his seat for Dumfriesshire, which he had held since April, 1880.

PICTURES AND CARVINGS.

It is stated by the Tokyo News Agency that an exhibition of Japanese Paintings was opened under the auspices of the Japan Fine Arts Society in the gallery of that Society in Ueno Park, on the 1st instant, and that it will remain open until the 30th. From the same source we learn that the Association of Glyptic Artists of (*Tokyo Chokōkai*) will open an exhibition at the same place on the 10th of November, and keep it open for twenty days.

THE HONGKONG AND SHANGHAI BANK.

We (*China Mail*) hear that the shares of the Hongkong & Shanghai Bank rose £2 in London upon receipt of the news of the Chairman's statement at the last meeting.

THE CABINET AND THE LOCAL GOVERNORS.

The *Kokkai* furnishes a brief account of the meetings held at Count Ito's official residence on Tuesday last, when the speakers were the Minister President of State, and Mr. Kono,

Minister for Education. The address of Count Inouye to the Governors on the day following has already been alluded to in these columns. All the Governors were present except Mr. Kitagaki, the new Governor of the Hokkaido, Mr. Narabara of Okinawa Ken, and Mr. Yamauchi of Kumamoto.

MEETING OF GOVERNORS.

The Governors of the various Prefectures now assembled in Tokyo, have been summoned to meet at Count Ito's official residence to-day (Tuesday), to discuss matters relating to the administration of public affairs. All the members of the Cabinet will be present. On the 14th inst. and following days, meetings of the Heads of Departments will be held in the Home Office under the presidency of Count Inouye, Minister of State for Home Affairs.

THE KYUSHU RAILWAY.

The *Rising Sun* and *Nagasaki Express* says:—The survey of the proposed Nagasaki railway will be completed within this month. It is rumoured among native residents that land to the extent of about ten thousand *tsubo*, equal to 8½ acres, will be required for the station compound. But it being found very hard to get such an extensive piece of ground within the limits of the city, it is proposed to fill in a portion of the head of the bay for that purpose.

INSPECTION OF COIN AT THE OSAKA MINT.

ONE of the periodical inspections of the Osaka Mint and the coin produced there is to take place on the 11th instant. It is customary for the Minister of Finance to be present on these occasions, but it is stated in the *Nichi Nichi Shimbun* that owing to pressure of public business, Mr. Arima, the head of the Public Bonds Bureau, has been appointed to represent the Minister of Finance and has already left the capital for Osaka.

THE "CITY OF CHICAGO."

CAPTAIN REDFORD, of the Inman liner *City of Chicago*, wrecked on the Old Head of Kinsale, has had his certificate suspended for nine months by the Liverpool Marine Court of Enquiry.

THE ENGLISH HARVEST.

A PRIVATE telegram dated at London on the 2nd inst., says that the "English harvest operations, have been hindered by bad weather."

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Opposition papers continue to clamour loudly for a thorough-going reformation in the Government. Their love for exciting news, it seems, induces them to regard with little favour the steady and unostentatious method of work adopted by the present Ministry. The manner in which the great reformation of 1885 was carried out, very naturally produced in the minds of the Opposition journalists an almost insatiable desire for equally brilliant and stirring changes in every branch of the Administration. Above all, they expected to have had material for criticism and condemnation supplied to them by an early announcement of the policy of the new Cabinet. Needless to say, they have been signally disappointed in every respect, and needless also to state, that their disappointment constantly finds expression in whatever they write about the new Cabinet. The two chief points on which they find fault with the Cabinet, are that it does not announce its policy, and that it has not gone far enough in dealing with those Governors who made themselves obnoxious by the part they took in the elections of February last. In spite, however, of the clamour which these journals make on the subject, it is apparent that they are more or less reluctant to assume an attitude of irreconcilable opposition against the men in power.

The Governor now staying in the capital

were invited to dinner by Count Ito on the 13th instant, and received from him instructions as to the duties of their office. The metropolitan papers continue to discuss the desirability of introducing more changes in the *personnel* of the Governors. The *Kokumin Shimbun*, after alluding to the instructions given to the Governors by Count Ito, observes that such instructions avail nothing so long as there yet remain Governors who regard themselves as belonging to the Military party in the Government. The Military party is at present powerless, but should it ever recover its former footing, these Governors would at once cast off their mask and again set about embarrassing the people with their despotic interference. Consequently, in their own interest, if not in that of others, the members of the present Cabinet are strongly urged to remove such a dangerous element. The Progressionists organ, the *Hochi Shimbun*, pretends to believe that the conclusion of the conference now being held by the Governors in the Department of Home Affairs will be the signal for the carrying out of thorough changes in the *personnel* of the local authorities. The opportunity for introducing such changes, if not utilized, will have passed for ever. Our contemporary is firmly convinced that the Cabinet is positively bound to take this step; for how can it otherwise justly claim, as it is understood to claim, its freedom from responsibility for the policy of its predecessor. Some writers, observes the *Hochi*, in another article, have, as a set-off against the interference of local Government officials, triumphantly pointed to the part taken in the last general elections by the elected servants of the self-governing local communities. Our contemporary defends the latter's conduct by alleging first, that their position is essentially different from the position of local Government officials, and secondly, that they were compelled to take an active part in elections by the unjust and provoking interference on the part of officials and police. Our contemporary, however, acknowledges the undesirability of the active interference of local communal officers in elections, but suggests that the evil will disappear if the original offenders, viz., Governors, are properly dealt with. Another Progressionist organ, the *Yomiuri Shimbun*, maintains that the Cabinet, whose path is at present apparently smooth, would at once find itself in a whirlpool of popular disaffection, if it should fail to remove the objectionable Governors.

The *Kokkai*, writing on the assemblage of Governors in Tokyo, draws their attention to the importance of introducing a thorough reform in the police service. The police, from the highest to the lowest grade, are recruited, in nine cases out of ten, from the *shizoku* or *samurai* class, and the whole service well deserves its exceptionally high reputation. Indeed, the Japanese police far surpass their *confères* in other parts of the world. But herein also lies their weakness; for they are intolerably proud and arrogant in dealing with the people. Since the general elections of February last, their arrogance has, if anything, increased, and they have even dared to disregard instructions of the Public Procurators. Nothing could be more pernicious than such a state of things; and every Governor who wishes to be a faithful servant of the Government is recommended to introduce radical reforms in the discipline of the police force under his control.

The *Nichi Nichi Shimbun* also admits that some Governors mixed themselves in party politics, and that the police force has become more or less demoralized. Our contemporary, however, seems to think that the evil can be remedied without introducing more changes in the *personnel* of the local authorities. Better supervision from head-quarters, and more zeal on the part of the Governors themselves, it believes, would be sufficient to bring about the desired reform. Our contemporary, consequently, recommends the Governors to carry out faithfully the instructions they have received from the new Ministry. Whether or not the policy of the Cabinet will succeed, depends largely upon the

zeal and judgment of the Governors, "who are to the Central Government what the hand and foot are to the body." They are further advised to show their capacity by actual deeds and not by plausible representations.

The report continues to be circulated that the Cabinet intends to introduce in the coming Diet a Bill for the reassessment of the taxable value of land. The object of this step is stated to be the purchase therewith of the goodwill of the House of Representatives. The *Kokumin Shimbun*, which is an ardent advocate of reassessment, is so perverse as to condemn in strong language the object for which the Cabinet is reported to bring in the Bill in question. However desirous our contemporary may be to have the reform carried out, it is constrained, it says, to oppose the measure being taken up by the Ministry from motives of policy. A Ministry which carries out a reform of such importance from motives of policy, cannot, in our contemporary's opinion be said to act in the best interests of the people. The *Nichi Nichi Shimbun* ridicules the perversity of the *Kokumin*. The *Nichi Nichi* does not believe in the accuracy of the report in question; but assuming its trustworthiness, what can be more absurd and incomprehensible than the line of argument adopted by the *Kokumin*? But such conduct is not very unnatural on the part of a journal which was loud in demanding a declaration of policy by the Premier, and when the latter gave instructions to the Governors, still found fault with him, maintaining that action was wanted, and not empty words.

The Railway question engages the attention of the vernacular press. The Railway Act, which was voted by the Diet in its last session, requires a certain number of lines to be constructed during 12 years. The Government decides which of these lines shall be built in particular years, but the raising of loans for the purpose has to be submitted to the Diet. Naturally each locality wishes to be the first dealt with, and there is keen competition among the people's representatives to present to the attention of the authorities the prior claims of their respective districts. The *Yiji Shimpō* sharply reproves the selfish conduct of those members of the House of Representatives, who go about from one Minister of State to another begging that the claims of their localities be not left unheeded. These members are even said to threaten that, unless their demands are acceded to, they will not vote for the raising of loans. These members are requested to reflect upon the grave responsibility of their position, and to desist from their pernicious attempts to restrain the freedom of the Executive.

The House of Peers is the subject of much anxious discussion on the part of the metropolitan papers. The Opposition journals and some of the independent papers believe that the House of Peers has, during the three years, been subservient to the Government. The *Nippon* remarks that Count Ito tried to place the Upper House on the same footing as the Lower House, but that the Peers have degraded themselves by becoming the instruments of those in power. They are reminded that their duty is to restrain the extravagance and partiality of the Lower House, but not to act as tools of the Executive. The *Yiyu*, writing on the same subject, observes that, of the members of the House of Peers, the new nobles and Imperial nominees are inseparably connected with the *Meiji* Government and are consequently incapable of maintaining an independent attitude. The old nobles (the former *Daimyo* and *Kuge*) and those members who are appointed from amongst the fifteen highest tax-payers in each locality, as they owe nothing either to those in power or to the mass of the people, are capable of pursuing a perfectly independent course of action. They are, therefore, appealed to by the Radical organ to obtain such influence as will retrieve the lost honour of the House.

Representatives for the Nihonbashi District of Tokyo, to fill the vacancy caused by the recent death of Mr. Fujita Mokichi, is keenly contested. There are several candidates, but the contest is practically between Mr. Kusumoto, ex-Senator and ex-Representative, and Mr. Yasuda Zenjiro, a well-known banker. The polling was to close yesterday, but at the time of writing, the result of the election is unknown. Mr. Kusumoto is supported by the Progressionists, while Mr. Yasuda is backed by the Ministerialists, if such a term is applicable to the opponents of the *Yiyu-to* and the *Kaishin-to*. The contest is anxiously watched by papers of all parties, and it has led to an interesting controversy between the *Nichi Nichi Shimbun* and the *Mainichi Shimbun*. The *Nichi Nichi* drew the attention of the electors of Nihonbashi to the importance of returning to the Diet men of independent means, and if possible, those engaged in business. The curse of modern politics in Japan is the ascendancy which professional politicians of empty purses have assumed in the absence of men of means willing to mix in politics. This called forth an indignant retort from the *Mainichi*, who defended the professional politicians of the Opposition by alleging that corruptible men have always been found, not among them, but among the followers of those in power. To this the *Nichi Nichi* at once replied that those politicians, whether belonging to the Opposition or not, who have been weak enough to succumb to the influence of money, have always been professional politicians. The rest of the professional politicians find it convenient to feed upon the earnings of their chiefs.

The *Kokkai* recommends the authorities to conclude a special treaty with the United States, securing to the Japanese the right to freely come and go in the trans-Pacific Republic. Our contemporary commences by enquiring into the causes of the anti-Japanese movement now going on in some parts of America. The sudden increase of the strength of the movement is ascribed to the machinations of politicians eager to obtain the votes of the working class. To the objection that the attempt to conclude such a treaty may make the situation worse than it is, our contemporary replies, that the movement is yet confined to a few States west of the Rocky Mountains and that, with the exception of some of the Congressmen from these regions, the Legislature at Washington will be found favourably disposed to the conclusion of a special treaty with Japan. Under such circumstances the Washington authorities may, in the *Kokkai's* opinion, be without difficulty induced to sign such a treaty. In conclusion, our contemporary strongly reproves those journals which indulge in violent language on this subject, either in recommending an alliance with China or threatening reprisals upon American residents in this country.

The *Choya Shimbun* advises its countrymen to go to Korea. The United States of America, Mexico, and Australia are no doubt hopeful fields for Japanese emigration; but our contemporary urges the Japanese to begin their career of foreign emigration in Korea. There are two reasons, besides its proximity to Japan, why Korea is specially advantageous for purposes of emigration, namely, its natural resources and its backward state of civilization. To the objection that there are treaty limits for the residence of Japanese in the peninsular kingdom, our contemporary replies that such limits may be very easily evaded if the Japanese emigrants are enterprising enough. They are referred to the manner in which foreigners evade treaty restrictions in this country, and the gradual ingress of Chinese into the interior of Korea. Shame to the Japanese, if they cannot do what the "pig-tails" are constantly doing.

Mr. Nakai Kitano, a writer on the staff of the *Yomiuri Shimbun* and now on a visit to Korea, is contributing interesting articles on the position of Japanese trade in the peninsular kingdom.

THE "HYOGO NEWS" AND JAPANESE JUSTICE.

THE *Hyogo News* very frankly admits that the case of tea-stealing which it originally adduced as the worst in its repertoire of charges against the administration of Justice in Japan, has turned out, on the contrary, to be "the vulnerable point in the whole list." We quote this admission, not at all for the purpose of discrediting our southern contemporary, but simply with the object of emphasizing the propositions urged by us originally, namely, that it is hazardous to criticise the finding of a Law Court without possessing some information as to the evidence tendered to the Court. The story upon which the *Hyogo News* relied at the outset was doubtless given and accepted in perfect good faith, but it proved to be an entirely incorrect version, and of necessity the inferences drawn from it as to the action of the Court were equally erroneous. We agree that misconceptions of this nature are among the most disagreeable contingencies likely to occur in connection with Japanese jurisdiction over foreigners. Unless a man knows the language in which the proceedings of a Court are conducted, he is apt to fall into serious error when he undertakes to estimate the propriety of its findings, and this must often happen where the language is Japanese and the person interested is an American or a European. But surely such an objection cannot be advanced as a serious obstacle to Japan's recovery of judicial autonomy? No one will be so unreasonable as to pretend that she must assimilate her language to ours before her claim to exercise complete jurisdiction within her own territories is admitted. At any rate, the point lies entirely outside the original question, namely, whether Japanese justice is as Western justice. We venture to think that it is, though of course we do not dream of asserting that miscarriages of justice may not, and do not, often occur in Japan. The *Hyogo News* professes to think that we have entered this discussion because we "hold a brief from the Japanese Government." Will it never be possible to eliminate such persiflage from grave journalistic controversies in this country? We hold no brief from anyone, but even supposing that we did, how could the fact affect the value of our arguments? It should not be difficult for the editor of the *Hyogo News* to perceive that so soon as he begins to attribute unworthy motives to an opponent, he confesses the weakness of his own case. Above all it is incongruous that a writer, professing to estimate the quality of a nation's justice and the capacity of its judiciary, should show himself unable to distinguish personalities from argument. In this tea-stealing case our contemporary, even at the present stage, exhibits a looseness of method that does not inspire con-

fidence. "A firm," he complains, "which has suffered losses to the extent of \$2,000 has no redress, though the men concerned in the conspiracy are brought before a Court of Law." Now why is the plural number used here? Why speak of "men" being brought before the Court when, in point of fact, only one man was brought, and, so far as concerns the evidence adduced, that man appeared to be absolutely guiltless of all participation in the theft? A censor of justice ought at least to be accurate in details of a vital nature. For our own part, we fail to see how the ends of justice would have been furthered by either convicting or detaining a man against whom no evidence was forthcoming, and who was exonerated by the only testimony produced. But the action of the Court with regard to this man is an affair altogether apart from the question of the general failure to discover and punish the authors of the alleged theft. The *Hyogo News*, while undertaking to weigh the value of Japanese justice in delicate scales, seems itself incapable of such a small exercise of justice as to distinguish between endorsing a particular judicial act and approving a general result of which that act constitutes only an incident. Of course justice is not satisfied when thefts go unpunished and their victims unrequited. But neither is justice satisfied when innocent men are convicted. Enough of this controversy, however. We close it, on our side, with two remarks. The first is, that whereas miscarriages of justice, more or less gross and flagrant, occur in the most highly civilized countries over and over again, according to the view of the general public and above all of the particular individuals concerned, nay, occur under our very eyes here in Consular courts, no reasonable and moderate observer ventures to infer that the whole judiciary to which the erring judge belongs is incompetent to administer justice in the Western sense of the term, or that the whole nation of which the judge is a unit has no capacity to appreciate justice as Westerners appreciate it. These wholesale verdicts are unwarrantable and unfair. They sound almost ludicrous in the mouths of men setting themselves up as astute appraisers of justice. The second remark we have to make is, that we are not less anxious than the *Hyogo News* to obtain concrete evidence of the competence or incompetence of Japanese Law Courts, and that we are equally ready to estimate each item of evidence on its true merits. Had the editor of our Kobe contemporary been a reader of these columns two years ago, he would have found that a persevering attempt was made to collect and publish digests of cases actually tried and verdicts actually rendered by Japanese tribunals. A daily newspaper, however, cannot convert itself into a permanent statistical record. Other matters

extruded our law-case column, but it was continued long enough to furnish testimony which by no means bore out the sweeping condemnations now founded by the *Hyogo News* on a few very problematical examples of judicial procedure. All are equally interested in arriving at the truth of this question, and for our own part we welcome every assistance which the *Hyogo News* or any other journal can render, though we shall never hesitate to protest against deductions which we deem to be a travesty of this justice they profess to estimate.

THE MITSUI COMPANY AND THE MIIKE MINE.

IT is alleged that the Mitsui Company are preparing to take an action against the Government in connection with the Miike Coal Mine. This matter has been on the *tapis* for quite a long time. The point is that after the Company's tender for the Mine had been accepted, but before the installments of the purchase money had been fully paid, an earthquake destroyed one shaft—said to be the most prolific—of the mine, and thereby materially reduced the value of the property. The Mitsui Company claim that some reduction on this account ought to be made from the purchase money, which was much higher than the figure at which the general public estimated the mine. It is stated that the deed of sale contains a clause to the effect that under no circumstances shall the price be subsequently reduced (*ikanaru fijo aru mo genkakusezu*), and some people are of the opinion that this proviso would immediately nonsuit the Company in a Court of Law. But it is inconceivable that the clause can have been intended to include catastrophes of Nature. Suppose that the mine had been completely destroyed by the earthquake which demolished one of its three shafts—and obviously the hypothesis is not at all extravagant—suppose, in other words, that a property for which the Mitsui Company were pledged to pay upwards of four million *yen* by installments, had been rendered absolutely valueless before a third of the purchase money reached the Treasury vaults, is it for an instant conceivable that the Government could have insisted on the full payment of the remaining millions? Civilized Administrations do not deal with their people on such a basis; an ordinarily honest trader would not attempt such an exaction towards his least considered client. What is true with reference to the complete destruction of the mine must also be true with reference to its partial destruction. Unless it can be shown that the proviso quoted above was intended to contemplate catastrophes of Nature, and unless it can also be shown—which, we imagine, is scarcely possible—that liability to such catastrophes was taken into account when appraising the

selling price of the property, there can be little doubt that, as a matter of common equity, some reduction should be made in favour of the purchaser. Nor is it likely that the Government questions the propriety of this view. But unfortunately the Government is no longer in a position to give practical effect, of its independent competence, to questions of equity which involve pecuniary issues. The Diet has shown that it will not tolerate anything of the kind. With reference to this very affair of the Miike Mine, even when the prospect of some reduction being made was purely matter of irresponsible conjecture, the House of Representatives displayed a disposition to be worse than captious. Possibly the hesitation of the Government to give any definite reply to the petition of the Mitsui Company warranted a hypothesis that the claim was favourably considered. It is now stated, however, that the present Minister of Finance has dismissed the petition with the court formula which in Japan does duty for *non possumus* (*negai no omomuki kiki-todoki-gatashi*), and that nothing remains for the Mitsui Company except an appeal to a Court of Law. Their case is very hard, and they ought to have public sympathy on their side whatever course they adopt.

THE POLICE.

WE stated recently, on the authority of the vernacular press, that considerable changes are contemplated in the organization of the police force, the general line of reform followed being to deprive the police entirely of judicial functions and limit them strictly to executive duties. The *Kokkai*, writing on this subject, alleges that the project has been suggested in the sequel of investigations undertaken by Count INOUE with reference to the question of official interference in the elections of last spring. These investigations disclosed defects savouring of despotic government, and Count INOUE, finding a fellow-thinker in Mr. KIOURA KEIGO, formerly Chief of Police and now Vice-Minister of State for Justice, set himself, with his wonted energy and drastic courage, to devise reforms. It is not easy to gather from the *Kokkai's* writings where the defects of the present system make themselves most conspicuously apparent, but we infer that unnecessary delays in bringing prisoners to final trial result from entrusting judicial functions to the police; that abuses of power are attributed to the same cause; that the distribution of the force throughout the Prefectures is not uniform; and that not only are the burdens imposed on the localities unduly heavy, but also the practical application of the principle of local autonomy is impeded. It would be very interesting to have a detailed account of the manner in which these defects

operate, but the information is not forthcoming. The total expenditure on account of the police service is now 4,527,490 *yen* annually, of which sum only 925,438 *yen* is borne by the Treasury, the remaining 3,602,062 *yen* being defrayed by the localities. The view attributed to Count INOUE is that the localities ought not to be liable for any police expenses over and above those incurred in the discharge of the force's executive functions, and that outlays connected with higher police duties as well as with their judicial functions should be borne by the Treasury. According to this method of division, the Treasury's share would be about three-fourths of the whole. As to unequal distribution of the force, it is found that in some Prefectures one constable is allotted to every three thousand six hundred or four thousand of the population, while elsewhere the ratio is one constable to two thousand people. Last year, at the time of putting into operation the system of local government for towns and districts (*shichoson*), the Minister of Home Affairs gave instructions that in places where the system became operative, the force of police should be one constable to from five hundred to fifteen hundred people, and that, elsewhere, the ratio should be one to from fifteen hundred to three thousand. But it would appear that these instructions have not been carried out in almost any instance. Evidently if the proposed reform involves increased payments from the Treasury, it will encounter opposition in the Lower House. The transfer of Prison Expenditures from the charge of the localities to that of the Central Government, a change in favour of which many potent arguments could be advanced, while, on the other side, no valid reasons whatever existed against it, was negatived by the peoples' representatives on the frankly stated ground that they wanted the whole surplus in the Treasury for the purpose of reducing the Land Tax, and that they could not consent to divert any portion of it in other directions. It may be that the Diet will exhibit a different mood next session, but we are disposed to think that the idea of reducing the Land Tax has taken such hold of the people's minds that nothing will be allowed to interfere with it. Even on that hypothesis, however, the duty of the Government is obviously to propose whatever reforms it may deem essential, leaving to the House of Representatives the responsibility of rejecting or postponing them.

MM. Ed. Moreau and P. Monchicourt, the liquidators of the Comptoir d'Escompte, have sent a circular to the shareholders explaining the state of the liquidation. From this it appears that a third dividend, amounting to 1.25 a share, will be paid on the 16th inst. The money to provide this has been obtained from the reconstruction of the Société des Métaux.

COTTON.

THE *Nichi Nichi Shimbun* has an interesting paragraph on the subject of cotton in Japan. It appears from our contemporary's statistics that, adding together the total quantity of cotton grown in Japan and the quantity imported, whether in the form of raw cotton, yarns or cotton cloth, the consumption in 1882 amounted to seventy million catties (83 million lbs.), whereas the consumption in 1891 was a hundred and twelve million catties. This extraordinary increase—sixty per cent. in ten years—is indeed noteworthy, and it would be a matter of much interest to foreigners to hear the causes assigned for it by the Japanese. Among those causes would probably be placed a disposition to substitute cotton garments for silk, the great profit derived from the export of the latter having tended, according to some authorities, to diminish its home consumption. Indeed no feature of Japan's commercial development during recent years is more striking than the growth of the export of silk. In 1885—we take this year because the tables now lying before us do not refer to a more remote period—the value of the total exports of silk was 14,743,554 *yen*, whereas the corresponding figure for 1891 was 34,908,874 *yen*, an increase of over a hundred and forty per cent. In these totals the item of manufactured silk goods also furnishes food for reflection; for whereas in 1885 the value of the export was only 270,158 *yen*, in 1891 it had risen to 2,732,982 *yen*. With such splendid customers as Europe and America waiting to receive and pay handsomely for all the silk she can produce, it would not be surprising that Japan should be disposed to send the staple abroad instead of clothing her own people with it. But such an act of thrift is not easy to conceive. For the sericulturist is seldom a silk consumer. He offers the whole or virtually the whole, outcome of his industry for sale, and he gives himself not the slightest concern whether its ultimate destination be a foreign, or the home, market. Sufficient for him is the fact of finding a market. Thus, then, there is perfectly equal competition between the two classes of buyers, the caterers for the wants of western folks and the distributors who supply the Japanese consumer. The latter will not stand aside in favour of the former unless price forces their hand, and the question consequently resolves itself into this—do exporters of silk purchase it at figures which deter home consumption? There is nothing to suggest an affirmative answer. We are persuaded that the Japanese themselves wear silk garments at least as much as they ever did, and that the great export trade in silk which has grown up since the opening of the ports, represents so much additional and independent profit to the country. Japan's capacity for sericulture,

most imperfectly developed in pro-Restoration days, has been stimulated by foreign demand, and in addition to supplying her own people, she is now producing enough of the noble article to sell some thirty-five million *yen* worth annually to foreigners. She is not yet within measurable distance of her limit of profitable production, and we are persuaded that she will never reach that limit until foreigners are allowed to step in and radically reform the methods of her sericulturists. But in the meanwhile she is doing a splendid business for herself, and we see no reason to entertain the supposition—opposed, for the rest, to all the usual circumstances of prosperous trade—that her own people clothe themselves in rough, cheap raiment because tens of millions pour into their coffers every year from abroad. Not in any diminution of the domestic consumption of silk is to be sought the great growth in the consumption of cotton. We confess that we can discover no reason for the latter, except it be the very simple one, the country is growing richer and that its wants are consequently becoming larger. That is probably the true solution of the problem. For though we hear of times of depression and intervals when trade seems to have collapsed, the general prosperity of the masses seems to be steadily increasing, and the seasons of so-called distress are inclement only to the disappointed speculator and the unsatisfied capitalist. The *Nichi Nichi Shim-bun*, too, without expressing this view in definite terms, evidently looks forward to a steady development of the people's purchasing power. It says that the consumption of cotton per head of the Japanese population in 1891, amounted to 450 *momme* (3½ lbs. approximately), whereas the consumption in England is 700 *momme* and that in France 800 *momme*. The people of the last named countries require, of course, more clothing than do the people of Japan; but, on the other hand, the widespread use of woollen fabrics in the West more than compensates this difference. Cotton stuffs being the great staple of wear in Japan, there is no reason to suppose that the consumption of cotton by this nation will ultimately fall below the consumption in England or France. On this hypothesis the *Nichi Nichi* predicts that Japan, twenty years hence, will be paying to foreign countries for raw and manufactured cotton as much as she will be receiving from them for her silk. But we question the accuracy of such a prophecy. The total import of cotton, raw and manufactured, amounted in 1885 to 22,068,014 *yen*, whereas the import in 1891 was only 16,387,460 *yen*. Despite the growing consumption of cotton fabrics in Japan, the nation is beginning to manufacture so largely for itself that its indebtedness to foreign countries tends to diminish rather than to increase.

STRIKES IN TOKYO.

STRIKES have now become a common occurrence in Japan, especially in the capital, and up to the present they have ended almost invariably in favour of the strikers. The latest case is that of the bricklayers of Tokyo. The number of the bricklayers is as yet very small. They do not aggregate much over 500, and are under the control of about 40 *tōryō* (chiefs). The *tōryō* is found in every department of labour. He is the representative of the labourers under his care. He it is that, in accordance with time-honoured custom, maintains order and discipline among the labouring fraternity. In many instances he is looked up to by his *kobun* (children)—for so the labourers under his care are called—very much as the *otokodate* of former days was revered by his followers. In fact it is among these *tōryō* that the spirit of the *otokodate* still lingers to a more or less modified degree. Evidently such an organization greatly facilitates strikes, and, at the same time, affords machinery for dealing with them. The *tōryō* alone need combine. Their "children's" obedience many always be counted on. But if the "children" are unreasonable or over-obdurate, the *tōryō* may be expected to reason with them. The bricklayers of Tokyo originally received better wages than the majority of the labourers employed in other kinds of manual work. Subsequently, however, their wages were cut down, until they found it no longer possible to maintain themselves and their families. The hardest feature of their lot was that, instead of paying daily wages, the contractors, their immediate employers, instituted a system of task-work. The rate under this system was 25 to 30 *sen* for laying 1,000 bricks. Now it takes the best hands a whole day to lay 1,000 bricks, so that, by this scale, inferior labourers could not earn more than 15 or 20 *sen* per diem, a pittance naturally regarded as insufficient. On the 13th of last month, all the bricklayers of the capital ceased work, and held consultations at several places, the result of these conferences being that delegates waited upon their employers, the contractors, to demand an increase of wages according to the following scale: 65 *sen* for 1st class hands; 60 *sen* for 2nd class; 55 *sen* for 3rd class; 50 *sen* for 4th class; 45 *sen* for 5th class; and 40 *sen* for 6th class. This meant an increase of more than a hundred per cent. The contractors and the *tōryō* (some of whom seem to act as contractors) held meetings to consider the situation, and after much discussion it was finally agreed that the men's demands should be granted. An exchange of documents, in the nature of pledges, took place between the contractors and the bricklayers, and the strike was at an end. These documents, however, do not seem to be uniform: several important differences are observable. Thus, in the document pre-

sented to the bricklayers by the contractors, several items do not appear which are included in the document handed by the bricklayers to the contractors. But according to the *Keisai Zasshi* from which our information is derived, it may be presumed that the points mentioned in the two documents collectively represent the sum total of the conditions actually agreed to by both sides. On this hypothesis, the main elements of the agreement are that the wages of bricklayers shall be of six classes, ranging between 60 and 40 *sen*; that these wages shall be paid on the 1st and the 15th of each month; that the *tōryō* shall decide what class of wages each particular labourer is entitled to receive; that the length of time for daily work shall be 10 hours; that no bricklayer shall work for any contractor other than those signing the documents; that, in the event of the formation of a new guild by non-signers of the documents, the members of the existing guild shall combine to guard their common interests; that the contractors signing the documents shall not employ any bricklayer not belonging to the guild, unless he be supplied with a certificate from one of the members of the guild; and, finally that the *tōryō*, the officers, and the members of the guild shall always endeavour to maintain friendly relations with each other. Thus, so far as outward appearances go, the trouble has been settled. But in truth the difficulty is not yet over. For a majority of the contractors who are not *tōryō* refused to affix their names and seals to the documents, and it is feared that they may endeavour to form a new guild of bricklayers by inviting to the capital labourers from other localities. In that by no means improbable event, a lively state of affairs may be expected, for the members of the old guild will not be scrupulous in their opposition to the newcomers. The *Keisai Zasshi* believes, however, that the contractors will not resort to such a dangerous experiment, but will finally consent to employ hands at the new rates of wages. Our contemporary is further convinced that the result of this increase of wages and of the adoption of a system of day payments in lieu of task work will be beneficial to all parties concerned. The Tokyo periodical is convinced that the principal cause of the deterioration of brickwork during the past few years must be sought in the system of payment by the quantity of work done, and that reversion to the daily wages system will assuredly tend to improve the quality of bricks, and thus indirectly contribute to the increase of brick buildings. It is interesting to note Japan's first experiences of the labour question which now occupies such a prominent place on the Occidental horizon.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THREE SUMMERS' RECORD ON AND NEAR USUI TOGE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—During the past three years it has been my privilege to spend the summer vacation among these delightful mountains in Gumma Ken, or Kodzuke. The two previous summers were restfully and profitably spent at Irino-yu, above Kirizumi, some seven miles north-east of Usui Toge.

Two years ago when our party was making preparations in Tokyo to come up to these parts, we were warned by friends, and strangers even, that fog, mist, and rain beclouded every day of the season. Most discouraging and damaging reports were circulated likewise concerning this Pass of the Toge, when we were arranging two months ago to come up here for a few weeks' rest. This and other causes led me to keep a daily record of the weather these three summers past. This record presents facts of such a happy character, and so diametrically opposite to the opinion prevalent in the minds of many, that several friends have advised the publication of, at least, a brief summary of the record. Had I not jotted down daily the report of the weather, but trusted to memory, I could not have believed that we had experienced so many days of sunshine and beauty. With the average "pleasure seeker" in the summer, it usually requires about four days of bright sunshine to dissipate the dark impressions beclouding the mind by one day's rain.

The good we early forget,
While the ill to us firmly clings.

Old Dr. Johnson said:—"Facts are stubborn things." In the interest of truth and in justice to this section as a summer resort among these "delectable mountains," the following summary of facts is herewith given:—

We have enjoyed, up to present writing, forty (40) days this season here on this Pass, 4,000 feet above sea-level. Of these forty days—last nine (9) in July and thirty-one (31) in August—there has been rain or inclement weather, *all day*, on four (4) days.

Besides these, days on which rain has fallen, number seven (7). Of these seven, six (6) had only light showers (*yudachi*), and usually late in the afternoon, after the day's pleasure in open air had been enjoyed. Thus a total of only eleven (11) days on which any rain whatever fell.

Only nineteen (19) of the forty days had fog, but nine (9) of these had a little fog, early or late in the day, so that the day was practically one of *sunshine*. To summarize:—Only ten (10) of the 40 days could be designated as foggy days: or one fourth of the time as foggy weather.

Only one-tenth (1/10th) of the forty days were rainy days. The highest temperature reached was 77 degrees on August 23rd.

Last year (1891) at Irino-yu, seven miles North-East of this place, we spent forty-four (44) days, July 22nd to September 3rd. Of the 44, there was no rain on thirty-four (34). Of the remaining ten (10) only showers on six (6). Thus nearly five (5) out of seven (7) with no rain, and sunshine, all or part of the day, on forty (40) of the 44. Two years ago (1890) was the memorable summer of typhoons and floods, by which over one million dollars of railroad property was destroyed and large districts inundated. However, the record from July 16th to September 4th—total of fifty-one (51) days—kept by us at Irino-yu shows *no rain* on thirty (30) days. On twelve (12) of the remaining twenty-one (21) we had light showers. One period of eight successive days, and another of seven, with *no rain* whatever. Forty-two (42) of the fifty-one (51) the sun shone on part or all of the day. Deducting the three "typhoon periods" of 4, 3, and 5 days each respectively, beginning August 14, 21st, and 29th, we had an average, even that year, of nearly three (3) out of four days pleasant weather.

This communication I cannot close without speaking a word in commendation of the officials on the railway lines over which we travel to reach these various resorts. Travelling to Nikko, Miyanoshta, and other places during these three years past, the experience has been uniform in this regard. "Nowhere in England, America, or any other country of the Occident, can we find more polite, courteous railway officials, and more ready to gratify every wish of the traveller than here in Japan"—has been frequently the expression of my fellow travellers. In this opinion I fully acquiesce, and express my sincere appreciation

of the courtesy and kindness which I have ever received at the hand of these native officials, of all grades, conducting the transportation lines in this country. Especially the public is to be congratulated on having such an affable agent, in the person of Mr. Miyagi, at Yokokawa, whose fluency in speaking the English language, combined with his readiness to assist the passengers every way, enables him to render efficient service to foreigners.

Thanking you in advance for the courtesy extended in the use of your valuable columns,

I remain, Sir, yours sincerely,

FREDERICK J. STANLEY.

Usui Toge, Gumma Ken,

September 1st, 1892.

MAJOR FUKUSHIMA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I take the liberty to ask you if you would kindly, through the medium of your columns, give, from time to time, a few particulars relating to that plucky ride now being performed by Major Fukushima from Berlin to Shanghai. I have already seen a little information on this subject in your paper.

I am Sir, your obedient servant,

ONE INTERESTED.

Yokohama, September 7th, 1892.

TO CYCLISTS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It may interest cyclists to know that a Pneumatic Tyre machine has been tried for the past two weeks, by me, on Japanese roads, with the result that I should advise all riders, thinking of ordering machines, to order nothing but the Pneumatic. A bicyclist who has not ridden a Pneumatic does not have the slightest conception of what pleasure there can be got out of one, the difference between it and the cushion tyre is very much more marked than between the cushion and the solid. There is, in fact, literally no jar. I expected to find that there would be a good deal of side slip on muddy roads, but I found none. I gave the tyre a very good test in riding the machine from Tokyo to Kamakura on a day when the roads were muddy, but the tyres have not a scratch on them. And as regards the risk of puncture I think in this country, where the jinrikisha men are naturally careful in seeing there is nothing hurtful for their feet left in the roads, that this risk is smaller in Japan than in Europe or America.

Many makers now are making their roadsters without mud guards, my machine has none, and for the much watered streets of Tokyo this is a mistake, and causes my back and front to be besprinkled with mud, my present machine has rat-trap pedals, and I must say they are easier to ride with than the rubber lined ones.

One objection to the Pneumatic is that you must use the brake on the tyre sparingly, but I find this no very great hardship, as by back pedalling I have ridden for days without touching it.

I remain, Sir, yours truly,

Sept. 10th, 1892.

E.F.

THE JAPANESE IN IDAHO.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As an American who spent some five years on what at that time was called the "frontier," amongst the class of men who recently expelled four colonies of Japanese in Idaho, I wish to state that the men who are the cause of this race trouble are miners, born and bred in Europe, and more-over entirely ignorant of American ideas. Most of them come from Cornwall and Wales, some from Ireland, others from Hungary, Bohemia, Germany, and various other European states, hardly any being natives of America or even educated there. Many of these men are old "Molloy Maguires" who have been driven out of Pennsylvania—not for their good qualities or amiable dispositions you may be sure—who had formerly been working in British collieries. It therefore seems to me rather hard to lay the blame on Americans for the actions of men whose native countries did not deem it worth while to educate them before turning them loose.

Very respectfully,

JOHN MURRAY BEAM.

Osaka, September 11th, 1892.

LETTERS FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, August 10th.

The August Century contains an account of "The Ascent of Fuji the Peerless" by Mabel Loomis Todd and Prof. D. P. Todd.

Rev. F. E. Clark, D.D., President of the Y.P.S.C.E., or Young People's Society of Christian Endeavour, has started for a tour around the world, and will soon reach Japan. He is familiarly known as "Father Endeavour Clark."

Rev. H. G. Underwood, the Korean missionary, occupied the pulpit of one of the Presbyterian churches of this city last Sunday.

Five young Chinese, three young men and two young ladies, succeeded in passing the Detroit custom-house, and thus gaining admission to the United States. They were armed with credentials from U.S. Consul-General Leonard. They are students from the M.E. Mission in China, and are to enter the University of Michigan.

The Senate passed a resolution authorizing foreign exhibitors at the Exhibition to bring to this country foreign labourers for the purpose of preparing for and making their exhibits. This resolution was favorably reported to the House of Representatives; but, whether it came to a vote or not, I am unable to state.

The following letter from the Assistant Secretary of the Treasury to Director-General Davis will be of interest to all foreign exhibitors:—

The department is in receipt by reference of a copy of a letter addressed to you by Lehnars Alquist, official representative of the Imperial German commission, dated Chicago, July 15, in which he inquires: 1. Whether, in case of exhibits sold at the exposition or delivered to the purchasers without the duty must be paid on the empty cases, a. Whether, if empty cases are destroyed by the heat or damp weather or any accident, duty must be paid thereon and, 5. Whether if an exhibitor has sold one piece out of a case containing, say fifty pieces of china, he will be required to pay duty on the remaining forty-nine pieces at the close of the exposition in order to get the exhibit out of the bonded warehouse. He also inquires whether there will be any charge for the time the empty cases remain in the store-house.

In reply to the first case, the duty must be paid on the value of exhibits, including charges of packing, and that no other duty will be charged on the empty cases left by the purchasers in the possession of the exhibition. 2. That the duty is on the exhibits imported, including the duty on the cases, and no refund or rebate of such duty can be made on account of the destruction of the case after the goods have been removed therefrom. 3. That exhibitors will be required to pay duty only on such articles as are not exported at the close of the exposition. The requirement in paragraph 18 of regulations of Nov. 5, 1891, which specify that withdrawn or bond can not be made for less than one entire package refer to articles withdrawn for bond for sale and delivery during course of the exposition, and not to exhibits sold to be delivered at the close of the exposition. No charge will be made for the storage of empty boxes.

It has been suggested that Hon. J. G. Blaine be sent as an official envoy to the leading crowned heads of the world to invite them to attend the Exposition. If that suggestion is carried out, you will have a visit from our second Henry Clay.

The post-office department is preparing designs for a special Columbian issue of stamps, of which probably the two cent stamp will contain the head of Columbus, and the others will have various appropriate scenes, such as the landing of Columbus, the convent of La Rabida, etc.

John B. Thacher, a World's Fair Commissioner from New York, has suggested that the Exposition be opened, not on May 1st, but on May 5th, 1893. He says that on May 5th, 1507, was printed a little book which first gave the name "America" to the newly discovered land; and thinks that a delay of four days in the opening of the Exposition would make no particular difference.

The Exposition Treasurer has received from the City Comptroller the last \$500,000 installment of the \$5,000,000 worth of bonds voted by the city of Chicago. This sum, together with stock subscriptions, is expected to last through this month.

The deadlock in the House of Representatives over the World's Fair appropriation was finally broken. The excessive heat persuaded both parties to accept a compromise, which on August 3 was suggested and voted in the Democratic caucus. By this arrangement, the matter of the special appropriation was taken out of the sundry civil bill, and was voted on by itself in the Durbin bill, which was, however, amended so as to give only \$2,500,000 to the Exposition. A very small squad of Southern Democrats, under the lead of two or three Texans, tried to defeat the compromise by filibustering and every conceivable scheme, but failed. On August 5 the bill passed the House of Representatives by a majority of 48; passed the Senate without a division; and about 8.45 p.m. was signed by President Harrison. It is a disappointment to the World's Fair managers to get only "half a loaf," but it is a satisfaction, that even with this amount the Exposition has been recognized as a public and national affair, which will surely be a grand success. The bill, as passed, reads as follows:—

Abill to aid in carrying out the act of Congress approved April 25, 1890, entitled "An act to provide for celebrating the four-hundredth anniversary of the discovery of America by Christopher Columbus and for holding an international exposition of art, etc."

dustry, manufactures and products of the soil, mine and sea in the city of Chicago, in the state of Illinois," and appropriating money therefor.

That for the purpose of aiding in defraying the cost of completing in a suitable manner the work of preparation for inaugurating the World's Columbian Exposition, authorized by the act of Congress approved April 25, 1890, to be held at the city of Chicago, in the state of Illinois, there shall be coined at the mints of the United States silver half dollars of the legal weight and fineness not to exceed five million pieces, to be known as the Columbian half dollar struck in commemoration of the World's Columbian Exposition, the devices and designs upon which shall be prescribed by the director of the mint with the approval of the secretary, and said silver coin shall be manufactured from uncurrent subsidiary silver now in the treasury, and all provisions of law relative to the coinage, legal tender quality and redemption of the present subsidiary silver coins shall be applicable to the coins issued under this act; and when so coined there is hereby appropriated from the treasury the said \$5,000,000 of souvenir half dollar, and the secretary of the treasury is authorized to pay the same to the World's Columbian commission, or, in his absence or inability to act, by the president thereof to the secretary of the treasury for labour done, materials furnished, and services performed in prosecuting said work of preparing said exposition for opening, as provided by said act approved April 25, 1890, until all such estimates and vouchers shall be made in duplicate, one to be filed with the secretary of the treasury, the other to be retained by the World's Columbian Exposition.

Provided, however, that before the secretary of the treasury shall pay to the World's Columbian Exposition the any part of said five million silver coins, satisfactory evidence shall be furnished showing that the sum of at least \$10,000,000 has been collected and disbursed as required by said act.

And provided that the said World's Columbian Exposition shall furnish a satisfactory guarantee to the secretary of the treasury that any further sum authorized by the act of Congress to be expended for the work of said exposition has been or will be provided by said World's Columbian Exposition; but nothing herein shall be so construed as to delay or postpone the preparation of the souvenir coins heretofore provided for; and there is hereby appropriated out of any moneys in the treasury not otherwise appropriated the sum of \$50,000, or so much thereof as may be necessary, to reimburse the treasury for loss on the coinage herein authorized.

Sec. 2. That the appropriation provided in this act shall be upon condition that the said World's Columbian Exposition shall maintain and pay all expenses, costs and charges of the great departments organized for the purpose of conducting the work of the exposition, said expenses, costs and charges to be paid out of the funds of the said World's Columbian Exposition.

Sec. 3. That 50,000 bronze medals and the necessary dies therefor, with appropriate devices, emblems and inscriptions, commemorative of said exposition celebrating the 400th anniversary of the discovery of America by Christopher Columbus, shall be prepared under the supervision of the secretary of the treasury at a cost not to exceed \$60,000, and the bureau of engraving and printing, under the supervision of the secretary of the treasury, shall prepare plates and make therefrom 50,000 vellum impressions for diplomas; at a cost not to exceed \$20,000, or so much thereof as may be necessary to pay the expenditure authorized by this section, and authority may be granted by the secretary of the treasury to the holder of a medal, properly awarded to him, to have duplicates thereof made at any of the mints of the United States from gold or silver or bronze, at the expense of the person desiring the same.

Sec. 4. And it is hereby declared that all appropriations herein made for, or pertaining to, the World's Columbian Exposition are made upon the condition that the said exposition shall not be opened to the public on the first day of the week, commonly called Sunday; and if the said appropriations be accepted by the corporation of the state of Illinois known as the World's Columbian Exposition, upon that condition, it shall be, and it is hereby made the duty of the World's Columbian Commission, created by the act of Congress of April 25, 1890, to make such rules of said corporation as shall require the closing of the exposition on the first day of the week, commonly called Sunday.

Sec. 5. That nothing contained in the act shall be construed to supersede or in any manner alter or impair the force or validity of the provisions of section 15 of the act of Congress approved April 25, 1890.

The miscellaneous small appropriations were retained in the sundry civil bill, and were also compromised. For the government exhibit, instead of the Senate's \$500,000 and the House's \$316,000, the sum of \$480,000 was voted. For the national commission, instead of \$320,000 and \$25,000 respectively, \$220,000 were voted. The board of lady managers, instead of \$128,000 or only \$36,000, received \$110,000. The "incidental expenses" of the Director-General had been allowed by the Senate to the amount of \$10,000, but wholly disallowed by the House, and were finally fixed at \$5,000.

Among the representatives who voted against the World's Fair appropriation to the very last was Buckenridge, of Kentucky. Some time ago he was chosen orator of the day on the occasion of the dedication of the Exposition, Oct. 21st; but he is now likely to lose that honour, which may be given to Chauncey M. Depew, of New York.

After the passage of the World's Fair bill, the sundry civil bill and some miscellaneous measures, the Fifty Second Congress, at 11 p.m. of August 5th, adjourned its first session *sine die*. It has not made as creditable a record as was hoped from the large Democratic majority, which was, too large and unwieldy. It passed the regular appropriation bills, including a big fat sum for river and harbour improvements; but it laid the anti-option bill on the table till the next session in December. It passed a few tariff reform bills,—for free wool, free binding twine, free tin, free cotton bagging and free silver-lead ores: but these measures were all pigeon-holed by the Republican Senate. In general, the new members of the People's Party have conducted themselves in no ridiculous, but quite a creditable manner.

The political campaign is as yet rather quiet. The Republicans will have a branch head-quarters in Chicago in order, if possible, to save some of the Western States from impending loss. The recent state election in Alabama resulted in favour

of the regular Democratic ticket by about 10,000 majority; but the defeated candidate for Governor threatens to contest on the ground of fraud. General Bidwell was formally notified in San Francisco on August 5, that he had been nominated as the Prohibition candidate for President; and Dr. Cranfill will be officially notified soon of his nomination by the same party for Vice-President. General Weaver is the only Presidential candidate who has thus far made any campaign speeches.

The Canadian Government has surrendered on the question of canal tolls, and will hereafter make no discrimination against American vessels, by means of rebates to Canadian vessels, passing through the St. Lawrence and Welland Canals.

The United States will be represented at the coming international monetary conference by five able men:—Senators Allison and Jones, Representative McCreary, ex-Comptroller Henry W. Cannon, and General Francis A. Walker. Jones and McCreary are ardent silver advocates.

The situation at Homestead and Pittsburgh is quiet, and seems to be nearing a peaceable solution. The strikers have made a legal retaliation by securing the arrest of six officials of the Carnegie Company, Robert and William Pinkerton, and seven of the Pinkerton men. At the Duquesne mills there was one day a small riot between the strikers and non-union men who were going to work; but it was quelled by troops, and the day before yesterday almost all the old men returned to their work in those mills. This will probably hasten a settlement at the other Carnegie mills; in fact, it is now rumoured that the workmen's committee has been given authority to accept the new scale which calls for some reductions in wages. Mr. H. C. Frick has so far recovered from the murderous assault on him as to be able to go to his office and attend to business.

There is trouble again this year in the Transcontinental Railway Association over the enormous subsidy of \$850,000 paid to the Pacific Mail Steamship Company to get it to maintain rates. It looks now as if the association will dissolve, and thus the subsidy be lost. In that case, through rates between Japanese ports and Chicago, New York, etc., may take a tumble.

By-the-way, the following item appears in to-day's papers, which also note Mr. A. B. de Guerville's return to Chicago:—

[The Canadian Pacific, and Chicago, Milwaukee and St. Paul have just completed contracts with the Japanese government for the transportation of 2,000 middle-class Japanese from Yokohama to Chicago. The Japanese will be brought here during the World's Fair, their expenses both ways and while here being paid by the Japanese government.]

Another newspaper item informs us, that Rev. H. L. Hobart, of the North China Methodist Mission in Peking, spoke on the missionary work in China at the Des Plaines camp-meeting the other day.

The population of Alaska has been estimated at 31,795, of whom 2,287 are classed as Chinese and Japanese, and 12,784 are Esquimaux. The whites number in all only 4,303.

The Knights Templars are holding their annual convocation in Denver, Colorado. As the numerous railroads running to that place got into a war and cut rates tremendously low, there has been a big rush to that point. From Chicago to Denver freight cars have had to be brought into requisition to carry the enormous crowds. But I leave this matter for your Denver correspondent.

A special train, carrying 20,000,000 of gold coin, and guarded by U.S. soldiers and artillery, has safely made its way from San Francisco to Washington. This is said to be "the largest transcontinental shipment of specie ever made by the government or by any person or corporation." Inasmuch as its departure and progress were duly proclaimed in the daily press, it is almost a wonder that the train was not wrecked and plundered. The daily papers, by-the-way, are often a serious obstacle to the detection of crime.

Chicago, August 22nd.

The other day, in a second hand book-store, I came across a copy of Professor C. R. Lauman's "The Japanese in America," and have been greatly interested in reading about the visit of the Japanese Embassy to this country just 20 years ago. They reached Chicago, en route from San Francisco to Washington, on February 25th, and remained here till the 29th. As this was only a few months after our "great fire," they were enabled to see for themselves what devastation and suffering had been caused. With the usual Japanese kindness and generosity they left with Mayor Joseph Medill, editor of the *Tribune*, a donation of \$5,000 for the sufferers from the fire. At Washington they were honoured with a formal reception by the House of Representatives, whose Speaker, Hon. James G. Blaine, delivered a cordial address of welcome, as follows:—"Your Excellencies:—On behalf of the

House of Representatives I welcome your Imperial Embassy to this hall. The reception which is thus extended to you so unanimously and so cordially by the members of this body is significant of the interest which our people feel in the rapidly developing relations between the Japanese Empire and the American Republic. The course of migration for the human race has for many centuries been steadily westward—a course always marked by conquest, and too often by rapine. Reaching the boundary of our continent, we encountered a returning tide from your country setting eastward, seeking, not the trophies of war, but the more shining victories of peace; and these two currents of population appropriately meet and mingle on the shores of the great Pacific Sea. It will be my pleasure to present to you personally the representatives of the people; and I beg to assure you, for them and for myself, that during your stay at our capital you will be at all time welcome to the privileges and courtesies of this floor."

The September number of the *Magazine of Fiction* contains "Love in Nippon," by K. I. Takahashi.

Among the speakers one day at the Des Plaines camp-meeting was Mr. Y. Okano, who gave a talk on missionary work in Japan.

Dr. H. G. Underwood, of Korea, has several times supplied a Presbyterian pulpit in this city, and once took for his morning subject "Korea and the Koreans."

The Rev. Dr. and Mrs. Henry Martyn Scudder have taken up their residence in Winchester, a suburb of Boston, in the neighbourhood of Dr. Scudder's daughter-in-law, Mrs. Ordway, and there they expect to make their future home. Dr. Doremus Scudder has left Chicago to visit his parents. What particular work he will take up on his return to Chicago he has not yet decided. It will, however, be akin to that with which he has been so faithfully identified at the Workers' Church of Christ.

H.M.S. *Warspite*, returning Aug. 14 to Esquimaux Harbour from a month's cruise during "the small-pox scare," ran over a sunken rock in Discovery Pass, and sustained injuries to the amount of from \$30,000 to \$50,000. She is now in the dry dock.

Hon. John G. Warwick, M.C., of Ohio, died August 14th in Washington. He had served as Lieut. Governor of Ohio, but was more famous because he defeated McKinley for Congress in 1890.

The state and congressional tickets are being rapidly put in nomination, so that by September 1st the campaign will be well under way. The "first gun" for the Republicans in Illinois was fired by Whitelaw Reid at Springfield, August 18th, under the auspices of the Republican League Clubs. There was a big demonstration with thousands in line in a torch-light parade. Mr. Reid made an eloquent and, from a Republican point of view, convincing speech. As a Vice-Presidential candidate, he is an improvement on Morton. Stevenson, too, is a good speaker.

Whitelaw Reid spent a day here on his way home, and was, of course, kept busy with receptions, public and private, a lunch at the Union League Club, and a visit to the World's Fair grounds.

It is quite probable that the World's Columbian Exposition will realize \$5,000,000 from the souvenir coins authorized by Congress. The authorities early received bids of \$4,000,000 and \$4,500,000 for the whole lot; and every day are receiving bids for smaller quantities at various rates, even as high as \$1.00 or \$1.10 apiece. For the first souvenir half-dollar coined the highest bid at present is \$1,000. The first public suggestion, that the 5,000,000 half-dollar souvenir coins be sold at one dollar each was made by the *Inter-Ocean* of this city, and has been received with favour by the authorities of the Exposition. The Executive Committee, without a dissenting vote, passed the following resolution:—

Resolved, By the board of directors of the World's Columbian Exposition, that the treasurer of this corporation be and is hereby authorized to dispose of souvenir coins provided to be issued by the United States in aid of the World's Columbian Exposition, by the act of Congress, approved August 5, 1892, at the price of \$1 for each of said coins as follows:

The treasurer shall sell the said coins in sums of fifty or multiples thereof only. He shall accept no order for said coins unless the said order is accompanied by the requisite amount of money to pay for the coins ordered or its equivalent in paper upon which the cash can be realized immediately in Chicago; he shall accept no order except upon the expressed condition that it shall be filed only in the event that the said coins so ordered are received from the United States; he shall comply with applications for said coins in the order in which the applications are received.

You had better send your order at once!

The report of the Exposition Treasurer to August 11th shows receipts to the sum of \$10,177,582.04, disbursements of \$8,216,981.99, with almost \$2,000,000 on hand. Auditor Ackerman's report

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

on expenditures to July 31st shows that Japan had already spent almost \$10,000.

The Finance Committee has made an estimate, that a little more than \$18,000,000 will need to be expended before the opening of the Exposition, May 1st, 1893. It is pretty certain that the excess of that amount can be easily realized from admissions to the grounds; so that the sum of \$18,000,000 remains to be secured. The present available resources amount to \$10,500,000; and the souvenir coins at face value would bring \$2,500,000 more. There would thus be lacking \$5,000,000 to be raised by debenture bonds; but, if the souvenir coinage, as is expected, brings in \$5,000,000, the amount of debenture bonds will be reduced to \$2,500,000. Whatever the amount, it will be raised without any difficulty.

Mr. W. T. Baker, President of the World's Columbian Exposition, has been compelled by failing health to resign his position; and Mr. H. N. Higginbotham, of Marshall Field and Co., has been elected unanimously to fill out the unexpired term. Mr. F. W. Peck becomes First Vice-President. The lack of harmony between the national commission and the local directory has been the source of a great deal of trouble and delay in the prosecution of the work. But now, by means of a conference committee composed of members of both boards, compromise has been effected in the formation of a "Council of Administration," invested with "concentrated powers" which may be exercised "with promptitude" when and as occasion requires. The duties of Director-General Davis and of "Director of Works" Burnham have been carefully specified and distinguished. This new Council consists of Messrs. St. Clair and Massy of the National Commission, and Messrs. Higginbotham and Schwab of the Directory, and will expedite matters.

The dates for the dedication of the Exposition building have been formally changed, in accordance with the vote of Congress, to Oct. 20-22, with Oct. 29 as the day for the special ceremonies. There will be 50,000 invitations to the dedication issued and 70,000 complimentary cards, good only on Oct. 21, will be distributed. Each Member of Congress will receive 50 invitations.

It is quite probable that printed tickets, instead of 50 cent pieces, will be required for admission to the Exposition.

On the 20th inst., President Harrison issued a proclamation, dated the 18th, suspending the free navigation of St. Mary's Falls Canal, and imposing a toll of 20 cents a ton upon all freight passing through that canal from Canadian ports on and after Sept. 1. It has been publicly, though not officially known, as I stated in my last letter, that the Canadian government intend to stop their discrimination against American vessels passing through the Welland and St. Lawrence Canals, but not till next year; hence, the President issued his proclamation to bring the Canadians to time. At the request of Mr. M. H. Herbert, *Chargé d'Affaires* of the British Legation, Secretary John W. Foster held back the proclamation two days to give Mr. Herbert an opportunity to hear from the Canadian Cabinet. As no official answer came, the proclamation was promulgated; but it can easily be suspended or revoked, if the other party discontinues at once the objectionable toll. The President was authorized by Congress to levy in retaliation a toll "not to exceed \$2 per ton;" but he has directed that the sum be fixed at 20 cents, which is the amount charged by Canada through the Welland Canal.

The Sublime Porte is also in trouble with the United States over the lack of protection to American missionaries. Various outrages have compelled us to send two gunboats to the Bosphorus to demand reparation, indemnity, and protection. The Sultan "must doff his fez."

To thinking men, who are by no means pessimists, the continued contests between capital and labour, are a source of great anxiety. Since last writing, matters in Pennsylvania, with the exception of a conflict between union and non-union men in Pittsburg, have been very quiet. But there have been serious riots with bloodshed and destruction of property in Tennessee and in New York.

In Tennessee it was a renewal of the war against convict labour in the mines. At Tracy City on the 13th inst. a body of armed miners fired the stockade, disarmed the guards, and returned the convicts to prison. The next day the same thing was done at Inman; and on the 15th it was attempted, but failed, at Oliver Springs. The militia had to be ordered out and sent to Coal Creek, one scene of last year's trouble. Before their arrival the guards there had several times repulsed the miners; but their commander, Captain Anderson, had been treacherously captured from under a flag of truce. On the 18th, however, the troops under General Cornes came to the rescue, and fought a battle with the miners. Both sides had

killed and wounded; but the rioters were defeated, and had to give up Captain Anderson. The next day two or three leaders of the miners were captured; and since then about 450 men and boys have been arrested. At this writing "peace reigns temporarily;" but it is feared that the armistice will not last long.

Another scene of riot and ruin during the past week has been Buffalo, N.Y. The switchmen on the Reading road made a "strike" for higher wages, and went so far as to assault suspected "scabs," and to burn or wreck cars. As the police proved insufficient to maintain order, the State troops were called out on the 16th. The strike rapidly spread to the switchmen of other railroads running into Buffalo, and even to those in other places. The militia have been gathering from all parts of the State, and have had skirmishes with the strikers. The latter are hoping that the firemen and, perhaps, the engineers will go out on a "sympathy strike;" and that trainmen, conductors and telegraphers will follow. Even now great loss and inconvenience have been caused in the delay of traffic and travel; as it is only rarely and with great difficulty that a train can be moved out from Buffalo.

In all these cases the sympathy which might naturally flow to the cause of labour against monopoly is forfeited by acts of disorder and lawlessness. Whether in Tennessee, or New York, or Pennsylvania the authority of the State must be upheld and honoured.

It is gratifying to learn, that, in spite of the labour troubles, business is active, money is abundant and easy. The prospects for crops, and for the fall trade, are considered bright.

An important financial event of the past week was the redemption in gold of 1,000,000 in silver certificates, at the Sub-Treasury in New York City. But can the United States alone maintain long the parity of the two metals?

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

Boston, Massachusetts, August 20th.

In my last letter, I gave an account of the murder of Andrew J. Borden and wife, of Fall River of this State. The murder was committed about eleven o'clock in the morning, August 4th. Between half-past ten and eleven o'clock, Mr. Borden was seen to enter the house. Fifteen or twenty minutes later the murder was discovered. It was the most frightful, the boldest, most mysterious murder in this country since the Nathan murder in New York. The facts are interesting—some of the details not given in the last letter. If the murder was not planned by some member of the family, the conjunction of circumstances favourable to the commission of the crime was at least remarkable. According to the testimony of members of the family, Mrs. Borden was not seen after nine o'clock, when she went to the upper part of the house. The stomachs of the murdered persons sent to a chemist, showed that Mrs. Borden was killed sometime before her husband. Both had breakfast at the same time and the process of digestion showed that one had been dead longer than the other. There was at first and is now, theories of poisoning and the contents of the stomachs were analyzed to determine. Some claim, even now, that the Bordenes were poisoned before they were murdered, but that could not have been the case with Mr. Borden. He went out after breakfast, and Mrs. Borden went to the upper part of the house to arrange the guest's chamber, then occupied by a man named Morse, a relative of the family, who was visiting there. Morse was practically under arrest after the murder, but has been discharged as he has proved where he was on that morning at the time of the murder. Was Mrs. Borden killed soon after nine o'clock, and then did the murderer wait for Mr. Borden who was expected to return about eleven o'clock? At all events Mr. Borden returns about eleven o'clock. Contrary to custom, he finds the front door locked and is obliged to ring for the servant, Bridget Sullivan. He enters, goes to the sitting room, lies down on a sofa to take his morning nap as usual. His daughter, Lizzie, arranges his pillows for him, and then goes to the barn, according to her story, to look for "sinkers," pieces of lead to weight a fishing line, for she is going to Marion, a summer resort, to stay for a time and will fish while there. She says that she stays in the barn twenty minutes looking for the sinkers, although the sinkers were found within three feet of the door after the murder, and only a moment would be required, apparently, to get a handful; but she says that she was here twenty minutes, although the barn on that unusually hot day was like an oven. Miss Borden returns to the house and finds her father lifeless on the sofa, where she left him twenty minutes before, with twelve hatchet cuts in the head. She rushes into the hall and

calls for Bridget Sullivan, who had been sent to the attic to wash windows. Miss Borden explains that she did not call for her mother because she supposed that she had left the house. Miss Borden relates that on that morning her mother (step-mother) received a letter from a friend asking her to visit her. This letter, however, has not been found, and the boy, who it is said brought the letter, or the person who sent it, have not been discovered.

Soon after the discovery of the body of the father, the mother is found in the guest chamber with twelve hatchet cuts in the head. The older daughter was out of the city at the time. It is not strange, then, that suspicion should be directed to Miss Borden. She was suspected at once and has been arrested, charged with the crime, and is now in Taunton jail awaiting trial. All Fall River is excited and divided. The Bordenes were rich and aristocratic, moving in the best society. Mr. Borden was miserly, some say almost to meanness, but he was also scrupulously honest,—perhaps a hard man in business. The daughters had in their own right ten thousand dollars. There was, according to all accounts, a lack of harmony in the family, although the younger daughter had not known any other mother, as her own mother died at her birth. But step-mothers, like mothers-in-law, are often crooked sticks in the family woodpile. There appears to be a lack of motive on the part of Lizzie Borden. Those who know her declare it impossible. She is represented to be modest, retiring, refined, liberally educated, and most active in the church. It is hard to believe that she committed these murders, but the evidence is against her. The hatchet with which the murders were committed was so sharp that it cut Mrs. Borden's hair as evenly and direct as though cut with shears—and cleft the skull at every stroke. It is claimed that the daughter had not sufficient strength to give these blows unless crazed or aroused to madness. But there is no clue to anyone else. In some States capital punishment has been abolished—was abolished long ago, but in Massachusetts the judge of the court in which the murderer is tried, sentences the murderer "to be hanged by your neck till you are dead."

The riot at Homestead has been quelled, but some of the strikers are still "exercising their functions,"—running down and maltreating the non-union men who apply for labour. The militia is still in the place; and this ill usage of newcomers must be done when it is not looking, and as it is looking most of the time, with guns loaded for business, only an occasional applicant is molested, but it shows the temper of the mob that it would be fatal to law and order to withdraw the militia. The people are beginning to think that this country may become an armed camp to keep order between capital and labour. But the Homestead affair pales just now before another similar outbreak. The switchmen of the Philadelphia and Reading system at Buffalo struck for higher wages a few days ago, and refuse to "handle" cars. Anyone familiar with the working of railways knows the result of a strike of switchmen at transfer centres, where hundreds, perhaps thousands of cars arrive and depart daily. It means that these cars must stay where they happen to be left till the company compromises with the strikers or secure others to take their places. The strike has extended to other roads and is still extending, and may draw into it all roads or their switchmen between New York and Chicago. The switchmen have not only struck and refused to work, which is sufficient to paralyze all freight operations centring at Buffalo and at other transfer points, but also they have begun to burn cars and their contents, to derail whole trains loaded with merchandise. The papers report the burning of one hundred and fifty loaded cars in one place. The hose of the fire companies was cut so that the cars must burn. There are or were one hundred and seventy three cars of live stock, sheep, hogs, and cattle, packed as they are usually so closely that they cannot move—so closely that the cattle, if they fall, cannot rise again and are trampled to death—this stock, standing in the sun, perishing for food and water, the switchmen refuse to move and would prevent, if possible, others from moving them. Humanity is not a trait of the striker. The switchmen claim that the incendiary acts are not theirs, but the acts of ruffians and thieves who make and take this opportunity to plunder. This has been the case sometimes, but there is doubt as to the truth of it now. The blockade of cars means the loss of all perishable merchandise in transit, and the loss is already enormous. Two regiments of militia are already on the ground in Buffalo, and a whole brigade is on the way, and their guns are loaded with powder and ball. The foreigner, the skulking vagabond from other countries, shows his hand in all disturbances of this kind.

Several years ago, a man moved from New England to Ohio, packing his household goods

in a railway car. He was well-to-do, and his goods filled one car. A strike took place at a transfer place, a railway centre somewhere in Pennsylvania. The strikers or somebody burnt cars and helped themselves to what they could get. Several months after, the man who moved from New England found by accident, in a store where second hand books were sold, near the place where the strike occurred, his family bible. That was all he ever saw of his carload of household goods.

The fastest horse in the world is a mare—Nancy Hanks by name. Maud S., "queen of the turf," at one time made a mile in two minutes and eight and three quarters seconds. Then Robert Bonner's Smol made a mile in two, eight and a quarter, and that was the "fastest mile" ever trotted in the world up to a few days ago. On the 17th of this month in Chicago, in the presence of twelve thousand people, Nancy Hanks trotted a mile in two, seven and a quarter. She made the first quarter in thirty one and a half seconds; half in one minute, three and three quarters seconds, and the third quarter in one minute thirty-six seconds and a half. Nancy had a "running helper," but not a running mate. Another horse driven by another jockey was driven a half length behind, yet along-side, so that Nancy "supposing" that another horse was about to go by her, made "extraordinary exertion" to keep ahead, and trotting against time, won without a break from start to finish in two minutes seven and a quarter seconds.

The mercury fluctuates between ninety and a hundred, and has most of the time a greater affinity for a hundred than for ninety. And we still live.

LETTER FROM GERMANY.

(FROM OUR OWN CORRESPONDENT.)

Berlin, August 2nd.

It is always instructive to hear retrospective declarations of great statesmen when out of office, because they are more likely to speak without reserve, and without fear of being compromised by their official relations. Of all the speeches Bismarck has made lately, there has scarcely been one more interesting than the discourse he held to the deputations from Baden, Hesse, Thuringia, and the Bavarian Palatinate, at Kissingen on the 24th ult. Not less than six special trains with 111 railway cars and 4,239 visitors had arrived at Kissingen in the forenoon. The crowd marched in the afternoon to the Saline, where Bismarck received them, and after listening to their addresses and orations, replied in the following manner: He began by expressing his thanks for the honours paid to him by the deputations,—honours, he said, which were of such magnitude as had to his knowledge never been shown to any German Minister before, in or out of office, and he had himself never experienced anything of the sort as long as he had been in office. He could only attribute this to the appreciation of the work he had accomplished with the assistance of others, and as he had the good fortune to be one of the last survivors, the merits of the achievement were now showered on him alone, though an essential part of it was really due to his co-operators who had now passed away. In looking backwards, he said, we must not forget that in the beginning of this century the dynastic interests were the paramount aim of politics, and the national interests began only to be the leading object during the present, or during the last, generation. He found that the individual cannot create the current of the times, he cannot only direct it when it is created; all he can do is to steer the vessel of state according to his firm convictions as to what is right; if he is fortunate, he will afterwards be considered as having merited well of his country, but if he is unskilful, he will be forgotten by posterity. Bismarck continued:—The movement for unity in the German nation commenced when I was born, namely, during the wars for the liberation of the Fatherland in 1830 and 1848; this movement was revived during the revolutionary events that originated with our western neighbour. The movement did not however succeed, for it was not fully comprehended by the people. To use a sportsman's expression, the gun missed fire, though the powder in the pan exploded. Looking backwards to the efforts of 1830, 1833, and 1848, those remembering the struggles in Baden and in the Palatinate for an Imperial Constitution in 1849, I can only say that they were premature and we are fortunate that they were not successful. If Prussia had been beaten on that occasion by the insurgents, no lasting condition of affairs could have been accomplished. It was equally providential that in 1866 also, the unitarian tendencies did not get the upper hand, for under the ordeal Germany had passed through, the unity would not have been accepted as satisfactory and permanent as is now the case.

We may assume that we found our unity and the Imperial crown amidst the French batallions. War was necessary for this object; we could only cut by the sword the entanglement of the old German Confederation, which was created under the malignant auspices of France. It was my task and duty to clear the way for the drawing of the German sword, a task I accomplished with my old master. When I was delegate to the Diet of Frankfurt, years ago, I was convinced that a national policy could only succeed if the King of Prussia and his army could be enlisted on its behalf. To my old master a war with Austria was difficult enough to decide upon, though it was impossible to avoid. And it was only natural that at the age of 73, the old Emperor should find it hard to go to war with France, though this war also was necessary for the establishment of the German Union. As long as France possessed Alsace and with it Strasburg, it was very powerful, a strength that could only be reduced by walking over Paris. It was fortunate that we were able to carry on this war by ourselves, for at the time no other Power would have cared to assist in creating a new great Power in Europe. In our political actions we had to count with and to oppose coalitions to which our military strength was no match. But now we may hope that this will no more be the case. The French war had to be watched and waited for until the French chose to lose their temper and to declare it. Just, as in the interest of Germany this war was unavoidable, so was there in the beginning the necessity for a degree of dictatorship.

After some allusion to the enemies which this dictatorship for the public good had brought on him, Bismarck referred to the present position of Germany in the following terms:—"We Germans, living in the centre of Europe are obliged to keep more closely together than any other nationality though we may feel it more difficult to do so. We must be united, otherwise we are lost! We have Russia behind us, covered by Asia; France in front secured by its ocean frontiers, but we have open country all around us, and must stand back to back if we are not to be run over. Against the outside we shall probably be united henceforth, but in our internal affairs this is more difficult, and we must expect to make mistakes from time to time. The desire for independence makes itself felt in individual persons as well as in political parties. Every political party is striving to obtain supremacy for itself, and will make no concession to others; it should be remembered, however, that the whole of our constitutional life consists in making mutual concessions. Extreme parties are not capable of exercising the duties of Government. We can make no use therefore of a Roman Catholic, nor of a Protestant theocracy. Confessional disputes are always to be regretted, and therefore we must renounce extreme opinions in order to possess a quiet and lasting Government. This should be in conformity with the average views of the educated German. I intentionally speak of the "educated German," for we can neither be ruled from the masses below us, nor by a theocracy above us—I therefore condemn begging for the votes of the masses.

When I was still in office I tried to overcome existing evils by an amalgamation of the middle parties. But the union established between the Conservatives and the National Liberals did not last. To all those who have an interest in strengthening our great work of unity, I beg to recommend the lessening of the antagonistic points between those parties who uphold the Empire. The Reichstag ought to be the culminating point of German unity, and should keep the high position it was created for. The authority of the Reichstag can only be raised by a still more complete union of the citizens, among whom I also include the first and highest placed of all. After again alluding to personal questions and vexations, and maintaining it as his personal right to continue speaking on political subjects, a right which his adversaries wished to deprive him of, Prince Bismarck concluded by proposing cheers for the Empire and the Emperor. This was responded to with much enthusiasm.

Critics of this speech cannot fail to notice that the ex-Chancellor now makes a point to revert to the necessity of upholding and strengthening the Reichstag. During his period of office he was rather impatient of the slightest manifestations of authority and opposition of Parliament. He may regret now that he did not in time think of the possibility of a retreat, and of securing a party there behind him. If he had now in the Reichstag anything of a party, he would have the satisfaction of hearing their applause, and of being able to give utterance to his opinions supported by the Representatives of the nation. The demonstrations of self-elected deputations from all classes of society may indeed be balm to his wounded feelings, but cannot restore to him what he may most desire—power—if

not to govern again, at least sufficient to crush his enemies.

The Government is keeping silence on all his last observations, and not only may this be the best policy, but it must be also granted that the last speeches of the Prince do not call for correction. As a rule all his direct utterances in public have not been of a kind to occasion any special retaliation. His conversations with newspaper reporters were very different, and these reports which cannot be traced actually to him, did more harm than he has perhaps been able to conceive.

On his way to his estates, Prince Bismarck stayed at Jena, where he received addresses, and made several speeches of a similar tenor to the above, but the report that he would pass a few days in Berlin turned out to be unfounded.

In the meantime, the Emperor has returned to Berlin, and if newspapers reports are true, his Majesty has strongly expressed himself against any further steps for the repression of the Ex-chancellor's opposition. Some papers believe and pretend, therefore, that Bismarck has powerful friends at Court. It would be, I believe, more correct to seek an explanation in the high feeling of the Emperor, who, as Caprivi's circular to the German Diplomatic agents expressed it, wishes everything to be avoided which could throw a shadow over Germany's greatest statesman. May we hope that this great statesman will now soon understand the present current of public opinion "among the educated classes" correctly, and not continue a critical opposition which gradually destroys his own pedestal, but as he has expressed it himself: "*naturam expellas furca tamen usque recurret.*"

BRITISH CONSULAR TRADE REPORT FOR KOREA FOR 1891.

Mr. HILLIER to the Marquis of SALISBURY.

Soul, April 20th, 1892.

MY LORD,—I have the honour to transmit herewith a Report on the Trade of Korea for the year 1891, to which are annexed tabular returns.

I have, &c.

(Signed)

WALTER C. HILLIER.

REPORT ON THE TRADE OF KOREA FOR YEAR 1891.

The following figures give the values of the trade of Korea which came under the supervision of the maritime customs. I have, as usual, to record my indebtedness to the Chief Commissioner of Customs for the information from which my returns are compiled.

NOTE.—In the tables appended to this report the sterling value of the dollar is reckoned at 9s. 4d., which represents the average rate of exchange for the year 1891 as fixed by Her Majesty's Treasury.

	1891.	Value.	1890.
Exports to foreign countries.....	561,057	...	591,746
Imports from foreign countries.	876,078	...	790,261

Total value of foreign trade. 1,437,135 ... 1,382,007
This shows an increase in 1891 of 55,128*l.*, notwithstanding a decrease in the export trade of 30,689*l.*

	1891.	Value.	1890.
Exports of native produce to Korean ports	94,125	...	121,018
Imports of native produce to Korean ports	205,017	...	251,828

Total value of coast trade 299,142 ... 372,846
Decrease in 1891 73,704 ...

The causes to which the decrease in the foreign exports and in the native coast trade are probably attributable will be referred to later on.

SHIPPING.

In shipping (Annex I.) there has been an increase of 44,292 tons, which is partly accounted for by the appearance of the Russian flag in Korean waters.

A line of steamers subsidised by the Russian Government has been established between Vladivostok and Shanghai, calling at Nagasaki, Fusan, and Yuenan, and I believe the results of the enterprise have proved most encouraging.

Vladivostok is rapidly becoming a commercial terminus of great importance, and as the construction of the Trans-Siberian Railway proceeds there is little doubt that trade will largely increase.

It is expected that a large portion of the brick-tea which now finds its way into Siberia via Tientsin and Kalgan, will eventually be shipped from Hankow to Vladivostok, while the extension of the railway cannot fail to open up new districts at present very sparsely inhabited, of which Vladivostok will become the centre. The

exports from Korea to Vladivostok now consist almost entirely of cattle and food-stuffs, but a native passenger traffic is being developed, which is likely to expand as the demand for labour increases. The growth of this little-known Russian port during the past few years has been very striking. Even in its present condition of isolation, and ice-bound as it is during at least 4 months in the year, it is astonishing to the visitor to see what progress has been made, and there is every reason to believe that when railway communication with the west is completed it will become one of the most important places in the far east. A large Chinese and Korean population is already established there, and vast tracts of apparently rich country remain to be opened up to the agriculturist.

One British ship appears in the returns, but after one trip under the British flag it was transferred to the Russian company above referred to. Rumours are current that two British firms are intending to place steamers on the Vladivostok line, which already affords employment for two large Japanese steamers.

I have referred in previous reports to the opening afforded for suitable steamers of light draught on the Han Kiang or Söul River. One small steamer under the Korean flag was put on last autumn, and the venture has, I believe, proved a very profitable one, but she is not of sufficient size or power, nor does she run with sufficient regularity, to divert much of the large traffic in passengers or goods that at present is carried on with the capital by road. This road is so bad as at times to be almost impassable, and I am convinced that steamers of suitable size and draught plying at fixed hours would attract the whole of the carrying trade between Chemulpo and Söul, and prove a profitable investment. This fact, I anticipate, cannot fail soon to be recognised, and it is a wonder to many that it has not been realised long ago. It seems almost hopeless to expect any improvement in the road between Chemulpo and Söul, or, indeed, of any roads in this country, although the need of better communication becomes daily more apparent. The maintenance and repair of roads is not regarded as an official duty. In fact it may safely be stated that public works generally are entirely neglected by the Government, the needs of the country in this direction being left to the people interested to carry out or not, as they please. It is not surprising, in view of the poverty of the people generally, and the official thralldom from which they suffer, that a state of apathy exists, and that public enterprise is conspicuous by its absence. It must be admitted that taxation, or at least direct and authorised taxation, is light; but it would be a dangerous experiment to place any increased power of legitimate taxation, however laudable the object for which it was imposed, in the hands of an official class who are notoriously underpaid, and who are obliged to support themselves and their numerous retainers by means of irregular levies from the districts under their control. It is by increased water communication, therefore, that the resources of this rich country must for the present be developed.

Unlike China, there are no artificial waterways, and to the best of my belief only four navigable rivers in the country, the Söul River, the Ping-yang River, the Yalu River, on the west coast, and the Nak-tong River near Fusan, on the east. By three of these rivers, at least, access can be secured to fertile areas, and steamers would give a great impetus to the export of grain. Ping-yang, unfortunately, still remains closed to foreign shipping, and the valuable coal-mine near the city, which is said to be capable of supplying an unlimited quantity of excellent steam coal, continues to be worked in the most primitive method. It is a matter of regret that the authorities have not yet realised the advantages to be gained by granting a concession to work this mine on scientific principles. Such a concession would secure a large revenue to the Government at no pecuniary risk, and confer a universal benefit.

EXPORTS.

In the list of exports (Annex II.) grain, as usual, figures for a large amount, the total export of all kinds being 93,755 tons. It was anticipated that the amount would have reached a higher figure, but over speculation on the part of exporters, and higher local prices consequent upon the depreciation of the cash currency, combined with a cattle epidemic of a very virulent type, which diminished the number of beasts of burden by over 50 per cent., acted as a powerful check to the quantities placed on the market. Another contingency arose, which was possibly unforeseen.

The demand for cereals has been so great that the price of food-stuffs in all the areas from which it was possible to send grain to the ports have risen to an abnormal height, with the result not only that prices were too high to make investments profitable, but that local consumers have been

caused much distress. Two years ago the price of rice, for instance, was 120 cash per picul; it is now 450, and with a depreciated cash currency the poorer classes have suffered severely.

The complaint amongst the people is very universal that the only result of foreign intercourse, as far as they are concerned, is the enhancement of the prices of all the necessities of life. The complaint is not an unnatural one. While there was no outlet for the products of the country, supply and demand remained at a more or less fixed ratio, but of late the prices of food-stuffs in particular have gradually assimilated themselves to those of the markets in adjoining countries, and, with a rise in the price of food, the value of everything else has increased in proportion. So primitive a people as the Koreans, who have been self-supporting for centuries, cannot appreciate any change, which means to them a harder struggle for existence, which it was difficult enough to support before, and they do not regard the clear gain of some 90,000% or more of revenue, none of which is devoted to their benefit, or the enrichment of a certain class of farmers, as an equivalent for the increased hardships to which they are subjected.

Herein lies the whole secret of the discontent. The ruler of the country benefits considerably by foreign intercourse. The people at present lose, and the burdens upon them remain the same as before. No doubt matters will right themselves in time, but as the distress I have referred to is confined to the neighbourhood of the treaty ports, and of this capital in particular, the immediate remedy seems to lie in the one direction in which the Government is slow to move, namely the improvement of the means of communication, which would afford an outlet for the products of inland districts, large tracts of which are at present uncultivated, simply because there is no means of getting surplus crops away. An element which contributes materially to the discontent is the steady influx of Chinese, and Japanese, who number in Söul alone about 1,300 and 1,000 respectively; while in Chemulpo there are 550 Chinese and 2,330 Japanese; the numbers at Fusan being—Japanese, 5,255; and Chinese, 138. The immigration is steadily continuing, and the value of house property in Söul is already double what it was 12 months ago, and five times higher than in the early days of foreign intercourse. The Japanese have occupied one quarter of the capital, where they have formed a settlement of their own; but the Chinese are spreading everywhere, and establishing themselves in the busiest quarters of the city, where by their thrift and industry they are gradually monopolising not only the retail trade in foreign imports, but that in native produce as well. Chinese pedlars are to be met with all over the country, as well as Japanese buyers of crops for export, and their operations are extending at so rapid a rate that Koreans are beginning to apprehend a gradual absorption of the industries of the country by these two classes of colonists. So far neither Chinese nor Japanese have turned their attention to agriculture, but the inducements to pursue this industry are great. With land so productive, and food, in spite of enhanced prices, still so cheap, there is no reason why the Chinese, with their natural genius for farming, should not abandon the less productive land of the Shantung province for the rich country that is lying waste in all parts of the kingdom. That they have not done so is probably due to the fact that there is a rooted objection on the part of all Chinese to break up their homes in their own country. Every Chinese clings to his ancestral place of domicile as a sort of sacred possession, and generally leaves his family there, returning to his home from time as funds and opportunities permit. This, and the fact that Korean farmers, knowing they cannot compete with the Chinese labourer, object to part with their land, seem to me the chief bars to Chinese immigration on an unlimited scale. Another obstacle is the fact that no capitalist will emigrate. A Chinese who comes to this country to farm must get his land for nothing, or next to nothing, and the Koreans will naturally not part with theirs on such terms.

To return to the export trade, the only other item that seems to call for notice is that of skins. A lucrative trade in wild cat, badger, and fox-skins is being gradually developed, and at the present rates, namely, 25c. for cats, 50c. for badgers, and 1 dol. for foxes, there are purchasers for all that can be put on the market. Tiger and leopard skins are to be had in fairly large quantities, but they are badly cured, and the prices are high; the price of a leopard skin being about 10 dol., and that of a tiger from 40 dol. to 60 dol., according to size. Sables are trapped in large numbers in the north, principally by Chinese, who send them across the border, but deer skins come down in large quantities. The export of cow-hides from Chemulpo has nearly doubled, but this increase is attributable to the epidemic of pleuro-pneumonia which prevailed in the autumn.

IMPORTS.

The import trade, a return of which will be found in Annex III., presents no novel features. In Annex IV., showing the total value of articles imported and exported, the imports are classified under three headings, namely, those from China, Japan, and Russian Manchuria. A large proportion of the imports from China and Japan are, however, as a matter of fact, goods of British origin landed in those countries, and re-exported from thence to Korea. I have been furnished with the following estimate of the actual share borne by each country in the import trade:—

Great Britain	£489,171
Japan	161,784
China	132,879
Germany	40,927
America	31,204
France	12,027
Holland	4,357
Austria	3,049
Belgium	521
Russia	159
	<hr/> £876,078

The demand for piece-goods continues steady, and is likely to increase in a direct ratio with the export trade, which, to repeat what I have said more than once, requires nothing but improved means of communication to grow at a rapid rate. That trade generally is expected to improve is demonstrated by the increasing demand for building sites at the treaty ports. At Chemulpo, in particular, holders of original lots are demanding five times the amount they paid, and a good deal of land has changed hands at these rates. A large proportion of the piece-goods imported are of British origin, but American drills continue to hold their own. I was recently informed by one of the largest importers of foreign piece-goods into Korea that he would prefer to buy English drills, which he considers better, and on the whole cheaper, but that orders for British drills are generally taken with a provision that strikes are to cancel contracts for delivery. This contingency is so possible as one that it is considered safer to buy in a surer if dearer market, where the fulfilment of contracts can be absolutely depended upon. In metal there is a falling-off. This is attributable to a diminution in the amount of copper cash manufactured during the year under review.

REVENUE.

The revenue collected was 91,590¹. After deducting salaries to customs officials and other costs of collection, the balance is paid over to the Royal exchequer. Some 3,000 dol. to 4,000 dol. a month, or, say 7,000¹. per annum, representing the salaries paid to the legal and financial advisers of the King, two American drill instructors, teachers in foreign schools, mint-master, &c., is said to be drawn from this fund, which has further to meet miscellaneous demands upon the privy purse; amongst others, the interest on debts to foreign firms purchase of arms, &c.

The amount of gold declared at the customs was valued at 114,846¹, but this can only represent a mere fraction of the amount exported. It is almost certain that 90 per cent. of the gold that leaves the country is not declared, in order to avoid the payment of freight.

GENERAL REMARKS.

As shown in the commencement of this report, imports from foreign countries have increased in 1891, while the export trade, together with the native coast trade, has fallen slightly behind that of the preceding year. A considerable increase was anticipated in all branches of trade, and that this anticipation was not realised is attributed to several causes, some of which have been already indicated. The summer was exceptionally wet, the rainfall being one of the heaviest on record; the country suffered from a virulent cattle plague; and the cash currency reached the lowest rate it has ever reached.

The heavy rainfall rendered the roads practically impassable for weeks together, and the rivers were so full that for a considerable period no boats could stem the currents. So high did the Söul River rise, that boats were anchored in the fields half-a-mile from the river bank, and on more than one occasion the country was under water for nearly 1 mile on either side of the ordinary channel.

The mortality amongst the cattle was phenomenal. This country, it should be explained, is noted for its fine breed of cattle, which are used exclusively in farm work, and share with the sturdy ponies—also an indigenous breed, small, but great weight carriers, with exceptional powers of endurance—the whole of the carrying trade. Hundreds of bulls enter this city alone every day with firewood, grain, and other commodities, and beef is a common article of food. The disease broke out in the early autumn, and as no measures

were taken to isolate the infected cattle spread with appalling rapidity. Dead and dying cattle were everywhere to be seen, and so great was the mortality and the risk of infection that animals worth 50 dol. or 60 dol. could be for 5 dol. of 6 dol., the value of their bones and hides. It is estimated by competent authorities that thousands of bulls must have died in the neighbourhood of the capital alone. In one instance there was said to be a loss of 63 head out of a herd of 65, in another five only out of 58 survived, and allowing for exaggeration I think the mortality might safely be computed at 60 per cent. or 70 per cent. The results of this epidemic very soon became apparent.

Firewood, an absolute necessity with all Koreans, who sleep on a heated floor all the year round, at once rose in price, until its cost was five times higher than usual, and this rate has been maintained ever since. Nothing can demonstrate the necessity for improvement of communications more forcibly than this fact. At a distance of 20 miles or 30 miles from Seoul the hill slopes are covered with dense scrub, which would fetch a high price in this market if it could only be brought down, but the cost of transport is so heavy that the price when laid down in the city would be prohibitive. The same remarks hold good in a less degree of grain.

Rice abounds, and is the staple article of Korean food, but the dearth of transport animals caused the price to rise from 120 cash to 130 cash per shing, or pint, in 1890, to 250 cash in 1891, while at the time of writing the price is 350 cash. The distress caused by this state of things was enhanced by the depreciation in the value of copper cash. As copper cash is practically the only currency medium in this country, and the salaries and wages of all classes are paid in cash, the distress caused by a depreciation of the value of this currency amongst receivers of fixed salaries, such as petty officials, soldiers, and the like, can easily be imagined. So keen did it become that there was a large exodus from the capital of the better classes, who preferred to vegetate in the country, where food and fuel were cheap, rather than to remain at head-quarters with enormous bills to pay for warmth and sustenance.

With regard to the depreciation in the value of copper cash, it should be explained that in Korea the standard of currency is not, as in China, sycee or lump silver, to which the cash coinage is subsidiary, but copper cash. These cash are modelled after the fashion of the Chinese coin, but were of somewhat better make and quality. In 1883 it was suggested to the Government that considerable profit might be made by the issue of 5-cash pieces in lieu of the existing 1 cash pieces. The suggestion was readily adopted, and a number of these 5 cash pieces, commonly known as "tangos" were forced into circulation in the capital and its neighbourhood, though their adoption has been successfully resisted in places remote from this city. The original "tangos," though of course not equal in weight or value to the number of 1-cash pieces they were supposed to represent—for therein lay the profit of the scheme—were none the less of fair quality, and exchanged for about 350, or 70 pieces, to the dollar. As the issue of these coins continued it was found more profitable to lease the privilege of making them to private speculators who paid a certain royalty per cent. As might have been anticipated, each new issue was inferior to the last, the latest specimens being made of brass instead of copper, with a large admixture of sand, and the value fell from 70 pieces, or 350 cash, to the dollar in 1883, to 680 pieces, or 3,400 cash, to the dollar in 1891. The difficulty of the situation was enhanced by the fluctuations of the market, a rise or fall of 10 per cent. in as many hours being no uncommon occurrence. Were it not for this latter peculiarity matters would not have been so bad as far as foreign trade was concerned, as higher rates could have been charged for imports in proportion to the fall in exchange, but foreign importers found it impossible to do business with so fluctuating a market, and for a time the import trade was almost at a standstill. The situation was, of course, worse for the Koreans themselves. So long as a Korean can get enough to eat and warm himself with, he is a very long-suffering individual, but cold and hunger not unnaturally render him desperate, and the Government were brought face to face with serious discontent, especially in the capital, where there are 5,000 soldiers to be maintained, not to mention a host of petty officials and their underlings, all in receipt of a fixed number of cash per mensem.

Various remedies were suggested, the most obvious being the recall of the debased cash and its replacement by a better coin, but as this would have involved the Government in heavy expenditure, a compromise was eventually adopted by the withdrawal for the time being of a certain amount

of the local currency, which was sent elsewhere and probably sold for its intrinsic value and melted down. The result was that exchange went up sufficiently to admit of a resumption of import business, though it was still low enough to bear hardly on the poorer classes, and the continuance of the depreciation, though less fluctuating, demonstrates the necessity for some improvement in the coinage. As I have said, the recall of the 5-cash piece and the resumption of a 1-cash coinage up to standard and weight is the obvious remedy, but the cost of such a change to the Government made them reluctant to face the question, and a compromise has now been effected which appears to be more economical, but will, it is to be feared, prove in the end expensive and ineffectual. It has been decided to make use of the foreign mint erected some years ago at great expense, but never used, and introduce a silver coinage. Arrangements have been made with a Japanese syndicate for a loan of 250,000 dol., which is to be devoted to the purchase of silver in Japan and its manufacture by a salaried agent of the syndicate into a coin which will be styled a 500-cash piece. This coin is to have a constant value of 500 cash, and subsidiary coins are to be struck bearing an equivalent cash value to the fraction of the 500-cash piece that they represent. Exchange offices, it is said, are to be established at the treaty ports, and the new coins issued to applicants, the cash presented for payment being gradually withdrawn from circulation. One obvious objection to the arrangement seems to be that it must result in heavy loss to the Government, who cannot possibly import silver and reissue it in the form of coinage at a rate which will compete favourably with the Japanese "yen" and Mexican dollar that have, under treaty, to be tendered in payment of maritime customs duties. Any departure from an absolute standard of purity will, I anticipate, be the ruin of the venture; while the new coin will probably be exported to China and melted down into sycee if it bears the value it is intended to represent.

Telegraphic communication was established between the capital and the northern treaty port of Yuensan on July 30th. It is intended to extend this line northward with a view to connecting eventually with the Russian land system.

I receive so many applications during the course of the year for information regarding the capabilities of this country in the matter of sport, and especially of big game shooting, that I venture to take the opportunity of offering a few remarks on the subject. That tigers, leopards, bears, and deer are to be found in large numbers in Korea, especially in the northern districts, is a fact beyond all manner of doubt; but although more than one sportsman has made an attempt to find tigers and leopards, none have as yet been shot. The word "tiger" has a painful significance to a Korean, for nearly every village in the north has a tragic story to tell of the ravages of this beast. In many places the people dare not venture out of doors after dark, and, when circumstances compel them to do so, they provide themselves with a plentiful supply of torches, and never travel singly, great reluctance being shown to taking the hindmost place in the procession. Tiger traps, built on the principle of a gigantic mouse-trap, are to be seen everywhere, and that they occasionally do work effectually is proved by the presence of raw tiger and leopard skins in the market in fairly large quantities. To shoot tigers, however, is a different matter. Koreans absolutely decline to act as beaters, and the only way the foreign sportsman can obtain a shot is to wait all night in a tree with a pig tied up at the foot. The darkness is generally an effectual obstacle to correct aim when the tiger does appear, and it may be that the watch has to be kept for many nights in succession in a lonely district, with accommodation of the most uncomfortable description. Bear and deer shooting also necessitate travel in almost uninhabited districts, involving the endurance of much hardship and the exercise of considerable patience, which is sorely tried by the laziness and trickery of porters and pony drivers.

Pheasants and wild fowl, on the other hand, can be shot in large quantities. The country near the coasts is the resort of millions of wild fowl, swans, geese, duck, and teal during the season; but the complaint of most sportsmen who have been amongst them is that the indiscriminate slaughter of birds that one cannot eat or carry away becomes wearisome very soon. Good pheasant shooting with the aid of a dog can be had anywhere within 50 miles of the capital, and improves as the traveller proceeds northwards, while trout and salmon are plentiful in the streams on the north-east coast. On the whole, however, the discomforts of travel in the interior are so great that they will deter all but the enthusiast.

Attention has been recently drawn by mission-

aries travelling in the interior to the prevalence of opium smoking near the Chinese border. The practice is, I imagine, purely local. The import of opium is forbidden by treaty, and there are no indications of indulgence in this habit by natives in these parts. It would be no difficult matter to smuggle opium into Korea if a demand for the drug existed; but it is not probable that so costly an indulgence will become prevalent in this country, where poverty is the rule, though actual want is happily the exception.

WATER FROLICS.

The swimming members of the Yokohama Amateur Rowing Club afforded a most diverting afternoon's amusement to a large assemblage of friends—among whom were a considerable bevy of the fair sex—on Thursday. The programme included a sampan race, greased pole, tournament, and water polo match, but the complete enjoyment of the affair was marred by a slight laxity in the management. The weather was cool, the sea in harbour lying perfectly smooth under a dull, grey sky—conditions very favourable to the competitors. A band was in attendance, and when things flagged on the water the ladies took advantage of the occasion to indulge in a few dances on the broad club house floor,—indeed, this amusement was kept up for some time after the sports had ceased, coloured lanterns being called into requisition to light up the merry scene. During the course of the afternoon the club hospitably entertained its lady visitors to tea and ices, a courtesy which was greatly appreciated. The Captain, Mr. J. Rickett, and Mr. T. Brewer, judge, were the officials of the day. Details are appended:—

DOUBLE-SCULL DINGHY RACE.

Captain of the Bathing-barge and the new *Sendo* 1
Captain of the Boathouse and Club carpenter, 2
This race was in substitution of a tub race, and was got up to allow members more time to prepare for the ensuing events. The "Old Skipper's" victory was very popular.

SAMPAN RACE—(MEMBERS ONLY).

F. H. Abbey	1
A. J. Watts	1
W. W. Campbell	2
C. K. M. Martin	2

There were eight sampans altogether collected around the post when the gun fired, and their occupants managed to set them in motion to a very irregular start. Accidents were frequent, and fouls the order of the day, on the run down in the stake boat. Then the two leaders managed to get clear of the bunch and a good race ensued. It looked a good thing for Martin and Campbell for some time, but gradually Abbey and Watt passed them, and got in first with a clear two lengths to spare, the rest nowhere. The erratic steering and handling of the native craft induced a good many jocular remarks, especially from the *sandos* and other Japanese collected near by.

GREASED POLE.

H. F. Arthur

About a dozen went in for this competition, and many ungainly tumbles took place ere Arthur succeeded in liberating the duck. The chase for the startled bird by the swimmers, was greatly interfered with by a crowd of boats who hedged them in on every side; eventually a *sendo* secured the quarry.

TOURNAMENT.

This competition was not finished, one more heat having yet to be decided. J. Eytan, jun., managed to upset two of his rivals, and held his own very well in both encounters. Thirteen entered for the event.

WATER POLO.

Teams:—Goal-keeper King Kingdon, J. B. Gibbs, jun., F. H. Abbey, and A. S. Goddard. Goal-keeper—H. Goddard, J. Eytan, jun., A. B.

Smith, and H. F. Arthur. The teams were mounted on corpulent steeds and appeared to enjoy their sport immensely, but the gathering dusk and the close intermingling of the rivals prevented much of the game being seen from the shore. Neither side managed to obtain a goal, but the tide was greatly in favour of Eyton's team.

The match between the messes of No. 11 and No. 71 was struck out owing to darkness, but a scratch race home on the "horses" resulted in favour of W. W. Campbell, Edwards making a close second.

THE CAPTAIN OF THE "MARY ROSE."

A TALE OF TO-MORROW.

By W. LAIRD CLOWES.

GOLD MEDALIST, UNITED STATES NAVAL INSTITUTE.
(FROM "THE ENGINEER.")

The story of "The Captain of the Mary Rose," of which we now publish the first chapter, is a story told with a purpose. Great diversities of opinion have always existed since the advent of ironclad ships, concerning the methods likely to be adopted in naval warfare. These diversities have been called into being, no doubt, by the various estimates which naval officers, artillerymen, engineers, and shipbuilders have formed of the value of this or that particular feature. Thus, one party claims overwhelming superiority for ramming over all other means of attack; a second party claims at least equal merit for big guns and quick-firing artillery; while a third group holds that the torpedo will settle the result of the next or any succeeding action which may take place, at all events near those coasts which it is one great function of the British fleet to defend. Unfortunately, the discussions which have taken place on these subjects in endless profusion have been mostly academic in character. They have not presented to the world a complete homogeneous picture of the probable or possible events of a great naval war. The dry bones have had no vitality. The arguments of the speakers or writers have not only been one-sided, they have been incomplete. We have long held the opinion that it was desirable to place before the world a living and vigorous statement of the views held by men of experience as to some of the weak and of the strong points in that system of naval defence on which Great Britain depends, not only for mere safety, but for commercial prosperity. But difficulties stood in the way. The publication of a treatise on torpedo attack and defence, for example, could not bring out in the vivid light desirable the possibilities of the next naval war. It could only proceed on the old lines. Little or nothing could be added to papers which have been read and the articles which have been published times and again. Something more than this was wanting; and reflection convinced us that the best, if not the only method available for teaching a desirable lesson and putting truths of the utmost importance before our readers, lay in following the example first set years ago by the author of "The Battle of Dorking," and telling the story of certain episodes in a Naval war between this country and France as though they had really occurred. Mr. Laird Clowes has brought to the task he has undertaken for us a thorough knowledge of his subject, acquired under conditions most favourable for seeing all that a Naval officer can see, and hearing the opinion of the best informed naval officers in every branch of their profession.

The telling of the story of "The Captain of the Mary Rose" will gain much in value if those of our readers who possess the requisite knowledge of the subject will express their opinions through our correspondence columns concerning the course of action adopted by those in command of the British fleet. For example, disaster attends certain operations. What course should have been adopted to avoid it? In what way, again, could the work done by the "Mary Rose" have been improved upon? We can assure our Naval readers that they will have ample scope for criticism of this kind; and it may perhaps startle some who still believe that "Britannia Rules the Waves" as completely she did at the beginning of the present century, to be told that most competent Naval officers hold that the story of the "Captain of the Mary Rose" is in no shape or way an exaggerated or even fanciful picture of impossible events. Enough has been said, however; we must now leave our readers to form their own conclusions. It was due to them that we should explain the circumstances under which a work of fiction finds its way into the pages of *The Engineer*. Truth is stranger than fiction, and some truths can more easily be taught the world by the aid of fiction than by any other means.

I.—A BOLT FROM THE BLUE.

On the morning of Tuesday, April 28th, 189—, the publication in London of the following Reuter's telegram created no small amount of uneasiness and excitement in commercial, as well as in political circles. The telegram was dated, "Toulon, Monday Night," and it was thus worded:—

"This afternoon a bluejacket, belonging to the British Mediterranean Fleet, which arrived here yesterday, got into an altercation in a café with a French seaman. Other sailors, British, and French, who were present, took sides; the argument assumed the dimensions of a quarrel; blows were freely exchanged; and the British bluejackets were last driven into the street, and thence to their boats. In the course of the disturbance some revolver and rifle shots were fired, it is believed by the Frenchmen, and, unfortunately, there seems to have been bloodshed, and possibly loss of life. Owing, however, to the excited attitude of the local population, to the extreme reticence of the police, and to the fact that a military cordon has been drawn round the scene of the outbreak, it is as yet impossible to obtain any trustworthy particulars. The Mari-

time Prefect at once went on board the British flagship *Victoria*. It is supposed that his object was to offer or to ask for explanations; but, upon his return to the shore, no public announcement was made, and nothing definite is therefore known. The situation, without being serious, may at any moment become so. The local authorities are in brisk telegraphic communication with Paris."

This telegram was, in itself, alarming; but the gravity of its import was increased a thousand fold by an announcement which followed it in the columns of *The Times*.

"The above news," said that journal, "is, so far as we can learn, the latest that has been received from France. It reached *The Times* office shortly after eight o'clock last evening. We at once took steps to obtain further particulars. We were, however, informed that between half-past seven and half-past eight telegraphic communications with France had been totally interrupted, and that all the Channel cables, as well as the Irish cable from Havre to Water-ville, had ceased to work. There is reason, therefore, to fear that the Toulon affair is of graver importance than Reuter's agent seems to have suspected when he sent off the dispatch. Up to the hour of going to press no further intelligence bearing upon the matter has reached us. We hope, however, to receive further news in the course of the night by way of Belgium or Holland, communication with those countries being still open. A copy of Reuter's telegram was, immediately after the arrival of the message, posted up in all the clubs, and exhibited in the windows of several newspaper offices in Fleet-street. The news caused much speculation and excitement, and, for the remainder of the evening, formed everywhere the sole topic of conversation. It is a subject for congratulation that Parliament is sitting and that all the Ministers are in town. In the Commons, as will be seen on reference to our Parliamentary report, the Under Secretary for Foreign Affairs rose at nine o'clock, and, apologising for interrupting the senior member for Northampton who at the moment was speaking in support of the motion for the appointment of a Royal Commission on International Arbitration, read the telegram to the House, which listened in hushed silence. In reply to several questions the right honourable gentleman stated that he had no further information, and that he trusted that, until further news should be forthcoming, the House and the country would, in deference to the susceptibilities of a friendly Power, refrain from demonstrations of any kind. He hoped that the affair would have no serious results; and he had every confidence, he said, that the French Government would act in the matter with absolute fairness. In answer to a question as to the alleged interruption of telegraphic communication, he replied that he had no information. At a late hour all the ministers met in informal conclave in the Prime Minister's room in the House of Lords. They had not separated when we went to press, and nothing, therefore, is known of the upshot of their deliberations. But in the lobbies, and among private members, the fact of the interruption of communications was definitely substantiated soon after ten o'clock, and it naturally excited much alarm. There is very little doubt that the cables have been deliberately cut; though a few sanguine people assert that the non-receipt of further news is due entirely to the effects of the storm which raged during the evening, and which, pitiless as it was, failed to disperse the crowds that thronged the neighbourhood of St. Stephen's in anxious expectation of hearing that some additional announcement had been made. The behaviour of the people was strikingly quiet and orderly. Strong feeling was, of course, general, but, for the most part, its exhibition was suppressed. That there were very few noisy demonstrations or patriotic harangues in the streets may, however, be partially attributed to the effect to the rain which fell in torrents.

"Upon inquiring at midnight at the French Embassy at Albert Gate, we were assured that no information as to the Toulon affair had been officially received.

"For the satisfaction of those who may be ignorant on the subject, we give in the next column the strength of that portion of the Mediterranean Fleet which anchored off Toulon on Sunday afternoon. (See Table A.)

"The rest of the Mediterranean Fleet consists exclusively of unarmoured cruisers and light vessels, and is composed of H.M. ships *Amphion*, *Dolphin*, *Cochetrice*, *Gannet*, *Hecla*, *Imogene*, *Landrail*, *Melita*, *Phaeton*, and *Sandfly*, with one or two stationary vessels. Several are in the Levant or the Red Sea, and none are nearer to Toulon than Malta or Gibraltar. Of the French ships at Toulon we have at present no particular information. We know, however, that there are at least twelve ironclads ready for, or actually in, commission,

several powerful cruisers, and a considerable number of torpedo boats, both large and small."

In a leading article on the Toulon affair, *The Times* advised its readers to suspend the formation of opinion until further news should be received; to abstain from any demonstrations which might make worse a state of things that was already sufficiently grave, and loyally to support the Government in whatever measures it might deem itself called upon to adopt. Much the same advice was given by all the other London morning papers, not one of which, it should be added, contained any more detailed news than appeared in *The Times*.

And, upon the whole, the advice was faithfully acted upon throughout that Tuesday of anxiety and agitation. A few roughs raised insulting shouts outside the French Embassy, and a truculent individual broke a window there with a stone; but in each case the police promptly interfered, and took the offenders into custody. No more news reached London until shortly before midday; but the early editions of all the evening papers contained the following telegram, which had been received by way of Brussels and the Middlekerke-Ramsgate cable:—

"Advices from Toulon report that, shortly after nine o'clock last night, the British Mediterranean Fleet, consisting of eleven battle ships, two belted cruisers, and four other vessels, quitted its anchorage off that port. A French squadron hastily put to sea at about the same time. The object of these movements is unknown, and in consequence, the most alarming rumours are current. Toulon is in a state of great excitement, and bodies of men patrol the streets singing patriotic songs. Several British blue-jackets were killed in yesterday's affray. The authorities refuse to give any information; but it is known here that last evening at a late hour all the submarine cables connecting the British Islands with France were cut by order of the French Government. All messages that cross the Franco-Belgian frontier are now jealously scrutinised, and several have been stopped."

During the day, with very brief intervals between them, many still more alarming telegrams poured in. The more important of them are quoted below:—

"Ostend, Tuesday, 12.15 p.m.—The British Ambassador to the French Republic has suddenly arrived here. Late last night he was roused from his bed and ordered to quit Paris at two hours' notice; and he was subsequently conducted by an armed escort to the Belgian frontier. He leaves at once by special steamer for England. The French Toulon Fleet, it is rumoured, put to sea yesterday evening, with orders to prevent the British Fleet from leaving until full satisfaction should be given for the alleged murders by British sailors during yesterday's riots. It is also rumoured that, in defiance of the Maritime Prefect's order to the contrary, the British Admiral has quitted his anchorage. The situation is regarded as most serious; and the dismissal of the Ambassador clearly points to a rupture. French troops are being rapidly concentrated at Cherbourg, Brest, Lorient, Dunquerque, and other coast towns; and it is whispered that, as a precautionary measure, a Belgian army corps is to be mobilised and is to occupy the frontier. Numerous British refugees from France have already reached this place."

"Dover, Tuesday, 12.58 p.m.—The passenger steamer *Victoria* started this morning as usual for Calais. When she was at a distance of about two miles from the French coast, a French gunboat hailed her and informed her captain that communication between England and France is forbidden, pending the issue of further direction from Paris. The *Victoria* had therefore no alternative but to return. Two other passenger steamers have been similarly treated. The excitement here is intense."

"Brussels, Tuesday, 1.50 p.m.—The French Government last night sent to the Admiral at Toulon orders which, if they be acted upon, can only bring about immediate war between France and Great Britain. The orders were to prevent, at all hazards, the British Fleet from putting to sea so long as the serious questions which were raised by yesterday's riot should remain unsettled. The exact nature of those questions lies in some obscurity. The pros-

Original from

pect of war is said to have already provoked unbounded enthusiasm in Paris."

"Flushing, Tuesday, 3.20 p.m.—It is reported that the formal declaration by France of war with Great Britain is only a question of hours; and it is believed that this precipitancy is due to the conviction which is entertained in French Government circles that England is just now very ill-prepared, particularly in the Mediterranean; and that France, by striking a sudden and unexpected blow, may produce results such as she could scarcely hope to attain, if ample time were allowed her adversary for the making of complete preparation."

"Portsmouth, Tuesday, 3.30 p.m.—Orders have just been received here for the immediate commissioning of every ship in harbour that can, by any exertion on the part of the dockyard officials, be made ready for the pennant, and for the hurried preparation of all rest, not excluding several old vessels that have recently been advertised as 'For Sale,' or even some obsolete gunboats. Similar orders have been telegraphed to each of the naval ports. The dockyard, where, until to-day, work was slack than it has been since the departure of the ships for last year's Naval Manœuvres, is already the scene of feverish activity. The coast-guard ironclads have been directed to assemble with all haste at Spithead, and not to wait for their full complements, but to leave their respective ports as soon as they can get up steam. Some of them are expected to-morrow. The Naval Commander-in-Chief is now concerting with the General in command of the Southern District elaborate measure for the defence, by means of mines, booms, and picket-boats, of the port and of the anchorage at Spithead, and to-night the carrying out of their plans will be begun. Masthead electric lights of novel design are being fitted to some of the larger battleships. These are so arranged as to shed a zone of illumination all around the vessel, but to leave the craft herself in comparative darkness, and it is confidently expected that they will be of great value should our squadrons be obliged to anchor at night within raiding distance of the enemy's torpedo boats. Some experienced officers, however, are of opinion that a ship which desires to remain exempt from attack should on no account exhibit a light of this kind, since it must of necessity be visible from a considerable distance to the foe, and they do not hesitate to say that, even if they be supplied with it, they will not use it. The advantage of the light lies in the fact that no ship so long as she employs it can possibly be closely approached by any enemy that does not expose himself to a very dangerous extent. On the other hand, it is pointed out that the apparatus is large, and offers so fine a mark for machine-gun fire, that it could doubtless be easily extinguished by moderately good gunners at 3,000 yards, or even more. Experts here are loud in their regrets that this device, which is quite new, in common with other electric lighting devices which are much older, has not been properly experimented with in peace time, and that, in consequence, no certainty exists as to either its practical utility or its vulnerability. Unfortunately there are symptoms of the existence of friction between the naval and military authorities, nor can this be wondered at when it is remembered by how vague and arbitrary a line their respective functions are divided. The feeling here is strongly to the effect that all the defences on the sea-front, should be unreservedly entrusted to the Navy and Royal Marines. On the other hand, there is an undoubted lack of both officers and men even for the manning of the vessels which are to be commissioned. So great, indeed, is the scarcity of stokers, seamen-gunners, and signalmen that only by calling out the reserves can even the immediate necessities of the situation be supplied. It is not certain, however, that the reserves will be of much use, seeing that the engines of modern men-of-war greatly differ, as a rule, from those of merchant vessels, that few men of the Royal Naval Reserve have any practical familiarity with heavy breech-loading guns, and that hardly any men, outside the service proper, are qualified as signalmen. There is also a scarcity of lieutenants, and a good many small craft will, if commissioned at all, apparently have to be commanded by gunners, carpenters, and boatswains. As for the local permanent defences, they are very imperfect. Many of the works on the land side have no guns at all, and the re-arming of Southsea Castle and the Spithead forts has not yet been completed. War is here regarded as good as declared. No one, and least of all naval men, can look forward to it with anything like light-heartedness, and many Portsmouth people regard the prospect with distinct apprehension, and propose to leave the town as soon as they can conveniently do so; yet the naval and military population here shows an admirable spirit, and numbers of retired officers of both services are offering their assistance to the Government."

"Brussels, Tuesday, 5.8 p.m.—There are grave reports from the South. It is said that a conflict of some nature has actually taken place between the British and French fleets off Toulon, but no details of any kind are given. There is also serious news from Paris. A declaration of war is undoubtedly by this time on its way to London. It was to have been dispatched at noon. The French capital is violently excited, and extremely enthusiastic. Very little news reaches this city, and that little slips through the fingers of very jealous French censors, dozens of whom must be employed along the frontier."

"Barcelona, Tuesday, 5.20 p.m.—The Italian steamer *Monte Pulciano*, which arrived here this afternoon, reports that very late last night, when off Toulon, she heard the sound of heavy firing, and saw in the sky the reflections of what seemed to be explosions on a very large scale. She did not, however call at any French port, and so brings no definite intelligence."

"Genoa, Tuesday, 6 p.m.—The news of difficulties having suddenly arisen at Toulon had scarcely reached this place ere rumours began to arrive to the effect that the French Admiral had received orders from Paris to destroy the British Fleet in case it should attempt to quit Toulon Roads. No one credited this report at first, but it must now be admitted that corroborative evidence of a kind is not lacking. A correspondent at Hyères telegraphs that most heavy firing took place late last night off that town, but, apparently, at a great distance out at sea, and that to-day some French men-of-war, which seemed to be somewhat damaged, entered Toulon. All messages from France are subjected to strict censorship, in consequence of the strained relations between that country and Great Britain. Too much reliance must not, therefore, be placed upon the trustworthiness of this news."

Then came the most unambiguous telegram of the eventful day.

"Dover, Tuesday, 6.20 p.m.—A French torpedo boat named the *Lance* has just entered the harbour under a flag of truce. The lieutenant in command of her brought dispatches which have already been sent on by train to the French Ambassador in London. Their purport is, however, no secret. They contain an announcement to the effect that the British Admiral having refused to consider the legitimate demand of the authorities at Toulon for apology and reparation in the matter of yesterday's riot, and having, in defiance of French orders to the contrary, quitted Toulon Roads while the grievances of the French Government remained unredressed, the French Republic declares war against Great Britain. There is intense excitement. The French lieutenant who was of course not allowed to land, departed as soon as he had communicated with the coastguard boat which went out to meet him. The civil population is apprehensive lest the town may be shelled to-night. Steam is being got up to work the turret on the Admiralty pier; and the men are to sleep beside their guns both there and in the various batteries on the heights. Stringent measures are to be adopted to preclude all possibility of a *coup de main*; and no vessels will in future be allowed to enter or leave the port until they have been searched. Very few people here are likely to sleep much to-night. Numbers of nervous folk are going inland without even waiting to pack up their effects. A large French man-of-war is now visible in the Strait, but her name is not known. It is hoped that she may be brought to action by the *Audacious* from Hull, the *Hotspur* from Harwich, or the *Iron Duke* from the Forth; for all these ships have been ordered to rendezvous at Spithead, and one or more of them is expected to pass Dover to-night. Here there is not so much as a gunboat; but it is believed that at the latest, by Friday, some of the coast defence ironclads will be assembled in the Downs, where, in case of need, they will be within easy reach of this most important position. No lights are to be shown to-night, and the windows of even private houses are ordered to be darkened. Pickets are to go round to enforce this rule. The town is already, in fact, though not in name, in a state of siege; and so long as hostilities last, it must be a prey to continual and very harassing alarms, if to nothing worse."

A later telegram explained that "the large French man-of-war" which had excited Dover was only a steam yacht.

These were not the only telegrams that brought the country to a quick realisation of the fearful suddenness with which she had fallen into a state of war with her nearest neighbour and most powerful maritime rival. There were many others, but the effect of all was the same. They startled England, not only with definite news of imminent hostilities, but also with the vague report, which was far more terrible, that some paralyzing blow had already been dealt against the Power which,

for three centuries at least, had prided herself upon being mistress of the seas. The nature and result of that mysterious blow were alike unknown; but lack of knowledge, fed by apprehension, often produce strange popular impressions; and the very absence of definite news from the Mediterranean Fleet was, at such a juncture, almost by itself sufficient to create very wild alarm.

The excitement in London increased, therefore, as the day wore on. The House met early, but the Ministers were able to say little that was encouraging. They were prepared, in case of necessity, to maintain the honour of the Sovereign and of the Empire; they had adopted such measures as prudence and the counsel of the most experienced officers suggested, and as their immediately available resources rendered possible; and they were, until late in the afternoon, not altogether hopeless that peace might still be preserved; but they had only the most meagre information to give; they were unable to inspire the public with that confidence which they professed to feel; and worst of all, they had absolutely no intelligence concerning the Mediterranean Fleet save that it had left Toulon on Monday night.

In the afternoon crowds gathered in Trafalgar-square, and other public places; and, in spite of the efforts that were made by the police to disperse the people, addresses—treasonable as well as patriotic—were delivered by persons who, whether they were loyal or not, would in the circumstances have more wisely kept their mouths shut. Most of the theatres opened as usual; and those which opened were thronged, for the temperament of the population at the moment required that men should congregate in any place where the latest news was likely to be obtainable. But no attention seemed anywhere to be paid to the performance. People loitered in the passages and foyers, and talked or listened with tongues and ears devoted to one topic only. As the successive editions of the evening papers came out, copies were brought in and handed round, and struggled for even by the musicians in the orchestra. Twenty-four hours previously, war had seemed the most improbable of catastrophes. It was practically certain now, and what its end might be no one could foretell. At the Lyceum Theatre "*Macbeth*" was being played. Towards the conclusion of the first act the curtain was suddenly lowered, and the familiar figure of Mr. Irving immediately appeared before it.

"Ladies and gentlemen," said the great actor, who was much moved, "news of a very grave character has this moment reached the theatre; and I deem it my duty to interrupt the performance in order to communicate it to you. I regret to have to say that, according to a telegram which I hold in my hand, the British Fleet in the Mediterranean was yesterday attacked by a French Fleet of superior force, and was very severely handled. There are, unfortunately, no details. I trust that the news is not really so grave as it at present sounds; but even if it be untrue that war has actually broken out, and that our brave blue-jackets have already been surprised by anything in the remotest degree resembling disaster, I feel that I shall only, in the circumstances, be forestalling your wishes when I announce that the performance cannot continue. Ladies and gentlemen, it is not for me, standing before you in this dress, to say much; but this I must say, the opportunity seems to have arisen for us to show that we are still the sons of our fathers. This, you will agree with me, we may do, not merely by volunteering or otherwise directly contributing towards the defence of our country; but also by lending a steadfast and loyal moral support to her most gracious Majesty's Ministers in this moment of terrible anxiety and public danger. England, facing her enemies, has always hitherto been as one man. Let us see to it that she be one man now. Let us banish all divisions; let us think not of ourselves, but of our country; and, believe me, though the path through this difficulty may be dark and terrible, we shall emerge into the light."

The earlier part of this brief address was listened to almost in silence. The latter part provoked first low expressions of approval and then cheers. When Mr. Irving had concluded, the audience, as with one accord, stood up bareheaded; and, as the orchestra played the first note or two of the National Anthem, there began a scene of indescribably contagious enthusiasm. People leapt upon the seats and waved hats or handkerchiefs; women burst into tears; and there was a confused babel of sounds which, in a few moments, blended into the solemn chorus of "God save the Queen."

(TO BE CONTINUED.)

TROTTING & PACING IN AMERICA.

BOTH RECORDS LOWERED IN ONE DAY.

THE *Inter-Ocean* of the 18th ult., gives the following account of two wonderful performances at Washington Park, where the trotting and pacing records were both broken on the same day:—

Nancy Hanks started at Washington Park yesterday afternoon to lower her record of 2.09. This she accomplished, and, at the same time, lowered all trotting records by covering the mile in 2.07½.

It was a few minutes after 5 o'clock when Budd Doble appeared behind Nancy Hanks. He came the reverse way of the track, and jogged the mare down to the head of the stretch, then turning her came by the stand at a thirty gait and slowing the mare down. As he passed the club-house he jogged her back and went down the track to the eighth pole, and turning started on what proved to be a most memorable journey. As he approached the stand he was joined by Frank Starr, who was driving the running horse Abe Lincoln. Doble nodded for the word, and as the mare's head passed under the wire Mr. Ijams shouted "go!" and a hundred watches clicked. She was on her stride nicely, and with the runner at her sulky wheel she trotted around the first turn, reaching the quarter pole in 3¼. Down the back-stretch she had to encounter quite a stiff breeze, and the second quarter was made in 3¼, the time for the half being 1.03½. Around the lower turn Doble took her back long enough for her to recover from her flight against the wind, and the third quarter, two-thirds of which is consumed in making the turn, was trotted in 3¼, the slowest quarter of the mile. When she passed the three-quarter pole in 1.36½ it was doubtful whether she would be able to do more than to knock a fraction of a second off of her own record, but she came like a summer storm.

Half way through the stretch the chances of breaking the record grew brighter and the crowd started to cheer, but promptly ceased at the request of the judges. She had reached the lower end of the stand when the crowd, trembling with a suppressed desire to yell, yielded to the admonition of the judges, and as she flew over the final furlong the big crowd was almost silent. The runner was plunging along at her sulky wheel and the new queen of trotters was moving like a beautiful, well-balanced piece of machinery as she went under the wire.

Only an instant of doubt followed and then the men with stop-watches who had been timing the mare gave the signal and the shout of a hundred men as they glanced at their timers became the roar of 8,000 voices. Everybody congratulated his neighbour that they had the good fortune to be present when all existing trotting records passed into eclipse. Then the crowd turned its attention to the new queen of the trotting turf and her famous driver. Doble had driven past the club-house before turning and as he trotted back a most remarkable ovation began with the waving of handkerchiefs on the club-house veranda and ended fifteen minutes later when the crowd had yelled itself hoarse cheering the mare, her driver, and even the name of Lincoln, in whose mother's memory Nancy Hanks was named.

Secretary Allen was the first to reach Doble, and before he had dismounted he was congratulated on behalf of the Northwestern Breeders' Association. Then the crowd insisted on a speech from Doble, but he made his escape and followed his pet mare over to the stable. W. P. Ijams announced the result and gave the fractional time. Then he called for three cheers for the new queen of the trotting turf and they were given with a tiger. Then cheers for Doble were proposed and the crowd outdid itself in enthusiasm for the premier reinsman.

Mr. Ijams again tapped the bell for order and said:—"Ladies and gentlemen: You have just seen the greatest trotting mare on earth, and she bears the maiden name of the mother of the greatest man this country has ever seen—Abraham Lincoln." Then the enthusiasm became epidemic, and just as quiet was being restored, Arthur Caton, who had captured Doble, brought him back to the judges' stand, and in response to loud calls for a speech he thanked the crowd for its appreciation. In the crowd was Hart Biswell, of Lexington, Ky., the gentleman who bred Nancy Hanks, and he came in for congratulations from all those that knew that he had bred the mare. As soon as Doble could escape from the crowd he sent a telegram to Malcolm Forbes, of Boston, who owns Nancy Hanks, announcing the result, but as Mr. Forbes is at present away from home on his wedding trip and the telegram

had to be forwarded to him to Boston, no answer was received up to a late hour last night.

Another telegram was sent immediately after the race that involves a good story. When Maud S. broke the record at Cleveland in 1885 and placed the mark at 2.08½, President Edwards secured one of the shoes worn by Maud S. and nailed it over the arched entrance to the diving park with the remark that he would present it to the association over whose track the record was beaten. He did not consider himself bound to give up the shoe when Sunol made her record of 2.08½ over a kite-shaped track and he has taken great pleasure in wiring to each association after an unsuccessful attempt had been made to lower the record that "Cleveland still has that shoe worn by Maud S. when she made the record." Before Doble had dismounted President Wheeler, of the Washington Park Club, was wiring a telegram to Mr. Edwards, announcing the result, and making a formal demand for the horse-shoe that for seven years has hung over the entrance to the Cleveland Driving Park.

One pleasant feature of the trial was the absence of all doubt as to the accuracy of the time. LeRoy Cagwin, of Joliet, took a seat in the press stand during the contest and timed each quarter. Before the official time was hung out he announced it as 2.07½. Governor Merriam, of Minnesota, timed the mare from a seat in the grand stand, and he also made it 2.07½.

Another record was lowered at Washington Park yesterday, and the present meeting now holds the honour of being the only one at which both the trotting and pacing records were wiped out. It was no fractional second victory over time in either case, for in each a full second was knocked off the record and the mark placed where it is as hard to get at as the name of George Washington carved more than a century ago in the sandstone of the Natural Bridge, Virginia, high over the point attempted by his most venturesome followers.

Hal Pointer, the new king of pacers, acquired the title at 6.30 o'clock last evening. During the afternoon a fresh breeze was blowing and the trial was delayed as long as possible in hopes that the wind would die away with the sun. It was much lighter when the trial was made than at any other time during the afternoon, but still strong enough to make it doubtful whether the record would be lowered. The betting was \$75 to \$50 against the accomplishment of the feat. Ed. Geers brought Hal Pointer out twice during the latter part of the programme and breezed him up and down the stretch. Before the trial a work team trotted around the track drawing an implement for smoothing the track, and then the great pacer came out accompanied by "Abe Lincoln," the runner, driven by Frank Starr. Geers scored up once, but shook his head and the judges tapped the bell. Then he came back, and turning two hundred yards down the stretch, he came to the wire on his stride with Geers nodding for the word.

He was sent away and moving beautifully around the turn, and reached the quarter in 4¼, a 2.07 gait. From the quarter to the half he increased his speed and reached that point in 1.02½, making the second quarter in 3¼. Around the lower turn Hal Pointer shuffled along with no sign of a skip or break and reached the third quarter pole in 1.34. From there home he simply flew. The running horse urged on by Starr could scarcely keep up. Geers was making the effort of his life and urging the horse by talking to him and shaking the whip over his back. When nearing the press stand the two minutes were up, and it was a sure thing that he would break the record for the wire was only two hundred feet away and Hal Pointer was devouring space at the rate of forty-two feet a second.

As on the previous occasion when Nancy Hanks made her record the outside watches agreed with the official time, and there was no question of its accuracy. Le Roy Cagwin took the time in the press stand, and as soon as Hal Pointer flew under the wire he announced it as 2.05½, which was hung out five minutes later as the official time. Budd Doble also sat in the press stand and made the time 2.05½.

There was a funny scene when Geers dismounted. The crowd of 10,000 people insisted that he should make a speech, but Geers, looking like a bashful boy, made his escape, and was nearly down to the paddock gate when Judge McDonald saw him disappearing and ordered the police to catch him and bring him to the stand. A couple of officers made the foot race of their lives to the saddling paddock, where Geers had taken refuge in one of the stalls, and a moment later they reappeared with their prisoner and delivered him to the judges. When Mr. Geers appeared in the stand there was loud applause, which ended for a moment when Mr. Walker called for order, and Mr. Geers thanked the crowd for their applause. Cheers for Hal Pointer, Mr. Geers, and Harry Hamlin, of Buffalo, the owner of the horse, were then given and the crowd dispersed.

PROBLEM No. 36.
By F. HEALEY.

White to play and mate in three moves.

CHESS PROBLEMS.

A correspondent commenting on Problem No. 33, which laid so many of our solvers *hors de combat*, remarked that it was a good specimen of the modern school. That there should be schools of the art of problem composition at all, may surprise some of our younger readers. And although we know of no such classification having ever been made, the task of doing so, would be comparatively simple. Briefly summed up, the schools developed themselves in the usual way, that is, when one style was found to be worked out, a new one was formed, until it in its turn, failed to yield the necessary concomitants of novelty and pleasure. The first school of all was that which existed up till Staunton's time—fifty years ago—and which consisted of problems, similar to that in 11 moves, forming the frontispiece to the "Chess-Players Handbook." Problems in five, six, seven, and eight moves were mere trifles to the players of those days. The Rev. H. Bolton, one of the great exponents of the school, revelled in positions whence White had to play and mate in 15 moves! Formidable as these structures appear, they are not so in reality, from the fact that the positions are "forced;" the key-move must be a "check," and Black has but one line of defence open to him. But Staunton in the *Illustrated London News* did much to popularise the game in England. Chess Columns soon began to appear in provincial papers, and then came in with S. Loyd, Dr. Gold, J.B. of Bridport, Meyer, G. E. Barbier, F. Healey, and a host of others, that school which had for its object, brilliancy of attack and defence combined with a minimum of force. Rarely was White required to mate in more than three moves; sometimes this was effected by dashing sacrifices, sometimes by obtaining the greatest range possible of the pieces employed. This school is not yet obsolete, as may be seen by referring to specimens published in these pages within the last eight months. But the Chess board has its limits; the situations are exhausted, and the efforts of to-day in this line will be found to be little else than variations of well-known positions which were fully exploited during the seventies. The modern school, so well represented by Mr. Heathcote, is more difficult to define; its main aim would appear to be intricacy of composition, like a novelist's plot, a wide field for the defence, and "mate in two moves" as a *sine qua non*. Surely evolution can no further go. And yet that such positions may possess considerable difficulty, is evident from the example referred to. To our mind, however, they lack the interest, the spontaneity, the beauty of the previous school; they are too artificial, one can see the process of building up too plainly. Whatever the future may bring forth, this school, at any rate, is surely not destined to have a long lease of life.

The Dresden Congress came to an end with the Original from

month of July, Dr. Tarrasch being the winner of the Masters' tournament, with a score of 12. We shall give details next week.

There is much talk of blindfold play in these days. In looking over the old chronicles we find that the ubiquitous Morphy played "eight games simultaneously without seeing the Chess board at the St. George's Club, London, 20 April, 1859. Of these games Mr. M. won five, three being drawn battles."

We give a short and lively rally which was one of the above mentioned eight games (score and notes by Mr. Staunton).

KING'S KNIGHT'S OPENING.

WHITE.	BLACK.
Mr. Morphy.	Mr. Worrall.

REPORTS.

The Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 4th September at 9.5 p.m.; had fresh N.E. winds with moderately heavy sea till midnight on the 5th; thence to Nagasaki moderate S.E. winds and swell with frequent heavy rain squalls. Arriving at Nagasaki the 6th at 4 p.m. and left the same day at 11 p.m.; had moderate easterly winds and fine weather to Shimonoseki, arriving the 7th at noon. Left the same day at 4.56 p.m.; had gentle N.E. winds and fine clear weather throughout the sea, arriving to Kobe the 8th at 2 p.m. Left Kobe the 10th at 7 p.m.; had moderate easterly wind and fine weather to Oshima; thence to Rock Island light N.E. winds with moderate S.E. swell and fine weather; thence to port light N.W. winds and fine weather. Arriving at Yokohama the 11th September at 11.10 p.m.

The American steamer *City of Rio de Janeiro*, Captain Smith, reports:—Left San Francisco the 27th August at 3.58 p.m.; experienced moderate to strong westerly winds with head sea almost the whole passage. Arrived at Yokohama the 13th September at 6.55 a.m. Passage, 15 days, 21 hours, and 29 minutes. September 10th at 9 a.m. lat. 41.18 N., long. 155.44 E. spoke British ship *Timandra* steering east; she wished to be reported.

The American steamer *Peru*, Captain Ward, reports:—Left Hongkong the 8th September; first part had fine weather and smooth sea; the 11th and 12th heavy gale from N.W. to west and high sea; latter part, wind S.S.W. settling down to moderate breeze and fine weather. Arrived at Yokohama the 15th September at 6 a.m.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Otaia the 10th September at noon; had light variable winds and overcast sky. Arrived at Hakodate the 11th at 7 a.m. and left the 12th at noon; had moderate southerly winds and clear. Arrived at Oginohama the 13th at 10.45 a.m., weather becoming boisterous and barometer falling. Left at 1.50 p.m.; had fresh breeze and overcast; at 3.30 p.m. weather threatening and heavy head sea, barometer falling still, turned back to Oginohama, when arrived at 4.50 p.m. blowing fresh during to-night, barometer 29.57. On the 14th at 2 a.m. weather moderating; at 5 a.m. left Oginohama, moderate breeze and overcast weather, strong southerly sea outside; had moderate breeze and cloudy weather and moderate sea to Noshima. Arriving at Yokohama the 15th September at 8.30 a.m.

The Japanese steamer *Sagami Maru*, Captain Pender, reports:—Left Kobe the 14th September at 12.15 p.m.; had light variable air and passing showers, cloudy and overcast weather; at 2.30 p.m. passed Tomaga-shima, with light northerly breeze and fine weather; at 3 p.m. met steamer *Wakanoura Maru* inward bound; passed Oshima at 9.50 p.m. with light southerly breeze and fine weather to midnight the 15th; at 2.40 a.m. met steamer *Saikio Maru* going west; thence to Rock Island with light variable breezes and cloudy weather; passed Rock Island at 1.15 p.m.; thence to

port light S.E. winds and cloudy weather. Arriving at Yokohama the 15th September at 7.23 p.m.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 9th September at noon. Arrived at Nagasaki the 11th at 3 p.m. and left the 12th at 5 p.m. Arrived at Shimonoseki the 13th at 8.30 a.m. and left the same day at noon. Arrived at Kobe the 14th at 7.55 a.m. and left the 15th at noon. Arrived at Yokohama the 16th September at 3.30 p.m. Experienced moderate to fresh N.E. gale with high head sea to Nagasaki; thence to Shimonoseki strong northerly gale with heavy head sea; Shimonoseki to port met with light variable winds and fine clear weather.

LATEST COMMERCIAL.

IMPORTS.

There has been a fair general business doing during the past week, and a much better feeling seems to pervade the market since the stocks pressing for sale have been so materially lightened. Grey Shirtings, gln., continue in good demand at full prices, but other Greys have not been much favoured. Some large sales of Prints and Turkey Reds have been made at improved prices, and fair lines of Velvets have also shared in an advance; of Silk-faced Satins considerable quantities have been sold at former rates, and there have been moderate sales of Italian Cloth and Mouseline de Laine. Yarns have met with ready buyers at reduced prices for arrival, and a fair demand has existed for spot cargo at about previous prices for certain spinings only. Bombays command very little attention. Sterling Exchange has remained very steady at 2/10½ for Bank on demand, though slight fluctuations have taken place in Bar Silver. Sales for the week comprise 950 bales English Yarn, 50 bales Bombays, 9,000 pieces gln. Shirtings, 3,500 pieces 24lb. Shirtings, 17,500 pieces Turkey Reds, 10,000 pieces Prints, 500 pieces Cotton Italians, 3,000 pieces Velvets, 750 pieces Silk-faced Satins, 3,000 pieces Italian Cloth, and 5,000 pieces Mouseline de Laine.

MRALS.

Considerable demand, but holders are strong, consequently sales are not by any means numerous. Quotations unchanged.

	PER PICUL.
Flat Bars, 1 inch	2.85 to 3.00
Flat Bars, 1 1/2 inch	2.95 to 3.00
Round and square up to 1 inch	2.85 to 3.00
Nailrod, assorted	Nom.
Nailrod, small size	Nom.
Iron Plates, assorted	2.95 to 3.15
Sheet Iron	3.55 to 3.80
Galvanized iron sheets	6.60 to 6.90
Wire Nails, assorted	4.80 to 5.00
Fin Plates, per box	5.00 to 5.20
Pine boards, 10 x 3	1.25 to 1.30

KEROSENE.

Since our last report, the ship *Robert L. Belknap* has arrived with 82,000 cases "Comet" brand; but this addition to stocks on hand has in no way weakened prices, the market still remaining strong with steady sales. We raise quotations 5 sen, although better prices in some cases have been obtained.

QUOTATIONS.

Comet	\$1.75 to 1.77 1/2
Comet	1.72 1/2 to 1.75
Devoe	1.67 1/2 to 1.70
Russian Anchor	1.67 1/2 to 1.70
Russian Moon	1.65 to 1.67 1/2

SUGAR.

Market has been quieter during the period under review, but prices are unchanged. Some arrivals have come in from the South, but stocks are in no way excessive.

	PER PICUL.
Brown Takao	\$4.70 to 4.80
Brown Daifong	3.50 to 3.70
Brown Canton	3.70 to 3.80
White Java and Penang	6.10 to 6.20
White Refined	5.50 to 5.60

EXPORTS.

RAW SILK.

Our last was dated the 9th instant. Since then, settlements on this market amount to 1,936 piculs, divided thus: *Hanks*, 36 piculs; *Filatures*, 1,336 piculs; *Reels*, 390 piculs; *Kakada*, 174 piculs. There have been no direct shipments this week, and the export business remains as above—1,936 piculs. After our last issue, the market was very quiet for a couple of days, and then one of the large operators for America suddenly entered the market, buying very heavily *Filatures* and *Reels*, so that about 1,200 piculs were settled on one day,—10th instant. Since then some degree of calm has supervened; yet still there is a fair daily business doing at a considerable rise in price over last week's quotations. Sellers are indifferent, having unloaded a large portion of their holdings at high prices, and the market is very firm, buyers having to pay full rates for any silk which they require. The best qualities are especially strong, very long figures having been paid for well-known chops.

Arrivals come in freely from the interior, and despite the large business done, the reduction in the stock list is only 200 piculs on the week. The available supplies to date are practically the same as last year, and the present high scale of values will bring forward plenty of silk, if buyers want it. Exchange has remained on an even keel all through the week, fluctuations in prices of silver in London having been very small.

There has only been one shipping opportunity since we last wrote, the French mail steamer *Melbourne*, which left port on the 11th instant, taking 557 bales for France. The export figures to date now stand, 11,160 piculs against 11,053 last year and 3,451 piculs at the 16th September, 1890.

Hanks.—Some few purchases have been made at unchanged prices. Among the recorded transactions we notice *Shimonita*, \$600 to \$605, with *Chichibu* \$570. Really high grades are very scarce this season and long prices are paid for good silk.

Filatures.—As customary during the present season, these have been in very strong demand, two-thirds of the settlements for the week having been in this class. On the 9th instant, dealers advanced their prices some \$15 or \$20 per picul, in anticipation of the large business of the 10th, on which day they were not disappointed, but were able to quit some very large parcels at their own figures. In fine sizes a large business has been done, best *Uzen*, *Mino* and *Goshiu* bringing prices ranging from \$810 to \$830, according to quality and brand.

Reels.—These have also been in strong demand, especially for the higher grades. *Five Girl* chop and equal thereto have realized \$740, and are now held for \$750. *Kirihana* has been booked at \$730, with other grades in proportion. Medium grades have also advanced and are strongly held.

Kakada.—A fair amount of business has been done at somewhat irregular prices; *Daruma*, *Ginko*, *Asahi suru*, \$755; *Asahi kame*, \$725; Common grades, \$630 to \$635. At the moment, nothing better could be done, although silks in this class are perhaps not quite so strong as are *Filatures*.

Oshu.—No business at all during the present week. Holders are firm and refuse all offers below quotations.

Export from 1st July	6,600	9,600	10,700
Stock, 16th September	21,000	21,600	14,000

WASTE SILK.

Settlements for the week are 1,418 piculs, divided thus: *Pierced Cocoons*, 1,109 piculs; *Noshi* 178, piculs; *Kibiso*, 131 piculs. No direct shipments to chronicle this time.

The business in *Pierced Cocoons* has increased, another buyer entering the market and operating freely at or near the same quotations which we gave last week. This reduces the stock on the market and it would seem that the basis of prices for *Cocoons* this present season is now firmly established. Another week's work like the present will clear out the whole remaining stock.

There has only been one shipping opportunity, the French mail steamer *Melbourne* taking 17 bales for Europe. The present export figures are 2,639 piculs, against 2,539 piculs last year and 1,506 piculs in 1890.

Pierced Cocoons.—As noted above, the business in these has been very large. Prices have been shaded a very little, 13% *kahi* having been accepted for several large parcels. This makes the prices realized this season for *Cocoons* from \$101½ to \$105 for good quality *Shinshu* stock yielding 75 per cent.

Noshi.—The business done has been principally in *Foshu* and is of small importance, prices ranging from \$62 to \$70 for good ordinary assortment.

Kibiso.—A fair amount of business done in medium *Filatures*, at \$90 per picul. Other grades more or less neglected, shippers looking for lower prices on medium and common grades.

In other sorts, no business.

QUOTATIONS (NEW WASTE).

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout Word.

"THE REAL CUP O' KINDNESS."

Perfect blendings of the Choicest Brands of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely untampered with.

MATURED IN SHERRY CASKS.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters BOS are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

BOS

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever Judges pronounce them *unique and unrivalled*.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate.—"A very Nectar" in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in square white bottles, labelled and capped, the quality being notified by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

YOKOHAMA: SATURDAY, SEPT. 24TH, 1892.

SUMMARY OF NEWS.

THE *Chishima Kan* arrived at Aden on the 18th inst. en route to Japan.

THREE by-elections have resulted in the return of Opposition candidates.

THE weather throughout the whole week has been raw, wet, and inclement.

MR. OTANI KANEI has accepted the office of President of the Yokohama Trader's Union.

MR. TAKAHIRA SHOGORO was appointed on the 16th inst. Japanese Minister Resident at The Hague.

MR. NAKAYAMA JOJI has been decorated by the Queen of Hawaii with the Second Class Order of the Crown.

RUMOURS as to dissensions in the Cabinet with reference to the Budget have been emphatically contradicted.

THE Government proposes to hold a conference in the capital of Chief Constables throughout the Empire in November.

H.I.H. PRINCE ARISUGAWA (senior) had a lengthy interview with H.I.M. the Emperor on the forenoon of the 19th inst.

H.E. MR. RASCON, Mexican Minister, was received in audience by H.I.M. the Emperor on the 17th inst. at 10 a.m.

THE dividend of the Sanyo Railway Company for the half year ending the present month is estimated at about 3 per cent.

A SPECIES of injurious insect has been ravaging the rice fields in the Imba District of Chiba Prefecture from the month of July last. They were destroyed in large quantities by the far-

mers, and for a time the fields were free from the pests. Their second appearance in the district is causing great anxiety.

MR. ISHII TADASUKE, and Mr. Funabashi Yoshikazu, Chief Constable of Wakayama Prefecture, have been decorated by the Sultan of Turkey.

MR. A. SIENKIEWICZ, French Minister to this Court, who is now at home on leave of absence, is expected to arrive in Japan by the close of the present year.

MR. HATAKAWA Tetsuji, an *attaché* of the Japanese Legation in Berlin, has been decorated by the Emperor of Germany with the Fourth Class Order of the Crown.

A FALSE rumour has been circulated to the effect that Portugal has intimated her resolve not to abide by Japan's action in the matter of the jurisdictional clauses.

VISCOUNT SHINAGAWA, of the National Union, arrived at Omura in Hizen province on the 19th inst., and Count Saigo arrived at Yokote in Akita Prefecture the same day.

THE total receipts of the Osaka Shipping Company during last month amounted to yen 63,951,936 of which yen 32,209,278 was obtained from passengers, and yen 31,742,668 in the shape of freight.

AN outbreak of fire took place on the night of 2nd inst. in a house at Neame-mura, Hino District, Tottori Prefecture, and an elementary school, twenty-three dwellings, and two godowns were burnt before the flames could be got under.

A MAN named Saiki Chuzo, residing at Yahomura in the North Tama District of Kanagawa Prefecture, while fishing on the Tama river on the 4th inst., was killed by an explosion of gunpowder, which he had purchased for the purpose of catching fish.

THE reported intimidation of residents of Kanazawa by the police during the recent election of half the members of the Town Assembly, has been discovered to be without foundation in fact. The Kanazawa police authorities deny the charge.

MR. NAKAJIMA NOBUYUKI, ex-President of the House of Representatives and a leading Radical, has withdrawn from the Party. No reasons for his withdrawal have yet been published, but it is supposed that he is about to accept an official appointment.

A KOBE telegram dated the 20th inst. announces that the residents of the town have resolved to hold a big entertainment on the 1st October next, to commemorate the extension of the port. The expenditure is estimated at three thousand yen.

DURING a severe blow on the 10th inst. a destructive fire occurred at West Ariyamura in the South Takagi District of Nagasaki Prefecture, and before the firemen could successfully grapple with it, 105 residences and 12 out-houses were burnt.

THREE kerosene vessels, says a telegram from Kobe, arrived at the port on the 18th inst. with 209,000 cases of kerosene. Another telegram from the same town dated the 19th inst. reports that the authorities have sanctioned the application for the construction of kerosene tanks on Wada Point.

A TELEGRAPHIC message has been received from Hokkaido announcing that a violent storm was experienced in the vicinity of Masuge in Teshio province on the 13th inst., and 12 houses were

blown down, 4 persons being more or less severely injured. The rivers have overflowed, and 13 houses were swept away.

COUNT SAIGO, says a telegram from Honjo, Ugo province, arrived there on the 18th inst., and opened a public meeting, an audience of over one thousand persons attending. A telegram from Nagasaki reports that Viscount Shinagawa left there on the 17th inst. for Hirado, where a political lecture meeting was held the following day, at which speeches were delivered by the Viscount and Messrs. Yabu, Wada, and Uyeda. About two thousand persons were present.

THE Japanese Acting Consul at Gensan, Korea, reports that the import and export trade in the port during the month of June last amounted to yen 239,484, in value, of which yen 124,809 represented imports, and yen 114,675 exports. The following are the values of commodities, over yen 1,000, imported and exported by Japanese merchants during the period:—Imports: yen 3,123 salt, yen 70,426 refined rice, yen 1,271 kerosene, yen 1,286 muslin, and yen 1,093 beans; Exports: yen 1,277 cattle, yen 28,898 dried fish, yen 2,270 ox-hides, and yen 32,383 gold bullion.

THE Improvement in the Import trade is maintained, and as the demand increases and supplies diminish holders have managed to level up prices to a very satisfactory point, and, as was suggested as probable in this column some time ago, the time has arrived when dealers are unable to obtain such good bargains now that the autumn trade has well and fairly set in. A good current business has been done generally, the prices for Yarns being steady and firm; Velvets, Prints, and Turkey Reds have improved in value; contracts have been made for Cotton Italians at higher rates; and a further advance has taken place in Italian Cloth as compared with the sales of last week. In Grey goods and T.-Cloths not a great deal of new business has been put through, but deliveries of current contracts are highly satisfactory. An extended variety of other goods has been bought, prices for which have been full and firm. In the Metal trade, Wire Nails continue in good demand, and prices have again been raised; and though there has not been a great deal passing in a general way, the tone of the market is good. Kerosene has been in fair demand at full rates, and all oils are very firmly held, notwithstanding heavy arrivals. The Sugar trade is healthy, Browns only being parted with for a distinct rise, and all kinds hardening more or less. The stocks, not being heavy, are well held, and still higher rates are prognosticated. The "boom" in Silk continues, 2,500 piculs being the business of the week. After the cessation of business for a day, when a few orders accumulate, buyers find the holders of Silk either disinclined to part at all or demanding a further rise. Thus sellers have had the advantage from day to day, and the position in their favour is further advanced by the competition among buyers. The "boom" has been extended to Waste Silk, and a heavy week's business has resulted in a total of 2,500 piculs being weighed in, while prices which were impossible a fortnight ago have been raised \$10 all round. This rise on already high figures has acted as a check to dealings, but evidently buyers are ready to go on with some concession on the part of holders. Thus the market, though quiet, closes very strong. A fair quantity of Tea has been taken, but as arrivals have been light and stocks become reduced, prices are firm though unchanged. Exchange, which has been generally steady after declining one point during the week, closes firm.

EDITORIAL NOTES.

THE JAPANESE IN THE UNITED STATES.

THE *Kokkai Shimbun* has published a long article, characterised by moderation and common sense, on the Idaho troubles. Here is the gist of our contemporary's remarks. Most of the Tokyo journals have refrained from discussing the anti-Japanese sentiment manifested in Idaho, on the ground that it is undesirable to excite public feeling on matters connected with foreign countries prior to the conclusion of the negotiations of which they will become the subject. The object of the present article is not to cause, but to allay, excitement. Public opinion often needs enlightenment on international questions, and one of the offices of a newspaper is to remove misconceptions. The first thing necessary to observe in connection with the recent agitation in America is its limited extent. As far as we know it is confined to the Idaho territory. It must not therefore be regarded as an indication of the feelings of the Americans generally towards the Japanese. The charge brought against the men who have become objects of antipathy to the labouring men of Idaho is that they are immoral. Now, if immorality is to be considered an adequate reason for expulsion from a state, why are the Italians, Spaniards, and French, who are adepts in various kinds of crime, allowed to remain in America? Is the morality of the Japanese in the United States so bad that Americans have to be warned against it? We have never heard that such is the case. We are not pretending that Japanese morality is all that it ought to be, nor do we say that it reaches the high standard attained by some Americans, but we maintain that it is of a far higher class than the morality of many men against whom there never has been any agitation. But this charge of immorality is insincere. The persons who bring it forward are aware that it is not the real cause of the aversion with which the Japanese are regarded. It is the cheapness of Japanese labour that is the crux. Virtue in the labourers would never reconcile the American working man to being undersold in the labour market. It is not to be supposed for a moment that the Washington Government has any sympathy with the anti-Japanese movement. But there is no denying that democratic candidates for election are accustomed to win votes by declaring themselves in favour of any policy that may be popular with the masses. The men who some years ago inscribed on their electioneering banners, "The Chinamen must go," are likely to re-echo the present cry of the Union workmen "The Japanese must go." The sentiment of the American nation is not to be gauged by the electioneering watchwords of hot-headed democrats. The American nation as a whole, is well disposed towards Japan. But the incidents on which we are commenting show the advisability of our Government taking immediate steps to secure for Japanese labourers in America the same rights as are granted to those of other nationalities. If this is not done the antipathy to Japanese will soon resemble that felt for Chinamen. Hitherto Japanese have been allowed quietly to settle in various parts of America. In California some of our countrymen have become landowners. Now provisions for such a contingency ought to be made in the treaty between the two nations, otherwise, Japanese landowners may be subjected to great losses at any moment. We would recommend the following course to be pursued at the present juncture. The Japanese Government should demonstrate to the Washington Cabinet that the Japanese are an order-loving and law-abiding people; that their habits and lives, from a Western point of view, are superior to those of the Chinese. The American Government should also be reminded of the intercourse between the two nations since the days when, in response to Perry's requests, the country was thrown open. Private individuals should come to the help of the Japanese Government at this crisis and by writing in newspapers, delivering lectures, and by making a good show at the World's Fair should furnish to the American nation at large,

abundant proof of Japan's claim to be treated with consideration and respect. The efforts of missionaries whose sympathies are with the Japanese should be utilised in every way possible. Endeavours should be made to influence members of Congress, so that when the question of America's future attitude to Japan comes to be discussed, Congress will be furnished with reliable information whereon to form an opinion. Some newspapers argue that the action of the Idaho labourers is not of sufficient importance to be made the basis of negotiations between Japan and America, but our view is that apart from the Idaho affair there are indications that the question of the Japanese labourers in America is an urgent one, the discussion and settlement of which it would be most unwise to postpone. With those who endeavour to stir up enmity against Americans in Japan on account of what has happened, we have no sympathy whatever. Any such agitation cannot but do serious mischief, and be most derogatory to our national reputation.

AN AMERICAN'S OPINION OF JAPAN.

ONE of the leading men of New York, well known among the magnates of commerce and celebrated among art amateurs for the beautiful collections which his fine taste and judgment, supplemented by great wealth, have enabled him to bring together, recently spent about three months in Japan. He devoted his whole time to visiting the artisans, artists, and manufacturers of the country, closely observing their methods and conducting intimate researches into everything that concerns them. The opinion of such a man cannot fail to possess interest. We therefore reproduce some extracts from a letter which he has just sent to us, dated New York, August 8th:—"I have just seen enough of Japan to wish to visit it again for a much longer period, and this I hope to do next year or the year following. Japan and its people have made a great impression upon me. I do not know of any people who seem so content, live so well and so cleanly, and have so much of the soft side of life about them, as the general classes of Japan. They compare very favourably with the same classes of other nations. They are the most energetic, hard and patient workers I have ever seen. They do everything so much more thoroughly and better than other peoples that they obtain much happier results. They seem to be becoming great in commerce, and will probably increase considerably in wealth. A Japanese is naturally a thorough gentleman in manners, and foreigners appear very crude compared to them." In the main we consider these remarks true as applied to the individual Japanese, but they should be qualified by the observation that the Japanese seem to lack some of the qualities essential to successful combination in commerce or industry. Their attempts to organise enterprises on a large scale are generally unsuccessful, and though experience may enable them to correct the defects which now mar these efforts, there can be only one verdict about them at present.

FOOT-GEAR FOR JAPANESE TROOPS.

It appears that the old question of foot-gear for the troops in Japan is again on the *tapis*. Chapters of advice and suggestion were penned on this subject in the early days before any definite decision had been reached by the authorities, the consensus of opinion being that Japan should endeavour to adapt to her new needs some of the excellent fashions of foot-gear with which her people were familiar, and of which they had learned by experience to appreciate the advantages. But this advice was not favourably received, probably because the comfort apparently enjoyed by wearers of foreign boots and the evident benefit of stout protection for the feet such as is provided by leather, seemed to fully counterbalance all other difficulties. Though, however, a well made, well fitting leather boot is unquestionably an excellent species of foot-gear for work, an ill-fitting boot of hard leather is about the worst conceivable covering that a man could use for his feet when he contemplates a long walk. This has

been proved many a time on service, and every commanding officer knows that he has to dread nothing more on a campaign than injury to the men's marching powers owing to defective foot-gear. In Japan the difficulty is much accentuated by the fact that soldiers never wear anything resembling boots until they enter the service, when their feet are found to have derived, from the customary use of sandals or clogs, a shape quite unfitted to the regulation boot. It is stated, however, that this embarrassment does not seriously affect the efficiency of the troops with the Colours: they have time to become accustomed to leather boots and learn to wear them without suffering. But when the Reserves are called out for annual training, it is found that they have entirely lost the habit of using leather foot-gear, and that a very large percentage become at once incapacitated for taking part in drill or manoeuvres. In their only serious campaign during the *Meiji* era, the Japanese troops at once discarded leather boots and took to straw sandals, and it is said that they do the same now whenever a long march has to be made. No objection, says the *Hochi Shimbun*, exists to the use of straw sandals in respect of appearance or comfort, but their lasting properties are so bad that in the end they prove much more expensive than leather boots. Our contemporary might have added that special commissariat arrangements would be required in the case of troops shod with straw sandals on service, since at least three pairs per diem would have to be provided for each soldier. A project is now on the *tapis* to manufacture a special kind of boot with a strongly plaited hempen sole and an upper of some material the nature of which is not intelligible from the *Hochi's* account. The inventor asserts that this device will combine the comfort of the sandal with the durability of the boot, which is certainly an extensive claim. We trust that the new gear may satisfy expectation, for assuredly the present shoeing of the Japanese infantry leaves a very great deal to be desired.

PORTUGUESE IDEAS OF JAPANESE JUSTICE.

THE *Novidades*, a leading journal of Lisbon, in its issue of August 5th, contains an article on the recent forfeiture by Portugal of her jurisdiction privileges in Japan. The following is a translation:—

We have an important colony in Japan, and the treaties with that country guarantee to the Portuguese residents in the Empire a precious right, which is also granted to almost all the other European nations. This right is freedom from the jurisdiction of the native Courts. In every case consular courts are substituted for these—and further on, we will explain the importance of this position to those who may not be aware of it. At this moment a most serious report is going the rounds of the European Press that in the case of Portugal, mark, in the case of Portugal alone, a resolution has been taken to modify the actual situation in Japan. The Japanese judges (according to the *Independence Belge*) have informed our compatriots that the privilege of consular jurisdiction has ceased to exist for them! Why is this? We have no idea. The only further information is that the Portuguese colony is most excited (which is very natural), and mention is made of urgent telegrams claiming the protection to which they have a right and the privileges of which they find themselves despoiled in express violation of the words of the treaties.

In order that a full sense of the gravity of the situation may be arrived at, we think it well to inform our readers as to what the judicial customs of Japan are, and as to the fate that awaits the Portuguese residents as soon as they become, like the natives, subject to the ordinary Courts of the country.

In spite of the manners of the Japanese being extremely gentle, the investigation and punishment of criminal offences is stamped with ferocity and irresponsibility. The bamboo is the ordinary accompaniment of cross-examinations. At the commencement of the proceedings the indictment is unrolled before the eyes of the prisoner, and if he does not answer as the *Juge d'instruction* thinks fit, a shower of blows comes down upon his back. If there is a suspicion that he is lying, he is made to kneel upon a piece of wood cut in facets, and large stones are placed upon his bent thighs until the floor is crimsoned with his blood and his ter-

Original from

rible sufferings force from him the confession of the crime of which he is accused. Imprisonment in Japan has usually somewhat of a preventive character, for the punishments generally imposed are exile, corporal punishment, and death. The most usual punishments are flogging and branding; the latter being inflicted not by means of a hot iron, but by a sort of tattooing on the arm which is indelible, and thus renders the culprit always liable to recognition. Incendiaries are burnt; murderers are beheaded; their heads are exposed in a public place and their bodies handed over to the youths of the nobility for sword practice. At the time of the persecution of the Christians the Japanese invented an atrocious torture; the condemned man was hung with his head down in a cistern the opening of which was shut leaving the feet outside, and was kept in this position till death ensued.

It is right to add that the above article was denounced as overdrawn and unfair by a large portion of the Portuguese press on the morning following its appearance in the columns of the *Novidades*. But the fact nevertheless remains that it was published in all seriousness by perhaps the most widely read journal in Lisbon. Its statements will probably be credited much more readily than their retraction. We cannot expect the people of Lisbon to know much about Japan. The people of Japan, on their side, doubtless have no acquaintance with and take very little interests in the affairs of Portugal. The ignorance is to some extent reciprocal. But the writer in the *Novidades* certainly carries off the palm, for it would have been impossible to pen a more ridiculous tissue of falsehoods about the procedure of Japanese tribunals than he has placed before his countrymen. Evidently his crass ignorance is not wholly shared by the rest of his countrymen, and that, at all events, is a satisfaction.

The same paper has a paragraph referring to the news, received in Europe by telegraph, of an attempt upon the lives of Count Okuma and Mr. Kono. The writer of the paragraph wonders whether the two attempts were perpetrated by Portuguese, and by way of alternative hypothesis suggests that perhaps these crimes constituted the reason for the withdrawal of the jurisdiction privilege hitherto enjoyed in the Japanese empire by the subjects of His Most Faithful Majesty! It thinks, further, that the use of infernal machines against "the two Ministers" may have been a protest on the part of the Portuguese against the withdrawal of that privilege. These conjectures are so entertaining that the *Novidades* would have conferred a boon on its readers by giving a somewhat wider scope to its imagination.

TELEGRAM RATES FROM CHINA.

THE *N.C. Daily News* says:—We understand that Mr. Byron Brenan, British Consul at Tientsin, has protested to the Viceroy there against the ratification of the new Telegraph Convention, and it is much to be regretted that, as far as we are informed, the Chamber of Commerce here has taken no action. It is of great importance at least to gain time for the new Convention to be considered by the European governments and Chambers of Commerce. As we have already mentioned, the Viceroy Li is not particularly anxious himself to see the Convention ratified, and anything that would confirm him in his opposition to it, or induce him to postpone the fatal step, would be well done. The other foreign Ministers at Peking should be asked by their merchants here to protest against the ratification, as we understand that Sir John Walsham has at last done, and the London Chamber of Commerce and the China Association should be appealed to for their assistance. It is not yet too late; but the Treaty will be ratified, it is to be feared, if all the energy is left to those whose interest it is to have it ratified, and those who will be condemned by it for ten years to a \$2 rate allow themselves to be sacrificed without a murmur.

MR. BRYCE ON THE JAPANESE CONSTITUTION.

In a recent issue we alluded to some remarks made by Mr. Bryce in the House of Commons

on the subject of the Japanese Constitution, and, at the same time, published an article by Mr. F. T. Piggott which had appeared in the *Asiatic Quarterly*, protesting against Mr. Bryce's view, and supplementing the protest by an interesting commentary on the Constitution. We also stated that Mr. Bryce had subsequently disavowed the intention suggested by his words, and had expressed strong approval of the Japanese Constitution as adapted to the circumstances of Japan, though not to the circumstances of other countries. Mr. Bryce, in order fully to remove the unpleasant construction to which his language was obviously open, has now addressed to the *Asiatic Quarterly* a letter which will doubtless appear in the next issue of that periodical. As a considerable interval must elapse, however, before the number of the *Asiatic Quarterly* containing this disavowal is in the hands of the public, and as Mr. Bryce is very anxious "not even to appear to disparage the efforts Japan is making," we have been requested to publish the letter at once, which we have much pleasure in doing:—

HOUSE OF COMMONS, August 11th, 1892.

DEAR SIR.—I find with surprise and regret that a reference which I made, in the House of Commons some months ago, to the new Constitution of Japan has been seriously misunderstood, no doubt unintentionally, in an article which appears in your last number. Whether this is owing to obscurity in my words or to their compression in a newspaper report I need not enquire. All I desire is to disclaim most explicitly and emphatically any intention of disparaging in any way the Constitution of the Japanese Empire. I carefully studied that instrument some years ago, and formed a high opinion of the skill with which it had been prepared. Nothing was further from my mind than to condemn as unsuited to the conditions of a great Oriental monarchy the provisions on which I commented, though I held that similar arrangements would be unsuited to Ireland or any other part of the United Kingdom. This was my argument; and it would have been as foreign to my purpose as opposed to my wishes and sentiments, to say anything that could be deemed wanting in respect or friendliness to those representative institutions which the new Constitution has created, and whose working many of us in England are watching with lively interest and sympathy.

I have the honour to be, faithfully yours,

J. BRYCE.

THE EDITOR
"ASIATIC QUARTERLY REVIEW."

BURNING OF THE GREAT PAGODA AT MANDALAY. A CORRESPONDENT writes:—Shortly after 11 p.m. on Wednesday, the 6th ult., a thick cloud of smoke, rolling towards the Mountain Battery Lines, announced to those who happened to look in that direction that a fire had broken out. At first it was feared it might be in the Transport Lines, but, on arriving on the scene, I discovered that the incomparable Pagoda was the victim; the doors on the windward side were all ablaze, and apparently the interior also; but not being a salamander or a Captain Shaw I did not venture in to look. Though it must have been burning for at least a quarter of an hour when I arrived, no one seemed to take much interest in the matter; at last, a Burmese arrived with a large chatty of water, which he apparently intended to throw on to the building but not having been through a musketry course, he clean missed his somewhat large target. As the blaze became greater, the populace, drawn away from a "pwe" in the Eastern bazaar by the superior attractions of the bonfire, came crowding into the compound, headed by an old lady, who had apparently dressed herself somewhat hurriedly, and carried a small *lotah* of water; boldly ascending the steps she advanced till within about ten yards of the burning building, where she found the atmosphere too warm to be pleasant, so, pouring her contribution a little on the floor, partly on herself, principally on an officious Hindoo who was making a great fuss and doing nothing, she retired a good deal faster than she came, occasionally glancing behind to make certain that the fire demons were not tacking up wind and down the steps to devour her. Loud shouts then heralded the advent of the fire engine, and every-one became seized with a fit of energy, regardless of the fact that the fire had now got such a hold that nothing short of the deluge could have saved the building. The Burmese, as pleased as children

with a new toy, began pumping vigorously long before the hose was long enough to reach the building, and amused themselves by squirting each other and getting in the way of the natives in charge of the engine. After breaking the hose twice, things were at last got into some order, and a stream of water, the effects of which were neither great nor far-reaching, was carefully directed on the windward side of the building, which was now fairly ablaze all over. As a strong breeze was blowing at the time, and the building was made entirely of teak, it is almost superfluous to add that it was completely destroyed. The next day the Cantonment Magistrate sat on the still smouldering ashes—inquisitorially, of course—and brought in a verdict of accidental death. I think I may safely say that this does not agree with the opinion, or rather opinions, of the multitude. The Burmese say it was burnt by the English—as they wanted the land to build commissariat godowns on; some of the Europeans are of opinion that the Burmese budmashes are the culprits; whilst others, including myself, think—well, arson is a serious charge, and not being quite sure of what constitutes a libel, I will keep my opinion to myself. The Pagoda was built by Min-doon-min, Theebaw's predecessor, at a cost of some three or four lakhs; its native name is Ah-tu-ma-she. This is by no means the first of the old-world landmarks of Mandalay which has been swept away, and, if things continue at the present pace, some ten or fifteen years hence Mandalay will be of no more interest to visitors than the ordinary common or garden modern cantonment town. The local Zadkiels are at present in great form, and it we are to believe them—I admit they are not infallible—we English, whom they only allowed in the country on sufferance, are in great danger of being kicked out, neck and crop. For one of their wise men of the East, who, according to his present statements, foretold the advent of the "man with the hal," i.e., Thomas Atkins, Esq., in Theebaw's time, now states that the "man with the pig-tail," i.e., John Chinaman, is to supplant us. He is not quite sure when, but probably soon, especially now that the Incomparable Pagoda has been burnt, for the same fate overtook the Arakan Pagoda in Theebaw's time just before we came up here. This undoubtedly settles the matter, but being naturally lazy, I have not yet begun packing my kit.—*Statesman*.

ASSAULT ON MISSIONARIES IN SZECHUAN.

A MISSIONARY, writing to the *N.C. Daily News* under date 15th August, from the Yangtze Ling, 55 miles N.W. of Chentu, in Szechuan, says:—Mr. Polhill-Turner and wife with two children and Dr. Parry and wife with their youngest child, spent yesterday with us and the Doctor leaves for the village below, to-day. Dr. and Mrs. Polhill-Turner stay in the temple with us. They have been subjected to gross ill-treatment at Sungp'an whither they had gone to meet Dr. Parry, as Mrs. Turner was ill. It was while they were waiting at Sungp'an that the natives, who were suffering from want of rain, came to the conclusion that the foreign missionaries were skilled in necromantic arts and had used these arts to prevent the rain falling. The natives were lashed into fury at this, and made an attack upon the missionaries. Mr. Turner was seized, his arms and legs tied, he was kicked and struck over the head, and, having been overpowered, the mob seized his wife and children. While this was going on a military mandarin, apparently in order to gain time, suggested that the missionaries should be tried before the mob proceeded further. This being acceded to, they were taken to the *yamen* and ordered to be beaten, but two native Christians volunteered to be beaten in their place. The mob was satisfied and the missionaries left Sungp'an for this place. The writer also states that the cholera was still bad at Chentu, and that lots of uncoffined bodies were lying outside the city gates. It was rumoured that the people at the village at the foot of the mountain on which the writer was, would drive the missionaries out of the temple, owing apparently to the presence of Mr. and Mrs. Polhill-Turner. Tremendous rains had fallen

and done considerable damage, the village above referred to being nearly swamped with mud, which was eighteen inches deep in some of the houses, the drought at Sungp'an and the rains at the Yangtze Ling being due to the presence of the *yang jen*, according to native ideas in this part of the world. Not much credence, however, was placed in the rumour that the foreigners were to be driven out. Another missionary writing under date 18th August from the Yangtze Ling says:—Mr. and Mrs. Cecil Polhill-Turner and children who were driven out of Sungp'an, ten days north from here, by a mob, have been staying with us in this temple since 13th. They expected to go to-day to Kuanhsien. We are all well here, the weather is cool and we wear spring clothing. We have had heavy and long continuous rains. From Chên-tu we learn that hundreds are dying daily of cholera. In many cases coffins are not obtainable, but the officials have contributed towards their purchase.

BUDDHISM IN JAPANESE ART.

A BRITISH architect, Mr. Josiah Conder, who has been for several years in the service of the Japanese Government, has published in the journal of the Royal Institute of British Architects copious notes on Japanese Architecture. He remarks that Shintoism and Buddhism have become so blended in Japan since the 8th century that many Shinto temples are to all appearance of Buddhist style. They have, for example, pagodas, shrines, images, and many details all Buddhist. In Japan the decorative arts have been growing all through the intervening thirteen centuries, and the differences observed in the buildings of old times and those of more modern date are caused by changes in decorative development. Chinese buildings are more solid than those of Japan. Chinese architects went to Japan and took their plans with them. They worked with Japanese materials, and native workmen built the temples under their direction. Thus in both countries the most imposing erections were those that were made under Buddhist superintendence, and as Buddhism is a Western religion, naturally we have to look to Western countries for the origin of all the more rich and refined features both of Chinese and Japanese architecture. This, Mr. Conder does not say, but it appears to be the conclusion to which we are driven by the facts. Japanese architecture is modelled on that of China, with modifications called for by the character of the country. So in China the monastery was modelled on the *Vihara* of India, and the monastic structures of Kashmir, Afghanistan, and Central Asia. Foreigners came, and with the Buddhist creed taught the Chinese the pictorial and architectural arts of those countries. It is in this way that notions of design which sprang up in Egypt, Western Asia, and Greece have found their way to these Eastern lands. In their art the Japanese are punctilious to excess. They pay such minute attention to trivial matters that they lose in grandeur. This remark of Mr. Conder is borne out by the circumstance that the effect of view of a Shogun's tomb on the observer is less impressive than that of the Ming tombs near Peking. The grandeur of the Ming tombs transcends the perfected beauty and richness of gilt lacquer seen in the last resting-places of the Tokugawa usurpers. The triumphs of the Japanese artist are the triumphs of the paint brush. How for example does he proceed in painting a single massive dragon on a vast square ceiling? There is such a dragon in black and gold in the Nanzenji temple at Kyoto. This is a fine example of Japanese calligraphy. The painter has the boards that form the ceiling spread on the floor below. He roughly sketches his subject with a burnt stick, and then proceeds with an enormous brush dipped in Indian ink to dash in a bold outline, which he does with great bodily exertion, making many vigorous turns of the brush and crawling rapidly over the surface from top to bottom. The bold line thus produced is greatly admired by the Japanese, and occasional ragged strokes or splashes from the too full or too empty brush add to the effect in the eyes of the connoisseur. Should

there be small accidents, such as splutterings of ink, they are afterwards effaced when the colouring is put on. A mixture of whitening is used with the colour for such purposes, and care is taken to preserve the black outlines. It is the black dragon itself that is important, the colouring may merely be an amber base on which gilding is laid. From this it is quite clear that, as in China so in Japan, the fundamental influence which led to the growth of Japanese art was Chinese Buddhism. The Chinese Buddhist went to Japan and acted there as architect and painter. The grotesque figures which the Japanese love to paint are based on the Chinese Lohans and *sten jen*. Asceticism is to some extent a mother of art, because the devotee prefers nature to the ordinary haunts of men. He is at home among trees, listening to the moaning winds on a seaside cliff, or to the brooklet as it whispers down a mountain side. The ascetic life is exalted by the painter, and at the very time when he is depicting the victory of Buddhist thought over the mind of the worldly man, driving him from the occupations of life to a forest home, he is the same moment encouraging the impulses of art feeling in the soul. Nature herself supplies the trees, the lake, the mountain, the grotto. The ascetic leaves society, and seeks a home of simplicity with the fewest wants possible. But into the void, thus made by the abandonment of society, art enters and pictures a hundred lovely forms, such as meet the eye of the fisherman and the woodman. It would be a great mistake to suppose that Buddhist thought is limited in its range to the metaphysical teaching of the Buddhist classics. That art feeling which springs up spontaneously in any country where there is culture, revealed to the Buddhist painter the essential beauty of those scenes and rural incidents which fail to touch the heart of either fisherman or woodman, who in fact sees too much of these things to recognise any admirable features in them. This is the effect of mental and moral culture afforded by Buddhism in these Eastern countries. The contrast with Christian art is remarkable. Christian art occupied itself with religion also, but in a higher sphere. Buddhist art is content with natural beauty as a pleasing variation in the too great dullness of metaphysical dogma. In Christian art we see humanity elevated by the entrance of the divine idea. Before Raffaele's time such beautiful human forms had never been seen as those which he drew, prompted by the teaching of the gospels. Thus we are helped to fix the position held by Japanese and Chinese art. It is Buddhist. It is the love of nature in minds under Oriental culture. So far as civilisation could aid in its growth the paint brush and a good selection of colours were usually required, and in addition, copper, gold and silver are all extensively used in Buddhist art, and of course wood and stone. Wherever they travelled it was the aim of Buddhists to reproduce as far as practicable those forms of architecture and painting which prevailed in the countries from which the missionaries came.—*N. C. Daily News.*

THE GLADSTONIAN OUTLOOK.

THERE was a momentary lull in home politics at the date of our latest advices. Even Mr. Labouchere's garrulity was, for the nonce, silenced in face of his recent snub by the Grand Old Man and his reserve as to the policy to be pursued in order to keep his heterogeneous majority together. The Radicals are deeply concerned at the outlook. It is felt that Irish Home Rule can never be carried unless due attention is paid to the measures of the various sections of which the Liberal party is composed, and this is the great problem awaiting solution at the hands of the old parliamentary tactician. Mr. Gladstone knows perfectly well that the Welsh members, the Labour Party, the Nonconformists, and some of the Radicals themselves, are much less enamoured with Home Rule than they are with their own pet projects. He also knows that if he could take up some of these measures before Home Rule, he would feel safer in appealing to the nation, when the Lords throw the Home

Rule Bill out. But assuredly the Irish members will tolerate no trifling at the present juncture; they will make a bold fight to carry Home Rule through on the flowing tide; they have waited long for the opportunity, and they realise, only too clearly, what delay will undoubtedly involve. Just as plainly do the other parties perceive that if the session is devoted exclusively to Home Rule, dissolution will descend upon them, and they will have to return to their constituents empty-handed. On the whole, we are inclined to think that Mr. Gladstone will stand or fall by his Home Rule programme.

RAILWAY TRAVELLING IN INDIA.

THE *Times* of India says:—The carriages are exposed to the sun during the whole of the day, and being constructed largely of iron, including the outer roof, they are heated up like ovens, while the arrangements for cooling them have never been satisfactory even to the companies who own them. One simple means of keeping down the temperature has been neglected in a manner that seems difficult to explain. Although white is known to be the colour that resists most effectually the heat of the sun, it is the colour least used on the exterior of the railway carriages, and although black and the darker shades of brown and grey are known to absorb the most heat, they are largely used on the roofs and sides of both carriages and waggons. The same substance, exposed to the sun, would, if coated with various colours, absorb heat in the following proportions:—

White.....	100	Dark Green.....	168
Pale Yellow.....	102	Turkey Red.....	165
Strong Yellow.....	140	Light Blue.....	198
Light Green.....	155	Black.....	208

Black iron exposed to the sun in a still atmosphere will heat up to 60 deg. in the interior of India, and as the human body has to be kept down to a temperature between 98 and 99 deg., it sometimes goes hard with the traveller in hot weather; and the coffin that is kept at most of the important stations comes into use. Many travellers in hot weather prefer the second-class carriages with rattan cane seats and backs to the leather upholstery of the first class, although the former has no kus-kus cooling apparatus. Considering that the second-class ticket is only half the price of the first, the advantage is decidedly in its favour when the shade temperature is over 100 deg. When we come to consider the devices that have been employed to cool the air artificially in railway carriages, there appears to be very much still undone to improve the comfort of the traveller in the hot weather. There is such a vast store of power in a moving train, some heavy goods engines being capable of exerting 1,000 horse-power, while such a comparatively small power will drive a thermantidote and cool a house, that one may marvel why no satisfactory apparatus has yet been used in railway carriages. What is said of the carriage and waggons applies equally to the station roofs. They are of every other colour than white. It is now pretty well known that one coat of whitewash will reduce the temperature of an iron-covered roof 26 deg. Fahrenheit, making it, in fact, cooler than unwhitened tiles. In the same manner, a well-whitened single-tiled roof is cooler than a red double-tiled roof, not to speak of the difference in cost. If any railway companies would make a careful series of observations on the effect of exterior colour on the interior of their rolling-stock and buildings, the result would be equally beneficial to the travelling and mercantile public and to themselves.

RAILS.

A CORRESPONDENT draws our attention to the following paragraph in *The Times*, which has interest for purchasers of rails in the East; it is from *The Times* correspondent in Berlin, and is dated July 25th:—"The trial of a number of engineers and workmen employed by the Bochum Association for Mining and Steel Foundry on a charge of having in various ways defrauded the German State Railways began at Essen to-day. The Bochum Works, which are among the best known in Germany, have given special attention to the manufacture of railway lines,

locomotives, axles, and wheels, in addition to many other branches of steel and iron work, and number not only the German State Railways, but many foreign railway companies among their patrons. The case is the more interesting because the material delivered by the Bochum Association has not only enjoyed an excellent reputation, but has been confessedly superior to the manufactures of other works. The frauds are stated to have taken place especially in connexion with the testing of the rails destined for the State Railways, which were in the habit of sending some of their own officials to examine the material and mark what they passed as satisfactory. The official received a stamp for the railway which he represented, and this he was not allowed to let out of his hands except when he was superintending the stamping of the good material by the workmen. The incriminated workmen are accused of having made false stamps after the pattern of those employed by the superintending officials, with which they marked material which had not been examined; and this, of course, led the officials to believe that they had tested more than they had in reality. A second charge against the accused is that they repaired holes, cracks, and other defects in the rails with a particular cement, and so gave the inferior and useless material the appearance of finished work. Thirdly, it is stated that whilst the stamping of the tested rails was taking place the workmen substituted rejected ones for those which the officials had handed over to be stamped as satisfactory, and marked the former with the forged stamps. An inducement to these fraudulent practices is said to have been the fact that the workmen received a premium proportionate to the amount of material which was accepted by the official overseers. It is fairly certain that these methods of palming off bad work for good are not of recent date, but have been practised for a very considerable period. The course of the trial up to the present moment has presented no feature especially worthy of notice.

THE PROWESS OF THE BRITISH OFFICER.

Writing upon the importance of a military officer knowing how to use the sword and the revolver upon the still not infrequent occasions when he is engaged in a hand-to-hand encounter, the *Saturday Review* says:—"Sir William Napier could run or jump with any one of the gallant members of his regiment, and records how, in the race for the rocks at La Rhune, he was 'not a foot behind' the most active of them. And he could hold his own with the foils, the single-sticks, or the bayonet, as well as in mere bodily activity. Marshal Beresford, too, was a man of magnificent physique, and owed his life to the thrusts and sinews when he found himself engaged in a rough-and-tumble that would have shocked Von Moltke, with the Polish Lancers at Albuera. Lord Anglesey was also a typical 'beau sabreur,' and even when he lost a leg could sit a horse with more grace than most mortals can display with two. During the Mutiny and Sikh wars hand-to-hand encounters, in which the leaders on either side set a shining example to their followers, were by no means uncommon, and almost all the men on our side who came to the front could hold their own, and more than do so, even with the expert hereditary swordsmen who rode against them. Nicholson was as efficient with his arm and wrist as with his quick decision and active brain. Hodson, of Hodson's Horse, was the very ideal of a cavalry leader, and his name was terrible to the natives, as much, perhaps, by reason of his reputation as a swordsman as because of any of the other soldier-like qualities of which he was possessed. Sir Dighton Probyn, when he was at the head of his native cavalry squadrons, was looked up to by his followers as a very Paladin, and could beat the best of them at tent-pegging, lemon-slicing, or any of the tests of horsemanship dear to men who are soldiers by tradition, birth, and predilection. Last, but not least, there were few men in India twenty years ago who would have cared to meet Lord Roberts, as we must now learn to call him, at any of these exercises."

if a heavy stake depended on the issue. Even now, when years and the cares of office may reasonably be supposed to have somewhat dimmed his eye, it is a refreshing sight to see the Commander-in-Chief take the first 'peg,' as he usually does, at the Simla gymkhanas, and to note that he can wield a lance with a dexterity which none of those who follow him will surpass, and not a man of his age in all India equal. Nor is it in our armies alone that such qualities in officers have ever commanded admiration. The brilliant Murat, vain and theatrical as he was in dress and manner, when the battle was at its height was never more thoroughly at his ease, and never showed more strikingly to advantage. The handsome figure covered with lace and frippery was always wont to shoot far ahead of the squadrons behind him into the *mêlée*, and regarded a chance thrown away which did not enable him to lay several opponents low by the superior skill he could display with the sabre. Lasalle, young, bright, and intelligent, who fell at Wagram, the best leader of cavalry in Europe, with the one exception we have just been speaking of, at two-and-thirty years of age, owed much of his influence and authority to his fine riding and his cunning of fence. In our own times Skobelev was just such another, and the halo of romance which played about him arose in a large degree from the physical advantages he could boast of among his uneducated troopers. Valentine Baker's is another name which will occur among several others, some of whom are happily with us still, and we may hope that, unless the character of Englishmen widely alters, we may never lack a plentiful supply of men of the same quality."

THE SILK BOOM.

THE Tokyo News Agency notes the fact that since 1876 no such prices have been obtained by Japanese sericulturists as those ruling at present. A great year indeed was 1876. Not only were immense sums paid to the silk-growers in this country, but happily the result proved most profitable for foreign purchases, so that the season took its permanent place in the records with a big red letter attached to it. The maximum price paid for a bale of 100 canties (133½ lbs.) of the best silk in 1876 was 1,120 yen, a figure not approached this year, for as yet 860 yen tops the list. Nevertheless, the latter sum, when compared with the general maximum of from six hundred to seven hundred yen, indicates a very remarkable boom. The News Agency predicts that prices will be sustained, and we see no reason to question the accuracy of the forecast. What is to be hoped is that transactions beyond the water may justify the liberal figures recorded at this side, and that the foreign exporter will come out of the enterprise with at least something of the success that crowned his doings twelve years ago. A little solid encouragement of the kind is greatly needed by the foreign merchant at present.

A NAGASAKI SCANDAL.

SOME time ago a vernacular newspaper of Nagasaki published a strange story imputing to a foreigner resident in that Settlement the contrivance of a most heinous crime, in which the greed of an abandoned woman was taken advantage of to gratify the prurient curiosity of two scoundrels. The *Kokkai*, if we remember rightly, reproduced the tale, supplementing it by an expression of disbelief, and inasmuch as the statements given in the Nagasaki newspaper were in some respects most improbable, we imagined that the matter would end there. But, on the contrary, the tale has since then made the round of the Tokyo press, even the leading journals of the capital assisting to circulate it, and evidently attaching credit to it. It is an old experience that stories invariably undergo some change in passing from mouth to mouth. Whether owing to that reason, or because the Tokyo newspapers possess particulars not published in Nagasaki, we observe that their versions have gradually departed more or less from the Nagasaki original. But whatever may be the exact facts of the affair, it seems to us that

no manner of proportion exists between the prominence given to it by the Tokyo press and its real importance. If some person, dehumanized by the indulgence of brutal propensities, has been guilty of a deed for which no manner of palliation can be found, surely the laws of Japan and of the country which has the misfortune to own him are fully competent to punish his offence. This journalistic hubbub insults alike the laws and their administrators. Besides, an unpleasant conviction is created that had both of the parties concerned been Japanese, we should have heard very little of the matter, except, perhaps, in the Manchusen columns of the *Yomiuri Shimbun*. So soon, however, as a foreigner figures in the affair, it is at once elevated to the rank of a public spectacle, as though crime differed in degree according to the nationality of the perpetrator, and as though the distinction between West and East occupied in the moral vista of Japanese publicists a space so large as to disturb the proper proportions of everything else.

THE POSITION OF FOREIGN PROFESSORS IN JAPAN.

A WRITER in *Industries* sums up a very sensible article on the above subject in the following manner:—"We have no hesitation in saying that among the foreign professors who have served, or are serving, the Japanese, there are to be found men who would do credit to any university in the world, and further, we believe that they keep themselves up in all the advances in their own departments. In our opinion, it will be highly necessary that for many years to come the Japanese should retain the services of such men, for it cannot be doubted that in Japan as in other Eastern countries there is a tendency to be content with the form of an institution; although the spirit which should animate it be almost entirely absent. Although we have a great admiration for what the Japanese have done in the matter of education, we feel that we should be doing them a wrong if we did not express the opinion that their higher institutions have not carried out the promise they gave a few years ago. In too many cases they have become enveloped in officialism and formalism, and will do little to advance either the material or the moral interests of the country. The best way to prevent this is to have about them a few distinguished men, and give them independent positions in which they may be able to make their influence felt. This independence would engender devotion to duty, and keep alive the true spirit of learning and investigation."

MARINE PRODUCTS.

REFERRING to the development of marine products, a matter that has attracted attention in both political and commercial circles during the past three years, the *Hochi Shimbun* writes that Mr. Kono Togama's project of applying a sum of 130,000 yen annually to the purpose is in some danger of being abandoned. The amount, according to our contemporary, was actually sanctioned by the Cabinet and included in the Budget for submission to the Diet during Mr. Kono's tenure of the portfolio of Agriculture and Commerce. Viscount Sano and Count Goto, who succeeded Mr. Kono, endorsed his views in this matter. Their idea was that of the total grant, a sum of sixty thousand yen should be assigned in the form of a continuing fund for a period of five years, to be applied to the purpose of boat-building, and that the remaining seventy thousand yen should be devoted to organizing and supporting schools for imparting theoretical and practical instruction in matters relating to marine products. But some doubt seems to be entertained as to the attitude of the present cabinet towards this scheme. It is not supposed that Count Ito underrates the importance of developing this source of Japanese wealth, or that he is less anxious than any other statesman to encourage enterprise in such a direction. But his general principle, as interpreted by the *Hochi*, is to avoid appropriating public money to inception of new works unless they are absolutely necessary. We are disposed to be sceptical, however, about the *Hochi's* forecast, for it seems to be based on a hypothesis contrary to Count

Ito's policy. Doubtless under his leadership the present Cabinet will endeavour to reduce the national expenditure as far as possible, but Count Ito and Count Inouye have always been distinguished for the liberal support extended by them to useful enterprises, and we think it scarcely probable that they will exclude from that category the development of marine products, for in these Japan unquestionably possesses a most important source of wealth which she has not yet exploited to a tithe of its capacity.

GOLD IN RANGOON.

FOLLOWING close on the discoveries of Dr. Neetling and Mr. Griesbach, comes the news that Mr. J. M. Puttock, Commander of the steamer *George*, has dropped on a veritable gold mine on the shore of the Irrawaddy, somewhat above Senbo. It reads like a tale from the Arabian Nights. Mr. Puttock went down from his vessel for what purpose is not quite clear, but he stayed to wash for gold, and he washed for an hour. At the end of an hour he put the washings in a bottle. It is not said what kind of bottle it was. It may have been a whisky bottle or it may have been a beer, and who knows that it was not a lollipop bottle. However, we do not think the bottle is a very material question. The bottle was carefully sealed and sent to the Chemical Examiner, who pronounced that the sample contained gold in proportion to sand of 1lb 1.4 oz. per ton. The inexperienced Director of the Department of Land Records was a bit sceptical. He wanted to know the weight of sand washed by the Captain; but as it would be a little inconvenient to get this information, he is satisfied with the weight of the sand and of the gold in the bottle, on which data he proposes, by taking into consideration the time the Captain spent in washing for gold, to arrive at some reliable result as to the value of the gold mine discovered by the Commander of the *George*. The Captain produced 3 lbs. 10 oz. of sand containing 10.4 grains of gold after an hour's work. For the purposes of calculation it would be safest for investors in the gold mine to judge his labour by the lowest standard. A famine relief coolie digs soft soil at the rate of 45 cubic feet in eight working hours. It is quite clear, therefore, that the auriferous sand bank contains gold in paying quantities, and we would propose that a Company be floated at once with Mr. J. M. Puttock as Chairman of the Board of Directors.—*Rangoon Times*.

PEKING.

A "RECENT VISITOR" writes as follows to the *London and China Express*:—"As you may perceive, I am now in that diplomatic slough of despond called Peking; a place which has no parallel in the world in more respects than one; a place where the united efforts of the greatest Powers in Christendom have failed to make any perceptible impression for good on the native mind. Christian missionaries have now been working here for centuries, and diplomatic ministers have been residing here for decades. It was during the Mongolian or Yuan dynasty, that is, in the thirteenth century, that John de Mont-Corvino was appointed Archbishop of Peking, or Kan Baluc, as the city was then called, and it was in the year 1860 that the allied armies of England and France camped before the city and demanded an entrance, and the right of perpetual residence for foreign diplomats and missionaries, leaving out the foreign merchant, for fear he might disturb the sleep of the place. Well now, not to go too far back, all the united efforts of diplomats and missionaries have miserably failed in thirty years to secure a respectable official entrance, or social admittance, into any class of Peking society, or even the daily perambulation of the useful water-cart in Legation-street, much less in any other part of this excessively dirty and dusty old city. Now it is not too much to say that if two dozen British merchants had been residing here for thirty years they would certainly have had good roads and shady walks, well watered daily, and a place for a decent ride and drive in foreign vehicles, and thousands upon thousands of natives following their example, as at Shanghai and elsewhere.

Diplomats and missionaries in Peking are like Worcester sauce and mustard placed before a hungry man without food. They may excite his appetite and disgust, but they cannot satisfy or appease his hunger. Yet there are people who imagine that our Ministers and Consuls may and ought to assist our merchants in the increase of trade. It is a mistake. Our merchants must do in the future as they have ever done in the past—help themselves, and even then they are likelier to be able to help the officials than the officials are to help them."

A VOLUNTEER FLEET FOR JAPAN.

FOR years politicians in Japan have been talking of the necessity of extending the naval force of the country, but as yet nothing has been done. On the contrary, the very advocates of the scheme, the *Jiyu-to* and the *Kaishin-to* members, refused to grant certain sums of money in the last session of the Diet for the construction of men-of-war. Now, however, a new enterprise has been proposed by Messrs. Uyeda Sho, Tashire Shozo, and others, under the name of the *Jiyu-Kantai* (Volunteer Fleet). Its statement of motives was published in the *Keisai Shimpō*, which we translate as follows:—

JAPANESE VOLUNTEER FLEET.

Japan is not a mere solitary island in the Eastern Ocean, but a great naval nation. Her situation is magnificent. Eastward lie, across the Pacific Ocean, North and South America; China and Korea stand on the west, and the Oceanic Islands on the south. When the Nicaragua Canal and the Siberian Railway are completed, our country will occupy a central position, and we shall hold the power of both commerce and war in the East. Though the area of Japan is not more than 24,700 *ri*, the length of coast line and its situation are equalled nowhere. In spite of these advantages our naval equipment is developing very slowly. Though we have some 37 war-vessels, only about 20 can be used in time of war; although there are 1,173 mercantile steamers and 96 sailing-ships, only 50 of these steamers, and 3 sailing-ships can carry over 500 tons. In Europe every nation is eager to acquire commercial, maritime, and colonizing powers, competition is keen amongst them, and yet no one in our country enters the lists with them.

To maintain the independence of a country, and extend its national power, it is absolutely necessary to augment the naval force. A great and ancient nation like China feeling this necessity has greatly enlarged her naval strength. She possesses 47 men-of-war, their total tonnage amounting to some 67,000. Again the total number of men-of-war of England, France, Germany, Russia, and America stationed in the East is 77, and their aggregate tonnage is 86,807. We cannot compare such immense strength with our own mean display. But to enlarge our naval force great expenditure is necessary, and at present, as we have numerous important undertakings in hand, we cannot devote the national revenue entirely to that purpose. At the same time, unless it is enlarged, the existing force will not serve in time of either peace or war. In order to increase the national wealth it is also necessary to develop and extend maritime enterprise. The present internal condition of Japan shows that various industrial enterprises have been established, and transportation by rail and steamer has been considerably augmented, yet maritime enterprise is entirely left in the hands of foreigners. The consequence of this is that emigration has made no progress nor has the spirit of exploration been aroused. We must increase the number of war-vessels by which long voyages can be made if we wish to extend our commerce and to encourage emigration. Such, indeed, is one of the most urgent questions of the day. It is not a time for the people to sigh at the present feeble condition of the country without attempting to improve it. We deplore it; and now with those who hold similar opinions, we seek to promote a scheme for a Volunteer Fleet. The object is to rouse the people to increase our naval strength and national power, on the one hand, and to encourage maritime enterprise, emigration, and exploration, on the other. A similar scheme was organized by the wealthy classes in Russia in 1878. Their ships are utilized in time of peace for commercial enterprises, and they make long voyages to the East; but should war break out they at once hoist the naval flag.

As friendly intercourse with nations increases, maritime enterprise develops, fisheries extend, and emigration spreads. The organization of a Volunteer Fleet becomes inevitable if we hope to compete with other countries.

THE INDUSTRIES OF NORTH FORMOSA.

MR. HOLLAND, H.M.'s Consul at Tamsui, in his report on the trade of that port for 1891, thus refers to winkle fishing and duck breeding in North Formosa:—"Fishing is carried on in the various ways that may be seen in many parts of China, but perhaps the most peculiar branch of this industry is the fishing for small winkles,

which are required in very large quantities for feeding the thousands of ducks that are bred here artificially. A crowd of boats may always be seen at flood tide, each with one man in it, who is constantly engaged in hauling up his peculiar net, discharging its contents into his boat and then pitching the net out again. Each boat has two nets, which are each furnished with a handle about 4 feet long, and a big stone fastened at the point of junction of handle and net frame. A long cord made fast at one end to the boat and at the other to the net handle, gives the fishermen full control over his net. On hauling it up to the surface, he lays the handle across the boat, and, sticking one leg over the boat's side, with his foot clears out all the mud which may be in the bottom of the net. This is much less trouble than it would be to stoop over and do it with his hand, and much safer is such very cranky little boats as are used. Having cleared the net out in this way, he turns its contents out into a compartment in his boat, and pitches the net out again. The stone carries it to the bottom, and it is so nicely arranged and balanced as to cause the net to stand on the bottom of the river at the most convenient angle for the reception of the winkles, which are swept into it by the tide.

A few words about the artificial duck-hatching, which is a great feature in the local native industries. A long, low shed is built, mostly of wattles and mud, with a thick thatched roof. Along the inside the walls of this are arranged rough troughs, which are filled up with grain and roasted paddyhusk, on which the eggs are placed as fast as they are laid. In summer no particular precautions are taken, but in winter the eggs are covered over with quilted coverlets, and far more care is taken to exclude cold draughts than is ever dreamt of in a native dwelling-house. The grain, which is sprinkled with a little warm water, sets up fermentation, and that, with the help of the warm paddy-husk, which is continually being changed, hatches the eggs in about 30 days. By this simple and inexpensive process the breeder is enabled to sell young ducklings at such a low price as 35 for 1 dol., or, say, about 1d. each. Many flocks of ducks, averaging 500 to the flock, can always be seen up river at low tide, feeding on the mud banks, and attended by a man in a small boat, who occasionally feeds them with some of the winkles mentioned above, and guides them about from place to place by his voice and the action of his boat.

THE ESSEN TRIAL.

The Times of the 5th ult., referring to this affair, says:—"The trial at Essen has ended in the acquittal of one and all of those engineers and workmen who are accused of having defrauded the State railways by the substitution of imperfect workmanship for that which had been approved by the superintending officials. The result of the trial is the subject of much discussion in this evening's newspapers. The general consensus of opinion, whilst greeting the acquittal of the accused as a triumphant vindication of the sterling nature of German industry in general, and of the Bochum Steel and Iron Works in particular, deplores the suspicion which has been aroused by this case in foreign countries towards German work no less than the political agitations of Herr Fusangel and the Clerical Democrats in the Westphalian provinces, which have been the cause of all the trouble."

THE "NO-CONFIDENCE" AMENDMENT.

THE division upon the "No-confidence" amendment, says *The Times*, is the heaviest on record. At the present moment the House of Commons consists of 568 members—the seats for Holborn and North-East Cork being vacant—and of these no fewer than 665 were in their places when the question was put from the Chair. The only member absent unpaired was Mr. T. B. Curran (Anti-Parnellite), who is in Australia, and the only pair was that between Mr. Wharton (Conservative) and Mr. Winterbotham (Gladstonian), both of whom are ill. Mr. Cremer and Mr. J. Power, who are also indisposed,

were determined to vote at any cost, and they managed to put in an appearance. Several hon. gentlemen travelled long distances to take part in the division, a notable case being that of Mr. Ernest Spencer, who had to excuse himself from dining with the King of the Belgians at Ostend in order to record his vote. Reckoning Mr. Goschen and Mr. Carson as Liberal Unionists, the figures were:—Conservatives, 263; Liberal Unionists, 47; total, 310. Gladstonians, 271; Anti-Parnellites, 70; Parnellites, 9; total, 350. The other members present were the tellers—Mr. Akers-Douglas and Sir W. Walrond (Conservative), and Mr. Asquith and Mr. Burt (Gladstonian)—and the Speaker. Throughout the evening there was a large attendance of the general public, and many persons unable to obtain seats in the galleries remained in the octagon hall to hear the result of the division. When the figures were made known there was a scene of wild excitement, cheers and groans being given despite the attempts of the police to preserve quiet.

POSTAL COMMUNICATION WITH HOKKAIDO.

HITHERTO postal matter for Hokkaido has been sent to Aomori by rail, thence to Hakodate by steamer, and from the latter place overland *via* Mori to Muroran. But since the line of the Tancho Railway Company to Muroran is completed, so that communication between Muroran and Sapporo is greatly facilitated, it is proposed to open direct communication with Muroran *via* Aomori and Hakodate. With that object the Department of Communications has ordered the Japan Railway Company, the Japan Steamship Company, and the Hokkaido Tanko Railway Company to consider the question of establishing a new line with the above object. Should the project be carried out, not only postal matter but goods also will be carried by the new route, and this will necessitate changes in the existing railway time-tables as well as in the dates for the sailing of steamers. Hence the Japan Railway Company is said to be making careful investigations. But the *Choya Shimbun*, from which we take these details, says that the Japan Steamship Company has not yet decided whether it will comply with the request of the Department of Communications.

THE BEAUTIES OF KOREA.

A VERY glowing account of the natural attractions of the Hermit Kingdom appears in the last number to hand of the *Korean Repository*, and one which will cause no little surprise to those who think they possess some knowledge of that much abused country:—

"Owing to the poverty of human language, one word has often to serve many uses, and the mere names of countries bear as many meanings as there are points of view from which they can be regarded. There is thus a plurality of Koreans known to foreigners. For example, there is the geographical pendicle attached to the continent of Asia and to the Chinese Empire, like a wart round whose root people are busy tying horsehairs; an intrusion into Japanese waters, inviting invasion from the adjacent islands; the poverty-stricken land, repellent to commercial enterprise; the mission field; the arena of illiputian intrigue;—all these and several other Koreans have been made more or less familiar to strangers by travellers and scribes. But there remains one Korea, the sweetest and best of all, which still takes visitors by surprise, because it has been less noticed than it deserves by those who advertise the country. Everybody is not an adventurer, an agitator, an evangelist, or a concession-monger. There are those—let us be thankful for it—who are mere men, natural men let us even dare to say, *pace* orthodox evangelists, who can look on the face of nature without ulterior designs, and who can yield to its charms with child-like abandon.

To those who even through the struggle for life are able to preserve such precious elasticity of perception, Korea presents an aspect altogether lovely. Grand scenery no doubt there is in the world, and much that is perhaps prettier or finer, but in the generous way she throws open her beauty with gentle invitation to enjoy it, it would be hard to find the peer of Korea.

The luxuriant green valleys, rich with grasses and wild-flowers as well as with waving corn; the hillsides suffused with the tender bloom of the azalea, give, in their season, and at the very first blush, a sense of heavenly rest to the traveller without imposing any tax on his faculty of admiration. Japan, the professional beauty of the Far East, extorts praises according to a tariff as well regulated as that which governs her imports and exports; so withhold the

tribute indeed would be a breach of the conventions sanctioned by the suffrages of the globe-trotting universe. China's beauties are in their way grand, but inaccessible without some labour and sorrow. Korea is by comparison with her neighbours in a happy state of unconscious maidenhood, making no demands on her votaries, and neither hiding nor obtruding her charms.

To come at the beauties of Korea, it is not needful to follow Mr. Campbell and other travellers who have so admirably described—as he has done—the interior of the peninsula, for they lie in profusion at the very threshold of the country. The estuary of the Han, which loses itself in the inland sea, affords to the storm-tossed traveller not only a welcome respite from his tribulations, but a pleasing prospect for his (oftener "her") eye to rest upon. The five hours' steaming through the archipelago is a fitting overture to the endless panorama which unfolds itself on land. Lovers of the picturesque must indeed be hard to please if they do not enjoy every one of the twenty-five miles between Chemulpo and Seoul, with hill and vale, rock and river, diversifying the scene at every turn, while the voyage by river is still more enlivened by pleasing changes.

And where could one find a spot of earth richer in scenic attractions than Seoul itself and its environs? The situation of the city, spread out in its basin within its grand amphitheatre of granite hills, is one whose artistic effect is so striking that it can never fail to produce agreeable sensations. The city wall climbing over the most precipitous ridges, the sentinel peaks of Nam San with its chevelure of fine trees, and the bold castellated rocks of Poukan, which on the south and north respectively keep guard over the capital, with many other points both within and without the walls, commanding varied and extensive views, would alone in any tourist-frequented land make Seoul a show-place of the guide-books.

One has not here, as in most show places, to make a toilsome expedition to some eminence to get "a view," for within the compass of an ordinary afternoon's walk or ride, in any direction, one may choose, one may meander through scenes of exquisite beauty. Rocky gorges, umbrageous woods, green meadows, a prodigality of shrubs and verdure, wild roses and giant bawhorn blossom sprinkling the whole with a glorious efflorescence, in endless and unbroken succession stretch out towards every point of the compass. Hedgerows and country lanes which transcend the hedgerows and lanes of old England as much as these do the box-wood borders and prim gravel-paths of a Dutch garden; banks and braes rugged and green as in bonny Scotland; roads as clean as granite sand can make them, and, owing to absence of wheeled traffic, as even as any pedestrian or equestrian worthy of the name would ever desire; coppices clear of jungle but richly carpeted with herbage, unfenced and undisturbed by eternal intimations to "trespassers," hamlets nestled in orchards; soil yielding fruits, flowers, and grasses in exuberance; all within an hour of the centre of the city.

There is much more in a similar vein, but we think we have given enough to assist in diverting the tourist tide from these shores to those, where, as the writer says, "the pure air is laden with fragrance such as the spicy shores of Araby the Blest never knew."

THE TOKYO GLYPHIC SOCIETY.

THE above Society opened its exhibition on Thursday last in the Fine Arts Gallery in Ueno Park. The principal exhibits are carvings in metal and ivory. Many of the new works possess much merit. Mr. Shimamura Toshiaki exhibited his models in wood of Nomi-no-Sukune, Tayama-no-Kebaya, and Kamatari. These are models of the ivory carvings intended for the Chicago exhibition, and though rough in design, and not all finished, they show the skill and strength of the artist. Viscount Enomoto, President of the Society, opened the exhibition, and some eighty members were present. Professor Miyachi delivered a speech on the fine arts; and Dr. Taguchi lectured on the necessity of anatomical accuracy in art. Afterwards prizes were distributed, the first prize being awarded to Sekiguchi Kazunari for his fine carvings of chrysanthemum on silver-studs.

THE MEETING OF LOCAL GOVERNORS.

WE mentioned some time ago that the meeting of Local Governors to be held this year in the Department of Home Affairs was said to be looked forward to with considerable perturbation, as it was expected that some perplexing and minute queries would be addressed to the officials assembled. Hitherto these meetings—which are called *Shimon-kai*, or assemblies of inquiry—have been presided over by the Vice-Minister of State for Home Affairs; the questions to be

propounded have been indicated beforehand, and officials (*setsume-in*) charged with the duty of explaining the nature of the information sought, have been appointed. But at the assembly of the present year all this was changed by Count Inouye. Instead of indicating the subjects of inquiry, appointing a chairman or naming officials for explanation, His Excellency simply ordered the Governors to present themselves on a certain day at the Home Department, when he himself took the chair and proceeded to question his hearers on all kinds of matters connected with the districts administered by them. Probably no man in the empire possesses such extensive and detailed knowledge of the circumstances of the various localities as Count Inouye, and it may easily be guessed that the ordeal of cross-examination at his hands was regarded with no little apprehension by some of the Governors. The meeting commenced on the 16th instant, but it is not likely that the public will learn much about the proceedings.

THE NIKKO FESTIVAL.

THE autumn festival of the Futa-ara Shrine at Nikko came off on the 17th instant, and was witnessed by a number of foreigners who are spending the last days of summer at that favourite resort, or had come from Tokyo specially to be present on the occasion. The festival is nothing more than a grand mass for the spirits of the two Tokugawa Regents whose bodies are interred among the Nikko groves. It consists of two pageants; a procession from the Shrine of Gongen to the O-Tabisho, and a series of religious services in the latter. In former days, when an Imperial Delegate and a representative of the reigning Shogun attended these ceremonials, the preparations were on a grand and elaborate scale, and the effect was doubtless correspondingly magnificent. But those days of princely lavishness are past and gone so far as the Tokugawa family is concerned. Then every Shinto official engaged in the ceremony, from the highest to the lowest, had new robes furnished for the occasion. But now, the same robes that were used twenty-five years ago continue to do duty season after season, and as it generally happens that very inclement weather distinguishes the day of the festival, the various garments, whether of cotton, of embroidered silk, or of brocade, look diaphanous and decayed, and in not a few cases show conspicuous stains and rents. Moreover, the times of ease and opulence having passed for the priests also, their appearance has come to correspond with their reduced condition, and what is still more unhappy for the sake of the spectacular impression produced by the ceremony, the great majority of those engaged in it, having been snatched for the day from the workshop, the lumber-forest, or the scullery, look about as swart and rusty a set of toilers and moilers as could be found in any community. Shinto ceremonials, indeed, always labour under this marked disadvantage, that the dresses of office, being of a scanty and superficial character, do not suffice to conceal the battered costume over which they are worn, and the effect produced is that of a number of highway and byway out-at-elbow rustics impressed for an occasion with which they have nothing in common. The procession of last Saturday should have started at noon, but it was an hour late; an accident easily understood when one observed the motley elements composing it. Wrinkled old men and smooth-faced boys, marched side by side, and *kago* coolies might be seen wearing cuirasses and helmets that must have been donned with vast difficulty and not without permanent detriment to the armour from such incongruous contact. Altogether it was a sad and washed-out affair, nor did those taking part in it make, in some cases, the most infinitesimal effort to preserve a semblance of gravity and dignity. The duties of chief Shinto official were discharged by the former feudal chief of Aizu, a venerable man of noble deportment. He, of course, and the priests themselves, performed all their functions in the most faultless manner, abating nothing of the solemnity and decorum that belonged to days of bygone grandeur. Nothing was want-

ing, too, in the matter of paraphernalia, even the hawks and the monkey that appear in all celebrations connected with Iyeyasu and Iyemitsu, occupying their places in the procession, the former represented by somewhat dilapidated wood carvings, the latter by a particularly large and live animal. The gorgeous *shijin-ten*, the *Tengu*, the masked figures, the lance-bearers, the bow-men, the sacred horses—all the elements of an orthodox procession were present, but no accuracy of such details could remove the battered, time-worm appearance of the whole. Within the buildings of the O-Tabisho full preparations for an elaborate service had been made, and of this part of the ceremony it must be admitted that no air of penuriousness protruded itself on the observer, for the beauty and richness of the utensils had been mellowed, not dimmed, by the lapse of years, and the vestments of the priests looked artistically austere and simple in the subdued light of the great hall. The ceremonial attending these offerings of viands to the manes of the dead has been often described, and there are those who find it imposing, even grand. But the majority of on-lookers will probably conclude that the monotonous intonations and slow genuflections of solitary priests, the solemn paces and hand-wavings of not too lovely females, and the mechanical posturings of puppet-like officials in rusty vestments, do not constitute a very striking ensemble. However, it is at Nikko only that a stranger can be sure of seeing the detailed observance of these Shinto ceremonies, and for that reason alone people who are in the happy position of being able to choose their own time may find it worth while to visit Nikko in June or September. Of the two periods the former is preferable so far as concerns the festival, for the summer ceremonial is said to be twice as elaborate and magnificent as that of autumn. The whole affair may be viewed by anyone, the procession from the road-side and the religious services from the embankment surrounding the enclosure of the O-Tabisho. But the best view is to be obtained by entering the enclosure, for then one can stand within four or five yards of the officiating priests. This privilege is granted to all members of the Hoko-kai, or Temple Preservation Society.

THE PUBLIC PROCURATOR AND MR. HIRANUMA.

It is sometimes astonishing to observe how little attention is paid by the vernacular press to matters of great curiosity and interest. A case in point is that of Mr. Odate Koreiaka, Public Procurator, and Mr. Hiranuma Senzo, a money-lender of Yokohama. During the trial of Kawai Kurata, a remarkable swindler, the prisoner's relations with Mr. Hiranuma came upon the *tapis* and evoked some very severe comments from the Public Procurator, who declared that Hiranuma engaged in a perpetual campaign against the nobility (*Kasoku seibatsu*), that he was a "pitiless usurer" (*mujishi naru korikashi*), and that from many points of view he merited condemnation and contempt. Mr. Hiranuma was not content to rest tamely under these aspersions. He instituted a suit for libel against the Public Procurator, but the Bureau of Procurators, after some deliberation, decided that a suit did not lie (*fukiso*), and Mr. Hiranuma is consequently without redress. Now this, we take it, is an exceedingly interesting question. Does the Procurators' Bureau intend to lay down the principle that the utterances of a Public Procurator in his official capacity are privileged? It would seem so. Of course if an ordinary barrister in open court were to assail any individual with injurious allegations such as those employed by Mr. Odate against Mr. Hiranuma, there could be no doubt about the barrister's liability to legal action. But a Public Procurator is not an ordinary barrister. He has an official status in the Court to which he is attached, and in some respect his latitude of language compares with that of the Judge. A peculiar point, however, distinguishes the case under consideration: Mr. Hiranuma was not upon trial; his connection with the affair was incidental, and, so far as we know, he was not legally represented in Court. Under

these circumstances, was the Public Procurator justified in uttering a damning oration against him, and are no legal means of redress available? Such a problem ought to have attracted keen attention, and induced the vernacular press to depart from its ordinarily apathetic attitude towards judicial proceedings by publishing in full the petition of Mr. Hiranuma and the judgment of the Procurators' Bureau. But the sole intelligence furnished to the public is that the Bureau declared that a case did not lie. Nothing could well be more unsatisfactory. We venture to express the hope that some of our Tokyo contemporaries will be sufficiently enterprising to correct this singularly perfunctory conduct by collecting and publishing exact details.

THE "JIJI SHIMPO" ON THE NEXT SESSION OF THE DIET.

As the Budget has not yet been published, says the *Jiji Shimpō*, it is somewhat difficult to predict the course of events in the next session of the Diet, but judging from present circumstances, the Railway question, the Reassessment of the Taxable value of Land, and the Treaty Revision problem will be the principal subjects of debate. No doubt the Opposition will fight against the Government on the Budget, but in view of the fact that the policy of the Government is directed to effecting large reductions in the ordinary expenditures, there is not likely to be such a hot discussion as in previous sessions. The Opposition, however, will certainly raise a question as to the employment of the Surplus. Very hot debates on the subject of railways may be expected, but the discussion will assume the character of quarrels among the members themselves, the Government standing aloof as a third party. The only duty of the Administration is to organize the Railway Council with all expedition, so as to afford as few points of attack as possible to the Opposition. The Bill for re-assessing the taxable value of land will pass the Lower House without any trouble, but as the Government's strength in the Upper House is increased greatly by the recent change of Cabinet, there can be little doubt that the Peers will reject the measure without any special prompting on the part of the Government. The latter will thus attain its aim without openly adopting an attitude of hostility to the Opposition. As to Treaty Revision, the Opposition will be sure to propound questions, but the Constitution provides means by which the Government can easily avoid any serious controversy. In a word the *Jiji* expects that next session will terminate peacefully.

THE BYE-ELECTION IN NIKONBASHI DISTRICT.

The result of the election in this district, which has been keenly looked for by all shades of politicians, has just been announced. Of the numerous candidates spoken of by the vernacular press, only two became conspicuous as the voting day approached, these were Mr. Kusumoto Masataka, ex-Radical member of the House of Representatives, and Mr. Yasuda Zenjiro, banker. The voting took place on Friday, and the ballot-box was opened on Saturday morning, with the following result:—

Mr. Kusumoto Masataka.....	248
Mr. Yasuda Zenjiro	224

In the last general election Mr. Kusumoto was defeated by Mr. Kuroda Tsunahiko, pro-Government member. Mr. Yasuda was also unsuccessful in the last general election when he contested the same seat against the late member.

LIGHTHOUSES IN JAPAN.

This empire has been greatly and justly praised for the enterprise displayed by it in lighting its coasts, and the subject has received additional prominence from the fact that, owing to reasons which need not be described again here, light dues have never been collected, vessels of all nationalities enjoying the benefits of these beacons without being required to contribute anything towards the cost of their construction and maintenance. There are eight thousand miles of coast to be lighted, and

as yet only seventy lighthouses have been built, whereas, according to the ratio followed in the Occident, there ought to be a thousand, or one to every eight miles of coast. The construction of these, at the present rate of procedure, would occupy from two to three centuries, and since the Authorities feel that one beacon to every hundred and twenty or thirty miles is conspicuously inadequate, it is proposed, says the *Jiji Shimpō*, to take the matter more resolutely in hand, and make a considerable appropriation for the purpose in next year's Budget. The places where lighthouses seem to be needed most imperatively are Daiogasaki in Shishu, Hiimisaki in Kishu, and three other spots in Seto. These will be taken in hand so soon as funds are granted by the Diet. It is expected that each lighthouse will cost about thirty thousand *yen*, but this estimate does not apply to the Daiogasaki light, which must be placed on a sunken rock several miles from the shore, and which will consequently be an expensive undertaking.

TELEGRAPHIC MESSAGES.

The *Jiji Shimpō* comments on the great increase of telegraphic business during the past ten years. In 1881, the number of messages despatched over the wires throughout the empire was 5,856,970, but in 1891 it was over 9,450,000, an increase of 3,593,030, or more than 60 per cent. The cost of the service and the receipts amounted respectively to over a million *yen* last year, against 858,000 *yen* in 1881, an increase of about 150,000 *yen*, or 18 per cent.; from which it will be seen that the rates charged for transmission are now very much smaller than they were a decade ago. It appears that the development of telegraph business became most remarkable from 1886 and onwards, a fact doubtless attributable to the adoption of a uniform rate of ten *sen* for short messages to every part of the empire. The *Jiji* states, however, that the increase is well sustained this year, the revenue during August having been upwards of 120,000 *yen*, which is 30 per cent. larger than the revenue for the corresponding period of last year. This development is greatest in the field of domestic telegrams. The increase in foreign messages was only fifteen per cent. in August of this year as compared with August of 1891. The *Jiji* attributes the slowness of the development of communications with foreign countries to the fact that no particularly healthy growth of the country's foreign trade has taken place.

SAVING MONEY.

We read in the *Nichi Nichi Shimbun* that the authorities are devising means to facilitate the process of money-saving. Hitherto the Post Office Savings Banks have been employed pretty freely by the people, but inasmuch as the smallest sum receivable under the regulations is ten *sen*, it has been found that the lower orders are unable to avail themselves of the Banks to any great extent. Ten *sen* do not often accumulate in a Japanese household among the labouring classes, and although the disposition to save might be strong enough to induce the deposit of fractions of that total so soon as they became available, it is generally too weak to educate the patient putting away of such fractions from day to day until they aggregate the required amount. Moreover, the mere fact that nothing below ten *sen* is received induces people to regard any lesser sum as an impossible basis for a bank account. In order to remedy all this, it is now proposed to sell stamps of any value from one *rin* (the tenth of a *sen*) upwards. These the purchaser will fix on a ruled paper which will be supplied to him, and when each square on the paper is filled with stamps, it will represent a total of ten or fifteen *sen*, and may be handed to the nearest post-office for deposit in a Bank. The stamps are to be pictorial, and will thus serve as a means of education, being at the same time sufficiently attractive to make their accumulation an amusement to school children and young folks generally.

THE SURVEY OF JAPAN.

If prosecuted at the rate permitted by the appropriations hitherto included in the Budget,

the cadastral survey of Japan would not be completed for a period of about sixty years. The area to be surveyed is 25,000 square *ri*, of which only 2,600 square *ri* have as yet been mapped, though quite a number of years have been spent upon the work. This tardy prospect has been the subject of comment from time to time. A Bill to accelerate the work was submitted in the first session of the Diet by Major-General Baron Ozawa, a member of the Upper House. Liberality, however, in matters of public expenditure has not hitherto distinguished the doings of the peoples' representatives. The Bill shared the fate of all other schemes requiring money for their prosecution. But a large programme of railway extension having now been approved by the Diet, new importance attaches to the question of a cadastral survey, which is evidently required not less for railway than for military purposes. Hence, says the *Mainichi Shimbun*, it has now been decided to hasten the work so that its completion within twenty years may be achieved. For that purpose a total outlay of 4,110,000 *yen* is required, and our contemporary says that the sum will be divided almost equally over the whole interval, the appropriation for next year being two hundred thousand *yen*. National cadastral surveys have everywhere involved a large expenditure of time and money.

THE MORA CURE FOR SNAKE-BITE.

P. J. DAMANIA, Surgeon-Major, I.M.S., writes to the *Times of India* that the application of *mora* as a cure for snake-bite is a myth:—"To our shame it must be confessed that the medical profession has nothing to offer as a certain cure for bites from poisonous snakes. Under these circumstances I do not think it is advisable for the medical profession to step in and put a stop to a treatment which does some good in its way. It has often happened that a native of India while working in a field on a dark night is hurt by a thorn or some other object, and he generally imagines that most likely a snake has bitten him, and subjectively develops some of the symptoms, and is very often found in a state of collapse. Nothing on earth will induce him to believe that what he has brought on is the result of his imagination and fright and not of a snake-bite. Unfortunately a medical man has not only to face this difficulty, but when the patient makes up his mind that he shall die, he (the medical man) is helpless, and cannot stop him from attaining that end. Of various remedies the patient has great faith in the application of this *mora*, and if he gets it he is cured of a malady which is the product of his own imagination. From what I have seen of this *mora* it is nothing else than a flat, round, smooth piece of animal charcoal, which by its dry and spongy nature absorbs blood from the wound and drops off when it is thoroughly saturated. Generally it is a small disc, but if made larger and thicker, and applied to the wound immediately after a bite it might do some good.

FILIAL PIETY.

In the report of the trial of the man who murdered his wife and extracted liver for the purpose of curing his mother of blindness, the following dialogue is recorded:—

Prisoner—Buddhism teaches that the benevolence of one's parents is deeper than the deepest seas, one's existence depends entirely upon them. Without parents we could have no existence at all.

Assistant Judge—But surely the same Buddhism also teaches you that it is a grave crime to kill another?

Prisoner—Yes, I know it. But I have heard sermons in which it was said that a certain Ko-chu in China attempted to kill his own child for fear his mother's daily food should be insufficient; and that another, Yang-ching, threw himself down in front of a tiger to save his mother. Those are really fine tales of filial piety, and I always hoped to do something to repay my mother's great kindness. If I lose my child I may still have another. Even if I have no more children of my own I can adopt one, but my parents cannot be replaced.

If, says the *Nichi Nichi Shimbun*, any one cares to read through the report of this most touching story, he will at once see that the prisoner is far from being a violent tempered man. He is a faithful believer in Buddhism, a fond parent, and a loving husband, if we may judge by his wife's readiness to sacrifice her life for him, and his whole soul was bound up in doing some

kindness to his aged and blind mother. But his good intentions made him misinterpret the tales of filial piety he had heard, and led him at last to commit a heinous crime. The stories he referred to are in the "Twenty-four examples of Filial Piety" and are often found in educational books and in sermons. Those who are engaged in educational matters or as teachers of moral doctrines, adds the *Nichi Nichi*, ought to be very careful.

"THE WORM TURNS."

MR. GRANT ALLEN writes as follows, under the above heading, in the *Athenaeum*:—

I have often been laughed at for saying in print that the English author, unless rich enough actually to defy his public, must work under painfully soul-killing restrictions. May I be permitted briefly to recount a recent experience of mine which proves my thesis? For years those who know me well have said to me frequently, "Why do you never put anything of yourself into your novels?" But I knew my public too well; I gave it self instead—which is what it wanted. Some months since, however, I was tempted by conscience to set to work at a more serious romance on a social theme that deeply interested me. I got absorbed in it; I was carried away with the subject; I wrote at white heat, in a glowing fever of moral enthusiasm. I put my soul into the thing, I put my religion into it. And I wrought long and hard at it, with graver and burnisher, till I believed for once I had made a work of art. It was a part—a small part, a first instalment—of the authentic Message which, rightly or wrongly, I imagine the Power that inheres in the universe has implanted in me for transmission to humanity. When it was finished I gave it to a publisher who is also a personal friend, and in whose judgment I have absolute confidence—he knows his public even better than I do. After reading it he implored me in the strongest terms not to publish. He said the book would ruin me. Nobody would afterwards take any other novel of mine. It would spoil my future. I am a very sane monomaniac; I yielded at once to his advice. I dare run no such risk. I shall destroy the manuscript. I hope those who read this note, so wrung out of me, will pardon its egotism. However insignificant a man may seem to others, to himself the failure of his life-work must always be a tragedy. But, after this, nobody, I am sure, can ever laugh at me for saying free thought is gagged in England.

WEDDING PRESENT TO H.I.H. PRINCE KANIN.

We read in the *Fiji Shimpō* that the French Government has presented a very beautiful wedding gift to H.I.H. Prince Kanin, who last year married Lady Chiye, daughter of the late Prince Sanjo. Prince Kanin resided for a considerable time in France, so that a special reason exists for this act on France's part, which, for the rest, accords well with the graceful courtesy that so eminently distinguishes the French. The gift is a vase of Sevres porcelain, white as alabaster, decorated with a finely painted design of Diana hunting. The goddess is accompanied by a number of female attendants, and her hounds are in the act of pulling down a stag. The piece is three feet high with its stand, and was specially manufactured at Sevres for presentation to the Prince.

TOURISTS IN 1893.

A STATEMENT is confidently forwarded from Hongkong that no less than eighty-five thousand first-class passengers from Europe propose to make the round trip *via* Japan to the Chicago World's Fair next year. This must obviously be a great exaggeration. Nothing like that number could find steamers to bring them here, even supposing that they desired to come. But we entertain no doubt that 1893 will be an unprecedentedly prosperous year for Japan. A veritable Pactolus of tourists may be expected to discharge its golden stream upon these shores during the progress of the World's Fair. Hotel shares, at any rate, should go up, and guides may count on a fat time.

THE INCREASE OF LIGHTHOUSES.

THE *Fiji Shimpō* urges the necessity of erecting lighthouses at a more rapid rate than has been hitherto done. Our contemporary observes that in well-lighted foreign countries these lights are not more than 8 miles apart, but that in Japan, which has a coast line of some 8,000 miles, the average distance is not less than 120 miles. The *Fiji* states that the cost of the erection of three new stations is included in the Bud-

get to be submitted to the Diet during its next session. The stations chosen are Cape Daio, Shima, Cape Hii and Setouchi, Kishyu. The ordinary cost of a lighthouse is about 30,000 *yen*, but that to be erected at Daio, owing to the obstacles to be overcome, will require a much larger sum. The *Fiji* thinks the attention of legislators should be drawn to the disadvantages and losses involved by the tardiness of the operations of the Department of Communications in this direction.

THE TOKYO MUSIC SCHOOL AFFAIR.

We observe with pleasure that the Japanese journal, the *Yomiuri Shimbun*, originally responsible for the publication of a story—already alluded to in these columns—seriously affecting the fair fame of a foreign Professor in the Tokyo Academy of Music, has now discovered and acknowledged its error. The whole tale, elaborated as it was into something of the character and dimensions of a novelette, had no foundation more solid than the simple fact that the Professor preferred a proposal of marriage to the relatives of one of the lady graduates and was unsuccessful in his suit. There the affair would have ended completely, had not some romancer constructed out of this fragment of every-day life a tissue of libellous falsehoods. Our only regret is that the paper responsible for circulating such a cruel slander should escape at the cost of an easy retraction.

FARES TO CHICAGO.

THE *Nichi Nichi Shimbun* says that an agreement has been come to with the Canadian Pacific Steamship Company as to the fares of Japanese who desire to visit the Chicago Exhibition. The terms arranged are that a first-class return ticket for Government delegates from Yokohama to Vancouver shall be two hundred dollars; for exhibitors, three hundred dollars; and for ordinary visitors also three hundred dollars. Tickets of the first kind are already issued; those of the second kind will be issued from the 1st of October; and those of third kind from the 1st of March next. The same authority states that no definite arrangement has yet been concluded with the railway authorities, but that, in all probability, the price of a return ticket from Vancouver to Chicago will be about seventy dollars gold, or a hundred dollars silver.

MAJOR FUKUSHIMA.

THE *Keisei Shimpō* makes an odd proposal in reference to the doughty major who is still engaged in his long ride across Russia. Our contemporary suggests that a band of military men, who are ardent admirers of the feat, should set out from Japan and meet the Major somewhere in Manchuria, and conduct him in triumph to the Land of the Rising Sun. It does not seem to have occurred to our contemporary that were such a plan to be followed the honour of the feat which the equestrian hopes to accomplish, would be considerably diminished. But it is of course improbable that the military authorities would allow officers to embark on such an enterprise. Major Fukushima's ride is a private affair, and undertaken at his own expense and risk. He hopes to reach his native country some time in February.

FOREIGN LOAFERS IN JAPAN.

THE *Nichi Nichi* has an article on the subject of loafers, who have lately been giving considerable trouble to the Japanese authorities. In many cases, these men are not recognised by any foreign representative. Their acts are apt to have a very injurious effect upon the relations existing between Japanese and foreigners. Few understand the niceties of international law, and it is not a matter for surprise, if many Japanese are unable to discriminate between one foreigner and another. Extreme measures should be taken by the authorities, says the *Nichi Nichi*, in dealing with these loafers, not only to preserve Japan's reputation for hospitality, but in the interests of foreigners as well.

THE STANDARD LIFE ASSURANCE COMPANY.

At the sixty-sixth annual general meeting of the Standard Life Assurance Company, held at Edinburgh on Tuesday,

The Radical organs very well understand the mood of the Progressionist journals, and have more than once tried to allay the latter's suspicions by declaring that their party is firmly resolved never to swerve from the course it has hitherto pursued. Observing that its past explanations have been entirely ineffectual to dispel public doubt and suspicion, the Radical organ, the *Yiyu*, has again written an article on the subject; but we strongly doubt whether its effort this time will be more successful than on former occasions. It begins by declaring that "the Ito Cabinet aims at impeding the development of a system of Government by party, inasmuch as it pursues an ambiguous and time-serving policy, without allying itself with either the Official party or the Popular party," and that "consequently the Popular party, whether it adopts a negative or a positive method, must, for the purpose of establishing a responsible Cabinet and a system of Government by party, be prepared to fight with the Cabinet more firmly and more perseveringly than heretofore." But what follows entirely destroys any good impression that may have been produced by this courageous declaration. "Before fighting with the Cabinet," continues the *Yiyu*, "we must ascertain the probable movements of our enemy. The Ministry's object is to try every means to induce the Opposition to pursue a policy of indiscriminate hostility to the measures proposed by the Government, and thereby to discredit the Opposition in the eyes of the nation. To reject the Government's measures without discrimination will, therefore, be to fall into the trap laid by the crafty statesmen now in power." So far the Radicals are concerned, the *Yiyu* is able to state that "its party will not hesitate to approve whatever good thing may be done by the Government and may even co-operate with it"; but that, "whenever the Government ventures to do anything bad, the Radical party will not desist from strong condemnation and attack." The *Yiyu* hopes that the same line of conduct may be followed by the Progressionists and by other sections of the Popular party.

The Minister President's speech to the local Governors has been very favourably received. Judging from the résumé of the speech published in the *Nichi Nichi Shimbun*, it is evident that he strongly condemned, though indirectly, the part taken by some of the Governors at the time of the general elections of February last. He went so far as to say that the Governors are not bound to obey even the instructions of their superiors when such instructions are obviously at variance with the grave duties of their office. The Opposition journals, while on the whole approving the speech, maintain that the Premier is bound to remove all the Governors who overstepped the limits of their official duties in February last. Even an independent paper of the *Fiji Shimpō's* standing, joins in the cry for thorough changes in the *personnel* of the local Governors. The ground on which the *Fiji* advocates this measure is, however, far broader than the one on which the party organs base their demand. Our contemporary recalls the abnormal state of affairs when Governors were first appointed in the early years of the present era. In those days, the principal object in sending out these officials was to impress the power and dignity of the new Government upon the local population; and in some cases Governors were accompanied to their place of appointment by a detachment of troops. It consequently resulted that several of them were men of military rather than of civil predilections. Many such Governors may be still found among those now assembled in the Department of Home Affairs. These men of the old type are declared to be entirely unfit for the functions they are now required to perform, and so long as they are suffered to remain in office, it will be useless to issue instructions, however excellent, for their guidance. The Administration is strongly recommended to introduce decided changes in the *personnel* of local Governors. If it be found impossible, from personal considerations, to introduce such changes, then the best alternative is to resort to a still bolder course and abolish the office of

local Governor altogether. The *Fiji* is of opinion that such abolition would not prove at all inconvenient, but does not explain the method of procedure on the ground that it discussed the topic more than a year ago.

The result of the election in the Nihonbashi district of Tokyo has given unbounded satisfaction to the Opposition, especially the Progressionists, who regard Mr. Kusumoto, the successful candidate as particularly *lié* with their party. The citizens of Nihonbashi are congratulated by the *Kaiship-to* organs on having returned a Representative of Mr. Kusumoto's ability and standing. The *Mainichi Shimbun* alludes to the immense disadvantages against which Mr. Kusumoto had to contend in being opposed by one of the most powerful capitalists of the District. Considering that all the influence of the *Goyō-shōnin* (merchants patronized by the Government)—and there are many of them in Nihonbashi—was exerted on behalf of Mr. Yasuda, it speaks, we are told, very much for the independence and proverbial chivalry of the descendants of true *Yeddoko* that an outsider without any powerful local connections was returned by a decisive majority. Our contemporary, alluding in another article to the same subject, doubts whether the Ito Cabinet really means to stand aloof from parties. The *Mainichi* cannot charge the Cabinet with any direct or indirect interference in the recent election in Nihonbashi; but infers from the manner in which the *Nichi Nichi Shimbun*, the supposed organ of Count Ito, pressed the claims of Mr. Yasuda upon the electors of the district, that the Cabinet must have been anxious to see Mr. Kusumoto defeated at the poll. Reference is also made to the cordial reception which the local authorities are extending to Viscount Shinagawa and Count Saigo in their political tour through the provinces. In view of these circumstances a large note of interrogation is placed after the Cabinet's alleged independence of party politics.

The *Nichi Nichi Shimbun*, writing on the result of the election in Nihonbashi District, cautions the partisans of the rival candidates against suffering political competition to interfere with their social and business relations. They are recommended to bury the past in oblivion and resume their commercial affairs as friends and neighbours.

The vernacular press has gradually recovered from the state of excitement into which it was thrown by the first news of the rough treatment suffered by Japanese in the United States. Some journals indeed, have been moderate and sober throughout, conspicuously the *Kokkai*, the *Nichi Nichi Shimbun*, and the *Fiji Shimpō*. The last named expresses great doubt about the accuracy of the reports thus far received from the other side of the Pacific. But even supposing the story to be essentially true, the *Fiji* sees nothing in it to justify the angry writings of some of its contemporaries which even went so far as to suggest retaliation upon American residents in Japan. The men concerned in the alleged persecution of the Japanese in Idaho must be, in the *Fiji's* opinion, ignorant emigrants from Europe and their conduct will undoubtedly evoke the unqualified condemnation of all respectable Americans. Moreover, the Government having ordered the Consul at San Francisco to make investigations into the matter, it will be time enough to take diplomatic steps after the receipt of a report from that official.

The *Kokkai*, which originally wrote in a similar strain to the above, has now an interesting article on "Japanese in the States." In one sense the Tokyo journal is pleased with the report of an anti-Japanese movement in America, since, if true, the fact proves the growing strength of the Japanese colony in the States. There are in America Japanese of worthless character, but the *Kokkai* has no doubt that many, even of such persons, must have derived some benefit by coming into contact with Americans citizens. Some, too, on

their return to Japan, will become important elements of social reformation. The *Kokkai* remarks that the Japanese at home are subject to various provoking restraints of officialdom, but being used to such a state of things, are apt to be indifferent about the necessity of altering it. Those, however, who have once lived in the free air of America, will find it hard to submit to these embarrassing restrictions, and will be ardent advocates of reform.

The *Fiji Shimpō*, discussing the question of Treaty Revision, urges upon the Authorities the importance of taking up the task speedily, but at the same time it frankly recognises the immense difficulties lying in the way. There are writers who believe that the foreign Powers are comparatively favourable to Japan's aspirations, but the *Fiji* is more than doubtful whether some of the Powers may not be reluctant to re-open negotiations after what occurred in recent years. The chief difficulty of the Japanese Government, however, will be in satisfying the extravagant claims of the Japanese people. Our contemporary believes that some of its countrymen ask not for equal but for unequal treaties. Nevertheless, a Government like the present cannot be suffered to postpone this important question merely because of the difficulties attending its solution. With Count Ito at the head of the Cabinet and Mr. Mutsu at the Foreign Office, the *Fiji* doubts not that the question is receiving serious attention, and that a scheme of revision has been already elaborated.

The extension of the harbour limits of Kobe is approved of by the press as a necessary and judicious step to meet the requirements of the increasing prosperity of foreign trade at that place.

The military manoeuvres that are to take place in November next afford a topic for journalistic discussion. The affair is to be on a scale never before witnessed in this country. The *Kaisei Shimpō* advises the military authorities to conduct these manoeuvres so as to develop the martial spirit of the troops. Sham fights will also serve to check the tendency to effeminateness and luxury among officers. The *Choya Shimbun* directs the attention of the War Department to the importance of making the manoeuvres a means of studying the questions of mobilizing the reserves, of commissariat arrangements, and of ambulance service. These subjects did not receive adequate attention at the time of the manoeuvres in Aichi Prefecture two years ago, tactics being on that occasion the primary object with the Military authorities.

The lamentable case of the murder of his wife by a farmer in the Prefecture of Oita has awakened widespread interest. The newspapers combine in directing the attention of Buddhist preachers, and writers of text books on morality, to the importance of exercising discretion in inculcating the duty of filial piety. There is no doubt that the farmer was betrayed into a terrible crime by an exaggerated notion of filial piety. Some writers more or less Christian tendencies, seize this opportunity to say bad things about Buddhism and Confucianism. The *Yomiuri Shimbun* takes up the cause of these creeds, and tells the Christians that their religion has also produced detestable victims of prejudice. Reference is made to the reported trampling on the Emperor's photograph at a religious establishment in Tokyosome 7 years ago, and to a certain Japanese student in the United States who liked Uncle Tom better than his Emperor. Of such materials does the *Yomiuri* construct its thunderbolts.

The shocking case of alleged barbarity by a foreign resident in Nagasaki inspires many angry notes and editorials in the metropolitan papers. The *Nippon* is conspicuously clamorous. It is a pity that the editors of these papers have not a larger experience of the world and its ways.

the 26th April, 1892, the following results were communicated:—Amount proposed for assurance during the year 1891 (3,199 proposals), £2,000,872; amount of assurances accepted during the year 1891 (for which 2,796 policies were issued), £1,692,564; annual premiums on new policies during the year 1891, £66,385; claims by death under policies during the year 1891, inclusive of bonus additions, £642,338; claims under endowments matured during the year, £6,355; subsisting assurances at 14th November, 1891 (of which £1,449,284 is reassured with other offices), £21,988,746; amount of policies issued during the last five years, £7,443,090. The accumulated funds now amount to £7,688,686, and the annual revenue to £1,006,720.

PROPOSED SUBSIDIES.

MR. MURATA TAMOTSU, a warm advocate of the protection of marine products, introduced a Representation on the subject in the last session of the Diet, which passed the Upper House by a large majority. The Government, it is reported, has now adopted the suggestion and intends to ask a grant of 130,000 yen for the purpose. Besides the above, the Department of Agriculture and Commerce wants a sum of 250,000 yen as subsidies for the Tea Merchants' Association. This association, says the *Nippon*, has for its objects the examination of tea brought from various parts of the empire, and its success in obtaining a good name for the staple has prompted the Government to assist it in defraying expenses.

THE NOBLES' CLUB.

It is stated in the *Yiji*, that the members of the Nobles' Club are contemplating whether they shall purchase the Rokumei-kwan, or whether they shall erect an entirely new building for the use of the Club, the present arrangement proving unsuitable in many respects. We are not inclined to place much confidence in this report. Hardly a year passes without a rumour getting afloat to the effect that the portion of the Rokumei-kwan used by the Tokyo Club will be appropriated to some other purpose. The Club is a great convenience to Japanese officials and others, and hence it is highly improbable that any steps will be taken necessitating its removal to a less central position.

NEWCHWANG.

Messrs. BANDINEL and Co., in their circular dated Newchwang, 3rd Sept., say:—Shipping business is quiet, and we do not look for much change until the new beans come in. The crop is expected to be a fair average one, partial floods and drought notwithstanding. Freights—Chinese talk about 15 cents to Kobe, 18 cents to Swatow 20 cents to Canton, for steamers in November. Arrivals to date are 235 steamers and 25 sailers, against 226 steamers and 37 sailers this time last year. Shipping in port: *Taku*, *Chinlung*, *Fidelis*, *Kwang-sang*.

THE BUDGET FOR 1893-94.

RUMOURS were circulated within the past few days that a serious conflict of opinion had arisen in the Cabinet with reference to the Budget for next year, Count Inouye and Count Yamagata being represented as entertaining opposite views about the propriety of re-including in the Estimates the items rejected by the last Diet, namely, appropriations for building men-of-war and establishing a Steel Factory. The Tokyo News Agency is authorized to emphatically contradict—and the *Nichi Nichi Shimbun* endorses the contradiction—that any such differences of opinion exist.

JAPANESE MARRIAGE CUSTOMS.

La Nouvelle Revue for August contains an article by Motoyoshi Saizau, entitled "*Le Mariage dans les classes moyennes*." It is mainly taken up with a description of manners and customs that are fast becoming things of the past.

A JAPANESE CONSULATE IN BOMBAY.

OWING to the great development of the cotton trade with Bombay and increase of trade generally with India, a petition was lately presented to the Foreign Office, praying for the establish-

ment of a Consulate in Bombay. The authorities admit its necessity, says the *Yiji Shimpō*, but consider that many other places have equal claims. The funds required for such a purpose would probably not be granted by the Diet.

THE USUI-TOGE RAILWAY.

It is stated in the *Hochi Shimbun* and other papers that 24 out of the 26 tunnels on the Usui pass have been completed and that the twenty-fifth is far advanced. It is calculated that the line will be ready for use some time in November. We (*Japan Mail*) do not know whether this is a technical opinion or not, but travellers over the pass report that they do not expect to see the line open for traffic before the end of the year. Much work still remains to be done to the bridges and embankments as well as the tunnels.

PORTUGUESE IN A JAPANESE COURT.

THE *Nichi Nichi Shimbun* notes that a case has been brought in the Kobe District Court by a Portuguese subject, Mr. Silva, against a fellow-national, whose name as transliterated reads "Mr. Leach" (? Ritchie) for the recovery of a debt. The amount involved must be small since the case is brought before a tribunal with such limited jurisdiction, but the fact is interesting since it is the first example of one foreigner suing another in a Japanese Court of Law.

YOKOHAMA TRADERS' UNION.

THE Yokohama Traders Union held a general meeting on the 16th inst. at which 35 members were present. Mr. Ohama Chuzaburo was elected Acting Chairman. The business of appointing a chairman to succeed Mr. Ono, who lately resigned, was then proceeded with, and resulted in the election of Mr. Otani Kahei, who received 34 votes. Mr. Otani, however, declined to accept the office, but the Union has begged him to reconsider his decision, and is now awaiting the result.

THE MILITARY REVIEW.

THE review to be held at the end of next month between Utsunomiya and Shirakawa, at which the Emperor has signified his intention to be present, promises to be a big affair. Some 30,000 troops are to take part in the manoeuvres. They will be divided into a northern and a southern army. Six military experts are to be deputed to act as judges, who will be assisted by 14 subordinates.

DISABLED JUNK AT SEA.

THE *Sakata Maru*, Captain Walter, from Miyako to this port, fell in with a dismasted junk at 6.47 a.m. the 20th inst. this side of Noshima. The captain got a line on board the junk with the intention of taking her in tow, but the rope parted. Just at this time a Japanese man-of-war arrived on the scene, and relieved Captain Walter by taking the junk in charge, and the *Sakata* proceeded on her voyage.

LACQUER COMPETITIVE ASSOCIATION.

SUCH of our readers as are interested in Japanese art may be reminded that an attractive exhibition of modern masterpieces in lacquer is now in progress at the temple of Monzeki, in Tsukiji. The affair is under the auspices of the *Shikō Kyōgi-kai*, or Competitive Association of Workers in Lacquer. The best artists in Tokyo have contributed specimens, and some fine old pieces also are on view for purposes of comparison.

NANCY HANKS.

THIS celebrated trotting mare, who quite recently at Chicago broke all previous records by trotting a mile in 2.74, has now beaten that wonderful performance by trotting a mile in 2.54, thus cutting down the best record by two seconds. The quarter occupied 30 seconds, the half 61 seconds, and the three-quarters 1.34. This feat was performed at Independence, Iowa, and the mare was driven by Budd Doble.

EARTHQUAKES AT NAGASAKI.

THREE shocks of earthquake were experienced here, says the *Nagasaki Express* of the 14th inst., on Sunday afternoon last, about 5.05, 6.02, and 6.30 p.m., respectively. The first one was the most severe that has been felt for several

years, but the two others were very mild. All were of short duration, and no damage whatever was sustained.

OFFICIAL APPOINTMENTS.

THE *Official Gazette* announces that Mr. Shimamura Hisashi, a Secretary of the Foreign Office, has been appointed a Consul-General, as has also Mr. Fuji Saburo, hitherto a Consul. Mr. Uchida Kesai, hitherto Private Secretary to the Minister of State for Agriculture and Commerce, becomes a Secretary of the Foreign Office.

DEATH OF MRS. LLOYD.

WE regret to learn that a telegram from Canada announces the death of Mrs. Lloyd, wife of the Rev. A. Lloyd, who resided in Tokyo for some years, and is now principal of a college in Canada. Mrs. Lloyd was much liked in Japan, and her decease will be mourned by a wide circle of friends.

THE CHOLERA AT HAMBURG.

THE *N. C. Daily News* of the 12th inst. says that Messrs. Siemssen & Co. received on Saturday afternoon a telegram from Hamburg announcing that the cholera is decreasing there.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

A rumour has been going the round of the Opposition press to the effect that the Government, perceiving the hopelessness of encountering the Popular party on the floor of the House of Representatives, is endeavouring to make the House of Peers a rampart against the joint attack of the Radicals and the Progressionists; and that, in order to further this project, offers of official positions are being made to the leading members of the Extreme party in the Upper House. The report even goes so far as to give the names of the Peers approached by the Ministry. It is stated, for instance, that the post of Minister to a foreign country has been offered to Prince Konoye; that of Minister of the Household to Viscount Tani; that of Chief Military Attaché to the Prince Imperial to Viscount Soga; and restoration to his former rank of Lieutenant-General to Baron Ozawa. How far this rumour is worthy of credence remains to be seen, but some papers seem to think that, in the case of Prince Konoye at least, the statement will probably prove well founded, for he is understood to be not at all disinclined to go abroad as the Emperor's Representative. It is also rumoured that Mr. Nakajima Nobuyuki, a distinguished Radical and ex-President of the House of Representatives, will receive an appointment to a foreign court, possibly China. He is stated to have requested the Radical Party to strike off his name from its roll of members. The *Hochi Shimbun*, in a sarcastic tone, tells the Cabinet Ministers to fall back upon the support of the House of Peers if they are not bold enough to meet their opponents in the House of Representatives. But which expedient, asks our contemporary, are they going to pursue, that of increasing the number of Imperially nominated members or that of reducing the strength of the so-called Extreme party among the Peers?

A general impression increases that the coming session of the Diet will probably witness the cooling, if not the entire rupture, of the friendship now existing between the Radicals and the Progressionists. Count Itagaki's party is very anxious to maintain its newly acquired reputation for being comparatively reasonable and practical; while Count Okuma's followers seem more than ever bent on pursuing to the bitter end their policy of desperate and indiscriminate opposition to the Government. There are indications that the members of the *Kai-shin-to* are ill at ease about the probable attitude of their allies, the *Fuyu-to*, in the approaching session. Thus far the Progressionist papers have refrained from speaking out their mind on this delicate subject; but indirect allusions have from time to time appeared in their columns.

Original from

THE CASE OF THE TOYAMA DIVISIONAL HEADMEN.

THE transfer of Mr. CHICHIWA YEIICHI, a Rural District Headman of Toyama Prefecture, to the post of Police Inspector in the Kanda Urban District of Tokyo, has evoked some comment, and has also had the useful result of bringing fully to light the circumstances of the trouble which recently occurred between this official and a number of the Divisional Headmen in the District presided over by him. The facts of the trouble, as originally stated, were so meagre as to mislead many persons into imagining that the Divisional Headmen had acted in a manner fully justifying Mr. CHICHIWA's procedure. It was understood, by ourselves among the rest, that the Divisional Headmen (*Soncho* and *Chochō*), acting on their own responsibility, had combined to address a joint letter of approval and congratulation to Messrs. SHIMADA SABURO and KONO HIRONAKA, leaders of the Opposition in the House of Representatives, on the occasion of the passing of the celebrated Representation declaring that Government officials had been guilty of improper interference in the general elections. Now in every Western country combinations of officials for political purposes is either distinctly interdicted or implicitly condemned. Moreover, much of the interference complained of during and after the general election of last spring had been laid to the door of District and Divisional Headmen. Yet here was a case where some thirty of these very Headmen, belonging to one of the Prefectures where official interference was alleged to have been eminently scandalous, combined for the purpose of throwing their weight into the scale of party politics. By the light of these supposed facts, it did not seem at all strange that the District Headman, Mr. CHICHIWA, had, in the first place, called upon the signatories of the document to withdraw it, and that, being met by an emphatic refusal on their part to comply, he had subsequently removed them from office. But the controversy aroused by Mr. CHICHIWA's transfer, very soon afterwards, to a post in the capital has made it clear that the above statement of the case between himself and the Divisional Headmen is imperfect. The Headmen did not act independently, or combine as officials to compile and sign a political round-robin. Their procedure was taken in their *ex-officio* capacity as Presidents of the Divisional Assemblies. Perhaps it should be explained here that, according to the Local Government system of Japan, there are three classes of Local Assemblies, namely, the *Kenkai*, or Prefectural Assembly; the *Gunkai*, or District Assembly; and the *Sonkai*, or Divisional Assembly. There are also the *Fukai*, *Shikui*, and *Chokai*, but these being merely the urban forms of the *Kenkai*, *Gunkai*, and *Sonkai*, do not con-

stitute special classes. The functions of each Assembly are defined with tolerable precision by the Law for the Organization of Local Governments, but of course a certain degree of latitude exists. In the case immediately under consideration, a number of the Divisional Assemblies of Toyama Prefecture passed resolutions congratulating the leaders of the Opposition on the success of the Representation with reference to official interference in elections, and the Headmen, as Presidents of the Assemblies, forwarded copies of these resolutions with covering letters. This information materially modifies the view originally taken in our columns of the action of the Divisional Headmen, and raises a very nice question as to the propriety of Mr. CHICHIWA's procedure in calling upon them to withdraw their letter forwarding the Assemblies' resolutions. Mr. CHICHIWA maintained that in thus forwarding the resolutions the Headmen exceeded their competence. We have read with care the Law for the Organization of Cities, Towns, and Villages, but we are unable to find any provision distinctly bearing on the question. In the 33rd Article of that Law a list is given of the matters falling within the purview of a Divisional Assembly, and among them there is nothing that can possibly be construed as pointing to a survey of resolutions passed by the House of Representatives. But in the preamble of the article the word "principally" is employed to qualify the appended list of matters, and since the list is thus deprived of the character of definiteness, it can scarcely be quoted as proof that the resolutions of the Toyama Divisional Assemblies were *ultra vires*. Supposing them to have been legally taken, however, the question still remains whether the Headmen, in their capacity of Presidents of Assemblies, were competent to open communications, on behalf of the Assemblies, with the leaders of Parties in the House of Representatives in respect of matters before the House. This, apparently, is the ground upon which Mr. CHICHIWA took his original stand, and no authoritative decision has yet been pronounced as to the correctness of his view. The matter is under consideration, and the result is fraught with interest on account of its evident bearing upon the autonomy of the lowest class of Local Assemblies. We ourselves, looking at the matter from an English point of view, cannot find justification for Mr. CHICHIWA's first step; but remembering that the Japanese Local Government system is not based on English models, we are constrained to suspend judgment. That he was right, however, in his second step, namely, the removal of the Divisional Headmen who declined to obey his directions, there can be little room to doubt. The Law, in unequivocal terms, invests him with competence to exercise disciplinary authority over Divisional Headmen,

and further provides that against a disciplinary measure taken by him appeal may be made to the Prefectural Assembly, and thence to the Administrative Court. But nowhere is it contemplated that a Divisional Headman may refuse to obey a disciplinary order issued by a District Headman pending appeal to higher authority. The plain duty of the Toyama Divisional Headmen was to comply with the directions issued by Mr. CHICHIWA as to withdrawing their communication to the leaders of the Opposition in the House of Representatives, and, after compliance, to appeal against his instructions. It was for their failure to be guided by this plain dictate of discipline that Mr. CHICHIWA dismissed them, and not for their original action in forwarding the resolutions of the Divisional Assemblies. Whether or no they were justified in taking the latter step remains to be determined, but their conduct in refusing to obey, pending appeal, was evidently indefensible. We trust that, in the interests of the autonomy of Divisional Assemblies, Mr. CHICHIWA's first step may be condemned by the Prefectural Assembly and the Administrative Court alike, but as to his measure in dismissing subordinates who refused to recognise his legally constituted authority, there can be no second opinion. Meanwhile, Mr. CHICHIWA himself has been transferred to a Police Inspectorate in the Kanda District of Tokyo. His pay in the latter position is the same as before, but the public regard the transfer as promotion, and are disposed to criticise any favour shown to an official in whose District so much commotion occurred during the general election. For it was this very Mr. CHICHIWA who ruled that a number of the votes cast for the *Kai-shin-to* candidate, Mr. SHIMADA TADAYUKI, were invalid, the consequence being that the pro-Government candidate, Mr. TAKEBE SONOBUMI, stood at the head of the poll. His ruling was subsequently condemned by the Supreme Court, and it was natural to conjecture that the error would mar his official career. But the Central Authorities do not, apparently, set much store by the fact. Mr. CHICHIWA is regarded as an able official, and the circumstance that he failed to secure the confidence of the people of his District in Toyama, though held to justify his transfer to another locality, is not counted to his serious discredit. The Minister of State for Home Affairs has shown such an unequivocal resolve to set his face against official interference in elections that his action in the case of Mr. CHICHIWA ought not to be misconstrued; but it would certainly have been a happier *dénouement* if the career of this particularly zealous official had received a check instead of an impetus.

**THE "LONDON & CHINA EXPRESS"
ON THE PORTUGUESE QUESTION.**

It is plain that when the *London and China Express*, in its issue of August 5th, undertook to discuss Portugal's forfeiture of Jurisdiction Privileges in Japan, it possessed no trustworthy information and was obliged to write from conjecture. Yet we are surprised to find how palpably it has missed the mark in every respect. The article is a mass of misconceptions. We are told at the outset that the affair is "a distinctly new phase of the ever-recurring question of treaty revision," and that it is "mainly pivoted on the Japanese desire to be quit of the extraterritorial powers exercised by foreigners in Japan." The *London and China Express*, however meagre its knowledge of this particular matter, ought surely to have understood, on general grounds, that Portugal, as she is at present, cannot possibly figure at the head of a new chapter in the history of treaty revision. That place is occupied by Great Britain, and must remain hers, unless some very radical change occurs in the relative importance of the Great Powers' interests in Japan. Portugal's failure to discharge the duties devolving on her by treaty invalidated her claim to continued enjoyment of the privileged conferred by that treaty. Such is the whole story in a nut-shell. By what stretch of imagination it can be called "a new phase of treaty revision" we are at a loss to conceive. Further, although there is undenied truth in the assertion that Japan ardently desires to terminate the conditions which bar her exercise of judicial autonomy within her own borders, it is an unwarrantable license that a journal, trusting to hypothesis for the facts of the case it discusses, should declare her recent action to have been "mainly pivoted on that desire." Japan, in common with all civilized Powers, owes to herself the paramount duty of providing for the proper administration of law and justice within her territories. Pressing as that duty has always been, it became still more imperative after the promulgation of the Constitution, wherein the SOVEREIGN solemnly promises that the preservation of order by duly administered laws and full access to equal justice shall be secured for his subjects in every region of his dominions. Portugal's procedure rendered that pledge nugatory so far as concerned the control of Portuguese subjects in Japan, and so far as concerned all legal claims of Japanese subjects against Portuguese. The situation that resulted from the withdrawal of the Portuguese Consul-General in Tokyo had not to be interpreted by Japan of her own insight. It was translated into the plainest language for her information by Portugal's Representative himself. She was officially informed that no system for the administration of justice by Portuguese Consuls in Japan would thenceforth exist, and if under such circumstances, her subjects

had neglected to take some decisive action, they would have palpably failed to discharge the first duty of every Government. We see no occasion, still less any warrant, to attribute to Japan's desire for judicial autonomy a course of action plainly dictated by the most rudimentary sense of a civilized State's duties.

This erroneous exordium of the *London and China Express* is followed by a series of not less striking misconceptions. Representation by merchant Consuls alone is assigned as the general cause of Portugal's deprivation of jurisdiction, while in the next sentence we are told that "the withdrawal of the Portuguese Consul at Yokohama and Tokyo seems to be the only event leading to the present action of the Japanese Government." Our London contemporary is not only mistaken as to its facts, but appears also to be without any definite idea of its own meaning. A system of merchant consuls, and the withdrawal of Consuls from the Japanese capital as well as from the principal centre of foreign trade—these things seem to be viewed by the *London and China Express* as identical. But in truth its confusion of ideas does not greatly matter, since the bases of its varying assertions are in both cases false. By and by, when the real facts are accessible, we may look for a juster review of the situation, though in truth our contemporary's readiness to commit itself to sweeping conclusions on premises so slender and contradictory does not argue any strong anxiety to be just. We observe, too, that the *London and China Express*, though the rôle it professes to play in discussing Oriental affairs deprives it of any claim to the indulgence extended to other journals published at a distance, labours under very singular misconceptions as to the Japanese Constitution. It represents the Privy Council as "communicating its decision to the EMPEROR," and it adds that "according to the Japanese Constitution, the decisions of the Privy Council become law directly they are promulgated." Whether these extraordinary statements are attributable to ignorance of facts, or whether they merely represent curiously careless phraseology, we need not stop to determine. In either case they are equally inexcusable. And so, too, is our contemporary's allegation that when Japan had communicated her decision to the Portuguese Government, she "thought the matter brought to a definite conclusion." How does the *London and China Express* know what Japan "thought"? We do not desire to draw harsh inferences, but between the lines of such writing it is impossible not to detect an effort to depict Japan's action in an arbitrary and precipitate light. Yet there is no explicable reason for a hostile judgment. The Great Powers, notably England, have fully recognised in practice their sense of the obligation imposed on them by their treaties with Japan. They have established in this

empire competent tribunals to discharge the jurisdictional functions thus acquired. Forty-eight years ago, long before any covenant with Japan was contemplated, England placed on official record her opinion that a Power which by convention had conceded jurisdiction within its borders to a foreign State, would be justified in revoking the privilege if due provision were not made by that State for the discharge of the jurisdictional functions assumed by it. On that principle England has always acted, and other Great Powers have carried the same sound theory into practice with more or less fidelity. On what grounds, then, should Englishmen defend Portugal's flagrant failure to discharge the duties which their own Government considers so imperative? We can understand and appreciate the "shoulder-to-shoulder" instinct that binds Occidentals together in the Orient, and makes them anxious to resist discriminations of every kind. But the sentiment is altogether exaggerated when applied to the present case. It is precisely because of the laches and inefficiencies of Powers like Portugal that the whole system of extraterritorial jurisdiction becomes discredited. But for the failures of these petty States to discharge the duties devolving on them, comparatively few practical defects could be laid to the charge of Consular Jurisdiction. Englishmen should be the first to condemn such failures. Above all, their sympathies should be with Japan in her laudable anxiety to provide for the due administration of justice within her territories. The singular nonchalance, not to use any stronger term, displayed by Portugal in her attitude towards Japan, is a feature of the case that need not be dwelt upon here. But no one can question the fundamental principle that from the moment when Japan found a number of Portuguese subjects within her borders and beyond the reach of effective control by their own laws and tribunals, she was bound, in the common interests of peace and good order, to assume jurisdiction over them. She did not do so without ample warning to Portugal, and her delay seems to us the only reprehensible part of her procedure. She discharged her plain duty at last, however, and nothing is more inexplicable than that her laudable resolve to provide for the efficient administration of justice in respect of every person within her territories should evoke the condemnation of any impartial Englishman. Great Britain, we are entitled to say with truth and pride, leads the world in her practical recognition of this duty. Her people need never apprehend that derelictions like that of Portugal will disqualify their country for the enjoyment of any international privilege. They should, and assuredly will ultimately, approve the course adopted by Japan in this matter.

SLAVERY AND CLASS DISTINCTION IN OLD JAPAN.

A PAPER read before the Historical Society by Mr. KONAKAMURA GISHO, and published among the Society's transactions, contains a large amount of interesting information bearing on the class distinctions of old Japan, much of which has never been published in so convenient a form before. It may be necessary to preface our reproduction of Mr. KONAKAMURA'S essay with the remark that the term slave is a somewhat too harsh rendering of the Japanese term *dorei*. As will be seen by the facts given below, Japanese servitude was characterised by none of the horrors which we are accustomed to associate with African slavery. It is true that men and women were bought and sold, and that the amount of personal liberty they enjoyed wholly depended on the dispositions of their masters. But since the Japanese have ever been a kindly disposed race, the hardships of such a servitude as that to which their menials were subjected differed little, if at all, from the hardships of ordinary domestic service.

Mr. KONAKAMURA rightly regards works on Law as the most trustworthy sources of information on the classes, status, duties, amenabilities, &c., of slaves. The earliest trustworthy record of the classes into which slaves were divided is contained in the collection of laws known as the *Taihoritsurei*, which was published in the Taiho era [A.D. 701-703]. In this work they are classified as follows:—(1) **戸** *ryoko*, or guards of the Imperial Mausolea; (2) **官** *kwanko*, or government slaves; (3) **家** *kenin*, domestic slaves; (4) **公** *konuhi*, the slaves of officials; (5) **私** *shinuhi*, slaves belonging to private individuals. This classification needs explanation. The first two classes are distinguished from the other three by being householders. Class 1 consisted of rebels and their descendants. The work of guarding the Imperial tombs seems to have been regarded in those days as ignominious, for in the order of precedence given we find that classes 2 and 4 rank highest. The slaves included in class 2 were mostly rebels, but they had to be over 60 years of age. Class 3 consisted of persons who were too poor or too helpless to become householders, and who were doomed to serve the families upon whom they depended for a living. The poor relations of retainers were often compelled to sell their liberty in order to keep body and soul together. Though there was a certain amount of disgrace attached to the loss of independence which this servitude involved, in many respects it was far preferable to other forms of slavery. It is difficult to distinguish classes 2 and 4, both being under official control. Their origin, however, was not the same. While rebellion rendered class 2 subject to bondage, class 4 were captives taken in war, criminals, or their descendants. *Englished by Google*

belonging to class 2 were required to do was of a far more menial kind than that performed by the slaves belonging to class 4. Class 5 consisted of captives and criminals. It was this class exclusively which furnished slaves for the market, the sale of persons belonging to the other four classes being strictly forbidden by law.

Coming now to the laws and regulations to which slaves were subject, it is necessary to state that prior to the publication of the Taiho laws, Japanese society was divided into two classes only, known as *ryomin*, 良民, and *semmin* 賤民, which may be rendered, superior people and inferior people. The Taiho laws classified the *semmin* in the manner indicated above. The marriage of slaves with other persons was strictly forbidden. Moreover, the slaves of each class were forbidden to intermarry with slaves of another class. The punishment for a violation of this law was 50 stripes and annulling of the marriage. The slaves who guarded the Imperial tombs were under the control of the Imperial Household officials. A special bureau existed for this purpose.

From very ancient times the Japanese held what we should consider very loose notions respecting the sale of human beings. Prior to the Taiho period the sale of people belonging to the superior class (*ryomin*) even was common; so much so that the Emperor JITO issued in A.D. 691 a decree specifying the cases in which the sale of persons should involve degradation in social rank. The following was the regulation:—"In case of a peasant who is sold for the benefit* of his elder brother, he shall not be degraded. But if he be sold for the benefit of his parents he shall be degraded. A person sold for the sake of discharging a debt shall retain his rank as a *ryomin*." It is not a little interesting to observe that the notion respecting the honour attached to self-sacrifice for the sake of discharging the debts of parents and relations existed more than 1200 years ago; that in those days no disgrace was attached to the sale of a human being into servitude provided the motive was a worthy one. The clause of the decree quoted above which declares that sacrifice of liberty for the sake of an elder brother shall involve no degradation, but that in the case of sacrifice for a parent the opposite shall hold good, can be only understood when considered in the light of the prevailing ideas concerning the filial obligations of children; according to which the greater the suffering involved the more praiseworthy was the conduct of the child. On this principle the EMPEROR required that what a child would not be prepared to endure for an elder brother he should bear cheerfully for a parent. The view that by diminishing suffering you diminish the merit attached to cheerful endurance, is by no means ex-

* The reference is not to sales for the sake of discharging debts, but with the object of gaining some benefit.

clusively held by the Confucian; it is the view of leading theologians in various parts of the world. Prior to the Taiho era, the sale of persons of superior rank was evidently common, for there is a law in the Taiho Code which forbids such sales.

Slaves were regarded in the days of which we write as animals. In the 法曹至要 *Hoso-shiyosho* it is argued that in case of slaves obtaining children by cohabiting in an irregular manner among each other, the children so obtained should belong to the master of the female slave, as with animals the male has nothing to do with offspring after birth. One law of this period provides that "in the case of the sale of a slave, a cow, or a horse, should illness occur within three days after the purchase, the animal or human being bought may be returned." In the case of traffic in slaves a written bargain had to be prepared and submitted to the authorities for approval.

An interesting document bearing on the prices realised by slaves was discovered in the Todaiji, Nara, some time ago. It gives an account of the sale of certain persons in Mino, the property of one MORIBEMARO. There were three male and three female slaves, who realised 4,900 bundles of rice plants. The ages of the three males were, 34, 22, and 15 years, respectively. The two elder slaves fetched 1,000 bundles each and the younger, 900. The ages of the females were 22, 20, and 15 years, respectively. The two elder ones realized 800 plants each and the younger 600. Various marks of identity are given, such as "a mole beneath the left eye," red spots on the left cheek, freckles," &c.

In case of flight it was customary to pay a reward amounting to 5 per cent. of the value of the slave if he or she was captured within a month, and of 10 per cent. when a year had elapsed prior to the capture. The following are the circumstances under which slaves might become free and enter the ranks of *ryomin*. (1) In case of persons who had been stolen and reduced to slavery illegally. A girl of the Fujiwara family was carried off by a Harima man and sold as a slave. She obtained her liberty by applying to the local authorities. Even the distant descendants of unlawfully captured slaves sometimes obtained freedom by referring the authorities to the register. (2) When released from service by their masters. (3) When a master died without an heir and his house became extinct. (4) In the case of official slaves, they became free when over 76 years of age, or when too ill to do any work. Freedom was often obtained after a few year's service by those who had been reduced to slavery on account of their association with rebels and not owing to any prominent part they had taken in opposing the Government. (5) Slaves occasionally obtained their freedom by displaying great proficiency in some art or accomplishment. (6) Slaves were sometimes released from obligations by the will of the SOVEREIGN.

In such cases there was usually some special object in view, such as the encouragement of agriculture, and the like. In the days of the Emperor JUNWA [A.D. 824-833] freedom was granted to 233 male slaves and 277 female slaves, who were ordered to settle at Okachidana, Mutsu.

It is impossible to say how many slaves there were in any given age, as no trustworthy statistics have come down to us. But Mr. KONAKAMURA states it as his opinion that at one time the proportion of slaves was about 5 per cent. of the total population, and that the number of female slaves was slightly in excess of that of males.

There is no doubt whatever that slavery in its earliest form was a punishment for disloyalty to the throne. The Emperor YURYAKU is said to have originated this method of punishment, when in A.D. 470, a man called NE-NO-OMI rebelled. NE-NO-OMI was killed, but the EMPEROR decreed that all the descendants of this man should be regarded as inferior persons and be reduced to servitude of a menial kind. They were divided into two parties, one being deputed to serve the EMPEROR and the other a provincial governor. A little later, in the days of the Emperor KENSO [A.D. 485-487], KARABUKURO-NO-SUKUNE rebelled, and when captured pleaded hard for his life. The EMPEROR pardoned him and ordered that he and his descendants should look after the Imperial tombs.

Another early origin of slavery was debt. In the days of the Emperor JITO [A.D. 690-696] it was decreed that if a man were unable to pay a debt, and if the sale of his property did not realise sufficient money to meet the demand, he should become the slave of his creditor.

Prior to the days of the Emperor JITO all foreigners who came to the country were classed among *semmin*, and, unless redeemed by relatives or friends, were slaves for life. The Emperor JITO altered this law and decreed that foreigners should be classed among *ryomin* and be exempted from servitude. For several hundred years the distinction between *semmin* and *ryomin* was very marked, but under the Kamakura and the Ashikaga Shoguns it was almost obliterated. In the 貞永式目, *Teiei-Shikimoku*, a book published in 1232, reference is made to the two classes, but this was done with the object of bringing this work into accord with earlier treatises on law, and is not to be understood as representing a distinction observed in everyday life.

The early Tokugawa Shoguns were specially given to social classifications. They not only revived the old distinction between *ryomin* and *semmin*, but also divided the latter into a number of minor classes. At no time before or after was the list of persons officially designated *semmin* so large. This list as given by Mr. KONAKAMURA, we append, with explanations of our own.

(1) *Chori* 長吏, originally the name given to the head of *Eta*, but in later days used as a synonym of *Eta*. (2) *Eta*. (3) *Hinin* 非人, an outcast, one who is too low to be regarded as human; originally applied to criminals only, but subsequently extended to beggars. (4) *Yamaban*, mountain-keepers. (5) *Kawaya-mono*, a low class of beggars who encamped in the stony beds of rivers, and who were required to take charge of corpses of criminals. (6) Ordinary beggars. (7) *Shiku* 虱, a term applied to men or women who dance in front of a shrine. (8) *Miko*, or *Kuchiyose*, a witch, or necromancer, who undertakes to appease the angry spirits of the living or the dead. (9) *Maimai*, a male dancer who uses a fan only and is not accompanied by music. (10) *Gannin* 願人, an ordinary mendicant friar, also called *Kofiki-bonzu*. (11) *Sode-koi*, applied to a special class of mendicant priests, who wear long-sleeved *koromo* and beg with a wooden bowl enclosed by the 2 sleeves; hence the term "sleeve-beggars." (12) *Ombo* 埋房, persons employed in the burning of dead bodies. (13) *Ningyo-tsukai*, puppet showmen, Punch and Judy men. (14) Actors. (15) Brothel-keepers. (16) *Zato*, or *mekura-amma*, blind shamposers. (17) *Sarugaku* 能 performers. (18) *Onyoshi* 陰陽師, diviners. (19) Plasterers. (20) Makers of earthenware. (21) *Imonoshi*, casters. (22) *Tsui-mekura*, wayside blind beggars. (23) *Saru-hiki*, men who make money by showing off a monkey's tricks. (24) *Hachi-tafaki*—called also *Kuya nembutsu* after their founder—priests who obtain money by beating a metal bowl and reciting passages of scripture. (25) Stone-cutters. (26) Umbrella-menders. (27) Ferry boatmen. (28) Dyers. (29) *Tsubotata*, the proprietors of archery grounds. (30) Pen-makers. (31) Ink-makers. (32) *Seki mori*, barrier-guards. (33) Bell-ringers. (34) *Shishi mai*, persons who dance with *shishi* masks for the amusement of children. (35) Makers of rain-coats. (36) Keepers of bath-houses. (37) Watchmen. (38) *Mikawa mansai*, beggars, originally from the province of Mikawa, who acted as mummers at the New Year to secure the prosperity of the Tokugawa Shogunate. (39) Jugglers. (40) *Yashi*, or *Mizemomo shi*, showmen. (41) *Inu mamashi*, persons who train dogs and get money by showing off their tricks. (42) *Hanashi ka*, story-tellers. (43) Serpent-charmers. (44) *Naso toki*, expounders of enigmas. (45) *Chikara mochi* exhibitors of feats of strength. (46) *Kagunike*, persons who make it appear that they crawl through a narrow basket without being hurt by the drawn sword attached to it. (47) *Kitsune-tsukai*, trainers of foxes.

In the case of many of these various occupations it is not easy to see why they should be deemed more ignominious than others which might be mentioned. In most instances, however, the above-named classes were included among *semmin*, for a reason which satisfied the leaders of public opinion in those days. Speaking generally, all irregular methods of obtaining a livelihood were considered derogatory. Begging was abhorred. All connection with dead bodies was supposed to defile: hence the pen-makers who used the hair of deer, and ink-makers who used the bones of cows and horses for hardening the ink, were condemned. Occupations were often considered ignominious on account of their associations: archery grounds, for instance, were used as meeting places for persons of loose character, hence they were despised. The prostitute was not reckoned among *semmin*, because in many cases she sold herself for the sake of her parents, but the man who kept a brothel was in the eyes of the Tokugawa Shogun a very different person.

During the time of the early Tokugawa Shoguns the control of *semmin* of all classes was entrusted to DANZAEMON and KURUMA ZENSHICHI. The powers with which these two men were endowed enabled them to establish a kind of im-

perium in imperio. All the misdemeanours of *semmin* were dealt with by these chiefs. In effect Extraterritorial Jurisdiction was sanctioned by the Tokugawa rulers, who considered that it would be derogatory to the honour of ordinary Court officials even to pass judgment on the outcasts of society. The reign of the DANZAEMON family over *Eta* and other classes of outcasts dates from the time of the Kamakura Shoguns. The wealth accumulated by this family was something enormous. Despite the fact that these Kings of outcasts were branded with the disgrace attached to the term *semmin*, the merchants of Edo were often only too glad to borrow money from them at cheap rates of interest. But such transactions were kept secret. It is recorded, however, that on one occasion a member of the DANZAEMON'S family, feeling keenly the ostracism to which society had condemned him, invited all the persons to whom he had lent money to a large feast. About two-thirds of the *invités* refused the invitation on the ground that the disgrace of accepting the hospitality of an outcast was more than they could reasonably be expected to entail on themselves. The remainder accepted the invitation, arguing that they could not do otherwise, having consented to make use of DANZAEMON'S money. When they arrived at the house of the host, they perceived that the preparations were on a magnificent scale, but they were altogether unprepared for the surprise that awaited them. When the covers were removed from the bowls placed before each guest, they were found to be full of *Koban*. These the host insisted on the guests' accepting, and when they rose to leave, the customary *miyage-mono* was handed to them, carefully wrapped in paper. On opening his parcel, each guest found that it contained the bond which had been given to DANZAEMON in acknowledgment of his debt, together with a declaration that it was null and void.

During the reigns of the later Tokugawa Shoguns, the classes of persons included among *semmin* were gradually diminished until, at the commencement of the Meiji era, Mr. KATO HIROYUKI memorialised the government on the subject, and as a result even *Eta* and *Hinin* were placed on an equality with their fellow-men. The Japanese as a race have never taken kindly to class distinctions. Their feelings on the subject, when uninfluenced by the fear of unpleasant consequences, were well represented by the merchants who attended DANZAEMON'S banquet. In no country do a man's circumstances count for so little provided his personal character merits esteem. A nobleman's carriage standing in front of the humble cottage of a highly valued friend of its owner is a sight no less common than significant. Japanese Sociology from a foreign point of view has yet to be written. When it is written there will be abundant proof that the vulgarity of

our modern wealth-worshipping world and all the senseless minor class distinctions of fashionable society, are adjuncts of a civilisation which in many of its characteristics is infinitely inferior to that which Japan, sitting at the feet of nature, has succeeded in developing.

CLIMATE AND ITS CHANGES.

OLD people sometimes say that the climate of the country where they live has changed since their youth. The assertion is generally regarded as indicating that their own perception of climatic conditions has altered. And yet the climate does change, though so gradually that no human being's life-time, however long, could suffice to make the change perceptible. There are two causes of change: a major and a minor. The major cause is the eccentricity of the earth's orbit. If our planet travelled in a circle round the sun, so that the difference between the amounts of heat received from the orb by the two hemispheres at a given time was due solely to the inclination of the planet's axis, winter and summer would be of the same length in each hemisphere. Inasmuch, however, as the earth's orbit is not circular but elliptic, it happens that the tilt of the axis favours one hemisphere longer than the other with regard to the sun's warmth, and the more elliptic the orbit becomes, the greater must be the advantage of either hemisphere in this respect. At present the ellipticity or eccentricity, as it is also called—is not great: it produces a difference of only seven days between the summers of the two hemispheres, the northern having 186 days of summer against the southern's 179. But in consequence of the attraction of the other planets the earth's course is sometimes extended to an ellipse of such eccentricity that the difference between summer or winter amounts to 33 days, or even more. Under such circumstances the one hemisphere has 199 winter days and 166 summer days, while the other has 166 winter and 199 summer days. Sir ROBERT BALL, the Astronomer Royal of Ireland, has shown that each hemisphere alike receives 63 per cent. of its total solar heat in summer and 37 per cent. in winter. Hence, when the earth's orbit has attained its maximum eccentricity, the hemisphere with 199 winter days has its 37 per cent. of warmth distributed over the whole of that period, and its 63 per cent. of summer heat is distributed over 166 days: in other words, it has a long cold winter and a short hot summer. Physicists assert that the heat of such a summer would not suffice to melt the ice and snow accumulated during such a winter, and that the accumulation would gradually increase, until, as in the past, whole continents would be buried under a thousand feet of glacial snow. This increase in the eccentricity of the earth's orbit is believed

to produce the glacial ages, of which there have been many in the past, and of which there will apparently be many in the future. But when is that terrible future to be anticipated? When is the half of North America and the greater part of Europe to be buried under ice, to the annihilation of the manifold forms of life now existing there? There is much difficulty in solving the complex factors that enter into the problem, but Dr. JAMES CROLL has calculated and published the periods of the greatest and least eccentricity of the earth's orbit for the next million years, and for a still longer time backwards. Briefly stated, his conclusions as to the past are that the maximum eccentricity was reached eight hundred and fifty thousand years ago; that for the period from two hundred and forty thousand to eighty thousand years ago the eccentricity was very high, and that the last glacial era in the northern hemisphere closed at the end of that period; while with respect to the future he calculates that one hundred and fifty thousand years hence a high eccentricity will be again attained, accompanied by a recurrence of the glacial period.

Such is the major influence operating to produce great climatic changes. But there is also a minor influence which makes itself felt at much shorter intervals. It is the precession of the equinoxes, the result of which is a transfer of the conditions between the two hemispheres every 10,500 years. The winter in the northern hemisphere occurs at present when the earth is nearest to the sun, while the contrary is the case in the southern hemisphere, and these conditions are reversed every 10,500 years. Were eccentricity of the earth's orbit as high to-day as it will be a hundred and fifty thousand years hence, the southern hemisphere would have its glacial period while the northern would enjoy short mild winters with summers longer than now but not quite so warm. Then, since the period of high eccentricity lasts long enough for the completion of several precessions of the equinoxes, the lapse of a hundred and five centuries would inaugurate a glacial era for the northern hemisphere in its turn, and the southern would simultaneously emerge into a state of habitability for human beings. It will thus be seen that our planet has two climatic lives, so to speak: first, it enjoys a temperate existence of about two hundred and thirty thousand years, during which no glacial periods occur for either hemisphere; then it enters upon a frigid existence of about a hundred and sixty thousand years, during which the hemispheres are alternately visited by glacial periods—buried under a thousand feet of ice and snow—at regular intervals of ten thousand five hundred years. We have our little winters and our petty summers now-a-days, but what a stupendous winter is in store for our remote descendants.

THE PORTUGUESE AFFAIR.

IT is not likely that any discriminating persons will be misled by the singular statement, advanced more than once by hostile critics of Japan's recent action towards Portugal, that a miscarriage of justice which occurred in Nagasaki in 1887 constitutes the principal warrant for Japan's procedure in 1892. Whether the publication of such a statement is due to crass miscomprehension of the whole question, or to a deliberate attempt to obscure the truth, we do not care to inquire. One or other hypothesis must be accepted, nevertheless, for, in point of fact, no direct connection of any kind exists between the Nagasaki business of 1887 and the Imperial Ordinance of July 4th, 1892, nor has the former ever been authoritatively mentioned as justifying the latter. In 1887, a Portuguese subject residing in Nagasaki was enabled to escape the consequences of a theft laid to his charge because neither the Portuguese acting Consul in Nagasaki nor the Portuguese Chargé d'Affaires in Tokyo had competence to issue a warrant for his arrest. This incident demonstrated that the improvements in her jurisdictional arrangements made by Portugal some years previously, at Japan's instance, were still unsatisfactory, and the sequel was the elaboration of a more efficient system of which the Consul-General in Tokyo constituted the key-stone. It may seem perplexing that only in 1887 was the insufficiency of Portugal's arrangements clearly ascertained. But the fact, as shown by official documents, is that Japan, after representations made by her to Portugal in 1883, and after the receipt of assurances from Lisbon that due dispositions had been effected, rested content until concrete evidence was furnished in 1887 that, despite Portuguese statements, no proper provision had actually been made for the administration of justice in respect of Portugal's subjects in this empire. Then it was that Portugal with this concrete evidence before her, at last discharged her duty after a fashion by organizing the system which remained in operation until the departure of her Consul-General in 1892. It will thus be seen that the Nagasaki incident was simply one of the stepping stones to the completion of the jurisdictional arrangements made by Portugal in 1888, which arrangements were coolly overturned in 1892, despite Japan's reasonable remonstrances, and despite the fact that they represented the outcome of representations extending over five years. The most superficial acquaintance with the sequel of events will enable anyone to see that the Nagasaki incident could only be quoted in 1892 as illustrating the eventualities contingent on reverting to the system of 1887, and in point of fact, Portugal did not even take the trouble to revert to that system, but quietly left her subjects in Japan without any juris-

dictional system at all. It is a clumsy falsehood to allege that the Nagasaki incident of 1887 was ever officially adduced to prove that the absence of jurisdictional arrangements consequent upon the withdrawal of the Portuguese Consul-General in 1892 justified Japan in assuming jurisdiction over Portuguese subjects.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

SUGGESTIONS TO THE YOKOHAMA TELEGRAPH OFFICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I take the liberty to ask you for a short space in your valuable columns to make a few suggestions to the Yokohama Telegraph Office? On the 6th instant (the day when the line between here and Kobe was down owing to the heavy storm), a telegram was taken to the Yokohama Telegraph Office to be sent to Kobe, and the officer in charge let it pass without saying a word about delay, though the line was then not in proper order. The next day (7th) when the line was still not working properly, a telegram intended for the same port was taken to the office, but the officer in charge (he was not the same man who attended on the 6th) refused to receive it unless the sender made a written statement that he would submit to delay in its arrival. Under these circumstances the message was brought back to me by the bearer. Thinking it rather strange that it should pass on one day and not on the other, I went to the office myself and found out that such was the fact. Upon enquiry, I was told that the clerk who received my telegram bearing no written acknowledgement for its delay the day before was wrong, and what he did today was right. I therefore had to do just as I was told by the officer and my telegram was then received. If things go on like this it will be very inconvenient for senders of telegrams, most of whom are not aware of this condition of things, consequently, I don't think it useless to suggest to the office that they should insert in their despatch form something like the following clause:—

"The sender must understand that there may be a delay in the arrival of a telegraphic message when the line is not working in proper order."

This would save much time, and be more convenient to all concerned. Similar cases to that I have referred to occurred a few days back.

Yours faithfully,
G. K. WAKIYA.
Yokohama, Sept. 16th, 1892.

THE NIPPON RACE CLUB COMMITTEE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The eccentricities of those who are at the head of affairs in the institution known as the Nippon Race Club are numerous and various, and the careful study on their part of the art of how not to do it, is now a by-word among persons interested in the welfare of the Club. People in Yokohama generally suppose there is a responsible Committee, but they are woefully mistaken, for although one may be in existence, it seems rather to shirk than execute its duties. A friend of mine from Shanghai, taking a great interest in racing, was here some days ago, and went up to the course to see the Half-breds. Speaking about racing in Japan, he asked me the following question:—"When will the autumn races take place?" and it was with shame that I, a member of the Club, and the owner of ponies, had to inform him that I did not know.

Perhaps in 30 or 35 days more we will have the races upon us, yet nobody knows the exact dates, with the exception, perhaps, of the autocrat of the Race Club and his immediate friends. This is unique in racing annals in the East or anywhere else, yet the Committee complain about the lack of interest in racing. Is it not largely their fault, and do they not do everything calculated to accentuate a lack of interest?

Yours faithfully,
A DISGUSTED OWNER.
September 19th, 1892.

THE NEW JAPANESE CODES.

A REPLY TO THE LAWYERS' MANIFESTO AND TO THE DIET'S OBJECTIONS.

BY MR. G. BOISSONADE.

(Translated from the *Révue Française du Japon*.)

Although the editors of this Review refrain on principle, and for reasons of propriety easy of appreciation, from taking part in the polemics which often divide Japanese opinion in the press and in Parliament, the question of the postponement of putting the new Codes into operation, is of too great an international interest for us not to take notice of it. Besides, upon this subject, altogether ill-founded criticisms have been pronounced against the French Codes which have had a recognized influence upon the new Japanese legislation, and it is impossible for the *Révue Française du Japon* not to animadvert upon them.

In refuting the criticisms, often harsh, expressed in the two Houses of the Diet, of French law and of the new Japanese law, we will abstain from naming their authors: we battle with doctrines and not with persons.

At the time that we are writing, the postponement of putting the Civil and the Commercial Codes into operation, has been voted by the two Houses, but to become a law of the State abrogating the Imperial law of the 27th March, 1890,¹ which promulgated these two Codes and fixed the 1st January 1893² for their coming into operation, there lacks the Imperial Sanction. We do not despair of the two Codes being sustained and made applicable next year; but were it to be settled otherwise, even before the publication of this article, we would not withdraw it, because agreement between the three legislative powers can very well be brought about by considerations of conciliation purely political, but it could not transmute into truths, historical, philosophical and legal errors, like those which we shall have to take up here.

If the Codes are abandoned at the very time when benefits were about to commence therefrom, the country will be astonished some day, and surely as much grieved, that such erroneous causes should have brought about so inauspicious a result.

We might limit ourselves to controverting the criticisms raised against the Codes in the two Houses; but we cannot let pass in silence, a Manifesto, a Memoir (*Iken*) by Japanese lawyers, that appeared before the discussion in the Diet took place, that was distributed to all the Members of that body, and that was profusely scattered throughout the country to impassion opinion. The numerous errors it contained were not all reproduced, it is true, in the Diet, but they were so in the press and, on that account, they have created against the Codes a current of unpopularity which certainly was not without influence upon the vote of the two Houses.

We shall, then, divide this reply into three parts, to meet the criticisms raised, 1st in the lawyers' Manifesto, and in the House of Peers, 3rdly in the House of Representatives.

I.—OBJECTIONS IN THE MANIFESTO.

We shall separate the criticism directed principally against the Civil Code or against the two Codes united, from those directed specially against the Commercial Code.

A.—CRITICISMS AGAINST THE CIVIL CODE AND AGAINST THE TWO CODES UNITED.

This Manifesto is signed by eleven lawyers, mostly advocates who have studied only English or American law, and some few of whom are not without reputation. Without putting their good faith into doubt, it is permissible to believe that their animosity is greatly connected with the speciality of their legal studies and with their disinclination to have to make new ones; at the same time, their criticisms of the text, in places, prove that they have not always understood it.

We shall point out only those errors of theirs which were not reproduced in the Diet; in that way we shall not have to revert several times to the same points.

Thus, the censure pronounced against the Civil Code (Book concerning Persons) "of having too much abandoned national customs as to the organization of the family," has been expressed in the Diet as well as in the Manifesto; but the latter has singularly bolstered it up, not only in pretending that "this Code is based upon Christianity,

which is not the religion of the country," but also in upbraiding the Christian religion "for not admitting any inequality between the Sovereign and his people, between parents and children, between masters and servants." According to the authors of the Manifesto, "Jesus Christ requires for himself alone the love and respect of man, so that nothing remains for parents or masters; in the eyes of Christ, father and son are equal, and those who honour their parents are unworthy of following Him."

A person may be ignorant of a foreign religion, but in that case it is meet for him not to speak about it, under the penalty of becoming ridiculous. It was easy for the authors of the Manifesto to inform themselves upon this point of doctrine, by questioning any missionary or any Christian whatever: they would have learned that on the contrary, among the formal Commandments in the Christian religion there is the one, "to honour one's father and mother (which certainly includes the other progenitors), to render to Cæsar whatever is Cæsar's and to God whatever is God's," and this reconciles the duties of a subject with those of a Christian. When Jesus Christ said that, "whoever wished to follow him, must leave his parents," he spoke for those who wished to find perfection outside of the sphere of mundane life, and not for the generality of men. Buddhism likewise proposes retreat and prayer to those who desire to elevate themselves above its frailness.

The Manifesto is not more fortunate when, to prove the pretended superiority of the Japanese family over the Christian one, it utters this strange assertion, that "in Christian countries, all that is required to constitute a house is, that a man and a woman love each other and consent to live together." Cohabitation of a man and of a woman is nothing but vulgar concubinage which the Christian religion formally condemns as immoral.

As to the Japanese system which gives priority to ancestors over descendants, to past generations over present or future ones, we will not discuss here whether or no it is preferable to the European system which, on the contrary, invites progenitors to sacrifice themselves for their descendants. The remembrance of ancestors is piously kept in the memories of children and exists everywhere, in Europe as in China and in Japan; but that the authority of ancestors should have an influence over the distribution and the administration of fortunes, is something that admits of serious economical objections and it is easy to convince oneself that, if the nations of the East have remained behind in modern civilization, the principal cause of it is, the fact that present generations have their eyes turned toward the past, instead of having them turned towards the future.

Let us leave this great question since the new Civil Code has precisely respected the old organization of the family, saving some slight modifications, as well as the law of succession with its privilege of primogeniture.

In another order of ideas, the authors of the Manifesto reproach the Civil Code "with having given more importance to the theory of Property than to that of Persons, and with having subordinated the second to the first, whilst it is the reverse, say they, that should take place."

If the importance of a legal theory were measured by the number of articles that are sanctioned therein by law, the first remark would be correct; but the critics undoubtedly did not intend to thereby express an idea of such little seriousness of character. If Property has necessitated a number of articles, nearly the double of those devoted to Persons, the reason of it lies in the great variety of rights that constitute Property, and especially in the details demanded by the theory of Agreements, considered as sources of property, of *Choses in action*, or of obligations, together with all that relates to the extinction of the same; the condition of Persons in a society and in a family does not present the same complications.

As to the pretended subordination of "Persons to Property," it is entirely imaginary and, even, we have difficulty in conceiving what the Manifesto means by it. The two theories are absolutely independent: that of Property is based upon the universal principles of Reason, Justice and of Utility, which are the same in all times and in all places, whilst the condition of Persons has always varied, more or less, according to times or to countries. If the authors of the Manifesto have ever so little studied the History of the Jurisprudence of the principal countries of the world, they must have seen therein that the theory of property, of obligations, and of the guarantees of the same (which constitutes all the law of Property), was the same among the Greeks and the Romans as it is among modern nations, and yet the organization of the family was different among ancient nations from what it is among modern ones. The theory of Property has always been and still is

¹ We purposely make use of the expression Imperial law, although it is out of use, because the last two Codes, like the first three, were sanctioned and promulgated by the Emperor before the Constitution came into operation.

² Let us recall the fact, however, that the Commercial Code was first to come into operation one year before the civil Code; but the Diet voted it at its first session and the Emperor sanctioned the postponement of the Commercial Code to the same date as the Civil Code. This vote was the motive of Count Yamada's retirement from the Department of Justice.

the same, at least in its fundamental principles, among the Latin, the Germanic and the Anglo-Saxon races; whilst civil capacity, the conditions for marriage and for adoption, marital and paternal authority present notable differences among them.

In Japan, Books II, III, IV, and V, might have been applied, even did Book I, not exist or did it not produce any change in the old organization of the family. The proof of it is in the noteworthy fact, that the Book on Persons was the last one drawn up, and that it necessitated but very few changes in the Book on Property; nevertheless some changes were necessary, and that exactly proves that it is Property that has been made subordinate to Persons, whenever there was contact between the two theories. Thus, the Book on Property admitted, at first, a plurality of heirs; but when, later on it was decided that there should be but one heir, the eldest born, all that related to an equal or an unequal division of the inheritance, had to be suppressed.

The censure of the Manifesto, then, is doubly ill-founded: there could be no question of subordination between two theories generally independent; but, in the only case in which they are connected, the Civil Code has precisely subordinated the right of Property to that of Persons, something it is very inconsiderately blamed for not doing.

After having, very inaptly and with gross misconceptions, forced the religious question into the civil law, the Manifesto declares that in the new Code, the expressions *house* and *head of the house*, have lost their ancient meaning, that henceforth it is individuals and no longer the family that constitutes the *house*.

How can such an assertion be advanced in view of the preservation of the right of primogeniture with its consequences? The writers of the Civil Code have given to the words *house* and *head of the house*, their traditional meaning in Japan; the few restrictions they have laid upon the latter's power, do not change its nature and in no wise constitute what, to frighten the timid, is denounced as "a revolution in the family and, consequently, in society."

The Manifesto blames the new Code "for giving to a surviving mother the guardianship of and parental power over an inheriting child, when it is a minor," and concludes therefrom that "all the fortune of the house is found to be in this way, at the disposal of the woman." If the authors of the Manifesto had taken the trouble to compare this provision with those touching guardianship, they would have seen that the powers of the guardian mother, like those of a guardian in general, are limited by a strong control of the family council (Book I, Art. 194), and not one of the least benefits of the new Code will be this protection of inheriting minors against the bad administration of guardians, and sometimes against their malpractices so difficult to prevent to-day. Parental power, like guardianship, should not be based upon the interest of whoever exercises it, but upon that of the child; the law, then, should give the same to that member of the family that merits its confidence the most by affection and presumed devotion for the child. Assuredly, the father must be preferred to the mother in exercising this power; but when the father is dead, the mother ought to be the civil guardian of the child's interests, just as she is the *natural* one of his person, that is to say of his life, of his comfort, and of his morality. There is no doubt that the person and the interests of a child will be safer in the hands of its mother than in those of a paternal uncle. It has been acknowledged, besides, in Japan, that the rôle of women in a family must be raised, and the Civil Code raises mothers and wives as is becoming to a civilized country.

The Civil Code is again criticized for having associated with the bonds of blood, the obligation of maintenance; especially when a woman, after having had children, is divorced from her husband and when the latter has remarried, it is said to be shocking that "the children of the first marriage should be obliged to maintain their mother;" there is seen in that a source of discord between the father and the children.

But the critics forget, that whoever owes maintenance, in a case where the former civil family bond has been broken by a divorce, owes it only as regards his own property, if he has any, and not as that of the family. The fear, then, of discord is imaginary. The dissolution of a marriage by divorce, severs the natural and civil bond between the husband and the wife, but it cannot sever as between the mother and the children, the natural bond, the bond of blood. It may be admitted that it would cause them to lose the right of inheritance, respectively, because that right is, in Japan at least, more civil than natural; but the right to maintenance is, above all, a natural right, and the civil law ought to sanction it, under penalty of being taxed with barbarity if it disregards it.

The Manifesto is not more successful in its criticism upon the obligation of maintenance between brothers and sisters, nor in its fears that this provision will encourage idleness: the law removes this danger, since "maintenance is owing only to whoever is in need through some cause that is not attributable to himself" (Book I, Art. 27); now, idleness is a cause of misery attributable to the idle person himself.

It has been maintained also, that the new civil law, by affording grounds for an action at law between relations, as the penalty of the preceding obligations, "will weaken morality in the land." But we have there a strange conception of what morality is: when the obligation of maintenance shall be voluntarily carried out, morality, will not suffer on account of any right of action to which there will be no need of recurring; if the obligation is not carried out of one's own accord, would not morality suffer much more, were natural and the most sacred rights ignored and violated with impunity?

It is also charged against the Civil Code that it allows the legitimization of natural children, by the subsequent marriage of the father and mother. But the law has taken great pains to declare that this legitimization does not retroact beyond the day of the marriage (Book I, Art. 105). Thus, if the husband has already a legitimate son, destined to be the head of the house, the subsequent legitimization of an older natural child, will not confer the privilege of primogeniture upon the latter. The hierarchy of the family will, then, in no wise suffer by the legitimization of the natural child. The writers of the Civil Code had no need "to become inspired here with Constantine's legislation," as they have been blamed for doing; reason and equity were quite sufficient to convince them that all the children of one father and of one mother legally married, should make part of the same family.

The authors of the Manifesto, after having striven to throw disfavor upon the Civil Code, in the minds of those who are attached to the national religion, by attributing to it, without reason, contrary religious tendencies, and in the minds of old conservatives, by accusing it of subverting the organization of the family, have shifted their contention to the arena of the Constitution and have endeavored to excite against this Code, on the one side the defenders of the Imperial Prerogatives, on the other the champions of Parliamentary Power: they have pointed out certain provisions of the Civil Code, as being antagonistic to the Emperor's rights and to the Diet's.

Thus, it is evidently to alarm the defenders of the Imperial Prerogatives, that the authors of the Manifesto set up, "that the French Civil Code with which the Japanese Code has been inspired, is based upon republican principles."

We are willing to believe in the good faith of our adversaries, but there is therein, on their part, a singular historical error that it was easy to avoid, like as was the religious one refuted above. No doubt, the French Code dates from the first Republic (1803); but already at that time, Napoleon Bonaparte was *1st Consul for life* and was upon the eve of taking the title of Emperor. The Civil Code, then, was applied in the 1st Empire for 12 years (1804 to 1815); afterwards during the restored Royalty of the Bourbons for 15 years (1815 to 1830), during the Royalty of Louis-Philippe of Orleans for 18 years (1830 to 1841), without there having been any dream of modifying its fundamental principles: it was applied in the 2nd Republic for 5 years (1848 to 1852), it was no less applied in the 2nd Empire, that of Napoleon III, for 18 years (1852 to 1870); the 3rd Republic again possesses it and has got along with it very well, it is true, for already 22 years, but neither better nor worse than did the various monarchical forms; so that, within the space of 90 years, the Civil Code ruled France for 63 years of Monarchy against only 27 years of Republicanism.

The French Civil Code has not, however, remained identical and unprogressive during that long space of time, as it has been very erroneously said in the House of Peers (we will revert to in Part II.); but the numerous ameliorations it has received, have had no connection with the form, whether democratic or otherwise, of the Government; the Civil Code is a Code of Private Law and is foreign to Public and to Political Law.

With the same object of alarming the defenders of the Imperial Power the Japanese Code has been blamed for having recognized, as does the French Code, a natural law anterior to positive law. This censure was reproduced and developed in the House of Peers, so it is in Part II. that we shall reply to it.

At the same time that efforts were being made to alarm the Imperial Power, there was a desire also to excite the Diet against the Civil Code, by endeavours to make the Diet believe that the code assailed its authority. Thus, the Civil Code de-

clares that the public property of the State is inalienable. Thereupon, the Manifesters maintain that this inalienability is a blow at the power of the Diet. They go so far as to pretend that the alienation of such property should be made possible by virtue of a simple Imperial Ordinance, because, "from the moment that the price of the sale appeared in the Treasury, instead of the thing itself, there would be no increase in the people's burdens."

There is there a double error of law. The power of the Diet is not held in check by this provision: it can always, by a vote which, with the Imperial Sanction, will constitute a law, change the class of any property in the public domain, that is to say, disappropriate it from the public service and thus transform it into property of the private domain; it will then be alienable by administrative process. On the contrary, an Imperial Ordinance would not suffice to alienate property as long as it was appropriated to the public service, although the price of it should enter the Treasury. This is so because the interest connected with property of this kind is not confined to its selling value only: it is connected also with the nature of the use to which it is put and of its aptness to satisfy the needs of the country; now, whenever property in the public domain should happen to be sold by Imperial Ordinance, it would generally be necessary to replace it by other property, which might be either more costly or less advantageous for its intended use. No more could an Imperial Ordinance, suffice to disappropriate property in order to afterwards succeed in alienating it as being in the private domain: that can be done only by a Law. If the distinction between the two domains was not formerly made in Japan, it is because the Emperor had alone the plenitude of the legislative power and at the same time the executive power; the Constitution having separated these two powers in His person, at the same time that it divided the first, the Civil Code had to conform itself thereto.

Finally, let us observe how singular it is to blame the Civil Code for restricting the Imperial Powers, when itself is an Imperial Law. Will the authors of the Manifesto say, that the organic Law of the Courts aims a blow at the Imperial Prerogatives every time that it exacts a Law for any modification it may receive (see Art. 4, 89, &c.)? In truth it is singular to meet with the defence of the Imperial Prerogatives in a Manifesto, the very object of which is to impair them in the most irreverent way imaginable, for the reason that it is from beginning to end, a harsh criticism of the two Codes, which, with the Constitution, are a most important Legislative monument due to the exclusive initiative and authority of the Emperor! *Quis tulit Gracchos de seditione querentes?*

The authors of the Manifesto, with apparently no care for method, revert elsewhere to the distinction between the property of the public domain and that of the State's private domain; but we prefer to finish at once with the subject. They upbraid the Civil Code for a new wrong which exists only in their imagination and show a second time that this theory is entirely unknown to them. They seem to think that "the Civil Code perceives two persons in the State, a public person and a private person," and they say that "that is an antiquated principle."

But this duality of the State's person has never been maintained by any one nor in any time: the State is *one*, it is a moral person; only, it has two kinds of property: one kind is appropriated to public uses, the other is in its patrimony in the same way as is the property of individuals and yields its revenue that is appropriated to its expenses. The Civil Code has said nothing else (see Book II, Art. 21 to 23).

The Manifesters themselves commit a singular error when they pretend that "the State being a public moral person, all its property ought to be in the public domain;" this is to ignore the destination or the purpose of this property, which should affect its nature and, consequently, the right to dispose of it, as it has been seen above.

The Manifesto upbraids the Civil Code "for not being in accord with the principles of the Budget, on the subject of taking possession of movable property for public purposes." Here the authors have made an odd mistake; they have strangely condemned the appropriation of movable property for public utility with the assessment annually burdened upon subjects by the budget.

The appropriation of movable property for public utility is generally not permitted in other countries; the only exceptions allowed, relate to certain commodities of prime necessity, in case of war, of siege or of other calamities. It has been thought that it ought to be more extensively allowed in Japan; but as there might be abuses in the exercise of this right of the State, and as, in order to enrich the national museums, collectors of rare and curious objects ought not to be despoiled of them, even by giving proper remuneration for

them, the Code is not satisfied, in this case, with an administrative declaration of public utility, as for real property, with a settlement of the indemnity, equally by administrative means: it requires a special Law (Book II., Art. 31); it is a complete guaranty for owners; so that if a private individual should discover, in excavations, objects of great interest for the political or artistic history of the country, such as the tomb or the arms of a celebrated warrior, very ancient manuscripts or specimens of a lost art, the appropriation of them might be authorized by a special law which would at the same time fix the indemnity for them.

This provision might be discussed from a legislative and practical standpoint; but at least, before all things, the text ought to have been understood. By what strange abstraction of mind can the authors of the Manifesto have seen in Article 31 the fixation of the annual taxation of taxpayers? How can they have mixed up an enforced cession of property in consideration of a price or indemnity to be received, with the legal obligation of a tax to be paid? Even when a tax-payer fails to pay his contribution, he is liable to a seizure of his goods, like is any refractory debtor; but there can have been, in similar case, no question of requiring a special law.

We are really frightened at the dimensions that this refutation is going to take; but were we to leave some of these criticisms unanswered, our adversaries might take our silence as confession of being wrong and we can make none upon any point. Besides, the last objections are not less strange than the others.

We shall, to finish with the Manifesto, take up the nine principal criticisms, in the order in which they come, which is not always a methodical one.

1. It is said, that "the Codes, based upon the principle of individualism, do not recognize the collective body of Society." But the Civil Code and the Commercial Code, which are codes of private law, have nothing to do with the social body in itself: sociology is a new science upon which some young Japanese writers willingly descend, with as much obscurity in their language as they have in their ideas; the writers of the two Codes had no motive for entering these theoretical regions; when they have to speak of the State, as representing the social body, it is solely to reserve its rights, it is not to determine them.

As a corollary to these criticisms, the Codes are charged, with "having been principally engrossed with assuring liberty of contract to each individual." The authors of this criticism fail to perceive that they are really bestowing the highest praise on the Codes, for Codes of private law "that assure liberty of agreements," are precisely what can be best hoped for in any country.

But what we do not understand is, that these same codes "encourage, by these means, the free action of the strongest to the prejudice of the weakest." It is impossible to express at the same time two more contradictory and more incoherent ideas. And, that the contradiction may be carried to its acme, behold, this liberty of agreements "excites the passions of political parties and opens a way to socialists"! Really, the uttering of such nonsense is to be wanting in respect for one's readers.

2. Flagrant contradictions continue. It had been charged against the Codes that they "ignored the idea of the State;" now it is said that they "leave to individuals too large a resort to the State for the protection of their rights and the performance of contracted obligations." If it is the weak that can resort to the State for protection against the strong, they are, then, not sacrificed; if the critics intended to speak of the recourse of the strong against the weak it certainly cannot be their desire that the latter should have no means of having their property or their debts respected. The truth is, that both have the same recourse for the protection of their rights. This recourse, moreover, is not to the State but to the courts, for which there are neither strong nor weak, great nor small, and before whom all suitors are equal.

Is it not rather our adversaries who, by exciting the weak against the strong, "are slipping upon the slope of socialism?"

3. The Manifesto continues its enormities. It finds it astonishing "that whoever is holder of a debt can assign it to a third party, with the single condition of notifying the debtor of the fact" (see Book II., Art. 347). It would doubtless be desired that the transferee should depend upon the debtor's good-will, "because the first creditor might be a friend or a relation of the debtor, consequently a kind creditor, whereas the transferee might be intractable."

Until now it had been admitted in every country even in Japan, that a creditor could sell his debt; it appears that the young cadet legislators wish to change that and yet they elsewhere constitute themselves champions of the same system. A case

in action is a chattel just like real property, assignment of it, therefore, should be possible in the same way; the only condition that reason and justice impose, is that the debtor be notified in order that he may not be exposed to pay twice. That persons without legal training should have such strange conceptions would be surprising . . . and sad, but among jurists it is incredible.

4. The Civil Code recognizes the validity of a stipulation only when the stipulator has a legitimate and appreciable interest therein (Book II., Art. 323). The Manifesters exclaim and upbraid the law "for not protecting individuals in their moral interests, in their reputation, in their honour."

Here, they confuse contracts and delicts: the civil law does not directly concern itself with offences against one's reputation, that is the business of the penal Code which punishes defamation with imprisonment and with fines. But the theory of the Civil Code is so exact that, even in the case of defamation, if a party wishes to obtain reparation therefor (exclusive of the suppression of defamatory writings and of the publication of the judgment), he must prove pecuniary injury, however indirect it may be. There is, then, in this criticism, a disregard or a forgetfulness of the elementary principles of civil law and of the role of the courts.

5. The Manifesto again comes back to the reproach that the two Codes "concern themselves only with individuals and have neglected collective bodies;" thus, they blame them for not having treated as companies, scientific, literary, and art associations.

They indeed are corporations, but the provisions of law for civil and commercial companies, cannot be applied to them. If the Manifesters knew better the legal character of Companies, properly so called, they would not have made this jumble and in consequence, this reproach: the essential end of a Company is to realize profits appreciable in money (always pecuniary interest) to be divided amongst the associates. But this is not the place for giving lectures upon law.

6. In this place the system of the codes is again taxed, upon the matter of Companies, "with encouraging great capitalists to the prejudice of small manufacturers and of small traders."

Is a retrograde step desired, or a return in Japan to petty industries and to a small local trade? Such things might have sufficed in feudal times, and in those of national and even provincial isolation, but they cannot respond to new needs and relations. The proof that they no longer suffice thereto, long before the promulgation of the Codes, is that already there have been formed in Japan, great financial commercial and manufacturing companies, joint stock companies which are veritable associations of capital rather than of persons. The new Codes, while still further favouring the development of these companies, take infinite precautions against the abuses that have already manifested themselves consequent upon the want of positive laws upon the matter.

To war against great enterprises, in the interests of small ones, is about as reasonable as to fight against the use of machines in the interest of manual labour and against railroads in favour of conveyance by hand or even by horses.

We can only refer the Manifesters here, to the most elementary notions of political economy.

It is equally unreasonably that the Codes are reproached "for having neglected agricultural associations:" they can perfectly well be formed or continued under the Civil Code; it is even to them that this Code will be specially applicable, for, as regards Commercial and Manufacturing Companies, it is naturally the Commercial Code that will govern them.

Let us, as we go along, dispel a gross error upon the subject of the Roman law, which is brought forward as "having been applicable only to a small city." Apparently the authors of the Manifesto do not know that Rome had come to govern almost the whole world then known, and that the Romans had conquered it by their arms before governing it with their laws. Their military conquests did not last because they were unjust, but their legal ones have endured because they were nothing else than those of Justice and of Reason in the private relations of man to man.

7. In the matter of servitudes, some new provisions regarding the use of water are criticized, especially the right of any one who has the ownership of natural or of artificial waters outside of his grounds, to conduct them through the intermediate ones (underground or upon the surface, as the case may be), for use upon his property, and, reciprocally, the right to discharge, in the same way, his superabundant waters (Book II., Art. 332 et seq.).

The manifesters, in their blind system of condemnation of themselves, invoke to condemn this

double legal servitude, "the nature of Japanese cultivation which requires water." But, this servitude tends precisely to permit water to be brought into the rice fields wherever it is wanting and to let it flow off wherever it is superabundant. The legislation of Italy, a country of rice fields, in certain parts of it, like Japan, has allowed for a long time back the same servitude; France has done the same without perhaps as powerful motives. There is reason to think, therefore, that the Japanese husbandmen, more clear-sighted than the manifesters, will soon rejoice at it.

8. We should never end pointing out all the contradictions accumulated in the Manifesto. Let us, however, say a word about this one, because it appears in a general theory, and because it is at the same time double.

It is curious that those who began by upbraiding the Civil Code for having strayed too much from Japanese customs and for having infringed upon the Emperor's powers and upon the Diet's, end finally by reproaching it with "having neglected the principles of jurisprudence applicable to the needs of modern life, leaving them either to the provisions of special laws that will step in, or to the arbitrariness (sic) of local customs"; it is thought "ridiculous (sic) that legislators leave the drawing up of laws to future times and that they have not investigated local usages in order to codify them."

It is then at least established that the Civil Code has not intended to trammel the legislative power in the future (which would have been a claim as unbecoming as powerless), and too, that it has meant to respect local customs in matters where they are preferable to a uniform and common legislation, such as leases, servitudes, and indentures of apprenticeship.

Touching the matter of references to special laws or to Regulations, they would not be met with if the Civil Code were itself a special law; but it is a general law comprising a multitude of different matters that require at times details of application; it was natural, then, to not overload it with them unnecessarily. These references, moreover, are not numerous and they nearly all refer to the Code of Civil Procedure then in preparation and to-day in operation.^a

As to codifying local customs, there was no necessity for that because the local courts and the inhabitants of the localities always know them sufficiently well; besides, they change with the times and to give them fixedness was not to be thought of.

9. Finally, it is claimed that the Civil Code does not agree with the legal system of taxation.

The Civil Code has scarcely had occasion for busying itself with taxes even incidentally; however, Articles 40, 18, 144 and 146 of Book II., lay them, in certain proportions, a burden upon co-proprietors, usufructuaries and users and upon tenants by emphyteusis. But, in all those cases, it is only a question of knowing which one of the interested parties shall bear them in the end, and in no wise of regulating the assessment or the correction of them. Thus, to take only one example, to-day the land tax in Japan is calculated upon the capital; it will be the same for lands encumbered with a usufruct; but as a good administrator pays his taxes out of the revenue from the property, and as it is the usufructuary that has this revenue, it is he that shall bear the annual tax: if he pays it voluntarily, he shall have no recourse against the absolute owner; if the latter is called upon by the administration to pay it, the usufructuary will owe him repayment of it.

Will it result therefrom that the political rights attached to-day to the payment of a direct tax, shall be transferred to the usufructuary? The manifesters have not raised the question; it was, however, worth the while.

We think that the absolute owner alone will be elector and eligible. When the Constitution attaches political rights to the payment of taxes, it is because the taxes represent the importance of property, and that the Constitution considers that those who possess some fortune are more interested in good order and the public peace than those that are without it; now, a usufructuary, with his temporary right, frail as his own life, may be poor.

The Civil Code, then, assails neither the organization of taxation nor the electoral and political system.

Nor is there any more reason for upbraiding the Civil Code "for introducing a new classification of taxes into ordinary and extraordinary." The

^a It is to be noted that the Code of Civil Procedure, Promulgated 29th March, 1890, came into operation 1st November of the same year. It has thus escaped the criticisms of the Diet. It would certainly have been the same if the putting into operation of the two other codes had not been so much deferred. If these are postponed (which is equivalent to abandonment of them, for it is impossible that an agreement can ever be come to between them) when it shall be a question of correcting them, the Code of Procedure will be like a skilful spinning or weaving machine which will produce a workable matter.

latter, as their name indicates, are entirely exceptional and made for the occasion, and it is for precaution's sake that the Code speaks of them on the subject of usufruct (Book II. Art. 79), precisely because, as these taxes are not to be laid, but in case of war or of public and unforeseen calamities, the special law that would step in upon the subject, might very well not think of usufructuaries to determine their participation in these taxes. If the Code had not taken this precaution, the manifesters would not have failed, doubtless, to reproach it for not doing so.

We reserve for Part II. the reproach, reproduced in the House of Peers, of having given to the new legislation "a character too dogmatic, to that degree that it might be thought that it was a question of a book upon the philosophy of law."

But what is characteristic of the Manifesto, is to add, in this place, "that in wishing to imitate them, Roman and French law have been badly interpreted." What authority have the authors of the Manifesto acquired in Roman or in French law to enable them to impute ignorance thereof to the authors of the Civil Code? In the House of Peers, at least, if anything is imputed to them in this respect, it is abuse and not ignorance of them.

B.—SPECIAL CRITICISMS OF THE COMMERCIAL CODE.

The authors of the Manifesto are less severe for the Commercial Code than for the Civil one, but their criticisms although less numerous are none the more well founded.

1. They criticize the obligation of traders to keep books, and their grievance is again, that "this obligation hampers small traders to the benefit of large ones." In what does it profit the large ones? Are the latter not subjected to the same obligation?

The keeping of books is of use, 1st to the trader himself by furnishing him with the way of knowing at any moment his situation as regards his creditors and his debtors, in such a manner that he shall not enter into engagements beyond his means; 2nd to his creditors and debtors in case of a suit between him and them, or else of bankruptcy. It is false, besides, to say that "whoever fails to keep his books regularly shall be condemned as having concealed his property;" it might be thought that this negligence was enough for his condemnation; now, that cannot happen unless he is at the same time a bankrupt.

After having criticized the principle of this obligation, the authors of the Manifesto say, that "even to-day traders keep books in which they mention almost all these facts." Then, where is the Code's wrong-doing, if it does nothing but generalize and impose an usage already frequent?

It is said also that for the keeping of books, "traders will be obliged to have employes graduated from a Commercial College or even from a Law School." The second idea is very false, for book-keeping is not taught in law-schools. As to a graduated accountant, that would be necessary for a great bank, at the most, where matters are very complicated; but for ordinary houses, a trader might keep his books himself, as he keeps them to-day. If, however, a trader is not accustomed to ciphering, he can, with the aid of a professional accountant two or three evenings a month, have his books kept in order; that is done everywhere and to-day already in Japan.

In this place, the Manifesters come back again to their favourite idea that "the law will benefit large traders," and they emit this strange averment, that "large traders always escape conviction." Is that an insult hurled at the judicial bench of the country? There would be but little patriotism therein on the part of young lawyers at a time when foreigners, desirous of maintaining their privilege of exterritoriality, are inclined to call in question the independence of Japanese judges.

2. The law of bankruptcy is equally, say they, "a weapon furnished to the rich wherewith to lay hold of the poorer classes' trade." This systematic procedure of ceaselessly exciting the small and the weak against the great and the strong, is only speechifying, and of a very bad animus: it is of a nature to agitate the country and, in this respect, it is very blame-worthy, not to employ a severer term: those theories that have been above and very unjustly imputed to the Civil Code are "socialist theories;" they may some day do much harm to the country, which hitherto has remained sheltered from this danger. When the law of bankruptcy takes precautions that the assets of a bankrupt shall not be diverted from his creditors, it is useful as much to small creditors as to large ones, it is equal for all; now, equality of rights is equity itself.

It is feared, too, "that in small failures, costs may be injurious to the creditors," and it is regretted "that the law has not permitted a certain limit to their right to have a debtor declared bankrupt."

There would be in this limit something arbitrary. The law has left to the creditors themselves the

business of watching over their own interests; now, they will always be able to agree among themselves to grant delays and even partial abatements to an honest debtor or to one only embarrassed (Art. 1,061 and 1,063).

3. In matters of navigation, the Manifesters do not show themselves to be better economists than in civil matters; it is not enough for them that the law confers Japanese nationality only upon vessels owned by Japanese: they fear that, in the Japanese navigation companies that shall be formed, "foreigners shall come to own the greater part of the shares and that, as a result, the coasting trade shall in reality be found in the hands of foreigners."

If the introduction of foreign capital into Japanese affairs is dreaded, even when foreigners shall be subjected to the laws and to the courts of the land, it is not from navigation undertakings alone that they must be excluded, but from all commercial and manufacturing ones, what no one, doubtless, would dare to claim, neither in reason nor in positive law. Let them not be uneasy: foreign capital will embark in Japanese undertakings only in case of the insufficiency or of the timidity of Japanese capital, and certainly the country will always be benefited by them more than if they were not entered upon at all. To day even, Japan benefits greatly from affairs carried on exclusively with foreign capital, on account of the activity they bring about in the labour and in the commerce of the nation.

As to the question whether it would be proper to lower to under fifteen tons, the requirement for vessels to obtain nationality, it has been examined by the writers of the Commercial Code, with as much competency as there is to be found among the authors of the Manifesto: had this requirement been fixed at ten tons, it would doubtless have been demanded that it should be lowered to five or raised to ten.

The necessity of the registration of national vessels, is also criticized: no utility is found therein and it is added "that no example thereof is found in foreign legislations."

It is a singular proceeding that of criticizing the Japanese Codes, now for having imitated European ones, now for having departed therefrom; it is for the pleasure of putting them in the wrong in every thing and always. But this registration of vessels, to the contrary of what the Manifesto affirms, is in use in all countries well administratively organized. One must, moreover, be wilfully blind not to recognize the administrative utility of this measure, when an analogous one is taken for modes of transportation by land, which have less importance for the security of persons and for the guaranty of goods.

4. It is impossible for us to understand in what are "too vague" the provisions of Articles 943 and following, on the subject of contributions to averages: they are, on the contrary, very precise. We see in this censure only habitual ill-will.

In our turn, we find absolutely "vague" too, the reproach made to these provisions, "of being in antagonism with the ancient chivalrous customs of Japan." Chivalry has nothing to do here: the question is of making saved goods contribute to the relief of losses incurred in the common interest; it is a question of equity.

As to saying that "these provisions increase the cases of accident," it is the most fantastical idea imaginable: the critics ought to have taken the pains of explaining it. It is singular that so old and so universal a legislation in Europe, has not yet been found out as "increasing risks," by apportioning them among the interested parties; insurance companies would not have failed to find it out.

If those are the reasons for deferring the putting of the Commercial Code into operation, it must be admitted that they present nothing more serious for it than for the Civil Code.

II.—THE CODES IN THE HOUSE OF PEERS.

It was on the 26th May that was begun the discussion of the bill presented to the House of Peers by the most declared enemy of the Codes and supported by 116 other members: it lasted three days which, considering the very limited time of the session, proved the importance attached to the question. No special committee was appointed upon the subject: the demand for it having been made only on the second day, it was deemed too late. The vote took place on the third day after three successive readings. This hastiness appears to be contrary to the spirit of the law; but in this case an interval between the three readings, would evidently have changed nothing upon the final vote, since the bill had already 117 Members in its favour, before the discussion, and obtained 123 votes against 61, at its first reading, that is to say two-thirds of the voters.

The criticisms made in the House of Peers are, in general, more apposite in form than those of the lawyers; they are less in disagreement with each other, at least when they emanate from the same

speaker; but they are no more substantiated than are the preceding ones.

The speakers who defended the Codes, among them three Ministers of State, were not only more numerous than their detractors, but also much more elevated in their views and more precise in their arguments; but it was evident from the first day, that the cause was judged before having been heard.

I.—The proposer of the bill who, as member of the late Senate, had been one of the commission for the revision of the Codes, maintained that "the codification had been hurried, to the extent that it had been thought necessary to despatch a certain number of articles every day."

We are not called upon to here judge whether properly permitted a Member of the Upper House to plead against the Government, a fact relative to his former function. What is most regrettable in this allegation is, that it may have made the House believe that the Codes had been prepared in a few months (which would have been rash, in truth, but at the same time prodigious), whilst they have required more than ten years of assiduous labour. The revision, for which the Senate Commission was perhaps somewhat made to hurry, was a last revision, coming after several others. Besides, no piece of work whatever, whether it be a law, a scientific or a literary work, or a building, is measured by the time it has taken to execute it, but by its intrinsic value: the Codes might have taken twenty years of preparation and be inferior to what they are.

II.—The principal grievance formulated against the Civil Code has again been "derogation from national customs in matters of family." But, how can any one be surprised that the Civil Code strays in many points from the national customs, since they themselves vary according to provinces? Even in matters of family they were not uniform, and these diversities were inevitable at the time when the provinces, placed for centuries under the feudal régime, did not communicate with each other. But to-day Japan is a centralized country: the provinces are no longer anything more than administrative divisions of the Empire; justice is rendered everywhere in the name of the Emperor, by judges that he appoints; it is, then, necessary that there should also be but one uniform law for the whole Empire. The same sacrifice of provincial laws and customs is met with in the history of other countries, of France in 1789, of unified Italy in 1860 and of federal Germany since 1870.

In reproaching the Civil Code for giving to parents and to married couples the right of going to law against each other, it has been said, "that it was destructive of the domestic peace and happiness and of the morality of the country."

We regret that the answer has not been given, on this subject, that, if parents and married couples have, towards each other, rights founded upon custom (what no one has denied), it is much more "contrary to the domestic peace and happiness and to the morality of the country," that these obligations, when they are not voluntarily carried out, should remain deprived of penalty: he whose rights are ignored and who finds no assistance in the law, will be much more inclined to resentment than he whose unwillingness has had to yield in the face of a judgment. Besides, from the fact alone, that recourse to law will be possible, it will be rare that any one who is exposed thereto, shall fail to voluntarily fulfil his obligation. It is not otherwise with a family obligation than with any other civil obligation: if ordinary debtors did not know that they were exposed to legal proceedings, they would much more often fail to satisfy their creditors.

III.—It has been objected that "the Civil Code having been based upon the French Code, whilst the Commercial Code has been so upon the German, they must inevitably be found in conflict with each other upon several points."

It would have been more to the point, but without doubt more difficult, to designate these conflicts; so confinement to a simple affirmation has been found preferable.

We, on the contrary, will say, that conflicts, properly so called, are, in principle, impossible between the two Codes, from the very fact that they do not have the same object: the Civil Code is private common law, the Commercial Code is special law, applicable either to commercial transactions or to commercial people, therefore, whenever the Commercial Code provides otherwise than does the Civil Code, its provision will be applicable in its own domain, and that of the Civil Code in its own. It is thus, that for the conclusion of a commercial sale and for the proof thereof, the conditions are more simple and more expeditious than for a civil sale; there will be no conflict, but there will be a difference. In the same way, commercial paper is assigned by a simple endorsement, whilst the negotiation of a civil indebtedness requires notification to the debtor or his acceptance thereof;

a lawyer will never see in such case any conflict of legislation.

This answer was not made in the House of Peers. Nevertheless, a few variances originally existed between the two Projects, prepared separately, but they have been corrected. This occurred precisely when it was a question of knowing whether such and such an act should be considered a civil or a commercial one, and it has happened sometimes that each one of the Projects claimed the act as being within its domain: there was thence conflict. Generally, it was the Commercial Code that had the preference.⁴

IV.—One of the honourable Peers has made a charge against the Civil Code and impliedly against the Commercial Code, one that had already been formulated by the lawyers' Manifesto and which would be more serious than the others, in that it contests the very basis of the new legislation, that "of having admitted the existence of a natural right anterior to positive laws." It has been maintained that "this pretended natural right is incompatible with the Constitution, according to which all the rights of the people should come to them by concession of the Sovereign."

This theory is without doubt correct in Japan, in as far as it concerns political rights. Before the Constitution, subjects had no part in the making of laws; the Emperor has graciously granted them to participate therein with him, and no one here pretends that the people had an anterior right thereto. But the Civil Code and the Commercial Code have no connection with political rights, and the country would truly be in a condition as sad as singular, were it governed by no other rule of private law than those that have been granted to them by the Emperor. Indeed, up to the promulgation of the new Codes, Imperial Ordinances about civil and commercial matters, have not been numerous and have been entirely special; it has none the less been necessary (and it is so still every day, since these Codes are not yet in operation) to judicially decide disputes of private interest; and as customs are notoriously insufficient and the more often silent upon the points in litigation, the Courts are compelled to apply the rules of natural law, that is to say those that are suggested by Reason, Justice, and Utility. Happily, a sufficient and clear expression of it was found in the French Code, a translation of which had been made in the beginning of the era of Meiji.

When the Emperor instructed the principal magistrates of the Empire, jointly with the members of the Legislation Bureau and with those of the Senate, to prepare a Civil Code and a Commercial Code, he did not himself lay upon their labours, fundamental rules that might have been looked upon as constituting for the people *civil concessions*, like as he later on granted them *political rights*: he impliedly commissioned them to formulate rules of reason of justice and of common utility that would serve to conciliate private interests, too often in conflict. And when the Emperor upon the advice of the Senate, of his Privy Council and of his Ministers of State, sanctioned and promulgated these two new Codes, he did not say, as he did in the Preamble of his Constitution, "that he granted new rights to his subjects." However, he has conferred upon these latter an immense benefit, that of giving them a *written formula* of what he has perceived to be just and useful, a matter which until then, had been exposed to the wide differences of the individual opinions of the magistrates.

It might be scientifically discussed whether the writers of the two Codes have proposed for the Imperial Sanction, the best expression of natural law; but no other basis for the civil and for commercial law can be sought for, since, outside of its pale, arbitrariness alone would abide.

How can it be said that the Codes disregard the Sovereign's rights, since it is the Sovereign himself that has sanctioned and promulgated them? On which side is the disregard of the Sovereign's rights? Is it on that where the benefit he has conferred upon the country has been accepted with gratitude, or is it on that where there is willingness to see only the sacrifice of national customs to foreign ideas?

Nor do the Codes any the more disregard the legislative power of the Diet, the acquired subsequently to this promulgation, since they can always be modified, if experience shows it to be found necessary.

⁴ Here is a striking example of these corrections: the Draft of the Civil Code allowed Companies whose object was civil undertakings, to themselves remain civil, notwithstanding the division of the capital into shares; the Draft of the Commercial Code, on the contrary, attached a commercial character to the Company by this division alone; the first gave more importance to the object of the Company and rested only upon the theory of the law; the second gave more of it to the form and had on its side the German Code, which obtained the preference.

⁵ At least conciliation was easy: to bring them into agreement, it was necessary to merely suppress the article in the Civil Code on this point.

⁶ The two foreign juriconsults, French and German, were merely advisers, auxiliaries of those gentlemen, without any precisely public and official character.

But further, if some day the Diet, in concert with the Emperor, comes to modify these Codes, as we suppose that it will not act arbitrarily but that it will be guided only by reason, justice and utility, we shall say that it has claimed to better determine what natural law is than the anterior law had done; the new law while being respected and applied, could be scientifically criticized by lawyers and publicists with a view to future ameliorations, but it is still from the stand-point of natural law that it will be judged.

It is truly sad that a doctrine so certain and so satisfactory for one's reason, is not obvious to all and that so many lines are necessary to demonstrate the truth of it to legislators.

Let us remark, moreover, upon this subject, that the Civil Code, from the very fact that it has intended to determine and to formulate natural law, has not had to proclaim, that it simply interpreted it: from the moment that natural law takes the form of a *written law*, it becomes *positive law*; and it is only in two articles that the Civil Code refers to natural law; in one case it is to make up for the want of rules into which it does not judge it apposite to enter (Book III., Art. 22); in another it is to warn the judge, that in the interpretation of the law, "he must impress his mind with its spirit as much as with its terms and to make up for what it lacks, with the general principles of equity and of reason" (Book V., Art. 3).

We do not consider as coming within the same order of ideas, obligations called "natural," to which the Japanese Civil Code (the first to our knowledge to do so) devotes a chapter (Book II., Art. 562 and following). Another member of the House of Peers has confused things on this subject, greatly to our astonishment, for the confusion arose in the mind of that distinguished juriconsult: the natural obligations in question, are foreseen and determined by the new Code, which attributes to them *civil effects*, they belong, then, henceforth to *positive law*; but as they are devoid of a direct suit at law for their performance and even of one for damages, upon failure of voluntary performance, a place quite apart had to be made for them.

This is not the place for entering upon developments of the civil effects of natural obligations. We will limit ourselves to saying that the Civil Code, to prevent doubts that might have arisen in Japan as elsewhere, has thought it necessary to declare, that a natural obligation can survive pleaded prescription, a matter decided in favour of the debtor and in a few other cases where presumption is in favour of civil discharge from indebtedness: in these cases there can no longer be anything but voluntary performance, but it will not constitute an undue payment subject to repetition and will not be considered a donation.

V.—The defenders of the Codes having all admitted that if the putting of them into execution should happen to reveal any hiatus therein or any serious imperfections, there would always be possibility to remedy them by special laws, their adversaries have taken it into their heads to say that "the nation should not be taken for a passive subject for legislative experiment."

Such an idea has never been in the thoughts of the defenders of the Codes; if it were now shown to them that the Codes have serious imperfections, they would be the first to ask for their immediate correction, even should it be necessary therefore, to defer the time for their coming into operation. But there has been nothing adduced beyond vague allegations, or erroneous ones when they were precise, or alarming predictions about family and social peace. The defenders of the Codes could also limit themselves to favourable predictions; with still greater reason are they authorized to demand that the experiment be loyally made, and then we shall no longer be confronted by the unknown.

What would be a condemnable legislative experiment, would be to put into execution a law the effects of which would be doubtful to those that had made it; but no one would have this culpable temerity. A physician is not said to make experiments upon a sick person, when he administers to him a remedy which he thinks the best, reserving to himself to change it if, contrary to his expectation, it should not succeed. The defenders of the Codes are convinced that the Codes are an enormous benefit for the country, but, out of modesty and out of consideration for their adversaries, they confide to the future to pronounce judgment upon them and to correct them if needs be. No *experimentum in anima vili* with which they have been upbraided, in these very terms, in the House of Peers, exists there.

VI.—One cause of hostility against the Codes, that has been less clearly expressed in the House of Peers than in the lawyers' Manifesto, but which seems to have excited many opponents, is the influence of foreign codes upon the new Japanese legislation. This is an unfortunate exaggeration of the national *amour propre*. Japan has not been

humiliated for having once upon a time borrowed from China her philosophy, her dominant religion and her ideographic writing, and, in our days, from the West, her new notions of physical sciences, her modes of communication and of transportation, her engines of defence, her military and maritime instruction; more recently, even in matters of legislation, Japan has not thought to have belittled herself for having borrowed from Europe her penal laws, more lenient and more proportionate to crimes than her ancient laws imitated from China; she has borrowed her political Constitution from Europe, from Germany especially. Why, then, are civil and commercial laws the object of such lively animosity? What is just and what is Useful are the privileges of no one nation: they are the common and inexhaustible estate of humanity whence each nation can draw without shame and without scruple, according to its needs. To-day several countries like France, Belgium and Italy, apply themselves with ardour to the study of the compared laws of nations and this is not out of mere scientific curiosity, it is above all to arrive at the amelioration of their own jurisprudence. Japan cannot lower herself in doing the same. Much more, her new Codes have already attracted the sympathetic attention of foreign legists, who have pointed out in them ameliorations of the very codes that had served as models, ameliorations that could be imitated in their turn.

VII.—One member of the House of Peers who did not have the same repugnance, doubtless, for borrowing from the West, but whose preferences seemed to be for German law, fought the new Civil Code for having been inspired by the French Code. He maintained that "that code, dating from 1804, had not progressed, remains to-day just what it was 90 years ago, and hence, should not be taken as the basis of the Japanese Codes."

But the honourable speaker, less than any one, ought not to be ignorant of the fact that the Civil Code has, on the contrary, received a number of additions and of modifications that maintain it in a state to respond to the needs of modern times. We have counted more than 35 laws that have modified the French Code since its creation, and we are almost sure that upon a more minute search 40 could be found, and perhaps more. Most of these modifications have been made in the text itself of the code, like the publicity of marriage contracts and the re-establishment of divorce, so that the code has preserved its original form and even to the numbering of its articles.⁶ However, some laws on account of their length, could not be incorporated therein, such as the laws upon the transcript of alienation of real property, upon irrigation and drainage and several laws upon the acquisition of the status of Frenchman.

These ameliorations of the French Code, at the same time that they justify the choice of guide that has been made of them in Japan, serve also as an answer to those who say that codification, in general, is an obstacle to the legislative and legal progress of a country. If this proposition were true, not only would France be one of the most backward nations in this respect, which no one would dare maintain, but also would Japan, on its part, be one of the most advanced, since up to now she has had nothing that resembles a codification of her laws or of her civil customs: now, it has been proved that the science of law was almost unknown in Japan before the era of Meiji, the time at which the study of the French Codes was begun.

VIII.—In another order of ideas, it is a no less strange objection raised by the same speaker, that "the new Code will serve only to enrich fortune-hunting lawyers."

It is impossible for us to understand how a *positive law*, the object of which has exactly been to determine the bases of private law, the modes of transferring property and of contracting engagements, the effects of the respective rights and duties that result therefrom, the guarantees that can be attached thereto, the modes of proof which serve to establish in law the origin of rights and their extinction, all in order to put an end to the uncertainties of former days and to prevent contentions as much as to facilitate the trial of them, how, say we, such a law can have unfortunately paved the way for a greater number of suits and how can it be serviceable only to suitors of bad faith and their dishonest advisers. It is exactly as if one had said that, in the drawing up of a contract where the parties have carefully settled the details of their respective rights and duties, there are more dangers of dispute, than if they had limited themselves to settling only the principal points of it, or again, as if it had been said that contracts drawn up by notaries of recent crea-

⁶ The most striking example is on the subject of divorce: the code of 1804 permitted it; a law of 1816 abolished it; a law of 1824 has reestablished it. The new divorce law is not entirely similar to the first one, in its causes and effects; but, by means of additions, of suppressions and of modification of the articles, it still appears in the Civil Code.

tion, will give rise to more litigation than those drawn up by the parties themselves, although but little initiated into the difficulties of law, or, finally as if it had been said that, a light, because it was not irreproachably pure, increased the darkness.

Were the Codes as imperfect as our adversaries claim them to be, and more so even, they would still be superior to the absence of positive laws and of certain and uniform customs in matters of private law.

Besides, the same speaker gives, in support of his unfavourable predictions, reasons which are totally adverse to them: namely, that "the Civil Code contains common-place truths, useless applications of laid down principles, definitions and distinctions that give it the appearance of a course of law for the use of magistrates."

Admitting that these censures are founded in themselves, it is impossible to understand how "common-place truths or useless deductions" can be a source of dispute and how a course of law delivered to magistrates shall profit mischievous suitors. If the Code is a course of law, it addresses itself to candidates for the magistracy and not to installed judges, and really, we believe that the study of the text, couched in the rational method that has been observed therein, will still be the best way of learning the law, starting with individuals who should be able to understand of themselves, their rights and duties before entering upon an agreement and especially before going to law.

IX.—As the criticisms of the same speaker may derive from his personality an authority, an influence they would not have derived from any one else, we must notice still another one of his, which, bearing upon an important point of law, would be very serious were it well founded; but it proves that the speaker has badly studied the Code he combats with such animosity:

The Civil Code has introduced a certain number of preferences, that is to say of real guarantees for debts; thus servants have a preference upon their masters' property for one year's wages (Book IV., Art. 141); thus again, a vendor who has not been paid has a preference upon the article sold (idem, Art. 166). The speaker to whom we are replying, has imagined that "these preferences might be prejudicial to previously obtained mortgages," which, in truth, would be contrary to justice. But the civil law expresses the contrary, as to servants (Art. 144, 4th paragraph), and if it does not do so for a vendor, it is because general principles are sufficient enough therefor. How indeed, could a vendor give preference to his own mortgagees his creditors or to those that might have upon the landed property of which he was owner and he a third party, a mortgage given by the former proprietors? Those to whom he gives the preference, and then in all justice, it is those to whom the purchaser had mortgaged the property sold before having paid the price of it. The preference of a seller of real estate, with its necessary publicity, was not invented by the writers of the Japanese Codes, and never has it entered the mind of any jurist-consult to reproach it with this imaginary injustice.

X.—Finally, the same speaker maintains that if the Codes were put into vigour and were it found necessary to afterwards revise them, some years hence, "the bad results of it would make themselves felt for 50 or 100 years, because rights acquired during this temporary application, would have to be respected."

It is certain that the law that would correct the Civil Code would not have a retroactive effect, not any more than would the Code itself on going into operation. But it is well known from the experience of other countries that questions called "transient," arising from the passage from one legislation to another, appear during a small number of years only, agreements being scarcely entered into for a very long duration; in the matter of leases even, they cannot bind parties beyond 30 years (30 years in the matter of emphyteusis); there can, then, be no question of 100 years; even should future modifications of the Civil Code bear upon leases, there would be no more inconvenience in respecting those made before reform, than there will be in respecting present leases when this Code shall come into vigour for the first time.

Here then there is a false alarm that would agitate only minds strangers to the general theory of law.

XI.—Another Member of the House of Peers, belonging to the class of lawyers, has devoted himself more to criticisms of detail, and has been enabled to make an impression upon the House by the number of his objections, if not by their relevancy. To reply to all these criticisms would be to extend this refutation already very long, out of measure. We must limit ourselves to the principal ones:—

1. Whatever be the bond of relationship that may exist between a usufructuary and the absolute owner of the property, for instance if the usufructuary is a

widow and the absolute owner is her son, that is no reason for dispensing her from making an inventory and from furnishing surety: she may marry again, she may be incompetent to manage or may be influenced by her new husband against her son. Instead of limiting itself to allowing the grantor to explicitly saddle her with the two obligations of guaranty (which he might hesitate to do out of regard for her), the law has preferred the general rule for these obligations, and the power left to the grantor will be that of dispensing his widow therefrom, if he deems proper, and upon the conditions that he shall think suitable to lay upon her.

2. There is no contradiction between the character of real right given to a lease and the prohibition to transfer it for a share of the fruits, unless the lessor consents to its being done: this exception depends upon this, that this particular kind of lease, while constituting a real right, as does every lease of things, is made in consideration of the person of the lessee, of his capacity and of his honesty, and, by reason of the division of fruits, has something in it of the nature of a contract of association.

3. It is true that the system of inheritance and that matrimonial contracts have an intimate union with the system of family and might have had places in Book I. But inheritance and nuptial contracts are also modes of acquiring property, they are, therefore, in their proper place in Book III., at the end of which they are found collected as modes of acquiring property by title of residuary legatee, side by side with donations and wills that could have no other place.

If the Diet preferred that Chapters XIII., XIV., and XV. of Book III. be placed in Book I., it need not for that, have deferred the putting of the Civil Code into operation: it would have been enough to have invited the Government to publish the Civil Code in that form.

It might have asked, at the same time and with greater reason, that its five Books be designated by numbers in order (I. to V.), independently of their present titles, with a single series of numbers for the whole of it (from 1. to 1762), instead of having a new series for each Book, something that complicates quotations.

4. If divorce for causes of ill-treatment by the wife of the children of her husband by a first marriage, has not been permitted, it is because the latter's authority has appeared sufficient to preserve his children from the ill-treatment of their step-mother, just as much as from their own mother's, if the latter case should happen.

5. It certainly is not the intention of the writers of the Civil Code, that a grand uncle should be able to marry his grand-niece: there is absolutely the same motive of morality and of propriety for this prohibition as for marriage between an uncle and a niece: in the same way that an uncle holds the place of father (*loco parentis habetur*), a grand-uncle does that of grand-father. The Courts will certainly not hesitate to interpret the law in that sense. It will be for them a case of applying this Roman principle for the interpretation of laws: "whenever a formal provision is introduced into law, it is an occasion for complementing by interpretation and jurisprudence, provisions that tend to the same utility."

6. It is singular that there are complaints about the intervention of the Court in the interest of children under tutelage: until now minors, having no longer their father, lack protection of their property; they are exposed to waste by their guardians. Wards will never be too much protected.

The new Code gives them besides, a general legal mortgage upon the real property of their guardians. Is it wished that this too be suppressed?

7. The Civil Code has not intended to derogate from the special Regulations touching titles of nobility nor from their transmission, it is they that derogate from the Civil Code: *specialia generalibus derogant*.

8. It is not flattering for the Restoration to say "that it has weakened the characteristic morality of the land and at the same time the valour of the samurai." Nor is it gracious for *heimin* to acknowledge the ancient morality to be only among the samurai. The preceding speaker had already thought it "dangerous to reduce the various classes of citizens to uniformity." Is it desired that we should be brought back to the times when penalties were less for samurai than for *heimin*? In that case the Penal Code also would have to be changed.

It is enough to point out these retrograde tendencies, without taking the trouble of fighting them,

* We have no doubt that this general numbering of the Books and of the Articles falls within the rights of the Executive Power, save the leaving also to each Book its special numbering. Thus Book I. would be numbered 1 to 293, Book II. would have a double numbering (1. to 572 and 294 to 865), and in the same way for the other Books. Practice would immediately abandon quotation by Book for that by Article.

for they will find no echo in the country, where civil equality is already an unshakable dogma.

9. The same speaker like the preceding one, announces that "the new Code will multiply suits." We will not confine ourselves to repeating that a law, even when imperfect, will beget fewer suits than will the absence of laws: we will add, that when an examination is made into the question of knowing whether there are more suits at one period than at another, a comparison must be made before everything, between the number of affairs treated, especially that of agreements, at different periods or in different countries. There are already to-day many more suits in Japan than there were formerly, and still, it is not yet on account of the new Codes. It arises from this, that there are to-day more civil and commercial contracts than before; it comes too from the fact that there are to-day well organized courts and that whoever suffers in his rights, knows that he will find in them enlightenment that he could not have expected in former times from judges who were, it is true, samurai, for the most part, but who were not jurists-consults.

The more a society develops, the more does its organs operate: administrators have to-day many more affairs to handle and to decide than formerly. Is it because there are more administrative laws? No, it is because there is more social activity, consequently more interests in conflict and, at the same time, more advantages in addressing oneself to the authorities than there used to be.

We have thought that we ought to abstain from naming the adversaries of the Code. We do not have the same scruples in naming their defenders. We will mention in the first place, Count Oki Takato, to-day Minister of State for Education, but who, as Minister of Justice, had had the initiative of the whole new codification and had contributed to its realization, successively as President of the Senate and of the Privy Council; then Viscount Tanaka Fujimaro, Minister of State for Justice, and Viscount Enomoto, Minister of State for Foreign Affairs. There were also heard in favour of the Codes, Messrs. Miyoshi, Vice-Minister of Justice, Mitsukuni Rinsho, who was himself Vice-Minister of Justice during the last periods of the preparation of the Codes and at the time of their revision, finally, Viscount Torii, Messrs. Watari Masumoto, Okochi, Kiyoura and young Marquis Kuroda.

All these speakers placed themselves upon the general stand-point of the interests and of the needs of the country, and it would be to weaken their arguments were we to reproduce them here. Let us recall to mind, only, that Count Oki vindicated with great firmness and with true exaltedness of language, the pre-existence of natural law, in civil matters, before all written legislation.

There is, however, a last argument in favor of the Codes that we cannot pass over in silence, because it has considerable importance at the present moment, and because this importance has been slighted and contested in the House of Peers.

The Minister of State for Foreign Affairs could not leave the Upper House in ignorance of the fact, that if the two principal Codes were postponed and sent back for further study, the work, for so long a time waited for, that of the Revision of the Foreign treaties, would still remain in suspense, to the great prejudice of the country and of its most legitimate interests. Indeed, the most serious obstacle to this revision has been until now the absence of civil and commercial laws to which foreigners could be subjected, and it was at the time that this obstacle was about to disappear, that its restoration was desired!

It is sad that so decisive a reason for accepting the codes, did not rally the minds of everyone. It was very ill-timedly objected, "that the interest of 40 millions of Japanese subjects was not to be made a sacrifice to a handful of foreigners, that the civil laws were to be framed for the needs of the country and not for the satisfaction of foreign interests."

But it results from all that precedes, that it is false that the civil and commercial interests of the subjects are compromised by the adoption of laws, the principles of which are everywhere regarded as the best safe-guard of right, of justice and of economical interests. In preparing the new Codes, in the front rank was placed the general interest of the country that is deeply suffering from the absence of positive laws in such important matters; but there could be no possibility of not knowing that at the same time the Revision of the Treaties would be facilitated and hastened. Then, to prepare for the dignity of the country and for its independence in regard to foreigners, was that not serving its interests? And yet the same adversaries of the Codes are at the same time most eager in demanding the Revision of the Treaties! If their national *amour-propre* suffers from the fact that Japanese laws have, to some little extent, been borrowed from those of the West, should it not

Original from

very differently suffer at having seen, for more than 30 years, foreign laws applied upon Japanese territory by foreign judges, and at seeing national laws void of authority over foreigners when they are debtors to Japanese subjects? It is impossible to push inconsistency and blindness further.

III.—THE CODES IN THE HOUSE OF REPRESENTATIVES.

The discussion in the House of Representatives will not take us long. It lasted only one day. Different from what took place in the House of Peers, a Special Committee was appointed to report upon the matter. The majority of the Committee proposed postponement, as the Upper House had voted. The minority asked for the postponement of the Book on Persons, the matter of Inheritances and that of Marriage Contracts only. This middle solution was acceptable on the score of conciliation: it would not have been as prejudicial to the economical interests of the country as will be the postponement of other parts of the Code and that of the whole of the Commercial Code, because the matter of Persons and of Inheritances is precisely the one where present customs are the least uncertain and the least insufficient. At the same time, this matter presents little interest in the Revision of the Treaties, as the time when foreigners shall have family interests or those inheritances to discuss with Japanese subjects, is still far off. But radical opinion has prevailed, and the total postponement has been voted. Also the three readings were expedited the same day.

The adversaries of the Codes reproduced some of the well known criticisms. Those that were new, reflected upon their authors, either still more inexperience of legal matters (like the criticism upon the right of a creditor secured by a pledge to repledge the thing given as security) or the same inattention in reading the texts criticized: for instance, where censure has been directed against article 261 of the Book on Persons, for saying that "if the head of the house dies and leaves no heir, the house ceases to exist and the members of the family constitute new families;" it is said that in such case it ought to be "that the members of the family, not being heirs, should be able to choose a successor to the name and to the house." But, precisely, what was asked for is formally given in the law, upon the subject of Inheritance (Book III., Art. 301 and 302).

The defenders of the Codes were less numerous than in the House of Peers. We will mention only Messrs. Miyagi Hozo, Kato Masanosuke, and Viscount Tanaka, Minister of State for Justice. The latter spoke with much firmness, not in his own name only but also in that of the Government. "The Government," said he, "is responsible for the putting into execution of the laws promulgated by it and has no other duty than to remove every obstacle to the operation of the Civil and of the Commercial Codes."

Although Viscount Tanaka has since retired from the Department, the causes of his retirement being entirely foreign to the question of the Codes, his statements in regard thereto have lost none of their force. The friends of the Codes nurse therefore the strong hope that the vote of the two Houses will not receive the Imperial Sanction and that the Civil Code and the Commercial Code will come into operation on the 1st January, 1893.

Ashinoyu, 1st August, 1892.

LETTER FROM LONDON.

(FROM OUR OWN CORRESPONDENT.)

London, August 12th.

After a season, which even at its best has never thoroughly emerged from the overshadowing influence of the Duke of Clarence's death, London is again deserted by those whose interests do not compel them to remain here. Among those who linger in town, however, are the members of the political world, as the new Parliament is in session, but as the prorogation is expected to take place about the 22nd, the metropolis will soon be forsaken by them also. The exodus commenced about a fortnight since with the Cowes Regatta, at which, by the way, the German Emperor, who came over to enter his yacht, had such bad luck, and the anxiety to have the first of the grouse shooting to-day has cleared out most of those who remained behind.

The Judicial Committee of the Privy Council gave their long expected judgment last week in the case of the Bishop of Lincoln, and the result is decidedly favourable to the High Church party. It will be remembered that the chief points of contention were the singing of the hymn called "Agnus Dei," the eastward position during the opening prayers of the Communion service, and the mixing of water with the wine before the commencement of that service. The Privy Council has found that in nei-

ther of these practices had any offence been committed against the rubrics of the Church. With regard to the use of lighted candles, the Bishop of Lincoln was not responsible for this innovation, but merely officiated at a Church where they were used, and the Privy Council does not consider that the abstention from protest was in itself an ecclesiastical offence. At the same time they decide nothing directly as to the candle question. Nor do they meddle with those portions of the Archbishop's decision which were adverse to the Bishop. The importance of the judgment pronounced cannot be gainsaid, and as a different decision might have led to further controversy as to the right of a "lay tribunal" to try the case, it is satisfactory that Archbishop Benson's conclusion has been substantially confirmed on all issues.

Messrs. Sheard & Co. are bringing out the musical settings of Rudyard Kipling's "Barrack Room Ballads" in batches of three. The first to appear will be "Tommy," "The Young British Soldier," and "Mandalay." Miss Mary Carmichael has undertaken the setting of "Tommy," the other two are by Mr. Gerard Cobb, the well-known Cambridge musician.

It is rumoured that Sir Arthur Sullivan is likely to be made a baronet, and should the higher title be granted, our leading British composer will receive the sincere congratulations of both the profession and public, with whom he is extremely popular. In this event Sir Arthur would be the first musician who has been created a baronet.

The name of Lady Lena Scott figures prominently in the Bankruptcy Court this week with debts amounting to £14,000, and assets nil. The debtor objected to a claim of £103 sent in by Lord Russell, in his capacity of practical electrician, for electrical fittings carried out in her house on the Thames, because she considered she had paid that debt by making him a wedding present on the occasion of his marriage with her daughter. The earl, however, seemed to think that such matters ought to be kept distinct from business transactions. Upon a remark being made in Court on the fact of Lady Lena wearing an extremely handsome diamond brooch, she replied that it was her daughter's property, but nevertheless she would surrender it as a set off against her £14,000 worth of debts. I do not know whether the daughter fell in with this sudden burst of generosity.

The great Cricket Match of the season took place at the Oval last week between Notts and Surrey for the championship, which resulted after a well-fought battle in a victory for Notts. Notts therefore stands undisputed at the head of county teams. To show the widespread interest in the contest, it may be mentioned that between 60,000 and 70,000 persons were present on the opening day.

A match has just been concluded between Notts and Middlesex in which the former gained a decisive victory by eight wickets. For the northern county the chief scores were knocked up by Shrewsbury (41), Mr. G. A. Dixon (44), Barnes (26), and Flowers (25).

The Royal English Opera House, which has been a financial failure since its opening, is going to be turned into a Music Hall and a company has been floated for this purpose, under the style of the Palace Theatre, Limited. Sir Augustus Harris is the Managing Director, and the board of Directors includes the names of Mr. George Augustus Sala and Baron George de Reuter. Alterations will, of course, have to be made in the building, but there is to be no sacrifice of beauty, and this will still be classed as one of the most magnificent theatres in the world. The capital is £200,000, divided into 100,000 preference shares at £1 each, with promise of 7 per cent., and 100,000 ordinary shares of £1 promising as much more as can be earned. The licence for music and dancing has not yet been obtained, and I hear that powerful opposition is being organised against its being granted, and that Sir Charles Russell and Mr. C. F. Gill have been retained by the opposers. The new company have made considerable capital over the fact that the Alhambra and Empire are paying very large dividends; but both these companies have comparatively small capitals to pay interest on, and it remains to be seen whether the public patronising variety shows will be sufficiently elastic as to support another theatre almost double the size of those now in existence.

An extraordinary case has just been heard in the Divorce Court, in which Mrs. Gertrude Barrett sought a judicial separation by reason of alleged cruelty of her husband, Mr. John G. Barrett, of the Indian Civil Service. He denied the charge and by a cross petition he alleged adultery on the part of his wife with some person unknown. The litigants have been married only a year, having first met in India, where the petitioner had been a companion to a lady. The petitioner having deposed as to the alleged cruelty on the part of the respondent, went on to state that while staying at

a boarding house, having left her husband, she was introduced to a person who passed herself off as Countess Carina, who the witness afterwards found out was a detective. They became very friendly and went to places of amusement together. At another boarding house she met a woman calling herself Mrs. Watson, the wife of an electrical engineer, who had been engaged to watch her movements. At the Empire she was introduced to a person as "Mr. S. of the Stock Exchange," who afterwards proved to be Clarke, a detective. At the Alhambra witness was introduced to a Mr. Chas. Wilson, also in the employ of her husband, by Mrs. Watson and accompanied him to the Café Monico. She afterwards met him and went with him to some rooms in Wellington-road, St. John's Wood. She passed the night in a bed-room there. Wilson was intoxicated and lay on the couch in the drawing-room. In cross-examination petitioner admitted that she had arranged to return to the house the following night and stay a week with Wilson as man and wife. In giving judgment, Mr. Justice Barnes said the case was a most painful one. He did not, however, think the charge of cruelty against the husband was satisfactorily made out; and therefore could not act upon it. With regard to the charge of adultery he thought that he was bound to find that it was proved. Having found that, there was another matter, and that was a matter which the court had to deal with. As to the husband's petition, the Court, by Act of Parliament, upon a petition for dissolution of marriage, had to satisfy itself that the petitioner had not connived at his wife's adultery or was an accessory in any manner. In the case before him the facts were remarkable. He acted in the main on the evidence given by Mrs. Barrett, and it was impossible for him to condemn in sufficiently strong terms the action of the detective, Wilson. A more improper state of things it would be impossible to conceive, and he must hold that the husband could not succeed. He could not believe that the husband was aware of the action of his agents, but unfortunately for him the acts of his agents were a bar to his success. The result, therefore, was that the wife's petition must be dismissed. The husband's petition must also be dismissed with costs.

In a case, *Morrissey v. Harrison*, heard yesterday, the plaintiff, a widow, claimed £1,000 as damages for the loss of her husband, who was the master of the schooner *Welcome*, which was run into and sunk on the 7th Feb. last, in the Prince's Channel by the defendant's steamship *Acacia*, the jury gave the plaintiff £1,200 as compensation for herself, and £600 for the child, a boy aged seven.

Mr. Kyrle Bellew, after playing a short season at the Shaftesbury Theatre with Mrs. Brown Potter, when they produced "Hero and Leander," is now doing leading business in Messrs. Sims and Buchanan's new drama, "The Lights of Home," at the Adelphi. This is quite a new departure for Mr. Bellew, and judging from the way in which he was received on the opening night, he is likely to become as great a favourite as any of his predecessors. Most of the London theatres are closed, and the companies are on tour for the summer months.

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

Boston, Mass., August 30th.

The Borden murders, of which mention was made in the last letter, continue to be the topic of the day throughout the country, especially in New England, for they are the most shocking, mysterious murders ever committed in these parts. The daughter, accused and arrested, is now undergoing examination with many witnesses—not of the murder, but of "contingent circumstances." But aside from the fact that she was in the house when the murders were committed, nothing has been found to connect her with the murders. There is one fact, however, that is against her in the opinion of many. No one has seen her shed a tear or exhibit any sign of emotion at the time of the murder or since. This trait is found in some persons, but if Lizzie Borden is as she has been represented to be, susceptible to all influences, this passive characteristic does not appear to belong to her. Still her friends maintain that she is innocent. After the murders, as no clue was found immediately, the papers of the country began to criticise the police of Fall River severely. They had to arrest somebody, and arrested Lizzie Borden, although there was nothing against her except her presence in the house and her apparent indifference. The examination now going on is the preliminary hearing to see if the accused is indictable before the Grand Jury. There has been three days of the hearing, and

the most important witnesses, it is supposed, have been heard, and yet there is nothing to show that Lizzie Borden did the deed. If she did kill her father and her step-mother, she is the most rapid, the most adroit murderer the world has seen. It is supposed that Mrs. Borden was killed an hour or more before her husband. But Mr. Borden was seen alive less than thirty minutes before his murder was discovered and announced. There were eighteen blows on Borden's head. Then Lizzie Borden, if guilty, struck her father eighteen blows with an axe, every blow causing the blood to spurt and to spatter. Then the murderer removes every stain from the axe and replaces the axe in its place in the cellar. However committed, the murderer must have been spattered with blood. Experts say it was impossible for the murderer to escape the spurring of blood, which would follow the withdrawal of the axe at every blow. Then Lizzie Borden, if she did it, changed her clothing and destroyed or concealed it where no one could find it, and the house has been searched from cellar to attic—chimneys, partly torn down and the floors taken up, according to the newspaper accounts, and no trace of the murderer or her tools or clothing have been found. If Lizzie Borden did all this, she must have done it in less than twenty minutes: it appears to be a physical impossibility. There is a report that evidence against her is withheld by the Government Prosecutor, and that it may appear before the hearing is concluded. At the hearing about fifty reporters are present, and every word of the testimony is telegraphed to the leading papers of the country. Mystery deepens, and things appear to be no nearer solution than on the day of the murders.

The Metropolitan Opera House in New York City was destroyed by fire on August 27th. It cost \$2,100,000, furnished by seventy stockholders, who contributed \$30,000 each to the enterprise, each of the stockholders becoming the owner of one of the seventy boxes. Besides the investment of \$30,000 there was an annual assessment of \$1,500 to \$2,500, as the enterprise did not maintain itself. It was the large white building between 39th and 40th streets, and between Broadway and Seventh Avenue, and covered about an acre and a quarter of land. It was said that the auditorium was the largest in the world. With each box was a saloon, twice the size of the box, where refreshments were served, and guests received between the acts. The house was opened in 1883. It was called fireproof, and had, as an additional precaution, a tank containing 8,000 gallons of water, to be released by the heat of the fire. The tank emptied itself without interfering in the least with the progress of the fire. The eight thousand gallons of water was only a bucketful to an acre and a quarter of inflammable material on fire. This was the rich man's theatre.

The wonders of the World's Fair are now claiming much attention, as many features are approaching completion. "Columbus Day" will be observed throughout the land by the school children. The dedication on this day promises to be attended by "Extraordinary performances and exercises." Applicants at home and abroad have called for 152 acres of space. It was expected that the Fair would have a tower higher than the Eiffel Tower at the Paris Exhibition, but there will be no tower higher than 400 feet. The labouring man is to be entertained at a moderate price if he attends the Fair. A hotel is in process of erection in Chicago to accommodate 3,000 labouring men and their families.

The Russians have a very good opinion of us now since they dined on our corn and wheat sent them in their sore distress, and are doing much—raising more money, thousands of kopecks and roubles, to make a good exhibit at our Fair. Chili, with which we had some words awhile ago, is now in good spirits and temper, and will send an exhibit to illustrate her nitrate industry.

In a former letter it was stated that the machinery of the Fair would be started by the only living descendant of Christopher Columbus, but his descendants increase like Washington's valets. There is a whole village of them now, and they will be invited to visit the Fair. Indeed, W. E. Curtis, of the Historical Department of the Fair, will go to Spain for the express purpose of inviting the King and the Queen of Spain, and the descendants of Columbus. As said before in these letters, this is to be the Fair to which the world's people should turn in 1893.

The cholera is coming near—too near us. At some of the foreign shipping ports, Hamburg, for example, from which steamers come to this country regularly direct, the cholera rages—at Hamburg, a thousand cases and three hundred deaths within a few days. If this country escapes, it will be due to the fact that we keep clean, that is, the cities are kept clean, and to the intervention of cold weather, for it appears that many emigrants at foreign ports are ready to come among us loaded down with cholera germs. The luggage of incom-

ing immigrants is now fumigated at quarantine before leaving the ships. This is good for the country, even if no cholera germs be lurking in the luggage, for there are other things alive and active that succumb to the fumes of sulphur, that do not live to get on shore and bring up families.

Here is a remarkable fact, and it shows what kind of citizens (to be) we are importing or allowing the future citizens to import or export themselves. In one day this year 5,450 emigrants to this country landed in New York. Of this number, only sixty had as much as one hundred dollars, and about the same number had only about ten dollars, while the rest, the "great majority" had less than five dollars. What does this signify?—sheer foolishness and improvidence, or an "abounding" faith in the fat resources of this country? Think of an Englishman "dropping down" in a new country with only five dollars in his pocket—or three dollars—one-fifty—a shilling—nothing, for that is all some of them had. In this great crowd of possible American citizens was one family of fifteen—father, mother, children, and grand children galore, and the total wealth in money was three dollars and fifteen cents. What are we coming to anyway?

The strike in Homestead is at an end and the striking switchmen at Buffalo have failed to get that for which they struck. The militia are still on the ground, but no further trouble is anticipated. The switchmen lost, some were reinstated, but the greater number are looking for a "job."

'Tis thus usually with strikers. The world is not surprised at anything that comes from Chicago now-a-days. It is declared in bold print, with apparent soberness and sincerity, that the Pennington Aeronautic Mail and Express Company is about to launch an air-ship, and that this air-ship is to make the rounds between Chicago, New Orleans, New York, and Boston to carry the mails and passenger. The machinery of this ship is protected by forty-two American patents and thirty-one foreign patents. It is said that some of the prominent scientists of the country, and also some shrewd capitalists are in the scheme. The air-ship is described as resembling a "pot-bellied flamingo" capable of flying seventy-five miles an hour. Its "main part" is an air chamber 125 feet long with a mean diameter of 38 feet. To this is attached the car of aluminum metal with cushion seats filled with hydrogen gas. The two engines are of alloyed aluminum, driving a great wheel of four spoon-shaped blades. May we be present, safe on the ground, when this flamingo takes wing.

Political roarbacks and boomerangs are now in order. The protectionists are strong in argument. They have discovered that as a result of the operations of the McKinley Bill there was in 1891 a net increase in wages of \$6,388,025, and a net increase in production of \$31,315,138 over the wages and production of 1890.

CRICKET.

SETTLEMENT V. BLUFF.

The match arranged for Saturday resulted in a somewhat unsatisfactory game, only eight players turning up to represent the Settlement. The Bluff team batted first, and the Doctor, in great form, defended his wicket against the attacks of Edwards, W., and Burn, until he had piled up 39, the top score, when Burn disturbed the sticks. Watson (23) and Mair (19) were next best, and the innings closed for 124. Edwards taking three wickets and Burn five. The "eight" then went in, but were all out for 32, including 8 extras. They then followed on, and made a resolute stand. Edwards had been dismissed by White for 2 in the first innings, but now put together 33 before being stumped by Crouch, and Burn (41 not out) and Hall (22 not out) were both well set when the game concluded. Following are the scores:—

Bluff.	
Mr. Crouch, run out	39
Dr. Wheeler, b. Burn	29
Mr. White, b. Edwards	7
Mr. Muir, b. Burn	19
Mr. Watson, b. Burn	23
Mr. Murdoch, l.b.w., b. Edwards	0
Mr. Young, run out	6
Mr. Robinson, b. Burn	3
Mr. Abbey, b. Edwards	4
Mr. Griffin, st. Burn	0
Mr. Nash, not out	5
b. 18	18

Settlement.	
Mr. Tate, c. Nash, b. Watson	13
Mr. Burn, c. White, b. Watson	41
Mr. W. Edwards, b. White	33
Mr. Dod, c. Nash, b. Watson	4
Mr. Layard, c. —, b. White	0
Mr. Hall, c. Murdoch, b. Watson	22
Mr. Parlett, not out	0
Mr. Showler, b. White	0
b. 9, l.b. 12, w. 2, n.b. 2	8

THE CAPTAIN OF THE "MARY ROSE."

A TALE OF TO-MORROW.

By W. LAIRD CLOWES,

GOLD MEDALIST, UNITED STATES NAVAL INSTITUTE.
(FROM "THE ENGINEER.")

II.—THE BATTLE OFF TOULON.

WHAT, then, had happened off Toulon. The Times of Wednesday morning was the first newspaper to give anything like a full account of the affair. This it did in the following painful telegram:—

"SAN REMO, Tuesday Night.—I have just been landed here, thanks to the courtesy of the commander of the Italian dispatch vessel *Agostino Barherigo*, and, with much grief, I telegraph to inform you of the sudden and terrible disaster which early this morning overtook the Mediterranean Fleet. That Fleet, as your readers will see on referring to any of the service papers of last week, consisted of the battleships *Agamemnon*, *Nile*, *Collingwood*, *Colossus*, *Dreadnought*, *Edinburgh*, *Thunderer*, *Inflexible*, *Sanspareil*, *Trafalgar*—flag of the rear-admiral—and *Victoria*—flag of the Commander-in-chief. On Sunday afternoon these vessels, together with the belted cruisers *Australia* and *Undaunted*, the armoured ram *Polphemus*, and the unarmoured craft *Fearless*, *Scout*, and *Surprise*, anchored off Toulon, and found the French Mediterranean Fleet lying there also. This squadron, which had come in earlier in the day after a cruise, consisted of the battleships *Amiral Baudin*, *Courbet*, *Dévastation*, *Formidable*, *Deguesclin*, *Hoche*, *Marceau*, *Vauban*, *Cuiman*, *Bayard*, *Neptune*, and *Indomitable*, with the cruisers *Cosmao*, *Troude*, and *Lalande*, the torpedo dispatch vessels *Vautour* and *Condor*, and the torpedo gunboats *Dragonne*, *Dague*, *Aventurier*, *Rabyle*, *Audacieux*, *Ouvragin*, and *Téméraire*. Up the harbour, in addition, lay the battleships *Trident*, *Colbert*, *Terrible*, *Redoutable*, and five other ironclads, and belonging to the 'Escadre de Reserve,' which has been newly constituted. There were also up harbour several cruisers and torpedo vessels.

"We exchanged salutes in the usual way; the admirals called on one another; and yesterday morning about four hundred of our blue jackets were allowed to go ashore. I was, at the time, on board the *Nile*, and can give, therefore, only a hearsay account of what occurred in the town.

"It appears that at about four o'clock in the afternoon some of our men, who were drinking in a wine shop, got into an altercation with several French seamen belonging to the *Colbert* over the merits of the two navies. The Frenchmen boasted that their ships were in every way superior to ours; Jack strongly objected; from words the disputants went to blows; and in less time than it takes to write, our fellows were retreating down the street pursued by a mixed crowd of French soldiers, sailors, and civilians. Reports vary as to the damage done, but it is unfortunately certain that at least a dozen of our men lost their lives, and that the French loss was nearly as severe.

"We, of course, lay too far out to be able to hear or see anything of the hubbub on shore. The first hint of what occurred came to us from the ship's chaplain, who, returning on board in a shore-boat, reported that a row was going on in the town. I went up into the top, whence through the glass I could see our men crowding into other shore-boats and pushing off in great haste. There was much struggling, and I saw occasional puffs of smoke, which could not proceed from our fellows, all of whom were, of course, unarmed. Being closely followed by boats full of Frenchmen, our men made for the *Surprise*, which lay closer in than the rest of the squadron. By this time the pursuers were using fire-arms freely, and we realised that the business was a very serious one. We were therefore ordered to man and arm boats and to cover the retreat. Our fellows pulled like devils, and, with oars and boat-hooks, fairly sunk one craft which came too close. Those of us who remained on board were all on the bridge or in the top; but just as we were wondering whether we should not have to open fire with our machine guns, we were disappointed by the Commander-in-chief semaphoring from the flagship that, bearing in mind the evident gravity of the situation, nothing must be done that might complicate matters. This order did not, however, prevent our captain from directing the magazines to be opened, and all preparations to be made that could be made without too pronouncedly calling the attention of the French. Meanwhile, our boats had gained the *Surprise*, and the men were scrambling on board as fast as they could. A regular swarm of French boats of all kinds was crowding round the ship, and the people in them were screaming and gesticulating as if they were madmen. The Commander-in-chief went in his steam launch to the *Sur-*

prise. Through our glasses we watched his crew shoving the French boats aside, and I doubt whether the shore people would have made room for the launch to get alongside the dispatch vessel if a French officer had not opportunely arrived on the spot in a torpedo boat from up the harbour. When he appeared the French retired to a respectful distance, but continued vociferating so loudly that we could quite plainly hear them. The French officer followed our Admiral on board the *Surprise*, and there had an interview with him. Not long afterwards they were joined by a stout gold-laced red-sashed dignitary from the shore; and the two Frenchmen between them made out, or tried to make out, that our bluejackets had begun the row, had deliberately murdered some men in the wineshop, and, in fine, that they only were to blame. Our Admiral, of course, promised to institute the fullest inquiry; but the French officers took a high-handed attitude from the first. They demanded that all our men who had been ashore should be surrendered. Compliance with this was out of the question. They then said that they had telegraphed to Paris for instructions. Before the Commander-in-chief got back to the flagship, we saw that most of the French ships in harbour were getting up steam.

"At a quarter to six all our captains were ordered on board the Admiral. When our captain returned he looked very serious, and sent first for the commander, and then for the fleet engineer and all the lieutenants, most of whom remained with him in his cabin for three quarters of an hour. The French Admiral had promised to dine in the evening on board our flagship, but he sent a somewhat awkward excuse. If I may judge from what I saw in the ward-room in the *Nile*, where I was a guest, the business spoilt the dinners of every one in both fleets, for all of our people had no end of work to do. We made as many preparations for action as we could without actually going to quarters; we got up steam for full speed; we kept unusually strict watch, and allowed no boats to approach us; and most of us unshipped all the pictures and breakables that we had in our cabins.

"At seven, the *Surprise*, by order, shifted her berth, and took up a fresh position outside our lines—we were anchored in two columns. The *Scout* and *Polyphemus*, under easy steam, went round the fleet and swept their searchlights shoreward continually. To guard against sudden attack by torpedo boats, certain craft were ordered to use their searchlights in combination in such a manner as to form a complete path of brightness round the fleet. The effect was very striking, but it was also very puzzling, for the illumination not only intensified the surrounding darkness, but also rendered it extremely difficult for us to again 'pick up' any craft—and there were several about—after it had once crossed the protected zone; and when half-an-hour's experience had thoroughly demonstrated this, the experiment was ordered to be discontinued. The eyes of many of us had not, however, recovered from the dazzling results of the trial when, some hours later, we needed our best night sight; and I doubt whether we should not have been wiser had we relied solely throughout upon such natural light as was vouchsafed to us. At a quarter to nine a French steam launch went on board the Commander-in-chief, and half-an-hour later we all knew what it had come out for. It brought a formal demand for the surrender by nine o'clock this morning of every officer and man who had been ashore during the day, and an imperative order that in the meantime no British vessel was to leave the roadstead.

"As soon as the French launch had shoved off again, the Commander-in-chief signalled the fleet to weigh. Almost at the same moment the *Scout* reported that a number of French ships were coming out. They soon began to play their searchlights freely on us, but we went on weighing as before, until one of their flagships, a great ironclad as big as the *Trafalgar*, but much higher out of the water, was abreast of the *Victoria*. It seems that the Frenchman hailed the Commander-in-chief, and with great politeness demanded whether he intended to go to sea. Our lights showed us that all the French ships were cleared for action, and were full of men. I suppose that our Admiral said 'Yes,' and we half expected, from the threatening attitude of the enemy, that fire would be opened at once. But the French fleet passed on, and went quietly out in single line ahead, the battleships being between us and their own light craft, which, naturally, kept off and seemed to be in no regular formation. They were all a mass of lights, and we could plainly see the officers in full dress standing on the bridges and poops, and saluting us as they passed, some of them at a distance of less than a couple of cables from us. As far as could be counted, there were twenty battleships, eight

cruisers, and over a dozen torpedo boats.* When they had got well outside of us, they suddenly extinguished all their lights, as if by preconcerted agreement, and ten minutes later another launch from the shore went on board the Commander-in-chief. One of our lieutenants was in the flag ship at the time for orders, and he told us on his return that the French had sent to say that any further attempt on our part to get away that night would, without hesitation, be prevented by force. Of course we were at once sent to quarters—we had really been at them all the evening, in the *Nile* at least. It was realised that, right or wrong, it was impossible, in the circumstances, to obey the dictation of any foreigner. At ten minutes past ten we got under way, and formed in two columns of divisions line ahead, the *Victoria*, *Agamemnon*, *Edinburgh*, *Collingwood*, *Sanspareil*, and *Inflexible* constituting the starboard division in the order named, and the *Trafalgar*, *Nile*, *Thunderer*, *Colossus*, and *Dreadnought* the port. The *Polyphemus* was a mile and a-half ahead, the *Undaunted* an equal distance on the starboard bow, the *Australia* an equal distance on the port bow, the *Scout* on the starboard and the *Fearless* on the port quarter, and the *Surprise* a mile and a-half astern. A rendezvous, which for obvious reasons I suppress, was given us, and the course, so soon as we had made an offing, was south-west. Although a guest on board, I, of course, volunteered to be of what use I could.

"It was an intensely dark night, and there was a nasty sea from the south-east, but very little wind; half a gale, which had been blowing during the afternoon, having dropped at sundown.

"It is not my business—and, indeed, I am still far too lagged and knocked up—to tell you much about our individual feelings and actions. I believe that we were all determined to do our duty, and I venture to think that, in what followed, most of us did, although, for once, the luck was against us. You at home must remember, ere you judge us, that we were outnumbered, that several of our heaviest guns were very defective even before the action began, that the speeds of our ships were very unequal, and that, upon the whole, the French vessels were better protected at the water line than ours. I am bound to mention these facts in justice to the hundreds of brave fellows who are gone. It was not their fault that guns broke down or that the fleets were unequally matched. With anything like equal forces, the results of this, the bloodiest naval fight that the world has yet seen, would I am confident, have been different. Surely the blame lies, not with them who had to use the weapons, but rather with those who forged them too weak and too few for the work required of them.

"For three hours we steamed at about ten knots, the slowness of the *Agamemnon* and *Inflexible* preventing our easily doing much more, save under great pressure. We saw nothing of the French, and, as we showed no lights, we had much difficulty in keeping station.

"At half-past one this morning the *Polyphemus* flashed a signal to the effect that she had sighted the French fleet about two miles ahead of her, apparently lying to. We therefore altered the course six points to the eastward, so as to head south-south-east, and, if possible, avoid the enemy; but I suspect the French must have seen the flashes by which the order was signalled, for, half an hour later, the *Scout* reported them a mile on her starboard quarter, steaming fast, and apparently coming up with us. We then put on full steam to the utmost capacity of our slowest ships, and again altered course two points to the eastward, so as to bring our heads due south-east; but the fleet, as a whole, could not, it was soon found, do more than 10½ knots against the sea which was running, the *Inflexible* doing barely that, and lagging behind in the most dangerous way. The Frenchmen, therefore, steadily drew up with us, having altered course soon after we did, and being able to steam fully 11½ knots, and perhaps more.

"It must have been inexpressibly galling to our gallant Commander-in-chief thus to be obliged to show his heels, even to an enemy of obviously superior force. But it is clear that he could not have remained at Toulon, where he could have accomplished nothing against the forts and batteries; and would, moreover, have been exposed to destruction from mines, submarine boats, and torpedoes worked from the shore, besides having to reckon with the French fleet. It is clear, too, I think, that in the circumstances it was his duty, if possible, to avoid action; though on this point, there will probably be greatest differences of opinion. When once the French were outside of him, he had to think of Malta and Gibraltar, his immediate bases. I must, however, leave these questions for others to discuss.

*The exact composition of the French fleet, and the state of the exact composition of the French fleet, at the end of this chapter.

"At this time I was sent for by the captain who was on the bridge intently watching the flagship, whose huge hull ploughed through the water two cables ahead of us, leaving in her wake a board strip of foam on the broken waves. The *Nile's* bows plunged ever and anon into the seas which dashed aft against the turret, and well nigh hid the muzzles of the great guns as they burst and deluged us with spray. We must have had hundreds of tons of water at a time upon the fore-castle, but the ship rising, shook them off with scarcely an effort, and then plunged again, as the rolling seas lifted her by the stern.

"We had no torpedo boats with us, and, had we had any, they would have been only so many encumbrances in such a sea as was running. Even our biggest boats—the 135ft. ones—do not steam well in circumstances like those which environed us early this morning; and unfortunately, we had nothing between them and the regular torpedo-cruisers, *Scout* and *Fearless*, vessels of 1,580 tons displacement. Very useful indeed to the Commander-in-chief would have been a few fast gun-vessels of the *Grasshopper* or *Sharpshooter* class, not so big as to be easily visible yet big enough to stand the knocking about and still preserve a decent speed of 15 or 16 knots! We had nothing of the kind, the *Landrail* and *Sandfly* being detached. The French, on the other hand, were well provided in this respect. They had with them several large torpedo boats, *torpilleurs de haute mer*, of the *Bombe* class, which served them in particularly good stead as scouts, and which, being craft of over 300 tons displacement, could breast the sea. With these, as we speedily found, they were able to creep up and observe us, without being sighted until they were close upon us. We, therefore, had an uneasy feeling that we were all the time being watched by spies which remained almost invisible.

"Finding at last that it was hopeless to think of getting rid of the foe by out-steaming him, the Admiral, the French being now reported broad on the *Inflexible's* starboard quarter, at a distance of between two and three miles, decided to attack. He, therefore, in accordance with a previously concerted arrangement, led his division ahead of the other one, so placing himself in the van of a long single column disposed in this change of formation, ordered the battleships to alter course in succession ten points to starboard, and the cruisers to obey previous instructions, which seem to have run to the effect that they were to be as useful as possible, and to be ready to tow the ironclads, but not to needlessly imperil themselves.

"It looked at first as if we were going to engage the enemy in the old-fashioned manner, for the French were steaming in a direction nearly at right angles with our line, and in single column; but they very speedily altered formation, so as to bring themselves into a line abreast in groups of three. In this formation the two fleets neared one another, the *Trafalgar* leading, we coming next, and after us in succession came the *Thunderer*, *Colossus*, *Dreadnought*, *Victoria*, *Agamemnon*, *Edinburgh*, *Collingwood*, *Sanspareil*, and *Inflexible*.

"It was about half-past two o'clock. Suddenly a ship near the centre of the French line began to use her searchlights on us, and fired a blank charge. Immediately all the other vessels did the same, and we soon followed suite, not, however, firing. Both sides seemed to feel that to engage in darkness would be doubly dangerous; but, in truth, the electric lights served only to render the situation more puzzling. The effect of the light when it shines into the eyes of the spectator is confusing in the extreme. It is absolutely impossible to decide, or even to guess, how far off the projector, whence the beam comes, is; and when the glare permits of surrounding objects being seen at all, it seems generally to show them distorted or misplaced. Moreover, in certain conditions of atmosphere, dependent, no doubt, upon the amount of moisture in the air, the beam, instead of being translucent, has the effect of a dazzling and semi-opaque white screen. Upon it, in these circumstances, shadows can even be cast, and phenomena resembling the mirage or the 'Broken Spectre' may be produced. I remember hearing Sir Nowell Salmon years ago tell how once in his steam launch he actually went in chase of one of these apparitions, and how he only discovered that he was pursuing his own shadow when he had occasion to shake his fist at the artificer in charge for not getting more speed out of the boat. I mention this solely because I am sure that more harm than good is, as a general rule, likely to be done during night actions by the use of the search-light. A moment later the French opened a perfectly awful fire on us, apparently from every gun that would bear. It seemed as if the whole horizon had become a mass of ragged smoke and belching flame. Only a very few of our men happened to be on deck, but nearly all these were killed or wounded. The captain himself, who was still on bridge, was

wounded in the right leg, but he refused to go below. We got him into the conning tower, however, without further injury, and I remained at his side until the end, the enemy's fire continuing without intermission from the moment when it first began until the action was over.

"The wind being so light as to scarcely stir the air, and that little coming now from the north-west, such smoke as did not hang rolled gently down the French line and shrouded from us the greater part of it. Almost immediately ahead of us was a group of three French ships, which I took to be the *Formidable*, *Hoche*, and *Marceau*. As the Admiral neared them he swerved slightly to port and went straight for the *Formidable*, while we swerved to the same extent to starboard and headed for what I believe was the *Marceau*. We thus put ourselves to windward of the flagship, and the smoke of her guns, as she opened fire, hid her from view. But I could see our immediate opponent quite plainly, a great towering single-funnelled three-masted ironclad, with a central battery, lofty sponsons, and a high fore-castle. At less than a cable's distance we got one shell from our left fore turret gun fairly into her starboard bow, where it burst, wrecking all the fore part of her. At almost the same instant, however, something struck our conning tower and caused nearly everything in it to fly, so depriving us of our communication with the people at the guns, except by means of the voice tubes which were in the din nearly useless. There were only the captain, the staff-commander, myself, and two signalmen in the confined little box from which of course, no one could be spared, and which for the moment, was practically cut off from the rest of the ship. The six-inch guns in our starboard battery fired once; but in vain did we shout down the voice tubes for them to continue, although we were now almost brushing the paint off the Frenchman's side as she just managed to escape our ram, and although we might, had we given her a broadside from our guns well depressed, have blown her bottom out. In the meantime she was treating us terribly; and it was not until we had passed through the enemy and well beyond him, that it was possible for us to send a man below to convey orders and to report upon what had happened.

"The news that came up soon afterwards was even worse than I had feared to learn. The whole starboard side of the box battery was beaten in, two of guns in it were dismantled and every man in the battery had been killed or wounded. The hydraulic loading apparatus of one of the guns in the fore turret had broken down, and the gun was useless; the funnels were so knocked to pieces as to seriously reduce our steaming power, two 5-in. projectiles had hit us and pierced us below the waterline, and two of our compartments were flooded. There were many other damages, the details of which were not reported; and there was no time, of course, for full inquiry.

"The captain in spite of his injuries was still able to retain command, and he had after clearing the French line brought the ship round sixteen points to port, in order to renew the action with the *Marceau*; or, in case we could not discover her, to engage some other ship. But scarcely had we turned ere we were attacked by two of the *torpilleurs de haute mer*, to which I have already alluded, as well as by several torpedo boats of a smaller type. Ahead of us the battle was raging, and the night was lurid with flash and explosion; but abreast and astern of us all was darkness, and out of this darkness our little loss dashed upon us suddenly from all directions. At the first onset, as I have explained, our men had been driven from the quick-firing and machine guns on the upper deck by the enemy's terrible fire. Many of these guns had been dismantled or injured; and the torpedo boats came on while those guns which had escaped were being again manned. For a few seconds, in consequence, we had nothing with which to meet the attack, and, in the meantime, the enemy was blazing away at us from his 3-pounders and machine guns. We tried to use our search-lights once more, but we could not get them to work, probably because the cables had been destroyed. We did, however, succeed in opening fire to a limited extent before the enemy got very close, and, I believe, we sunk one of the small boats. But, although the men behaved splendidly, and worked at the guns with admirable steadiness, the game was up. A torpedo hit us on the port bow, just under the forward sponson; and in an instant, or rather, as soon as we realised what had happened, we knew that the dear old *Nile* was done for. The shock was tremendous, and threw us all down, for the ship's bows rose violently into the air and trembled as if they had been wrenched and twisted by some angry giant. But, bruised and bloody, as we were, we were soon up again. The entrance to the conning tower was half blocked with the debris

of boats and booms, yet the captain, in spite of his wound, managed to struggle out on deck, and I followed. Several boats were by this time almost alongside, and, as we appeared, a French lieutenant in one of them coolly removed his hat, and made a motion as if to ask whether we surrendered. The captain fired his revolver at the gallant fellow, and, even as he did so, fell back, shot through the chest by a bullet from a machine gun. 'Don't haul it down while we float,' he cried, as he lay writhing in his last brief agony: 'remember what they will say at home.'

"We did not haul it down. We drove the boats off, and gave them a weak cheer as they went, but the ship was by that time settling rapidly down by the head, with a frightful heel to port. The boats were ordered to be got out. They were, however, all knocked to pieces. We did our best also to steam back into the still battling fleets, feeling that no fate could be much worse than the one which immediately threatened us; but the water had got into the stoke-holds, owing, I suspect to some of the bulkheads having given way under the pressure, and we could not move. Just when everything seemed most hopeless I saw what looked like a small cruiser rapidly making for us, with all her lights showing. But she came too late for most us. While she was still a full mile away the *Nile's* stern rose high out of the water, so high as to send everything and everybody on deck adrift, and then with a great gurgle, the ship dived down bows first.

"I have no further recollection that helps to explain how, when the day was beginning to dawn, I found myself clinging to a splintered grating, alone upon the sea. I was dizzy and chill and sore from head to foot, and I was almost naked, but I clung on mechanically. Indeed, my arms were so stiff that it seemed that I could scarcely have unclasped them, even if I had wished to do so. As the sun rose I caught sight of a vessel under steam, less than half a mile from me; and although I was able to make no effort to attract attention, I was in another quarter of an hour so fortunate as to be picked up by a boat which was sent for me by the commander of the *Agostino Barberigo*, and to be taken on board by the kindly Italians. They tell me that at first I could give no account of myself, and that I could neither speak nor stand, but they treated me so well that by midday I recovered.

TABLE B.

	Tons.	H.P.	Guns.	Men.
Battleship—				
Admiral Baudin	11,380	8,300	75	500
Courbet	9,612	8,122	74	670
Dévastation	9,039	8,154	74	685
Formidable	13,441	9,700	15	500
Ruche	10,610	11,300	30	660
Marceau	10,581	10,200	22	660
Amiral Duperré	10,487	8,130	30	664
Catman	7,200	6,000	0	332

Leger	450	2,300	Q.F.	65
Bombard	395	2,000	Q.F.	65
Levrier	450	2,800	Q.F.	65

And the first-class torpedo boats *Asya*, *Audacious*, *Courier*, *Oura-gum*, *Téméraire*, *Kabyle*, *Orange*, *Aventurier*, and *Eclair*.

"My first question was, naturally, about the fleet. Terrible, even beyond my apprehension, is the fragmentary story which my rescuers told me. The *Agostino Barberigo* had been almost within gunshot during the action, which had lasted for less than an hour. After the battle her commander had hailed the French ironclad *Amiral Baudin*, and had learnt that, of our ten battleships, five namely, the *Nile*, *Agamemnon*, *Edinburgh*, *Inflexible*, and *Collingwood*—had been either sunk or compelled to strike, and that of the remainder, two at least, although they had temporarily got away, were entirely disabled. One of these was understood to be the *Victoria*, in which, quite early in the engagement, there had, apparently, been some serious accident. The fate of the *Polyphemos* was unknown, but she had rammed, or torpedoes, and sunk the *Trident*. The *Australia* had got away, but the *Undaunted*, towards the end of the action, had made a gallant endeavour to ram the *Vauban*, and, although she had considerably damaged her, had been sunk, firing as she went down. The *Surprise* had got away, but was on fire when last seen. The *Peacock* after colliding with one of our own vessels

and having her bows stove in, had been taken. The *Scout* had rammed and sunk the cruiser *Sfax*, but had herself gone down, though I am glad to be able to add that most of her officers and crew are safe on board the cruiser *Cecile*. Finally, in addition to the *Trident* and *Sfax*, the French are said to have lost the *Vautour* cruiser and the *Kabyle*—*torpilleur de haute mer*—as well as two small torpedo boats.

"But the victory, which is an undoubted one, lies with them. Our Mediterranean fleet, as such, exists no longer. Half of it has been destroyed or taken; the other half is disabled, and in all probability scattered. Never before in all her history has England experienced so complete a disaster upon the sea, and it can be but slight satisfaction to us to know that to purchase this grand success our enemies have spent an old second-class ironclad, a large but not very new cruiser, and three or four small craft, even when we know also that many of their other vessels must be severely damaged.

"When I was picked up I was nearly ten miles from the scene of the action; and, so far as I know, I am the only one of my ship's company that has escaped, though one cannot but trust that others were picked up by the cruiser which was approaching us when we went down. The *Agostino Barberigo* had, however, on board about thirty blue-jackets and a wounded sub-lieutenant, whom she saved when the *Agamemnon* sank; and it is certain that in the French fleet, the greater part of which put back to Toulon, there are many other survivors.

"I can add no more. As a British officer who as a volunteer has tried to do his duty I cannot, nevertheless, avoid expressing the opinion that if we had had a proper Mediterranean fleet—one equal or superior to that of the French, this grievous disaster would not have occurred. We allowed ourselves to be lulled to sleep by the peaceful aspect of affairs here; and the unforeseen storm has found us unprepared to cope with it. Such a fleet as we had was weak, not only numerically, but also in armour and armament; for enormous guns and partial belts have proved a failure. We have been pinning our faith too much to these partial waterline belts and to guns of monstrous proportions. The only one of the *Sanspareil's* big guns that was fired broke down. The other could not, for some reasons which I have not been able to discover, be fired at all. And I am informed, by a seaman who belongs to the *Victoria*, but who had been lent as a signalman to the *Agamemnon*, that the accident already alluded to as having occurred in the *Victoria* was, in fact, the bursting of a 110-ton gun in her turret. If I can, ere I start for home, learn any further details of our unexampled misfortune, I will lose no time in telegraphing them. I am aware that this account leaves much to be desired. The awful circumstances in which it is written must be my excuse. The fact that I have, in a short hour, lost, as I cannot but believe, most of my shipmates and dearest friends, gives me personally such poignant pain that I can barely concentrate my thoughts; but even more am I overwhelmed by the consciousness of the irreparable loss in officers and material that has fallen upon the country. Would that half the gallant fellows who perished to-day were still at the call of England; for sorely will she need them."

Thus the bolt fell from a clear sky, and within a few hours the two most powerful naval nations of the world found themselves engaged in deadly struggle.

Elsewhere in its issue of that Black Wednesday, *The Times* gave particulars (see Table B), derived from other sources, of the victorious French fleet. It also mentioned, in a leading article, that the telegraphic dispatch above quoted had been sent to it by Lieutenant Thomas Bowling, R.N., an officer on half-pay, who had been present as a guest in the ill-fated *Nile*. And in its edition it contained a great deal of bad news from a spot far less distant than the Mediterranean. This news will be found in the next chapter.

(TO BE CONTINUED.)

CO-OPERATION IN CHINA.

VILLAGE HEADMEN.

No more important exemplification of the principle of co-operation in Chinese society is to be found, than that embodied in the local self-government of the small communities of which the greater part of the empire is composed. The government of the village is in the hands of the people themselves. At first this condition of affairs is liable to be mistaken for a pure democracy, but very slight inquiry is sufficient to make it evident that while

the government in all matters of local concern is theoretically done by the people, in practice the burden falls not upon the people as a whole, but upon the shoulders of a few persons, who in different places are called different names, and whose functions differ as much as their titles. The apparent dead-level uniformity of China is found upon investigation to be subject to surprising variations, not only in parts of the empire remote from one another, but in those which are separated by but a short distance. On this account it is difficult to generalise as regard to the government of villages in general, but easy to describe that of some villages, with the explanation that elsewhere the same results may be attained by means slightly different or by the same same means under different names. Every Chinese village is a kind of little principality by itself, although it is not uncommon for two or more villages which are contiguous and perhaps otherwise linked together to manage their affairs in unison, and perhaps by the same set of persons. The headmen are sometimes styled *village elders* (*hsiang chang*, or *hsiang lao*), and sometimes they are termed merely managers (*shou shih fen*). The theory in regard to these persons is that they are chosen, or rather nominated, by their fellow-townsmen, and confirmed in their position by the district magistrate. In some regions this is actually done, and for the good conduct of the headmen in their office the leading landowners are required to become security. The designation village elders might be understood to denote that the persons who bear it are the oldest men in the village, but this is not necessarily the case. Neither are they necessarily the wealthiest men, although it is property that will be in some way represented among them. They are not necessarily men of literary attainments, although this may be the case with a few. In those regions where the method of selection is most loose the number of headmen has no necessary relation to the size of the village: the position is not hereditary, neither is there any fixed time of service. A man may act in this capacity at one time, and refuse or neglect to do so at another time. Where this plan prevails, the headmen are not formally chosen, nor formally deposed. They drop into their places—or perhaps climb into them—by a kind of natural selection. The qualities which fit a villager to act as headman are the same which contribute to success in any line of business. He must be a practical man who has some native ability, acquainted with the ways of the world, as well as able and willing to devote upon occasion an indefinite amount of time and attention to the affairs which may be put in his charge.

The duties and functions of the headmen are many and various. They may be classified as those which have relation to the government of the district, those which relate to the village as such, and those which concern private individuals, and are brought to the notice of the headmen as being the persons best able to manage them. Of the affairs which concern the government, the most important is the imperial land or grain tax, the nature of which and the mode of collecting which vary greatly. Calls are constantly made by the local officials for government transportation, provision for the entertainment of officers on government business, materials for the repairs of the banks of rivers, work on river-banks, patrols for the imperial roads at the season of year when travel is at its maximum, and many other similar objects. The medium through whom the district magistrate communicates with the village, is the 'local constable,' called the *lifang* or *tipao*, but this individual has necessarily intimate relations with the headmen, who constitute the executive board, through which alone definite action is taken. Among the affairs which relate to a village as such are to be named the construction and repair of the wall (if it has one), and the care of the gates (if they are closed at night), the establishment and supervision of fairs and markets, the engagement of theatrical companies, the organised watching of the crops, together with the punishment of persons detected in violating the rules which have been agreed upon, the building and repairs of temples, the sinking of wells for the use of the village, or the cleaning of those which are already in use, and a great variety of other similar duties, depending upon the situation of the village and its traditions and circumstances. It is a noteworthy fact, that the government of China, while in theory more or less despotic, places no practical restrictions upon the right of free assemblage by the people for the consideration of their own affairs. The people of any village can if they choose meet every day in the year. There is no government censor present, and no restriction upon liberty of debate. The people can say what they like, and the local magistrate neither knows nor cares what is said. The government has, however, a right to

itself than espionage, and by a system of graded responsibility, is able to hold all its subjects under strict control. But should insurrection break out, these popular rights might be extinguished in a moment, a fact of which all the people are perfectly well aware.

The methods of Chinese management being what they are, it is not surprising that those who are in the position of headmen find it, or rather make it, to their advantage to stay in it. The ways in which this comes about are many and various. There is in every village an unceasing supply of matters which do not belong to the public, but which must be adjusted by some man or men who are in the habit of transacting business, and who not only know what is to be done, but know how to do it. There are always Chinese who like to engage in these matters, such as the adjustment of domestic quarrels, and differences between neighbours, and the like. The headmen of the village will be certain to be frequently called upon for service of this sort. But such labours, onerous as they often are, will be acknowledged only by the thanks of those interested, and a participation in the inevitable final feast. It is quite otherwise with such public matters as the collection of material for public uses, and the disbursement of public funds. Every village has numerous enterprises which involve the handling of money, and these enterprises must be in the hands of those competent to take charge of them. There is not in such cases that constant struggle between the 'ins' and the 'outs,' which is seen in lands where the democracy is of a more flagrant type than in China. Yet even in China such contests do sometimes occur. We know of one village in which the public business had for a long time been monopolised by a band of men who had subjected themselves to the criticisms of those who, although younger, felt sure that they were not on that account the less capable. The result of the criticisms was that the incumbents withdrew from their places, leaving them to those who offered the criticisms, a method of adjustment which is known to be practised in the government of the empire. But it is probable that cases of such easy victory are relatively rare, for the reason the 'ins' have every opportunity to keep themselves in their position, and they are for the most part not at all sensitive to criticism, being quite content to reap the substantial benefits of their position, and to leave the talking to spectators. In the ordinary matters of routine, it is easy for them to find abundant precedents for almost any irregularity, and to the Chinese precedents are most precious, as marking out the natural limits of human action. In many villages but a small portion of the population can read well enough to inspect accounts and many of those whose knowledge is equal to this strain upon it, have no practical familiarity with public business, with which they have never had any opportunity to become acquainted. Many who clearly recognise the evils which attend the methods in which the business of their village is managed, do not for two excellent reasons make any protest. In the first place, to do so would raise a storm about their heads, which they have no wish to encounter. And even if the movement should prove completely successful, and the present incumbents should all be removed from their places, it would be difficult, not to say impossible, to find others who would manage matters upon any plan essentially different. A change would be simply the removal of a well-fed swarm of flies, to make way for a set much more hungry, a change against which the fox in the fable wisely remonstrated. The Chinese wholly agree with the sagacious fox. The course which matters take, when complaint is really made, may be understood by an illustrative example, with which the writer is acquainted. During one of the years in which the Yellow River made destructive breaks in central Shantung, an order was issued that all the counties in the province accessible to the river should furnish a certain quota of millet stalks to be used in the repair of the river banks. These stalks were to be paid for in ready money by the government agents. But as some of the counties were situated more than two days' journey from the riverbanks, the amount received for the stalks did not cover the cost of the feed of men and animals for so long a journey. Besides this, the government officials had a ready means by which to exercise complete control over those who brought the stalks, by refusing to take over the material or to weigh it, until such time as the officials might be ready. By this means, both men and teams were kept on expense, so that at last the persons who hauled stalks were only too glad to be allowed to depart without any pay at all for the loads which they had brought. Abuses of this sort were said to be exceedingly common at that time, although on subsequent occasions we have been assured by those who have taken stalks to river-embankments, that full pay in good money was invariably given.

In the village to which we have referred, the business of providing and delivering the stalks was put by the district magistrate into the hands of an elderly man, who was a literary graduate of the grade of *hsuts'ai*. This man naturally called about him some of his former pupils, who did the practical part of the work. They took stalks three times to the place of deposit, and received in payment about seventy thousand cash. Taking advantage of the general uncertainty which prevailed in regard to payments, these managers rendered no accounts to the village, but proceeded to appropriate a certain part of the receipts to their own use. Matters continued in this way for more than a year, when some of those who were dissatisfied, called a public meeting in a village temple, and demanded a clear account of receipts and expenses, which for reasons well understood, it was impossible to give. Finding that the affair was becoming serious, the *hsuts'ai* got some residents of the same village to 'talk peace' to the excited villagers. Their argument was this: "If we press this matter, and take it before the district magistrate, the old *hsuts'ai*, who is really altogether innocent, will lose his button, and will be disgraced. The others concerned will all be beaten, and this will engender hatred and feuds which will last for generations." The middlemen then proposed that by way of settlement a feast should be prepared, at which a representative of every surname in the village should be present, and this plan being adopted, because nothing else was feasible, the matter was buried in compulsory oblivion. This is a type of a large class of cases.—*N.C. Daily News.*

SOLUTION OF PROBLEM No. 35.

WHITE. BLACK.
1—Kt to Q 3 1—R x Q
2—B to K 6 mate if 1—R x R or R to K 3
2—Q to Q B 5 mate if 1—R x B
2—Kt to Q Kt 4 mate if 1—K to Q 3 or advances P.
2—Q x R mate

Correct solution received from J.D., W.H.S. Omega, Omicron, J.W.E., Digamma, Scacchi, and O. Balk.

PROBLEM No. 37. BY A. F. MACKENZIE.

White to play and mate in two moves.

Tuition in chess is part of the education of every boy and girl in the little town of Storbeck, in Austria. The game is regularly taught in the schools, and every year there is a public examination in the game, and a distribution of prizes in the shape of chess-boards.

"Spectator," in the *China Mail*, says:—"A correspondence chess match is announced between Mr P. A. Reutens (Singapore) and Mr J. I. Hazeland (Hongkong), and this suggests the question whether chess is in such a moribund state in Hongkong that chess-players require to go afield for opponents. There are, I believe, a fairly large number of players in the Colony to whom I would suggest some sort of combined action, not for the formation of a Club—the conditions of the Colony being somewhat against that—but of a Chess Circle, whose objects would be the bringing of local players together, and perhaps the promotion of interport correspondence matches with Yokohama, Shanghai or Singapore. Correspondence matches, it is true, are usually tedious and long drawn out, whether conducted by individual players or by groups of players, but the answering of an occasional post-card and the analysis of a position does not entail a great amount of labour, while the ad-

vantages would be ample compensation for the trouble, and a bond of unity would be formed amongst Far Eastern players. We have our interport cricket and rifle matches: why not chess matches?"

We hope this excellent suggestion will be taken up by the Hongkong players, who may be assured that so far as our local club is concerned, a contest by correspondence would be heartily welcomed.

Details about the Dresden Congress which we promised last week have already appeared in our Editorial columns of the 16th inst.

The August number of the British Chess Magazine contains an interesting article on the London and Edinburgh Correspondence Match 1824-1828. The match was played for a silver cup of the value of twenty-five guineas. Among the players on the English side are found the names of Brand, Cochrane, Fraser, Lewis, Mercier and Pratt, while on the Scottish side the name of James Donaldson, the Bailie, is the only one of importance; he was the leading player of the Edinburgh Club and all the accounts agree in assigning to him the chief merit of the victory. Five games in all were played, the first and third being drawn, the fourth won by London, the second and fifth by Edinburgh, who thus secured the trophy. The first game was lead off by Edinburgh and appears to have been conducted at a commendably rapid rate, the 35 moves being got through before the end of the year. The third game extended to 99 moves and was not finished till the autumn of 1826. By far the most interesting of the five games are the two won by the Northerners, which led to the "Queen's Pawn Opening" as it had been hitherto called, being re-named the "Scotch Gambit." The second game is described by Walker as "one of the most brilliant gems of chess extant." The plan of attack was Mr. Cochrane's on the part of London; and he quitted England for India with the assurance of a won game. His partners thought to "play fine" by sacrificing a Rook, and to Mr. Cochrane's horror, he subsequently learned that they had justly lost the battle. We lay this game before our readers as it appears in the *B.C.M.* with notes by W. Wayle.

SCOTCH GAMBIT.

WHITE. London.	BLACK. Edinburgh.
1—P to K 4	1—P to K 4
2—Kt to K 3	2—Kt to Q 3
3—P to Q 4	3—P to P 3
4—B to Q 4	4—B to B 4
5—P to B 3	5—Q to K 2
The beginning of Black's troubles, but the now accepted defence of 5... Kt to B 3 had not yet been thought of. It was first pointed out by Major Jaenisch in his <i>Nouvelles Analyses</i> , 1842-3.	
6—Castles	6—P x P
P to Q 6 is much better, but it still yields White a good game by 7 P to Q Kt 4 and 8 P to Kt 5.	
7—Kt x P	7—P to Q 3
8—Kt to Q 5	8—Q to Q 2
9—P to Q Kt 4	
In this vigorous, attacking move, we recognise the style of Mr. Cochrane.	
10—Kt x Kt	9—Kt x P
11—Kt to Kt 5	10—B x Kt
12—B to Kt 2	11—Kt to R 3
	12—K to B sq.
Castling was of course out of the question, on account of the reply Q to Q 4, forcing the mate.	
13—Q to Kt 3	13—Q to K 2
Black are glad to give up one of the Pawns in order to liberate the Pawns on the Queen's side.	
14—Kt x K B P	14—Kt x Kt
15—Q x B	15—Kt to K 4
16—P to B 4	16—Kt x P
17—Q x Kt	17—Q to B 2
18—Q to B 3	18—B to K 3
19—P to B 5	19—B to B 5
20—R to B 4	20—P to Q Kt 4
21—P to K 5	21—P x P
22—Q x P	22—P to R 3
23—R to K sq.	23—R to R 2
24—P to B 6	

As was pointed out by Lewis (*Remarks on the Report*, &c.), White could here have won easily by 24—Q to B 5 ch, K to Kt sq.; 25—R to K 7, Q to B sq.; 26—P to B 6, &c. If 25... Q to Kt 4, or Q to R 4, 26—R x B wins a piece.

24—P to Kt 4

25—R to B 5

For the second time White could have won without much difficulty: the following variations are from Lewis: 25—Q to B 5 ch, K to Kt sq.; 26—R x B, P x R (or); 27—R to K 7, Q to B sq.; 28—Q to Q 5 ch, and wins. 26—Q x R; 27—Q to K 6, R to B 3; 28—Q to Kt 6 ch, K to B sq.; 29—Q x R P ch, K to Kt sq.; 30—Q x K ch, K to B sq.; 31—Q to R 6 ch, K to Kt sq.; 32—R to K 7, and must win.

25—P to Q R 4

26—Q to B 5 ch.

Here they miss their third chance. The following variation is by Lewis: 26—B to Q 4 (the natural reply to 25—Q to B 5 ch, threatening now the perfectly sound sacrifice 27—P to Kt 4).

27—R x P ch.

28—Q x P ch.

29—R to K 7.

30—Q to B 5 ch.

31—R to K 7.

32—Q to B 5 ch.

33—R to K 7.

34—Q to B 5 ch.

35—R to K 7.

36—Q to B 5 ch.

37—R to K 7.

38—Q to B 5 ch.

39—R to K 7.

40—Q to B 5 ch.

41—R to K 7.

42—Q to B 5 ch.

43—R to K 7.

44—Q to B 5 ch.

45—R to K 7.

The defence relied on by Edinburgh; B to Q 6 and other moves may also be tried, as shown by Lewis, but all are unavailing. 27—P to B 7, B x P (best); 28—R x B ch, K x R (best); 29—Q to K 4, and must win at least a Rook.

27—R x P ch.

Without the co-operation of the B at Q 4 this turns out to be unsound. There was yet a fourth chance to win the game; the following variations were given by Von der Lasa in the *Handbuch* (omitted in last edition): 27—R to K 7, Q to R 4 (or A); 28—P to B 7 ch, R x P (28 B x P equally loses); 29—Q to Q 4, K to B sq.; 30—R to K sq. and wins. (A) 27—Q to Kt 3; 28—Q x P, R x R (28... Q x R loses speedily by 29—R to Kt 7 ch, R to R sq.; 30 R x R ch; and upon 28... R to K sq. followed 29—Q to K 6, B to B 2; 30—Q x Q Kt P with a decisive advantage). 29—P x R, R to K sq.; 30—Q to K 4, Q to R 2; 31—Q to B 6, B to B 2; 32 P to K R3, with a winning game.

27—P x R

28—Q x P ch.

29—B to Q 4

London had still a draw by perpetual check, as the Black King could hardly go to R sq. in the face of R to K 7. But they evidently still played to win, and were unprepared for the tenacity of the Scotch Defence.

29—B to K 3

30—K to Kt sq.

31—K to B sq.

32—B to B 5 ch.

They might still have drawn by continuing the checks with the Q: if K to K sq, Q to Q 5 would win.

33—Q to Q 5

34—Q to R 7

35—P to B 7 ch.

36—R to B sq. ch.

37—Q to K 4 ch.

38—Q to K 8 ch.

39—Q to Kt 8 ch.

40—P to Kt 4

And now the tough Northern nature carries the day after all. This excellent move had clearly been foreseen for some time.

41—Q x Q R

42—R to R sq.

43—B to R 3

Checking on this, or either of the two next moves, would have been useless except to waste time. A slight examination will show that the Black King would have found shelter at R 2 or R 4 according to circumstances.

44—Q to B 6

45—Q x Kt P

46—K to Kt sq.

A beautiful link in the chain; if 47 R x R, Q to K 6 ch, and mates in three more moves. White must, therefore give up the exchange as they do by their next move.

47—Q to Kt 2

48—Q to Kt 2

49—K x Q

50—K x B

51—B to K 7

52—P to R 3

53—Resign.

41—Q x Kt P ch.

42—R to Q 2

43—K to B 2

44—R to Q 8

45—Q to K 5 ch.

46—K to Kt 3

47—Q to Kt 5 ch.

48—Q x Q ch.

49—B to R 6 ch.

50—R x R

51—P to R 5

52—R to B 4

A COLUMBIAD.

Four centuries ago a caravel
(To speak more accurately there were three)
Steered forth to climb the green Atlantic's swell,
And seeking Asia, stumbled on the key
Of that strange continent where all is free—
Save Trade—and where the Sawin Eagle's cry
Is pitched, say, half a dozen notes too high.
Great is the debt that Europe owes to Spain,
For Intellect was clearly bound to die
Had Kit Columbus never sailed the main.
No Mr. Howells had appeared to tell
Our novelists what fiction ought to be;
No Mr. Edison had dared to quell
Thy forces, Giant Electricity;
If Christopher had never crossed the sea,
And with his keen horizon-sweeping eye
Bahama's misty outline chanced to spy;
Britain had never heard of Mr. Blaine,
Whose trade it is the Briton to defy,
Had Kit Columbus never sailed the main.
That Western humour that we know so well,
Those yarns of Iroquois and Cherokee,
Those Christy songs about Annabel
Surname, if I remember rightly, Lee,
Had been unknown, my friend, to you and me:
Snakes had not prompted journalists to lie,
Our maidens' manners had remained more shy,
The clam and terrapin had lived in vain.
Tourists had never tasted pumpkin-pie
Had Kit Columbus never sailed the main.

ENVOI.

Stanley! If Christopher had sauntered by,
Unconscious that the Happy Land was nigh,
And turned his battered bowspirt home again,
Some other Johnny would have gone to pry:
You might have found the Western World—or I—
Had Kit Columbus never sailed the main.
—St. James's Budget.

LATEST TELEGRAMS.

(REUTER "SPECIAL" TO "JAPAN MAIL.")

London, September 17th.

A letter has been received from Lord Rosebery's secretary, in reply to Mr. Bowles, which states that the Pamir question is seriously occupying the attention of the Government, but that it is undesirable to publish anything at present.

Cholera is increasing in Belgium and Holland, and notably at Antwerp. Several cases have been discovered on board the liners sailing to New York.

It is expected that the Monetary Conference will open at Brussels in October next.

London, September 18th.

At a Parnellite meeting at Limerick it was resolved that Mr. Gladstone's scheme of Home Rule would not be accepted unless it included provisions for the amnesty of the dynamiters.

London, September 19th.

It is stated in Vienna that a Convention has been concluded between China and Russia which arranges for the founding of Consulates in Central China with the object of ousting British commerce.

London, September 21st.

The Times demands an apology from Russia for the insult to the British flag by the unjust seizure of three sealing vessels at Copper Island.

The time and place for the meeting of the Monetary Conference have not yet been fixed.

A band of robbers wrecked a train in Kansas, U.S.A., and decamped with a million dollars.

(FROM THE SINGAPORE FREE PRESS.)

London, August 30th.

An order made by the British Government obliges owners of all ships to keep filthy and destitute alien Passengers on board their respective ships unless these are able to furnish the exact details of their destination.

Cholera has now appeared in Dundee, South Shields, and Berlin; in Havre it is very severe.

London, September 1st.

The New Zealand Parliament have adopted the bill for female suffrage.

A heifer charged and upset the Right Hon. W. E. Gladstone in Hawarden Park. The Premier was severely shaken, but succeeded in taking refuge behind a tree. The heifer was afterwards shot.

London, September 2nd.

President Harrison has issued a decree that quarantine of twenty days, longer if necessary, will be enforced at all ports in the United States against vessels arriving with immigrants.

The fear of cholera has caused a regular panic in the New York stock market.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Yamashiro Maru*, from Otaru via ports:—Captain J. Ingles, R.N., and Mr. C. H. Hard in cabin; Mr. J. Budge and Mr. Panasu in second class, and 38 passengers in steerage.

Per Japanese steamer *Wakanoura Maru*, from Kobe:—Mr. F. J. Freer in second class and 12 passengers in steerage.

Per British steamer *Empress of India*, from Hongkong via ports:—Dr. Abercrombie, Mr. Geo. Balloch, Mr. and Mrs. Barroddas and child, Mr. and Mrs. H. F. Brady, nurse, and child, Rev. O. E. and Mrs. Brown, Masters P. and L. Bischof, Mr. J. H. Duran, Mr. M. Doran, Mr. A. H. Groom, Mr. Chas. Fox, Capt. P. de Lemascheffsky, Mr. A. P. MacKintosh, Mr. A. Marischal, Mr. J. P. MacKein, Miss Reid, Mr. and Mrs. A. H. Rennie, Mrs. Stair, and Mr. Geo. Thomson, Mr. S. N. Milutin, Mr. C. Richmond, Mr. G. H. Potts, Miss Warren, and Mrs. Edwardes Moore in cabin.

Per Japanese steamer *Sendai Maru*, from Kobe:—Mr. Rikami and Mr. Max Schlesinger in cabin; 17 passengers in steerage.

Per Japanese steamer *Miike Maru*, from Otaru via ports:—Mr. Kato and Mr. and Mrs. Oliver in cabin; Mr. Watabe in second class, and 18 passengers in steerage.

Per British steamer *Gaelic*, from San Francisco:—Miss Mary Thorn, Mrs. S. A. Cooley, Miss E. S. Cooley, Miss C. J. Reynolds, Mr. Isaac Sharpe, Mr. Heinrich Matz, Mr. Adolph Fisher, Mr. Alfred Unger, Rev. J. C. Davison, Mrs. Fennie K. Patton, Dr. A. P. Peck, Mrs. Peck, Mr. Willys R. Peck, Mr. Llewellyn Peck, Miss May Peck, Dr. G. M. Meacham, Mrs. Meacham, Mr. Morris Meacham Moulton, Rev. J. Soper, and Mr. Br. Augustus Wood in cabin. For Hongkong: Mrs. L. W. Eckley, Miss Nellie C. Derrick, Rev. Chas. H. Nelson, Mrs. Nelson, Rev. Chas. D. King, Mrs. King, and Mrs. E. Hastings in cabin. For Shanghai: Mr. O. M. Sama, Mr. Y. O. Skordal, Mr. Henrik Seyffarth, Miss S. Clausen, and Miss D. Vestervik in cabin.

Per Japanese steamer *Hiogo Maru*, from Hakodate via ports:—Mr. Leitch and Mr. K. Marshara in cabin; Mr. R. Sipant and Miss Sipant in second class, and 21 passengers in steerage.

Per Japanese steamer *Yamashiro Maru*, from Kobe:—Mr. K. Tsuboi, Miss Tsuboi, and Mr. K. Tsuchiya in cabin; 1 passenger in second class, and 153 passengers in steerage.

DEPARTED.

Per British steamer *Empress of India*, for Vancouver, B.C.:—Mr. and Mrs. F. O. Barstow, Mr. A. Barstow, Mr. and Mrs. H. F. Brady and child, Rev. and Mrs. O. E. Brown, Mr. Barker, Mr. Bollock, Mr. J. C. Chambers, Mr. and Mrs. R. H. Calvert, Dr. J. P. Dake, Dr. C. Dake and servant, Mr. M. Doran, Mr. J. H. Doran, Colonel Fox, Captain and Mrs. P. de Lemascheffsky, Mr. Fukushima, Mr. H. M. Glidden, Mr. J. H. Inches, Miss J. H. Inches, Mr. McCorkell, Mr. and Mrs. de Rivas, Mr. and Mrs. Rennie, Mr. Paul Schou, Mr. Geo. Thompson, Mr. J. Turukawa, Mr. Winstanley, and Mr. and Mrs. F. Webber in cabin; Mr. T. Kawada, Mr. Milutin, Mrs. Edwards Moore, Mr. S. Ota, Mr. G. H. Potts, Mr. R. Richmond, Mr. T. Terashima, and Miss Warren in cabin.

Per Japanese steamer *Kobe Maru*, for Shanghai and ports:—The Misses Hogg, Mr. and Mrs. Major, child, and nurse, Miss J. E. Reed, Mrs. and Miss Norris, Mrs. J. M. Barber, Mr. and Mrs. Sneathage, Dr. W. H. Abercrombie, Rev. J. M. Francis, Captain Hussey, Messrs. C. M. Dimock, P. H. Gill, W. Hellyer, J. Ahrlaub, Rigami, W. Haycock, and Swano in cabin; Mrs. Swano and

child, Mr. Bishop, and Mr. J. P. Dwyer in second class, and 45 passengers in steerage.

Per British steamer *Gaelic*, for Hongkong:—Mr. and Mrs. Faorw, 3 children, and European nurse, Mr. and Mrs. Saunders, Mrs. Danby, Mr. and Mrs. H. Oliver, and Captain Retallick in cabin.

CARGOES.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Treasure, \$100,000.00.

REPORTS.

The Japanese steamer *Sendai Maru*, Captain Tipple, reports:—Left Kobe the 18th September at 10 a.m. and arrived at Shiowtsu at 1.10 p.m. Left again at 4.25 p.m.; passed Oshima the same day at 10.47 p.m.; Omai-saki at 11.20 a.m. and Rock Island at 2.47 p.m. on the 19th; experienced moderate N.E. winds with clear weather to Omai-saki; thence to port strong N.E. winds with overcast sky. Arrived at Yokohama the 19th September at 9.55 p.m.

The Japanese steamer *Sakata Maru*, Captain Walter, reports:—Left Miyako the 18th September at 5.45 p.m.; had fresh N.E. winds and overcast, misty weather and continuous rain; on the 19th at 3 a.m. passed Kinkasan with strong winds and high sea, similar weather and very misty, land obscured, which continued to Noshima; passed Inuboye at 7 p.m. on the 19th and Noshima on the 20th at 3.17 a.m.; at 6.47 a.m. spoke a large junk dismasted, bore down to her and proceeded to take her in tow; while getting a line aboard it carried away, and a Japanese man-of-war bore down to her to render assistance. Left and proceeded on our voyage; at 9.30 passed Kanon-saki strong breeze and misty weather. Arriving at Yokohama the 20th September at 11.21 a.m.

The Japanese steamer *Miike Maru*, Captain MacMillan, reports:—Left Otaru the 16th September at 5 p.m. Arrived at Hakodate the 17th at 12.30 p.m. and left the 18th at 4.30 p.m. Arrived at Oginohama the 19th at 3.30 p.m. and left at 6 p.m. Arrived at Yokohama the 20th September at 11 p.m.; experienced moderate winds and fine weather to Hakodate, strong northerly winds and dull cloudy weather to port.

The Japanese steamer *Sagami Maru*, Captain Pender, reports:—Left Kobe the 19th September at noon; had gentle N.E. winds and fine weather to Tomanga-shima; thence to Oshima gentle N.E. to S.E. winds; passing at 8.55 p.m.; thence to Rock Island with fresh breeze from N.E. with cloudy squalls weather; the 20th at 2.45 a.m. met steamer *Yamashiro Maru* going S.W.; passed Rock Island at 1.40 p.m. with strong N.E. winds and cloudy squally weather; passed Kanon-saki at 7.40 p.m. with a medium gale of wind from N.E., cloudy and overcast with passing rain squalls. Arriving at Yokohama the 20th September at 11 p.m.

The British steamer *Carmarthenshire*, Captain Clark, reports:—Left Kobe the 19th September at 10.30 p.m.; had fine weather and light variable winds to Oshima; thence to Rock Island strong E.N.E. winds attended with light squalls of rain; from Rock Island to port north-east winds and thick weather. Arriving at Yokohama the 21st September at 10 a.m.

The Japanese steamer *Hiroshima Maru*, Captain

Pyne, reports:—Left Shimonoseki the 19th September at 5.45 a.m.; passed Isa-saki at 7.30 a.m.; experienced light northerly winds and fine weather; thence strong winds varying from east to N.E. and overcast with high confused sea and continued showers. Arriving at Yokohama the 21st September at 2.30 p.m.

The British steamer *Gaelic*, Captain Pearne, reports:—Left San Francisco the 6th September at 4.10 p.m.; in the 10th had westerly winds and head sea; thence to the 20th variable winds and fine weather; thence to port strong N.E. and high sea. Arrived at Yokohama the 22nd September at 4.32 p.m. Passage, 15 days, 6 hours, and 53 minutes.

The Japanese steamer *Hogo Maru*, Captain Fukui, reports:—Left Hakodate the 21st September at noon; had light westerly winds and cloudy weather until arrival at Oginohama the 22nd at noon. Left at 3.30 p.m. on same day; had light northerly breeze and rainy weather to Inuboye-saki; thence moderate to fresh breeze and overcast rainy weather, continuing to arrival at Yokohama the 23rd September at 5 p.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Kobe the 22nd September at noon; had light breeze and rain freshening to moderate breeze from north and north-eastward; continuing all night and next day with almost incessant rain until arrival in Yokohama the 23rd September at 7.30 p.m.

LATEST COMMERCIAL.

IMPORTS.

The improvement in the market continues, and sellers are gradually levelling up prices to a more satisfactory range as the demand increases and supplies diminish, fully bearing out the forecast made some little time ago that dealers would not be able to obtain such good bargains after the autumn trade had fairly set in. A good current business has been doing in Yarns at steady prices. Velvets, Prints, and Turkey Reds have been in demand at improved rates. Cotton Italians have been contracted for at higher prices, and Italian Cloth has further advanced on recent sales. In Grey Shirtings and T-Cloths there has not been much new business transacted, the demand being supplied out of sales to arrive, now coming in. Sterling Exchange is quoted 2/10½ for Bank Bills on demand. Sales during the week include 875 bales English Yarn, 25 bales Bombays, 1,250 pieces glb. Shirtings, 300 pieces T-Cloths, 3,500 pieces Prints, 8,800 dozen Handkerchiefs, 6,500 pieces Cotton Italians, 990 pieces Velvets, 7,500 pieces Turkey Reds, 140 pieces Silk-faced Satins, 2,700 pieces Italian Cloths, and 6,000 pieces Mouseline de Laine.

KEROSENE.

Demand is good at unchanged rates, a steady business being done, notwithstanding the firmness of sellers. The steamer *St. Andrews* arrived with over 100,000 cases Russian oil, but some of this, we understand, is to be sent to Kobe.

QUOTATIONS.

Chester	\$1.75 to 1.77½
Comet	1.72½ to 1.75
Devoc	1.67½ to 1.70
Russian Anchor	1.67½ to 1.70
Russian Moon	1.65 to 1.67½

SUGAR.

Quotations on Brown are raised to-day, Takao especially, being very short of stock. There does not seem to be a great quantity on hand, and holders have been able to take advantage of their strong position. While sales have not been brisk the advance obtained has fully compensated for the few daily transactions. By some a still further advance is looked for.

	PER PICUL.
Brown Takao	\$3.80 to 4.00
Brown Daitong	3.60 to 3.80
Brown Canton	3.75 to 3.95
White Java and Penang	6.10 to 6.20
White Refined	5.50 to 7.60

EXPORTS.

RAW SILK.

Our last issue was dated 16th instant. Since then, settlements on the market amount to 2,500 piculs, divided thus: *Hanks*, 227 piculs; *Filatures*, 1,242 piculs; *Re-reels*, 765 piculs; *Kakeda*, 246 piculs; *Oshu*, 20 piculs. There have been no direct shipments during the week, consequently, the total export business remains at the above figures, 2,500 piculs. We have again had another heavy week, large buyers rushing in and putting prices up daily. The chief business seem to have for America, the higher grades, both of *Filatures* and *Re-reels*, being much in demand. As will be seen from our statistics at foot, the available supplies to date form about one half the expected crop, and the season is likely to close early. Best qualities will be extinct much sooner than usual. Holders are now very strong believing in an advance to \$900 per picul for best *Filatures*. In some cases they withdraw their goods from sale and quietly sit down to await events. There is also a good daily business doing for Europe at prices which are well maintained. Cables from consuming markets come in daily saying the prices are too high and that they cannot afford to pay them, but they go on doing it just the same. Altogether we have not seen such lively times since the remarkable season of 1876.

Arrivals come in freely from the interior, but with the heavy buying the stock list is reduced to 6,200 piculs, against 10,500 piculs at the same date last year.

Exchange has remained fairly steady all through the week, the slight decline in silver producing a corresponding effect here.

There have been four shipping opportunities since we last wrote. The Pacific Mail steamer *Peru*, on the 17th instant, carried 1,001 bales for New York, followed by the Canadian steamer *Empress of India* on the 19th, which vessel took 956 bales for the same destination, and the Northern Pacific steamer *Loosok*, which left port on the 20th, with 92 bales also for the American trade. The English mail steamer *Ancona*, on the 17th instant, took 533 bales for Europe. These departures bring the present export up to 13,845 piculs, against 12,560 piculs last year and 3,820 piculs at the same date in the previous year.

Hanks.—A fair amount of business has been done in these, especially for Europe, high prices being freely paid. Crack *Shinshu Hanks* are held for \$675; excellent silks from the same province have been done at \$650; *Chichibu* have brought \$630; *Shibukawa*, \$600; *Hachioji*, \$545. The stock of these is small, being less than 250 piculs, and there is every prospect of prices being well maintained.

Filatures.—This class has had the lion's share of attention, as indeed they have had all through the season, and about one half the settlements

come under this heading. Prices have been still further advanced. Best *Shinshus* have been paid \$840, and are now held for a strong advance. *Kaimisha* has been done at \$830, with other good *Shinshu* brands at the same price. These are now held for \$840, and sellers are very shy, withdrawing their goods from the market expecting an advance ere long to fully \$900 per picul. In fine sizes business continues at long figures. Nothing to note in Extras, but ordinary No. 1/1½ silks are freely taken at \$810. One parcel *Usen* brought \$825; lower grades at proportionate prices.

Re-reels.—These have been in strong request, especially the higher grades. *Fine Girl* chop brought \$775 and are now held for \$815. Equal chops at equal rates. Good medium stock has also been in strong demand and are now hard to find. Dealers talk of \$730 for silk like *Sharusha*. *Bushu* Re-reels have also advanced in the same proportion, and no decent quality can now be obtained at less than \$700 per picul.

Kakeda.—These were more or less neglected in the early part of the week and prices were cheap compared with other classes of silk. The last two days, however, holders have braced up and ask full quotations for anything which they choose to put upon the market.

Oshu Sorts.—These are very strongly held and but little business has been done. One small parcel *Sendai* at \$580, with *Hamatsuki* at corresponding prices.

In Taysaam kinds no business for export.

WASTE SILK.

We have had an active week, settlements amounting to 2,500 piculs, divided thus: *Pierced Cocoons*, 223 piculs; *Noshi*, 1,551 piculs; *Kibiso*, 726 piculs.

Immediately after our last issue, the market became very active and almost excited on the news reaching us of a syndicate being formed in Europe to raise the prices of Waste there. One or two large buyers operated heavily here, especially in *Noshi* and *Kibiso* and Japanese at once advanced their prices about \$10 per picul all round, which had the effect of checking business to some extent. They still maintain a very firm attitude, but shippers are somewhat wary and the market is quiet, though very strong.

The *Ancona*, which left port on the 17th instant, carried 92 bales for Europe, and the total export to date amounts to 2,900 piculs, against 3,262 piculs last year and 1,578 piculs at the same date in the previous year.

Pierced Cocoons.—Trade has slowed down, holders trying for an advance on the balance of the stock. Buyers, on the other hand, appear to think that their previous purchases were quite dear enough and for the moment refuse to go on.

Noshi.—Large speculative purchases at a substantial rise in quotations. Good *Oshu* have been done at \$140; buyers now ask \$140. Some *Fila-*

tures were put through at \$120 for medium quality, and ordinary *Yoshu* has been done as high as \$75.

Kibiso.—A smart rise has taken place in quotations here, holders now asking \$110 for best selected *Filatures*. So far as we have heard, the price has not yet been paid, buyers running on lower qualities—from \$90 to \$100. In *Aira* sorts Low Curlies have been done at from \$40 to \$30, according to province and grade.

Mawata.—No business as yet, but a small sample lot of new fibre is said to have come in from the country.

Neri.—Nothing to record in this class. Supplies come slowly to hand, but holders are difficult and the quality of present offerings is not first-class.

Established a Quarter of a Century.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Coore, in his account of his extraordinary travels in China, published in 1871, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1890.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

"THE REAL CUP O' KINDNESS."

Perfect blendings of the Choicest Brands of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely unadulterated with.

MATURED IN SHERRY CASKS.

A LUXURY ■ PURE SCOTCH WHISKIES.

The letters BOS are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

BOS

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them *unique and unrivalled*.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate,—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in square white bottles, labelled and capped, the quality being notified by a small label on each bottle.

The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 1ST, 1892.

MARRIAGE.

At Yokohama, on September 22nd, 1892, before Hon. W. D. HILTON, U.S. Consul General, GEO. ECKLEY, of Hongkong, to Miss NELLIE C. DERRICK, of San Francisco. No cards. Hongkong and San Francisco papers please copy.

DEATH.

At Aoyama, Tokyo, Mrs. J. F. BELKNAP.

SUMMARY OF NEWS.

A BRANCH of the Nippon Ginko will be established at Hakodate.

H.I.H. PRINCE KOMATSU YORIHITO proceeded to Yokosuka on the 24th ult.

COUNT MATSUKATA, ex-Minister President, paid his respects to H.I.M. the Emperor on the 23rd ultimo.

THE residents of Senju, Tokyo, have petitioned the Authorities for the establishment of a telegraphic office in the town.

THE new premises of the Yokohama Town Office are to be built at Yoshida-machi. The work is estimated to cost 30,000 yen.

MR. OYAMA TSUNASUKE, Secretary of the Japanese Legation in Austria, was ordered on the 26th ult., to take charge of the Legation.

COUNT MATSUKATA, ex-Premier, and family left the capital on the 27th ult. for Mikage, starting from Shimbashi by the first train.

THE troubles which have been agitating the members of the Yokohama Silk Traders' Union for some time, appear to have been settled.

COLONELS TERAUCHI Seiki, Takahashi Korenori, and Manabe Bu, of Infantry, and Shioya Masakuni, of Artillery, have been appointed Judges of the Autumn Manœuvres of the troops of the

First and Second Army Divisions, which take place in the northern provinces shortly. Some seventeen Assistant Judges have also been nominated.

THE Privy Council has concluded its discussion of the revised Hunting Regulations and the new rules have been laid before the Emperor for approval.

RUMOUR says that the Government has decided to appoint Mr. Nakajima Nobuyuki, ex-President of the Lower House, Japanese Representative in Italy.

VISCOUNT ENOMOTO, ex-Minister of State for Foreign Affairs, will start from the capital about the beginning of next month on a tour of pleasure in Hokkaido.

THEIR Imperial Highnesses Princes and Princesses Arisugawa, Komatsu, and Kitashirakawa paid their respects to the Emperor and Empress on the 27th ult.

THE rules for the operation of the Parcel Post System were promulgated on the 27th ult. The rules consist of fifty-four articles, and are to be put into force on the 1st inst.

MR. HARA, Chief Commissioner of the Trade Bureau in the Foreign Department, has been ordered to proceed to Korea. His departure is said to be connected with the Quelpart affair.

A TELEGRAPHIC message has been received from Hakodate stating that a fire broke out on the 21st ult. at 10.20 p.m. in a house at No. 26, Ebisucho, and 34 dwellings were burnt down, 6 being partially damaged.

UNO TSUNEZO, an employé of the Shimbashi Station, has been sentenced to seven months' major confinement and six months' police supervision for having stolen a quantity of goods belonging to passengers.

THE public meeting of the Oriental Society (*Toho Kyo-kwai*) held at the Kinki-kwan, Kanda, Tokyo, on the 25th ult. was attended by over three hundred persons. Mr. Ishikawa Yonosuke delivered a lengthy speech relating to his recent visit to Chishima.

DURING August last 1,132 applications for patents were entered at the Patent Bureau, and 974 were granted, for which fees to the amount of yen 1,358.502. were received. Compared with the previous month, the above shows a decrease of 280 applications, 417 patents granted, and yen 369.336 in fees.

THE exhibits to be displayed by the students of the Third Higher Middle School at the Chicago Exhibition were shipped to Tokyo, per the *Hokuriku Maru*. The ship, however, foundered off the shore of Shimoda some time ago, and the pictures and other articles have been damaged beyond repair.

DURING a severe blow on the 8th ult. a fisherman, residing at Isohamacho in Ibaraki Prefecture, who was engaged at work near the shore of East Ibaraki District, was caught in the high waves, and narrowly escaped death. Three of his neighbours who courageously went to the rescue of their friend, were drowned.

A SPECIAL general meeting of shareholders of the Tanko Railway Company, Hokkaido, is to be held in the capital on the 25th of October next, in order to consider a proposition by the Directors for raising a loan of 1,100,000 yen for the Horonai line. They propose to spread this sum over three years, raising, 500,000 yen in 1893, 400,000 yen in 1893, and 200,000 yen in

1894; the debt to be cleared off in twenty-five years commencing 1895. The interest they propose to pay is fixed at not more than 6.5 per cent. per annum.

ON Saturday afternoon, about three o'clock, a processional car, engaged in the *matsuri* of the Shinto Shrine at Noge-yama, was overthrown while proceeding between the second and third divisions of Noge-machi. A man was severely injured, and is now under medical treatment in the Jizen Hospital; three or four persons also were slightly wounded.

MR. WATANABE, Minister of State for Finance, who has applied for the appropriation from the Second Reserve Fund of yen 50,000 toward the expense of bringing into operation the Parcel Post System in Tokyo, and yen 2,209 towards the relief of sufferers in the devastated districts in Tokushima Prefecture, has received the Imperial sanction for both amounts.

MR. KONO, Minister of State for Education, accompanied by Messrs. Tsuji, Vice-Minister; Hamao, Chief Commissioner of the Bureau of Special School Affairs; and Kubota, Chief Commissioner of the Bureau of General School Affairs in the Educational Department, visited the Tokyo Fine Art School and the Tokyo Academy of Music in Ueno Park on the 24th ult.

THE import market has been brisk, and dealers have shown an inclination to operate in a way that they have not done for several seasons past. This is doubtless due to good crops and high prices for exports, added to which stocks have diminished to such an extent that the buying of the last month has not only cleared out most "spot" cargo but a large portion of what is now on the way has already been sold; consequently, as importers have very little to offer at the moment, buyers are prepared to go on and to pay higher rates. Single Yarns have fetched more money, while two-folds have been active at a further advance, and fine counts at a considerable rise, still higher prices being anticipated, the supply being so much reduced. The demand has spread over a great variety of goods, and the sales included 10,000 pieces heavy shirtings, 5,000 pieces Prints, 2,000 pieces Cotton Italians, 50,000 pieces Turkey Reds, 15,000 pieces Italian Cloth, 7,200 pieces Mousseline de Laine, 15,000 pairs Blankets, and large parcels of other fabrics, all at steadily advancing prices or considerably higher rates. In the Metal trade, offers have been made at good figures for future business, but holders decline to let go "spot" cargo for the prices offered, which has restricted business. There is a fair trade in Kerosene, owners of oil being still very strong, and buyers have had to pay full rates. Stocks of Brown Sugar are light, and Takao exhausted, parcels being taken as fast as arrivals come to hand. Whites are also in request and of higher value. The "boom" in Silk has continued, the 2,500 piculs of last week having been exceeded this week, when over 3,000 piculs passed the scales. Prices still continue to rise, and no such figures have been paid since the great "boom" of 1876. Competition to obtain high quality parcels is keen, and the lower grades appreciate proportionately, holders "raising" with a bold front. Waste Silk has not met so strong a demand, the heavy trade of last week—and the figures paid—having steadied buyers. The Tea trade has not been extensive, Common grade leaf being scarce, and most of the transactions took place in Good Medium and Fine sorts. The stock now is small all round, the export already having figured up to nearly 30,000,000 lbs. Exchange has been steady, and closed a point higher than a week ago.

EDITORIAL NOTES.

PRINCE IWAKURA TOMOSADA.

PRINCE IWAKURA, President of the Board of Decorations, Chamberlain to His Imperial Majesty the Emperor, and Director of the Nobles School for Boys, suddenly presented his resignation of the last post two or three days ago. A certain influential nobleman, hearing the news, at once went to visit the Prince, and asked him his reasons for resigning. The Prince replied that his resignation was dictated by inability to discharge the onerous duties of the school. The visitor, however, not convinced by such an explanation, pointed out that the question of ability to discharge the functions connected with the Directorship of the School ought to have been considered before accepting the post. If, on the other hand, the resignation was caused by ill-health, it could not be helped, though the Prince seemed as strong as ever. There must be some hidden reason; and the questioner pressed for a statement. Prince Iwakura remaining silent, the other went on to ask whether there was any disagreement among the masters under his control, and if not, why one hitherto so zealous in the discharge of his duties should decide to retire so suddenly. The Prince at last abandoned his attitude of reticence, and said:—"Your doubt is just. I intended at first not to disclose the real reason of my sudden resignation, but as you propound so many questions, I shall inform you of it. When the post was offered to me originally, I declined to accept it over and over again, as it is an additional office, and a busy one too. But I was induced to accept it at last. From that day I worked hard to discharge its responsibilities. But recently I heard that two candidates for the office had been discussed in the Cabinet, so before I should be removed *volens volens*, I decided to resign of my own volition. Such is the real reason." The visitor then asked who the candidates were, but the Prince declined to answer, saying that they were both members of the House of Peers. The *Yomiuri Shimbun*, in recording the above, adds a rumour that the candidates are Viscount General Tani and Prince Konoye. It is whispered that Prince Konoye will be offered the post of Minister to a foreign Power, but some affirm that he is resolved to decline the offer.

THE IDAHO TROUBLES.

It has already been noted that when the intelligence of the Idaho troubles reached Japan, several vernacular newspapers expressed considerable indignation, though some wrote temperately, notably the *Kokkai*, an article from which was translated in these columns. The *Fiji Shimpō* now writes as follows:—"When the news that some hundreds of Japanese had been expelled from Idaho in America reached this country, public indignation was aroused, and in their excitement some went so far as to declare that extreme measures must be adopted against America to wipe away the shame put upon us. The event referred to happened in July, and an account of it was reproduced by us at the time, but the public did not pay much attention to it till a San Francisco journal took up the question under the caption 'Crusade against the Japanese!' It is a common practice with American journalists to magnify small and unimportant news so as to attract public attention. Hence the news published in the San Francisco papers cannot be regarded as an accurate account. But, on the other hand, judging from the usual feelings and conduct of American labourers towards the Japanese, such a trouble might very well have happened, and even in a local paper statements entirely groundless could not be fabricated. Hitherto, however, the relations between Japan and America have been most intimate, so that, even if, most unfortunately, such an unpleasant event happened, the fact must not be lost sight of that it was but a small and comparatively insignificant incident, confined to one portion of America. No possibility should exist of the friendly relations between Japan and America being injured by it. The people con-

cerned in the fracas were low Irish and Italian labourers, who had recently immigrated into America, but were still ignorant of American institutions, as well as of the difference between the Japanese and the Chinese. Such men dislike every one who is not of their own race. Their unique object is to lessen competition so as to raise their own salaries and have plenty of money to spend on whiskey. In a word, they are not capable of considering anything seriously. It is stated that they often give vent to discontent about working hours and wages, and resort to all kinds of nefarious schemes to obtain more pay for less work. Sometimes they push their rowdiness so far as to openly violate the laws of the country. The police then arrest them, but the country being very extensive and the preservation of law and order correspondingly difficult, it is scarcely possible to control such persons effectually. We guarantee that when the news referred to becomes widely known in America the upper classes will be unanimous in their condemnation of the scandalous doings of the rowdies, and will sympathize with the unfortunate sufferers. Such being the case, it is an obviously hasty conclusion to declare that the Americans treat the Japanese as enemies merely because lawless persons have behaved lawlessly in a small country district. It is stated that our Government has already despatched a telegram commissioning our Consul in San Francisco to investigate the facts of the case. Should the investigation confirm what has been reported, then it will not be too late to open negotiations with the United States Government. We deem it ridiculous and contemptible to talk of retaliating by expelling the Americans in Japan, and we trust that both the Government and the people will adopt the most peaceful policy, calmly seeking to settle the trouble and to obtain suitable redress. For no wrong in the world can be buried for ever beyond the reach of atonement. Meanwhile, the question is purely diplomatic. Its solution must be trusted to the Authorities, we on our side watching their procedure quietly. It will be permissible to discuss the result, but it is not permissible to complicate the problem by premature clamour."

TREATY REVISION.

THE public, says the *Hochi Shimbun*, is expecting to see some satisfactory settlement of the Treaty Revision problem by the present Cabinet, but it has to be remembered that the failure of the negotiations has hitherto been due not merely to the assaults of the Opposition but also to disagreement in the ranks of officialdom itself. Hence the new Cabinet is said to be very careful about approaching the question, the desire being to dispose of internal troubles first. Moreover, some apprehension is entertained also about the anti-mixed-residence association, for it numbers among its members or supporters not only the disciples of Mr. Oi Kentaro, but also some Radicals and officials, graduates of the Imperial University and Peers. There is reason to fear that when the negotiations for revision are reopened, these various seclusionists may raise such a commotion as to disturb the solidarity of the Government, and consequently Mr. Mutsu and other members of the Cabinet are chary about burning their fingers.

* * *

This paragraph is evidently penned with the subtle purpose of attributing a pusillanimous rather than a prudent attitude to the Cabinet. For it is evident that, in dealing with such a large question as Treaty Revision, if the Government waited until every section of officialdom and every coterie of politicians could be brought into line, the Greek Kalends would be the date of achievement. Mr. Oi Kentaro and his fellow agitators have of course found sympathisers, and will find more. Success would attend their efforts did they canvass even among the foreign residents, for there are some of these who have declared that the result of any attempt on the part of the foreigner to trade in the interior would be disastrous to him and profitable to the Japanese. Mr. Oi and his seclusionist disciples think that, in free competition, the foreigner would swallow up the Japanese as

Aaron's rod swallowed up the spurious snakes of the magicians; the foreign anti-revisionist believes that he and his rash fellows would fare like the magician's rods if they ventured within reach of the native Aaron. The world has never been entirely without such timid folks, but happily they have not greatly obstructed progress hitherto, and we expect that they will be swept out of the path of Revision without much ceremony.

THE HAKONE DISTRICT.

MR. OGAWA has given us another of his beautiful albums. On this occasion he takes us into the Hakone district, and shows us views of many familiar and exquisite mountain spots, Kiga, Miyanoshita, Sengen-yama, Ojigoku—so forth. The photographs, or rather collotypes, are really admirable, and the letter-press, by Mr. James Murdoch, is pithy, picturesque, and nervous. The two are well matched, and that is saying a great deal. We have, however, one crow to pluck with Mr. Murdoch, if he be responsible for the arrangement of the descriptions. Just as Professors Milne and Burton, in their imposing volume about the great earthquake of 1891, actually forgot to tell their readers the date of that terrible phenomenon, so Mr. Murdoch has virtually forgotten to tell us what scenes the plates in this pretty album represent. It is generally possible, indeed, by perusing the letter-press carefully, to discover the original of the picture described, but even this task is not always successful; while in the case of some plates, XI., XII., and XIII., it cannot be said that any description at all is given, and in the case of another (IX.) the four views grouped into one picture are carefully distinguished in the text by letters (*a*, *b*, *c*, and *d*), but identification is impossible, inasmuch as the letters are not repeated on the picture itself. Probably the printers are chiefly to blame for this slovenly inattention to the principles of lucidity, and we trust that in the albums hereafter to emanate—it is to be hoped—from the same source, Mr. Murdoch will trust nothing to his publishers, but insist upon having a clear descriptive heading printed above the letter-press accompanying every plate. In all respects, save this, the new Album is really a charming work of art. Its success, so far as securing public favour is concerned, ought to be assured.

NEW RAILWAY IN YOKOHAMA.

ONE of the questions of the moment in Yokohama is the construction of a railway in connection with the new harbour-works. The Kanagawa Kencho sought the opinion of the Town Council on the subject, and the President of the Council having submitted the project for discussion, a Committee was elected to examine and report upon it. The *Fiji Shimpō* gives details of subsequent proceedings. It says that on the 18th ultimo, Mr. Uchida, Director of the Home Affairs Department in the Kanagawa Kencho, addressed the following despatch to the President of the Yokohama Town Council:—"Sir,—In accordance with the original arrangement, a railway is to be constructed from the newly made landing place of the Yokohama harbour-works to the Yokohama Station, as shown in the plan enclosed herewith. In respect of this purpose the Harbour-works Bureau has requested us to notify the fact to all persons interested. We therefore beg to request that the Town Council will cause an estimate to be made showing the amount of money required for the purchase of land or for compensation to its proprietors. You are also requested to offer your opinion on the general question. Further, we beg to inform you that the stone walls along the sea-front, except those belonging to private persons, will be used for the purposes of the works as previously arranged. We trust that the estimate will be compiled at your earliest convenience. We remain," etc. The line mentioned in the above is from the landing place to the station. Its construction will greatly enhance the value of the harbour, but will, on the other hand, probably compel those engaged in transport by sea to abandon their business, and will

Original from

also entail important consequences for the Japan Mail Steamship Company. Such being the case, the Committee investigated the question very carefully; and as some 18 *tsubo* of land belonging to the Japan Mail Steamship Company, and 212 *tsubo*, the property of Mr. Den Kinsaku, must be purchased, as well as various public buildings along the Japanese *hatoba*, due notice was given to the owners who were requested to forward statements of the prices demanded by them. It is rumoured that the Committee having examined these statements very carefully, and reconsidered the whole subject, came to the conclusion that it would be better to reclaim a portion of the coast for the purpose of constructing the proposed line. Against such arrangement the *Fiji* does not think that any opposition would be offered.

RUSSIA AND THE SEALS.

As our telegrams to-day contain a message in reference to the capture of British vessels by Russia, we reproduce the following telegram—a somewhat mysterious communication—from Washington to a Californian paper:—"No one connected with the State Department cares to say anything, officially or privately, in the matter of the seizure by the Russian Government of certain American sealing vessels, owing to the absence of the Secretary of State. A gentleman who is an authority in international law, however, and who has frequently been consulted by the State Department ventures the opinion that unless there has been some gross outrage permitted upon the American seamen by the Russian authorities, our government is not likely to take any action in the matter for these reasons. So far as the facts are understood the probability is that the Russian Government, in making these seizures, have acted in accordance with the interpretation which the United States claims should be given to the rights of Russia and of this country in the waters of Behring Sea. In other words, the probability is that the action of the Russian Government is the interpretation of the rights of the United States under the cession of Alaska to this country, which will be maintained by the United States before the Behring Sea arbitrators. In common language, therefore, unless the attitude of Russia is entirely misunderstood here, the Czar has come to the aid of the United States in the preparation of its case for the board of arbitration. The reverse of all this is, of course, true so far as Great Britain is concerned. Russia, in making these seizures, seems to have proceeded upon an assumption which Great Britain maintains is untenable. In the absence of more definite information this is the best opinion that can be obtained here as to the probable effect of the action of Russia upon this government."

ANOTHER BY-ELECTION.

Mr. KATO MASACHI, member of the House of Representatives for the Sixth Election District of Aichi Prefecture, having resigned his seat, a by-election took place on the 22nd September. Mr. Kato Kiyemon, Radical, Mr. Aoki Eiji, ex-member of the House of Representatives and an affiliate of the Tomoye Club; and Mr. Ito Harutaro, Independent, competed for the seat. The ex-member, Mr. Kato Masachichi, was an independent, but in view of the influence developed by the Radicals in the district, he urged his supporters to vote for Mr. Aoki Eizo. The result, however, was: Mr. Kato Kiyemon (Radical) 1,942 votes, Mr. Aoki Eiji (Tomoye) 42 votes. The Tomoye Club, as our readers probably remember, is an off-shoot of the *Taiseikai*, or Independents, and though not pledged to any line of policy, its members generally voted with the Government. Nevertheless, it is not regarded as a pro-official organization, and the object of the retiring member, in seeking to transfer his supporters to an associate of the Club, was doubtless of the nature of a compromise, his conviction being that a declared Independent, like Mr. Ito Harutaro, had no chance whatever in the face of the Radicals' influence. It would appear from the above return that Mr. Ito obtained no votes at all, but that is scarcely credible. At all

events, the issue of the four by-elections recently held is to transfer three votes from the Government to the Opposition, a difference of six in a division. This, however, is on the hypothesis that the various parties vote as heretofore, and that the *Kaishin-to* and *Fiji-to* remain in the same camp—two decidedly doubtful suppositions.

THE "MYRMIDON."

THE *Singapore Free Press* says the steamer *Laertes* arrived at Singapore about 1.30 p.m. on the 9th inst. having in tow the steamer *Myrmidon*. The *Myrmidon* left Suez on the 5th August, and notwithstanding the rough weather and the high seas, continued to make good progress, averaging 11½ knots an hour, until the time of the breakdown on the 19th August. She had a strong monsoon all the way across the Indian Ocean, but she passed Point de Galle all right on the 18th ult., with a fresh breeze blowing, accompanied by rain and an overcast sky. Next day the propeller shaft snapped clean off at the stern post, and the remainder of the journey, until she was taken in tow by the *Laertes*, had to be performed under canvas. On the morning of the 21st ult., the ship broached to and a sea anchor had to be rigged before they could get her off before the wind again. Pulau Rondo was reached on the 27th ult., and on the 4th September the *Myrmidon* anchored off Pulau Butong, being unable to get further to the south on account of adverse winds and currents. A boat was then sent out to Penang in charge of the second officer, Mr. Thompson, that place being reached on the 6th inst. The *Laertes* was then sent out to her aid, and no further incident occurred until she reached the wharf, after an interval of three weeks reckoning from the time the breakdown occurred. The *Myrmidon* will go into dock after unloading her cargo. She brought only three passengers, two, Mrs. Leask and Mr. Baird for Singapore, and Mr. Van Raay for Sourabaya.

A DEPUTATION.

A VERY pretty deputation waited on Count Inouye at the Home Office on Friday week. Its members came from Shizuoka, forty-three of them, and instead of proceeding on foot, or even riding two and two in *jinrikisha*, as is the custom with economical and modest Japanese, they hired, every one, a *jinrikisha* for himself, and, in forty-three of these vehicles, dashed up to the Department, the *kuruma* that led the van being adorned with a flag which flaunted somewhat limply in the pouring rain. These gentlemen came to the capital as representatives of the Shizuoka farmers, and their purpose was to impress upon the Minister of State for Home Affairs the urgent necessity of re-assessing the taxable value of land. They had provided themselves with a huge card, on which were inscribed, in legibly large ideographs, the full names of the whole forty-three, and this missive they handed to the astounded officials on duty as though its aspect must suffice to remove all obstacles. The domestic affairs of the empire are at present transacted in a wooden building, neither imposing nor spacious, and a difficulty was at once experienced in the fact that no reception room sufficiently ample to house this huge deputation offered itself. The largest available chamber of the kind was, however, placed at their disposal, and into it as many as could find space packed themselves, the remainder tailing off into the corridor. Probably, having obtained admission to the precincts of the Department, the forty-three processionists thought themselves secure of an interview. But they were mistaken. They had not waited long before Mr. Sato, one of Count Inouye's Private Secretaries, penetrated the crowd, and informed them that, in view of their disorderly and unbecoming manner of presenting themselves, the Minister would not see them, and had, moreover, forbidden any official of the Department to give them an interview. The men of Shizuoka were considerably excited by the message, and began to remonstrate vehemently with Mr. Sato, but he paid no attention to their words

and quietly withdrew from the room. The deputation thus found itself in something of a dilemma, for to be in the room of a Department of State with the consciousness of complete isolation from all the officials of the Department was a situation not very favourable to the interests of the reassessment of the taxable value of land. After an interval of hesitation and perplexity forty of the processionists withdrew, leaving three of their number to represent them. These three obtained speech once more of Mr. Sato, but their request to be introduced to the Minister had to be refused, Count Inouye being engaged. They left the Department considerably crestfallen, the manner of their departure offering a striking contrast with the clatter and flaunt of their advent.

THE UNITED STATES AND CHOLERA.

THREATENED with an invasion of cholera, the United States Authorities have resorted to measures which not every Power could venture to imitate: they have subjected to medical inspection every ship coming from Europe, whether or no its port of exit, or any of its ports of call, was infected. Some folks will call this an arbitrary proceeding, no doubt, but the preservation of life is a consideration far higher than any pretty principles of personal liberty. The *New York Herald* probably expresses the sentiment generally prevailing in the American capital on the subject of preventive measures. It writes:—

If there is any one thing in the world on which the doctors seem to agree it is the proposition that cholera is generated by a specific infectious material which comes from India only.

Professor Virchow said that this proposition was so firmly established in Germany now, that you could scarcely get a dissenting opinion on the subject. The diffusion of the poison material has no reference whatever to the velocity or direction of the wind. In no instance whatever has its rate of progress exceeded that of a man on land or water, nor has it ever taken a direction different from commercial or military movements. On land it has crept from place to place, and though it has sometimes seemed to overleap the sea it has never invaded any inland town or seaport without first having been brought there from a point already affected with the disease. More than this, experience has proved that it can generally be quarantined with success. Of fourteen epidemics of cholera that have reached our Quarantine station at Staten Island, all but four were prevented from reaching the city.

When cholera does overleap the quarantine barriers, the doctors say the reason can always be traced without much difficulty. It has done so because of some neglect, criminal or criminally careless, on the part of some one connected with the cordon of health.

There is little doubt that the main channel of infection, the one through which cholera is generally disseminated, is drinking water; water which has been contaminated by the specific germs of the disease. The specific cause is thus taken into the alimentary canal, and thus acts directly upon the parts which are to be affected. Given pure drinking water, and one-half of the danger is gone, but there are still other ways by which the poison may be spread, if the authorities give it a chance to start.

You cannot catch cholera any more than you can that devil's offspring, typhoid fever, merely by poverty, filth, crowding, and depression of spirits, all of which have been named as predisposing causes, though you can materially aid its progress by means of them. The same holds true of all contaminating diseases. Anything which tends to weaken the constitution opens the doors to infection. Drunkards, therefore, are in a better state to receive infection than men of abstemious habits, though the fact that they drink but little water is an element of safety to gentlemen of convivial habits. Still there is the happy mean of mineral waters, which leave no excuse for either cholera or intoxication to creep in.

But it is not bad water alone which is friendly to the disease. Bad air is a great help. Insalubrity of climate gives the epidemic a big boost. The great houses standing on the backbone of New York, along Fifth avenue, are much safer places in case of a visit from the epidemic than are the tenements of the lower east or west side streets. The rich never are affected in any like proportion to the poor. And in battling with the disease the doctors have always found that they made no material progress until they had improved the hygienic conditions of the people who were suffering.

First, keep cholera away from you by establish-

Original from

ing a quarantine cordon that will not be fooled, and which makes no exceptions to its rules for safety. It must hold suspected ships and their crews and cargoes until they have been cleaned beyond a peradventure of infection. This is the first and great rule, and the second is like unto it:—

You must keep yourself away from cholera. To do this be clean, be sober, be calm. Do not run away at the first whisper of danger, for fright is one of the best conductors of disease known to the doctors. See not only that your own property is in a condition to delight the sanitary inspector, but your neighbour's also. If the latter's be not so, send in a complaint by first mail to the Board of Health. By this means you will be showing that you love your neighbour as yourself.

Look to your plumbing. Better a big plumber's bill in the house than Asiatic cholera. Do not overload your stomach, Eschew trash. Drink no water which is suspicious. But don't drink whiskey on the plea that it is a preventive. If you must disinfect your insides take carbolic acid plain. It is a quicker death and a more decent one than drunkenness.

Do not derange your digestion. It is opening the door to cholera, as any good doctor will tell you.

Above all, don't worry yourself into a fever before the disease gets a foothold.

RESULT OF BY-ELECTIONS.

As Mr. Hirayama Yasuhiko, pro-Government member of the House of Representatives, returned by the First Election District of Hiroshima Prefecture, was lately appointed Local Governor of Akita Prefecture, and consequently resigned his seat in the House, a by-election was held on the 20th ultimo. The ballot-box was opened on Thursday last and the result was published as follows:—

Mr. Fujita Takayuki 497 votes.

Mr. Toyota Sanehide 383 votes.

Mr. Fujita Takayuki, the successful candidate, is a member of the *Kaishin-to*, and one of the Directors of the Fifteenth National Bank.

* * *

Lately two other by-elections took place, the one in the Nihonbashi District of Tokyo, and the other in the Seventh Election District of Hiroshima Prefecture. In the former Mr. Kusumoto, a Radical, obtained a victory over Mr. Yasuda, a pro-Government candidate, and in the latter Mr. Mayeda, a Radical, defeated Mr. Satake, who stood in the official interest. Thus the Popular Party has been successful in three by-elections. Two of the seats in question were previously occupied by Government supporters, namely, the First District of Hiroshima, by Mr. Hirayama, and the Seventh District of the same Prefecture, by Mr. Nagai Matsutaro. The result of these by-elections is consequently a clear gain of two seats by the Opposition, making a difference of four in a division.

THE WORLD'S FAIR.

SOME time ago we explained that the result of Mr. de Guerville's visit to Tientsin, an arrangement had been proposed and agreed to semi-officially, by which China, while adhering to her resolve not to take any national part in the World's Fair so long as the American exclusion laws remained in force, would nevertheless avail herself of the opportunity to advertise her manufactures and productions. The scheme suggested was that the Government should announce its intention of remitting all export duties on goods destined for the Fair, thus not only affording material aid to intending exhibitors, but also removing all doubt as to the empire's friendly attitude. We observe that this project has assumed practical reality. The *World's Fair Notes* contains the following paragraph:—"Ho Shen Chee, translator and attaché of the Chinese legation at Washington, has visited Chicago for the purpose of becoming familiar with World's Fair matters, and making arrangements for Chinese exhibits. The Chinese government has made no World's Fair appropriation, because such action is contrary to its policy, but it will aid exhibitors by remitting the heavy export duties on articles sent for exhibition, and will otherwise encourage the making of a Chinese exhibit. Ho Shen Chee says that his government desires to advertise its wares, and fully

realizing that all nations are to be well represented at Chicago, will not allow the exclusion law to interfere with a creditable showing of its own goods."

* * *

Here are some further particulars of interest with regard of the Fair:—

California is to be honoured by having a section of one of her famous big trees made a prominent feature in the Government building at the World's Columbian Exposition at Chicago. The project, the accomplishment of which is fully assured, is a unique one. The section of the tree will be twenty-three feet in diameter and thirty feet long. This will be divided into three parts and these will be placed in their natural position, one above the other and so arranged as to form something like a two-storey house. The contract for the tree was made by H. A. Taylor of the Department of the Interior with the King's River Lumber Company in the spring of this year, and the company is now at work getting it out in their forest of *sequoia gigantea* in the Converse basin on Kings river in Fresno county. The contract called for a tree twenty feet six inches in diameter, but the tree actually found will be three feet greater in diameter. There are, of course, larger trees in the forest, but the requirement was that this section should be perfect in all respects, cylindrical, straight, and without a turn in the bark, and this was the largest found to fill all these conditions. The tree selected is one known as the "General Noble." It measures thirty-three feet in diameter near the ground, but as the object was to have the section of the same diameter at both ends, as nearly as possible, a piece is being taken out of the tree at some distance from the ground. To do this and to preserve the section from harm by falling as well as to meet other requirements has proved to be a work of considerable magnitude. The idea is not to send a solid section, but, rather, the rim of the tree hollowed out and cut into segments of suitable size, and all to be numbered so that they can be erected at Chicago, so as to look from the exterior like a solid section of a *sequoia* thirty feet in height. The three parts into which the section in being cut consist of two parts of fourteen feet each, to be hollowed out, and one, two feet thick, which will serve as a floor between the two stories, as it were. The work of cutting, lowering, and boxing the segments is being pushed forward as rapidly as possible, and it is expected that the tree will all be shipped by the end of October. To get the tree to a point where waggons can reach it required the building of a road two miles long. The entire exhibit, including the work, will cost the Government several thousand dollars. The tree when erected at Chicago will be surrounded by a glass dome, and will stand directly under the great dome of the Government building.

* * *

The bust of the Queen upon which the Princess Louise has been engaged for some months, and which her Royal Highness has, with her Majesty's consent, promised to send to Chicago for exhibition at the World's Fair, is now complete. It is a notable example of the Princess' skill, and, standing in the Queen's boudoir, at Osborne, it has attracted much attention among members of the Royal Family. The Princess has also been at work upon some pictures which are intended for Chicago, and these, it is said, will, after the Exhibition, be sold, the proceeds being given to some of the charitable institutions in this country in which she takes so much interest. Of all the daughters of the Queen, Princess Louise is the best artist, though she is closely run by Princess Beatrice.

MATSURI AT NOGE-YAMA.

THE Shinto Temple of Ise, at Noge-yama, held high *matsuri* on Saturday and Sunday last, and on each occasion the grounds surrounding the shrines were crowded. The ostensible motive for the ceremony was the completion of the repairs to the *Torii* of the Shokon Monument which stands within the precincts of the temple, and which work has been superintended by the *Chiu Kon Kuai*. The weather was all that could be desired, the sun shining out right gloriously upon the gaily decorated processional cars as they wound their way, with their straggling hosts of attendants, through the adjacent streets. At two o'clock a memorial service for all foreigners who have died in Japan—"whether they came here for their own interests, or to introduce Western civilization into the country, or have received their death from cruel Japanese swords or have been drowned in Japanese waters," so ran the announcement—was quietly celebrated. Long ere it finished the happy throngs had left the priests to themselves and adjourned to the fencing and wrestling ring. There were many foreigners among the assembly, and they appeared to derive much satisfaction and fun from the spirited displays. In addition to the ordinary bamboo-sword fencing, a bout with

sharpened swords took place; the combatants were in old *samurai* armour, but the encounter was very tame, in fact rather disappointing. The wrestling (*jingetsu*) was animated, the men putting in more rough-and-tumble work than do the professional wrestlers. A dance with a two edged sword followed, the affair concluding with a representation of a fight during the Satsuma Rebellion,—a very spirited set-to indeed, in which each side endeavoured to capture a flag. A band was in attendance during the afternoon, while the committee of the *Chiu Kon Kuai* hospitably entertained their foreign visitors with tea and other light refreshments. Altogether the affair passed off most successfully, the *torii* was duly admired and critized, while most foreigners present expressed high delight at the extremely pretty views of land and seascape which are to be obtained from the summit of Noge-yama.

THE NOBLES.

READERS of these columns are aware that since the opening of the Diet many political parties have been formed among the nobles in the empire. The constant friction between the two principal of these parties, the *Sanyo-Kai* and the *Kenku-Kai*, is carried to extremes at the election of members of the Diet, with the not infrequent result that friendships as old as feudal days are abruptly severed. Some of the peers, grieved at this untoward state of affairs, have been attempting to correct it. According to the *Yui Shimpō*, seven or eight members of the *Kenku-Kai* have resigned from the association, and are endeavouring to form a new and independent party. Rumour has it that nearly all the Viscounts belonging to the *Sanyo-Kai* have left that body and united themselves with the new independent members, so that the number of the latter already amounts to over 30. But the association being organized by Viscounts only, other nobles are not allowed to join it.

CONTINUED RIOTING IN THE STATES.

REPEATED references in these columns to the state of affairs in North America, more particularly in the U.S., gives us a glimpse only of the seriousness attending the riots at Homestead, Buffalo, and certain districts in Tennessee. The parties who angrily claimed, one that Mr. Hayes, the other that Mr. Tilden, had been elected President of the U.S., almost plunged that Republic into a revolution, and could only be pacified when Congress took action in the matter affecting them. Since then there have been no difficulties of such magnitude and far reaching significance as those of the present year. The troops with loaded guns at Homestead and Buffalo are there because their presence is necessary to warrant a measure of peace, and stay further and more serious calamities. In Tennessee, where the convict labour law—a species of slavery—is in force, the state militia met with resistance from the miners, who had been driven from their work by convict labourers, and the troops were defeated in open battle. Had it not been for cooler and wiser heads than those of an unskilled Governor, the results of this defeat might have proved disastrous in the disturbed condition of affairs there. Re-enforcements were called into the field, and after much deliberation the miners were pacified, but not until they had received intimation that the convicts working in the mines should be withdrawn, and the miners allowed to earn their bread without such competition. Such riots will and must be settled, and the instigators punished, or the fair name of "the land of the free and the home of the brave" will be seriously tarnished. To do this however, certain obstacles, placed by law in the way of honest workmen, must be removed.

PRINCE IWAKURA'S RESIGNATION.

IN a previous issue we published an account of the resignation of Prince Iwakura, taken from the *Yomiuri Shimbun*. The fact is now confirmed by several of the vernacular newspapers. They say that as Viscount Hijikata, Minister of the Imperial Household, is absent from the capital on a tour in Hokkaido, the petition of the Prince was presented to the Emperor by Mr.

Original from

Hanabusa, Vice-Minister, but that there is no prospect of its being granted easily. Meanwhile it is rumoured that Marquis Tokudaiji, Lord Keeper of the Seals, is advising the Prince to abandon his intention. Rumour affirms, however, that if the resignation be accepted, certain influential members of the Government will recommend Viscount General Soga, while others are strongly in favour of Mr. Otori Keisuke, now Envoy Extraordinary and Minister Plenipotentiary in China, who occupied the position in former times. Mr. Otori is considered the more likely of the two. All this militates strongly against the suggestion, circulated by the *Yomiuri*, that Prince Iwakura's resignation was in effect a forced step, in order to anticipate his removal by the Government who wished to bestow his post on a member of the Opposition. The Government evidently has no desire to remove the Prince, nor any project of utilizing his post for political purposes.

FEMALE HIGHER EDUCATION.

As female education advances in Japan, a number of young ladies begin to talk about "women's rights," or to bandy some of the stock phrases so trite in Europe and America. The *Yomiuri Shimbun* relates an amusing tale on this subject. It says that Mrs. Kono, wife of a leading member of the *Yiyu-to*, is known to be an extremely clever lady. Her resolute and shrewd acts have often astonished her husband and the public at large. She lately proposed to start a Female Club, with the object of extending the power of the fair sex. In this project she was supported by Mrs. Ito, wife of Mr. Ito Daihachi, a Radical member of the House of Representatives. Desiring to secure the co-operation of a large number of ladies, Mrs. Kono lately called on a certain friend in Kojimachi, the wife of an unsuccessful candidate in the last general election. This friend also is known to be a clever and well educated woman, but she preserves the old customs of the country, and dislikes any exhibition of forwardness on the part of a female. Mrs. Kono said to her:—"Judging from present circumstances, success cannot be achieved in any direction unless a large number of persons unite to compass it. Just as politicians require to co-operate harmoniously, so their wives also must unite to assist them. Lately Mrs. Hatoyama aided her husband in his canvass, and the result was his return by a large majority. With a cognate object we seek to promote the organization of a Female Club, and I have come to ask you to support it by becoming a member." The other lady listened to the above very gracefully, and then replied:—"I thank you for your kind suggestion, but my education has not reached a standard sufficiently high for your purpose. I am now learning the management of domestic affairs, such as the drawing of water, the washing of rice, the nursing of children and so forth. I am afraid I am not a suitable candidate for such a club." Mrs. Kono was at first confounded and chagrined by this reply, but a little reflection convinced her that her friend was a true wife, and that words apparently spoken ironically were in truth deserving of all praise. She went away crest-fallen but wiser.

A NEW WEAPON FOR ANARCHISTS.

SCIENCE seems to be helping ruffianism more earnestly than ever. We read of a newly devised infernal machine which, if it be at all like the description given of it, will add tremendously to the risks of sovereigns and politicians. The invention is thus spoken of in the *New York Sun*:

After years of labour the Russian nihilists have at last succeeded in inventing a perfectly satisfactory infernal machine. The model was finished in London a few days ago, and a report which has reached this country says that those who examined it pronounce it as perfect a death dealing instrument as could be devised. The machine is sixteen centimetres in height and four in width. It is rectangular in shape, portable, and looks somewhat like a small book. Even when charged it can be carried with the utmost safety in the breast pocket of a coat, and no one but the initiated would ever imagine that it was anything but a bulky purse. When the time for action comes the nihilist can take it out of his pocket, place it where the explosion is to occur and then calmly walk off to a place of safety. At the appointed moment the machine will

explode without the aid of clockwork or even of a lighted match.

Instead of dynamite a secret explosive is used and with this the bottom of the machine is filled. Over the explosive is placed a detonator, which consists of a chemical product and is set on fire by coming in contact with a drop of some secret liquid. A glass ball holds this liquid and, when an explosion is desired, all that is necessary is to let it trickle drop by drop through a tube, at the lower extremity of which is the small chemical mass resting on the explosive.

When the machine is turned upside down so that the glass ball is at the bottom no explosion can take place, but when the machine is held upright so that the liquid can trickle down to the detonator an explosion is bound to follow.

In the eyes of revolutionists the merit of this machine lies in the fact that it can be operated without any danger to the operator. Moreover, it is always ready and can be regulated to a moment. Heretofore clockwork or a lighted match was necessary to produce an explosion and the result was that, once set going, the machine could not be stopped. This new machine, however, can be stopped at any moment before the explosion takes place. After placing it in position the operator may decide to postpone the shake-up for a while, and then all that will be necessary for him to do will be to turn the infernal device upside down and put it back in his pocket.

He will run absolutely no risk in handling the machine, for by means of the five plugs of blotting paper in the glass tube he can determine the very moment at which the explosion is to take place. If he allows the liquid to trickle very quickly, he may confidently expect an explosion in five minutes, whereas, if he uses five plugs of blotting paper, he may reckon on a full hour for flight before the liquid touches the detonator.

Nihilists consider the invention of this machine almost as important as the invention of dynamite and are very anxious to learn what steps the authorities will take to guard themselves from it. When dynamite bombs came into use among anarchists the authorities in France and other countries placed many restrictions on the sale of dynamite, and it is assumed in revolutionary circles that they will pursue the same policy now and by restricting the sale of dangerous chemicals and explosives render it difficult, though hardly impossible, for their implacable enemies to do much harm with this new instrument of destruction. What will make their task especially difficult is the fact that they do not know what kind of explosive and liquid is used in the new machine, and nihilists are determined that they shall not be enlightened on this point.

B.B.'S.

SOME three or four years ago an alarm was raised that the celebrated bed-bug of the west had found its way to Japan. It had made its debut, said a vernacular newspaper, in Tsukudajima prison, and of course there seemed no hope of preventing it from becoming a permanent resident of Japan. But something seems to have blighted the career of that pioneer colony of bed-bugs. They have disappeared from public notice, and we are tempted to hope that some effectual means of eradicating them were found. If they ever do manage to establish themselves here, it will be a bad look out, for there is ample room to accommodate them in the fleas' tenement between the mats, and the abode is ideal for both offensive and defensive purposes. The subject is recalled by an American journal's account of a new fashion of bed, devised solely to circumvent the bug. It is of iron, and the rails are concealed inside the mattress, which rests on shoulders attached to the head and foot of the bedstead. To the description is appended the Kentucky editor's couplets:—

The June bug hath a gaudy wing,
The lightning bug a wing of flame;
The b. b. hath no wing at all,
But he gets there all the same.
The June bug leaves in June,
The lightning bug in May;
The b. b. takes her bonnet off
And says, "I've come to stay."

SEQUAH'S ENTERTAINMENT.

"CHARITY never faileth," was the motto which headed the programmes of the entertainment given by Sequah on Monday evening, in the Public Hall,—as a testimonial to the Yokohama circle of the King's Daughters,—and a more appropriate text could scarcely have been found. It was most fitting to the occasion, a fact which the crowded state of the hall bore adequate testimony to. Yokohama is seen at its best whenever any charitable scheme is underweigh, and concerts or entertainments given on behalf of any association which has for its object the relief of the sick or suffering always receive hearty support and practical approval at the

hands and pockets of its cosmopolitan community. The entertainment on Monday evening passed off most successfully in every particular, Sequah's card tricks especially evoking loud applause. His swiftness of Indian clubs was a striking exposition of the science of muscular exercise reduced to a fine art. He is a thorough master of his instruments, and the dextrous display which he gave last evening forcibly demonstrated the rare powers of endurance which he possesses. Though modestly laying claim to only an amateur's acquaintance with conjuring, he thoroughly delighted his audience with his tricks of legerdemain and rope-tying. In regard to the latter he managed to tie himself up tightly within 32½ secs. effecting an escape within 20 secs. "The flags of all nation's" was very pretty and clever. Sequah was assisted in the musical portions of his programme by several local amateurs, and all their efforts were well received. The items they contributed were as follows:—Overture, "Othello" (Rossini), Messrs. Kiel and Griffin; "Lied ohne Worte," encored (Terschak), flute, M. de Micheaux, piano Mr. Kiel; song, encored, air from "Trovatore" (Verdi), M. Launay; song, "Voque Toujours" (Senée), M. Launay; Andante and Allegretto on English Melodies (Terschak), flute, M. de Micheaux, piano, Mr. Kiel. During the evening a beautiful basket of flowers were presented to Mr. and Mrs. Sequah on behalf of the King's Daughters as a mark of their appreciation of his kindness in promoting the affair. The funds of the Association should be materially benefitted by the performance; those who contributed towards the result have the satisfaction of knowing that they will be devoted to a most worthy object. We ought not to forget to mention the services rendered by the band attached to the Grand Hotel, which was stationed in the vestibule; their musical standard has reached a very creditable level, and one or two of their pieces were most sympathetically handled, while a corner solo drew forth hearty expressions of pleasure.

FRAUDS.

SOMEBODY wrote long ago, "Man is man's prey," and the truism obtains to-day the force it had centuries back. Perhaps few persons as a class are so often pestered with petty attempts at fraud as are newspaper managers. It would fill a column to give a list of persons who, in the course of a decade, were highly desirous of advertising, especially "in your journal." There are the enterprising individuals who desire a sample copy of the paper, under a pretence of subscribing after learning the terms; then there are other enterprising persons who will send no end of advertisements on learning the scale and receiving copies of the paper—some go the length of requesting a dozen copies or a continuous supply in order to "submit the paper to our clients," &c. Some of these requests are so cleverly made as to almost ward off suspicion, at least upon a first reading, but put by for a day or two and read a second time, the fraudulent intention generally becomes apparent. Without the smallest notice being taken of their communications, some of these deluded people prefer the same request and enclose the same advertisement with the regularity of the departure of the mail, notably the agents—real or pretended—of lotteries in Central and South America and more than one large city in Europe. Quack doctors mostly send forth their attempts at gratis advertising from Paris and other continental cities, offering a consignment of their wares in return—at some future period—or expressing their willingness to exchange their physic for the "products of your country, all charges duly paid," &c. Perhaps the collecting of postage stamps in recent years, has added more to the newspaper manager's weight of mail than any one branch of what may be termed bogus correspondence. Hence the numerous applications for used stamps "of your country," in return for which a "magnificent article de Paris will be sent." As there are regular methods and channels for bona fide business, of course it stands to reason that ninety-nine out of every hundred of such applications are frauds pure and simple. To

say that such attempts are made from China to Peru would be no exaggeration, for, leaving out Continental cities—always a prolific source—we have during the last few days received advertisements from such far distant places as Beyrouth and Chicago. It might be asked what object the writers of many of these letters have in expending time and postage in this way. Outside the class who try to get an advertisement for which they never intend to pay are those who are making a collection of the newspapers of the world—this is the latest fad—and others who attempt to get letters and papers merely for the sake of postage stamps placed upon them. We are induced to make these remarks through the receipt of an "order" from Chicago, which we reproduce below. This "order" comes from the "United Artists' Association," and the advertisement is headed "Portraits—Crayon, Water Color, and Pastel." Of course there is a "drawing" in the affair. The holder of the lucky number will be entitled to a first class round trip ticket to the World's Fair from any railway station and \$300 (U.S. gold of course) in addition, to say nothing of the chance of winning a buggy (two seated by-the-by), numerous gold watches, &c., &c. No one but the veriest tyro could fail to see through this appeal, and were bogus advertisers generally to imitate their epistles in the strain of the following, no newspaper manager would require to set it aside for consideration, but would instantly consign it to the capacious receptacle always handy:—

Chicago, Ill., U.S.A., Aug., 25th, 1892.
"Editor" Japan Mail, Asia.

DEAR SIR,—Enclosed please find and let us know how much you will charge us for the insertion of same for one year, but insert at once and let us know what the amount will be and we will remit at once do not wait until you hear from us to insert the ad in your paper but insert at once, as it takes such a long time for our answer to reach you.

Please insert at once, and send us your lowest prices for the insertion for one year, and if not too high we will insert our ad in your paper for one year.

Yours truly,

UNITED ARTISTS' ASSOCIATION.

THE WEATHER.

THE extraordinary spell of cold raw weather which has prevailed throughout the country during the past week, is attributed by the *Fiji Shimpō* to the recent typhoon, which travelled from Korea via the Japan Sea to Hokkaido, producing along its track an atmospheric rarefaction into which the cold air from the north has swept to restore equilibrium. The rapid precipitation of moisture caused by this phenomenon has helped to accentuate the cold. It is not to be expected, of course, that this state of affairs will continue. The genial, balmy days of a Japanese autumn will doubtless revisit us soon again, though the indications recorded at the Central Observatory do not point to any rapid change. Meanwhile, there has been much suffering among delicate folk. The thermometer fall between Sunday and Monday last from 12° to 15° (C.) and though such a change might not be so severely felt were it from great to intense heat, or from sharp to freezing cold, it is decidedly difficult to support when it signifies a sudden transition from the balmy warmth of late summer to the raw chilliness of early winter.

ANTI-CHRISTIAN OFFICIALS.

SOME time ago rumours began to be circulated that the Governor of Kumamoto had interfered to check Christianity in a manner plainly at variance with the Constitution. The particular action charged against him was that he had convened the Divisional Headmen of the Prefecture, and warned them to be careful that teachers in Primary Schools did not attach themselves to political parties, or associate with converts to Christianity. As an indirect outcome of the spirit educated by this injunction, the Principal of the Yamaga Upper Primary School interfered, it is alleged, to prevent the study of the Bible by four of the students, and subsequently expelled one of them for refusing to observe the interdict. Incredible as these stories seemed, they have now received confirmation and been brought into prominence by the publication of an open letter, said to have been written and signed by certain well-known

Christians in Kumamoto as an appeal, not only to the Authorities, but also to public opinion. The accusation against the Governor is based on a report of his speech published in a local newspaper, and on the testimony of a member of the Kumamoto Prefectural Assembly who was present at the time of the speech's delivery. Whether such evidence is sufficient, it will be for responsible persons to say. Should it turn out, however, that the Governor really did speak, and that the Principal of the School really did act, in the manner described, we imagine that these officials will receive little mercy at the hands of the present Cabinet. It would be intolerable that the distinct provisions of the Constitution, which guarantees complete freedom of conscience to all, within the limits of law, should be deliberately and flagrantly violated by local officials. But we are strongly disposed to doubt the accuracy of the assertions, and until the Governor and Principal have been heard in their own defence, judgment ought to be suspended.

CUSTOMS RETURNS.

THE following is a summary of the customs Returns for August, showing the foreign trade of empire for the month:—

	1891.		1892.
	SILVER YEN.	SILVER YEN.	SILVER YEN.
Exports	7,481,705.610	8,485,662.240
Imports	5,921,396.000	5,925,564.530
Total exports and imports	14,411,226.770	14,411,226.770
Excess of exports	1,560,309.610	2,560,097.710
CUSTOMS DUTIES.			
Exports	241,314.547	241,314.547
Imports	213,833.993	213,833.993
Miscellaneous	9,968.802	9,968.802
Total	465,117.342	465,117.342

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

	Exports.	Imports.	Total.
	Silver Yen.	Silver Yen.	Silver Yen.
United States of America	5,793,222.150	350,274.030	6,143,496.180
France	1,975,797.430	297,994.870	2,273,792.300
Great Britain	2,950,068.970	1,644,237.650	4,594,306.620

ESCAPED RUSSIAN CONVICTS IN HAKODATE.

SOME Russian convicts, escaping from the mainland, reached Mombetsu in Hokkaido, via Yesachi in Kitami province, during the first week in the present month. They were arrested by the Japanese police and examined, the conclusion being come to—though on what grounds we are not told—that two of them had been condemned for very serious crimes. These two escaped from the police-station the night (9th instant) after their arrest, and having first stolen some rice and cooking utensils from the

house of a resident of Mombetsu, attempted to effect an entry into the police station in order to carry off their own belongings which had been impounded. Failing in this, they concealed themselves in a cane-brake. Information of their whereabouts having been conveyed to a constable called Tamura, on the 13th instant, he arranged with the ferryman at the Yubetsu River to assist in capturing the men should they attempt to cross. The convicts fell into the trap, but when the constable, the ferryman, and the informer tried to seize them in mid-stream, one of them attacked the constable with a broad axe. The constable drew his sword and slashed off the man's hand, so that hand and axe fell into the boat. The wounded convict was, of course, easily secured, but the other got hold of the axe and attacked the informant, who jumped over-board to avoid the blow, but immediately diving under the boat, entered it from behind, and thrusting his head between the convict's legs, overthrew him. Thus the arrest of the two men was effected by this plucky constable and his equally courageous assistant. But they were apparently unable to guard the culprits, for one of them again effected his escape just before dawn the following morning. The Hokkaido police seem to be more skilled in seizing fugitives than in holding them.

PRINCE KONOYE ATSUMARO.

IT was recently rumoured that Prince Konoye Atsumaro had received a confidential communication intimating the Government's intention to appoint him Envoy Extraordinary and Minister Plenipotentiary to some foreign court. The *Yomiuri Shimbun* now makes the following statement:—"Though the Prince is one of the most able among the nobles, and has acquired a widely spread reputation, yet he attained that reputation chiefly through Count Ito, Minister President of State. Since, however, he supported Viscount Tani's Representation relating to the Government's Policy, he has been recognised as a member of the Opposition. Some of the peers begged Count Ito to give the Prince a little wholesome advice, but the Count absolutely refused to have anything to do with the matter. Nevertheless, Count Ito has always desired to give the Prince some solid practical experience if an opportunity offered. Lately, by the will of His Imperial Majesty, and believing the Prince to be not unfavourable to a diplomatic appointment, the Count confidentially communicated to him the intention of appointing him Envoy Extraordinary and Minister Plenipotentiary to the Chinese Court. But the Prince, in view of his relations with the other nobles, declined to accept the post, pretexting the feeble health of his aged father. It is also reported that as the above confidential communication was prompted not by Count Ito's wish only, but also by the will of the Emperor, the Prince thought that to refuse it point blank would be a breach of etiquette. He therefore replied that he should consider the subject carefully and then announce his resolution. Subsequently, assembling some of his political friends, members of the *Sanyo-kai*, he informed them of the communication, and said that as he did not intend to accept the offer, there was no absolute necessity to consult his associates, but in the interests of friendship he gave the information. He added that if any had advice to offer, he should be greatly pleased to receive it. Some discussion ensued, but no one opposed the Prince's intention of refusing the offer. Entirely satisfied, therefore, the Prince at once communicated to Count Ito his refusal on the ground mentioned above. This information, says the *Yomiuri* in conclusion, shows plainly that the Prince has no intention of accepting any official position at present.

THE "JIYU" AND THE LISBON GOVERNMENT.
THE *Jiyu* repeats the false rumour circulated by certain vernacular journals during the past few days, as to the receipt of an emphatic protest from Lisbon against Japan's action in abrogating the jurisdiction clauses of her treaty with Portugal. Original and contemporary fathers its

erroneous information upon an anonymous Privy Councillor, who is made to explain that though a communication has undoubtedly been received from Portugal, it has not yet been submitted to the Privy Council, but that its treatment by the latter body, when submitted, is a foregone conclusion. It is, of course, more than probable that Portugal will protest: any Power in her place would do so. But she has not yet protested, and the journals that say she has are merely disquieting themselves in vain.

A GRAND DINNER PARTY.

The principal bankers in the capital gave a dinner party to Count Matsukata, ex-Minister of State for Finance, and Mr. Watanabe, his successor, at the Teikoku Hotel on Thursday the 22nd ultimo. Some 56 bankers assembled. One end of the table was occupied by Marquis Ikeda, Director of the Fifteenth National Bank, with Mr. Watanabe, New Minister for Finance on his right, and Mr. Yokura, Manager of the Bank of Japan, on his left. The other end of the table was occupied by Mr. Shibusawa, Director of the First National Bank, with Count Matsukata, ex-Minister for Finance on his right, and Mr. Kawada, Director of the Bank of Japan, on his left. During dinner Mr. Shibusawa rose, and proposed the health of Count Matsukata and Mr. Watanabe. He said that it was not necessary to dwell upon the great services rendered to the nation by Count Matsukata. The public were familiar with the main facts of the distinguished statesman's record. But it might be well to allude briefly to what the ex-Minister had done for Banks since 1877. It was Count Matsukata who introduced order into the disorganized condition of the country's finances; it was he who reduced the volume of the fiduciary currency; it was he who effected the resumption of specie payments; it was he who improved the method of collecting taxes. To his credit were to be placed countless undertakings to develop the national wealth. He had always been friendly to bankers, and by his aid they had prospered. They were deeply grieved to hear of his resignation, but they derived comfort from the fact that Mr. Watanabe was his successor; for the new Minister had long served under Count Matsukata, and was well versed in the methods of management pursued by his former chief, so that bankers might feel confidence in the soundness of his procedure. The political world had lost an able statesman but the financial world had gained a new adviser, for the speaker believed that Count Matsukata would enter the field of finance and give his valuable aid to those engaged there. In conclusion, he desired to convey an expression of sincere gratitude for Count Matsukata's past services, and to congratulate Mr. Watanabe on his promotion. The toast was drunk enthusiastically. Count Matsukata, in returning thanks, expressed himself very grateful for the kind words expressed and their warm reception by his hosts. He said that, as Mr. Shibusawa had declared, he hoped to work hand in hand with those engaged in improving the financial condition of the country. The economical world of Japan was still immature, and many dark points presented themselves in the outlook. Conscious of all this, he felt not less concerned about the country's finance when he was out of office than he had been when holding a portfolio. There were many important questions, such as the silver problem, which called for the utmost watchfulness and vigilance. Moreover, the existing organizations of the banks were adapted to the interest of commercial people alone, and could not be considered suitable for manufacturers or agriculturists. On the other hand, these latter branches of enterprise were developing fast, and it was therefore necessary that the organizations of the banks should be amended and new and improved methods introduced. In conclusion, he requested his hosts to consider these subjects very carefully, so that when the time and the opportunity offered, they might be prepared to take the required steps. The Count resumed his seat amid loud cheers. Mr. Watanabe, the new Minister, then rose, and made a brief but pregnant speech. It was most

important for the welfare of the country, he said, that officials and private persons should unite heartily in seeking a sound remedy for the troubled state of national affairs. Hitherto, innumerable mistakes had resulted from absence of co-operation between the two. He sincerely hoped, therefore, that in future men of practical experience, like his hearers, would readily offer their opinions and advice on any matter relating to finance. The party is reported to have been a great success by the *Yiji Shimpō*, from which we take these details.

CANTON TRADE.

MR. CONSUL WATERS, in his Report on the Trade of Canton during 1891, writes:—

One remarkable feature of the trade at this port last year was the extraordinary development of the use of transit passes. It was only in the previous year that foreign merchants began to avail themselves of the treaty right to send foreign goods into the interior on payment of transit duty and receipt of a transit pass. Goods of the value of 48,279*l.*, covered by 79 passes, were that year sent into the interior. In 1891, transit passes, to the number of 1,946 were issued, covering goods valued at 435,566*l.* The chief commodities thus sent into inland markets were Indian cotton yarn and raw cotton, grey and white shirtings and other cotton goods, and kerosine. As the Commissioner of Customs observes:—"To this remarkable development of the transit transit trade is partially due the advance evinced in the table of imports, and it also shows to what an enormous extent, with lighter taxation and unfettered transit privilege, the trade and prosperity of the province could be increased." Yet only one or two British subjects at this port make use of transit passes, and no British merchant sends his goods under them to inland markets in any noticeable quantity. The Leken officials and the mandarins generally are violently opposed to transit pass systems, and resort to all kinds of expedients to prevent the use of the passes from becoming general.

The Government mint has been in active operation for some time, and its coins are rapidly gaining in popularity. From May 22, 1890, when the making of silver coins was begun, until December 31, 1891, the output was as follows:—

Dollars	45,933
Half dollars	17,847
20 cent pieces	506,934
10 cent pieces	96,038,579
5 cent pieces	1,958,948

Since February, last, the coinage of copper "cash" has increased from 400,000 to 500,000 a day. The subsidiary coins, especially 20 cent pieces, have been sent to Swatow, Foochow, and other places, to be put in circulation. They are now in general use among all classes of people in this province, and they may be said to have to a large extent practically supplanted broken sycee and cash.

THE HONGKONG SHARE ORDINANCE.

THE adjourned meeting of the Hongkong General Chamber of Commerce took place on the 15th ult., in accordance with the request of H.E. the Governor that the Chamber should report upon the working of the Share Ordinance during the period of its operation. There was a large and representative attendance of members. Mr. Grote, in a long speech in favour of the repeal of the Ordinance, proposed, as an amendment to the resolution put forward at the previous meeting, a kind of compromise in the following terms:—"That in the opinion of the Chamber it is desirable to continue Ordinance 15 of 1891 in so far as concerns the shares of banking institutions, but to exclude from its scope all other shares, and that all time bargains or contracts for forward dates be limited to a period not to exceed three months from the time of their being entered into." Mr. J. J. Francis then made a lengthy speech, at the end of which he seconded Mr. Grote's proposition. Mr. Chantrey Inchbald then addressed the meeting as follows:—

It is an old saying that "extremes meet" and it seems to me that we are having an illustration of this fact to-day. When I came to the first meeting I thought that the question was whether the Share Bill of 1891 was to be absolutely *in toto* approved or *in toto* repealed. What is the actual position to-day? Mr. Bell-Irving at the last meeting in a very moderately worded speech himself admitted that new laws are seldom perfect and he thought that some modification might be introduced. To-day in Mr. Grote's speech, also temperately spoken, we see the same expression. He no longer proposes to abolish the Bill, he proposes merely to modify it—to modify it in such particulars that the Bill shall hold good to shares in financial institutions, but shall be modified so that you should

allow forward sales without the numbers for a period of three months, and that such numbers shall be valid for such period. I find myself on the horns of a dilemma. I am in favour of Mr. Bell-Irving's resolution; at the same time I am absolutely in favour of Mr. Grote's amendment in six months' time when the colony is in its normal state, as I believe it will be. My reason for supporting the resolution is that over three weeks ago the crisis of 1892 came to an abrupt termination, suddenly, in half an hour, by the excellent, plain, outspoken speech of the Chairman of the Hongkong and Shanghai Bank. The public did not realise the fact at first. It was necessary that the speech should reach Shanghai, Yokohama, Singapore, and the outports, but when it was read and realised, confidence came back to the investors, and orders came by telegram. I have received them myself to buy stock, the first I have received since I have been here. That confidence has gone on increasing, and in an incredibly short time we have seen a rise in our best stocks of 20 per cent. It is wise, is it policy, is it common sense, at the present moment to interfere with the return of confidence, with that better feeling, with that brighter and happier outlook? I think myself decidedly not. My other reason, which I have said I would produce, is the present stringency of the market. I have only been out in this part of the world for 14 years, but if you refer to the oldest residents they will tell you that within all their experience they have never seen credit so curtailed in Hongkong, Shanghai, or in other places of the East. Credit is curtailed, accommodation is denied, financial facilities are almost impossible. I doubt very much whether any bank manager—we have well known managers here, I see Mr. De Bovis, Hon. T. H. Whitehead, the member for the Chamber, and Mr. Rutter,—will tell us that within two or three months, time this stringency will be a thing of the past. If you modify this Bill so that you have power to buy forward, I think you will find that many of the present holders will come into the market, who are unable to get financial facilities, buy forward to the end of December, say, and if the money market is still stringent when it comes for delivery, they will be unable to take delivery and you will see these shares thrown back again, doing harm to all who have been concerned with them. These are two reasons outside the others brought before you why I intended to vote for Mr. Bell-Irving's resolution, if we have to decide solely on the question of Mr. Bell-Irving's resolution or Mr. Grote's amendment. But I would suggest a possible arrangement. I wish this Chamber would show its common sense and be unanimous now, and say in six months hence I think our finances will be in a firmer condition, and a totally different state of things generally existing. I beg to bring forward the following amendment:—"That in the opinion of this Chamber it is undesirable at present to make any change in Ordinance 15 of 1891, known as the Share Bill, but that H.E. the Governor be requested to be good enough to refer the same inquiry back to the Chamber of Commerce six months from now."

Several other speakers followed, and, when it came to voting Mr. Inchbald's motion was carried, 20 for it and 16 against.

FRACAS BETWEEN A FOREIGNER AND A JAPANESE CONSTABLE.

THE *Yomiuri Shimbun* states that at 7 p.m. on the 22nd ultimo, a Dutch subject, by name Johnson, residing at No. 106 Settlement, Yokohama, which is described by our contemporary as a grog-shop, got into a dispute with a customer and assaulted him. The latter fled, but Johnson, following him into the street, behaved with violence towards the folks passing by. A constable, Tomita Chozo, endeavoured to restore order, but Johnson fell upon him also, and after striking him several times, escaped indoors. Constable Brown, who is in the employment of the Settlement Police, arrived at the moment, but as quiet had then been restored, no attempt was made to arrest Johnson. A complaint, however, was lodged the next day at the Dutch Consulate.

A SLOW-COACH.

ONE of *The Times* correspondents with the fleet says:—"The big ships were organised in two divisions, of which the first was formed by the *Nelson*, *Shannon*, and *Neptune*, and the second by the *Northampton*, *Hotspur*, and *Belleisle*. . . . It was a melancholy farce to order such a squadron to cruise in company, for the unfortunate *Northampton* proved to be so slow that she could not preserve even the modest speed of seven knots that was demanded of her, and presently she was ordered to take station at the tail instead of at the head of her division. Nor were the other ships in much better plight. Most of them seemed to be able to keep station, but to do no more. We cruised for a time in some kind of ragged formation in column, but

at length the *Northampton* lagged so disgracefully behind that she was directed to leave the line and cruise by herself, a station being assigned to her from which, in the event of an attack, she could scarcely fail, in spite of her slowness, to reach the protection of the mine-field before she could be come up with by the enemy. I am very glad that there were no foreign critics to watch the unworthy spectacle of a British first-class armoured cruiser having to quit a fleet steaming at seven knots because she could not maintain her station in it." Since writing the above the same correspondent has mentioned that a yacht, apparently French owned, followed all the movements of the fleet very constantly.

MINING INVESTIGATION COUNCIL.

THE first meeting of the Mining Investigation Council was held on Tuesday last, at the Department of Agriculture and Commerce. The following newly elected members were present. Messrs. Hasegawa Yoshinosuke, Shibusawa Eiichi, Watanabe Wataru, Kubo Moriaki, Yuasa Junichi, Kuwabara Sei, Noro Kageyoshi, Maeda Seisha Nakano Kaneichi, Naito Hisahiro, Suzuki Seisuke, Dan Takuma, Okazaki Takaatsu, Godai Riusaku, Oshima Rokuo, Inagaki Tetsunosshin, Ikeda Magoichi, Oshima Takato, Kazuye Saneyemon, Yoshitomi Eiichi, Sakamoto Kinya, Yamada Sumikiyo, Tokatori Iko and Kajiware Tsuchisuke. The order of sitting having been arranged, Count Goto, Minister of State for Agriculture and Commerce, rose, and delivered the following speech:—"Gentlemen—As you are well aware, mining enterprise is one of the most important means of developing the wealth of the nation. Some noteworthy progress had been made in this direction of late years and the Government has granted various subsidies for the purpose of encouraging further efforts. Your presence has been requested with the object of seeking from you valuable information about three questions which we submit to you to-day, the aim in view being to increase the activity and prosperity of mining enterprise. The Department of Agriculture and Commerce has commissioned Mr. Wada, Director of the Mining Bureau, and Messrs. Kohana and Tanaka, Superintendents of Mines, to attend your meeting. They will explain any difficult passages in the Government's questions or answer any question you may propound. This meeting is not convened for the purpose of asking your opinions on miscellaneous matter relating to mines, but it is nevertheless hoped that you will freely offer your opinions and discuss the advantages or disadvantages of mining enterprise. You will kindly determine the rules of the meeting among yourselves, noting, however, that its session is not to exceed a week to ten days on one occasion. I beg to thank you very sincerely for the trouble you have taken in assembling here."

When Count Goto had concluded his speech Mr. Shibusawa Eiichi rose to move that for the sake of convenience either the Vice-Minister or the Director of the Mining Bureau should occupy the chair and preside over the meeting. This proposal was approved unanimously, but Mr. Nishimura, Vice-Minister for Agriculture and Commerce, replied that being busily engaged in the compilation of the Budget, and very much occupied by other miscellaneous affairs of the Department, he was unable to take the chair. He thought, therefore, that the Director of the Mining Bureau would be a suitable man to fulfil the duty. Some members expressed the opinion that as the Director of the Bureau was acting in the capacity of Government Commissioner, it might be inconvenient to have him in the chair, but Mr. Shibusawa combated this objection, and contended that if any confusion seemed likely to result from the arrangement, questions could be answered by the other commissioners. Thus Mr. Wada, Director of the Mining Bureau, was elected Chairman. The meeting then proceeded to consider rules of debate and procedure; a draft, prepared by the Department of Agriculture

and Commerce, was read out and discussed. Two or three amendments having been made the rules were adopted. No other discussion took place that day, the meeting closing at 3 p.m. The Council met again on Wednesday last at 1 p.m. to discuss the establishment of a Miners' Guild. The public was excluded, but it is understood that the scheme was approved by the council, on condition that no new organization should be promulgated, and that miners should be at liberty to present applications for permission to form such a guild in accordance with rules determined by themselves. The meeting continued its session the following day. The following by-laws of the Council are reported to have been fixed:—

- 1.—The meeting shall open at 1 p.m. and close at 5 p.m.
- 2.—No debate shall be held unless in the presence more than two-thirds of the whole number of members.
- 3.—No resolution shall be carried unless more than one half of the assembled members support it.
- 4.—Any proposal of a member cannot be put to the vote.
- 5.—Matters relating to speeches or to the management of the meeting shall be decided and controlled by the Chairman.

The meetings of the Mining Council having been conducted with closed doors, and its members having agreed not to divulge the proceedings, it is somewhat difficult, says the *Nichi Nichi Shimbun*, to report exactly what took place. The principal points of discussion, however, may be summed up as follow:—First, as to the question of organizing a Miners' Guild, it is contended that such an undertaking ought not to be circumscribed by hard and fast regulations. Varying circumstances of locality may render the enforcement of such regulations impracticable. At present there are two kinds of guilds in every province. One is in the interest of miners, the other of sellers of ore, and the objects of the two being different, to unite them under the same set of regulations would be quite impracticable. Thus viewed, the question was decided in favour of leaving the matter in the hands of those concerned without any interference in the matter of regulations. The second question discussed by the Council had reference to the protection of minerals exported to foreign markets. This matter, however, was postponed to a future date, and nothing more will be said about it at present. In the third place, with regard to amending the Mining Regulations, the question brought forward at the outset was the abolition of the provision relating to experimental borings. Those in favour of abolishing the provision, pointed out that, in accordance with its terms, any one willing to pay a stamp duty of 3 yen could obtain permission to experiment in any place. Thus countless applications were presented. The applicants, however, never really intended to open any new mines. Often they sought permission to open a mine in the neighbourhood of one already existing, thus wilfully causing inconvenience to the original owner, with the object of compelling him to purchase the proposed new mine at a high figure. In view of such flagrant abuses by dishonest speculators, the necessity of rescinding the provision was urged. On the other hand, those opposed to the proposition declared that the development of mining enterprise in the empire had been due chiefly to the regulations permitting experimental borings, and that if the system were radically altered now, even though some rich mine be discovered hereafter, it might have to be transferred to some one other than the discoverer, owing to the latter's want of capital to work it. Thus no poor engineer would take the trouble of questing for new mines. The latter view obtained a majority of supporters, so the provision will remain in force. After the settlement of the above question, a motion was brought forward to the effect that some provision ought to be made compelling an applicant who contemplates experimental boring to commence work within 30 days after obtaining permission, or else to forfeit that permission. Some expressed approval of this idea but the majority were against it. After

a long debate it was decided to leave the matter in the hands of the authorities charged with the duty of granting applications and superintending mines.

SHANGHAI RACES.

From the programme of the Shanghai Autumn Meeting, just received, we find that the fixture has been made for the same dates as those of the Nippon Race Club. There are nine events on the first and second days and eight on the third, the wind-up being the usual steeplechase. Shanghai still retains its "Off-day," which however, is not "legitimate business." The prizes, as usual, are good, there being nothing under Tls. 100, while there are several of Tls. 150 and 200, and in such races as the Pari-mutuel Cup—"Tls. 200 added to a Sweepstakes of Tls. 10 each"—the large number of entries being considered, the total divided between the first three ponies is quite a considerable sum.

CODES.

A BILL to postpone the operation of the Civil and Commercial Codes, says the *Kokumin Shimbun*, was passed by both Houses of the Diet last session, but has not yet obtained the Imperial sanction. The public are anxiously looking for its promulgation, and many persons are disposed to suspect that the Government contemplates the rejection of the popular wish. It is now reported that the opinions of the various Departments of State are as follow:—For the better control of commerce and industry, the Department of Agriculture and Commerce desires the immediate enforcement of the Codes. In the interests of treaty revision the Department of Foreign Affairs also desires their speedy enforcement. From the point of view of tax collection and the management of general finance, the Department of Finance also desires their enforcement. The Departments of War, of the Navy, and of Communications are absolutely indifferent. The Department of Education advocates postponement. Owing to the energetic representations of Count Yamada, who ardently desires speedy enforcement, Count Yamagata, Minister for Justice, has come to favour that view. It is further rumoured that Count Yamada, having considered the question profoundly, has expressed the opinion that it be necessary to have any postponement the "Law of Persons" only ought to be held in abeyance. But the Constitution does not invest the Government with any such power of discrimination: the choice must be between complete enforcement and complete postponement. It is thought that the Government will either put the Codes into operation and amend them by degrees, or submit to the Diet next session a Bill providing for the postponement of certain portions only. At all events it is beyond question that very few Ministers of State are in favour of entire postponement.

SILK.

As the market price of silk rises daily, sellers begin to stand out for bigger figures at each transaction. On the other hand, purchasers being in receipt of orders from abroad, appear disposed to pay almost anything. On Saturday last Iwashiro *saguri* fetched as much as \$880, and on the following day, though it was Sunday, several transactions were concluded by Messrs. Sieber and Brennwald. Subsequently Messrs. Bavier and Co. received some new orders, and began to purchase Shinshu silk at \$900 for Riujo-kan and \$905 for Inasha. Such a leap in price was remarkable. Again on Monday Messrs. Bavier and Co. purchased some more Shinshu Shinyeisha silk at \$900, Koshu Kyo-sei-sha silk at \$880, and other kinds at equally high prices. Messrs. Otto Reimers and Co. also began to buy largely for the European market. Their chief transactions were:—Goshu Hino silk at \$910; Goshu Sugitani silk at \$900; and Jakushu Kumohama silk at \$905. Besides which Mr. P. Dourille, Messrs. Griffin and Co., and other silk-men are asking for further supplies of the staple. It is stated that the market will probably reach \$1,000 per bale, though some people assert that a portion of the transactions recently concluded are purely speculative.

tive. Even in view of the partial failure of the European crop or the opening of the great exhibition in Chicago, such a rise, say the vernacular papers from which we take these details, was quite unanticipated. In 1876 the maximum figure reached was \$1,100, but as the sterling value of the yen was much higher then than it is now, there is still a considerable interval between the \$910 of to-day and the \$1,000 of sixteen years ago. None the less it is many and many a year since such a boom was witnessed in the silk market. We do not, for our own part, perceive how the World's Fair can be counted an important factor in the situation, but some of the Japanese newspapers appear to think that it can.

TOKYO CHAMBER OF COMMERCE.

THE Tokyo Chamber of Commerce held a special meeting at the Bankers' Hall in Sakamoto-cho on Monday last. The object of the meeting was to determine whether the Chamber should comply with the request of the Kyoto Chamber, and despatch representatives to the meeting of the United Chambers of Commerce. Mr. Shibusawa Eiichi, President, took the chair at 1 p.m., 27 members being present. After a prolonged discussion it was at last decided to send two representatives to the meeting with the object of proposing amendments of the Regulations relating to Chambers of Commerce. The President nominated Messrs. Masuda Katsunori and Oye Taku, for the purpose, and the nomination was approved unanimously. Messrs. Sakuma Teiichi and Handa Zempachi then moved, as a point of urgency, that a petition be presented for the rescinding of the Regulations, now in force, relating to the sale of poisonous drugs. A committee was appointed to investigate the question, and the meeting was closed at 6 p.m.

The draft of amendments passed by the Tokyo Chamber of Commerce for presentation to the meeting of United Chambers of Commerce throughout the Empire, is as follows:—

Art. I.—“Commercial men” in these Regulations shall mean persons engaged in any of the following commercial occupations:—

1. Transactions relating to the exchange or sale of articles.
2. Transactions relating to industrial manufactures and handicrafts.
3. Transportation of persons or goods.
4. Public works and other works carried out by contract.
5. Banking business.
6. Exchange and pawn-broking.
7. Transactions relating to the warehousing of goods.
8. Transactions on the Exchange.
9. Transactions relating to insurance.
10. Business of brokers or agents for the sale of articles belonging to other persons.

(Original Article, I.—“Commercial men” in these Regulations shall mean merchants and persons belonging to the category of commercial occupations enumerated in the Commercial Code.)

Art. V.—Commercial men of any locality where a Chamber of Commerce is established, who pay income tax, and members of any company or corporation, as designated in Art. I.; clause 2, shall have the right of electing members. (Original Art. V. Commercial men of any locality where a Chamber is established, who pay income tax, shall have the right of electing members.)

Art. VI.—Commercial men mentioned in the foregoing Article who are above 30 years of age, or who are members of any company or corporation designated in Art. I. clause 2, shall have the right of being elected as members. (Original Art. VI.—Commercial men who pay income tax in any locality where a Chamber is established, and who are above 30 years of age, or members of Commercial Companies, shall have the right of being elected as members.) Each company shall be represented by one person who is above 30 years of age, and is legally entitled to represent it. (Original clause.—Each company shall be represented by one person legally entitled to represent it.)

Art. VII.—In regard to the right of election or that of being elected, as provided in Arts. V., and VI., the Minister of State for Agriculture and Commerce may decide the qualifications with reference to the amount of income tax paid, or to the amount of the capital of the company in question, by an ordinance of the Department, in accordance with the circumstances of the locality. (Original Art. VII.—In regard to the property qualification for election and the right to be elected, as provided for in Arts. V., and VI., the Minister of State for Agriculture and Commerce may decide the amount of income tax or may specially include national taxes in such qualification, by an ordinance of the Department in accordance with the circumstances of the locality.)

To Art. VIII.—The following clause shall be added:—The foregoing rule shall be further applicable to persons representing the companies mentioned in Art. VI., clause 2. (Original Art. VIII.—The following persons shall not have the right to elect or be elected members:—

- (1) Idiots and lunatics, etc.)

In Art. XIV.—The words “clauses 4 and 7” shall be excised. (Original Art. XIV.—The meetings of a Chamber

held under clauses 2, 4, and 7 of Art. IV., not be open to the public.)

Art. XIX clause 2 shall be amended as follows:—Should anyone fail to pay the amount assessed for the expenditure, after being applied to by the collector, the Local Governor shall treat him in accordance with the laws relating to the Non-payment of National Taxes, at the request of the Chamber of Commerce. (Original clause.—Should anyone fail to pay the assessed amount at the proper time, it may be collected by the district collector of local taxes.)

THE “NICHU NICHU” ON M. BOISSONADE’S REPLY TO THE CRITICS OF THE NEW CODES.

MR. BOISSONADE’S diligence with reference to the Japanese Codes, says the *Nichu Nichu Shim-bun*, is really praiseworthy. During his summer vacation, which he spent at Ashinoya in Hakone, he compiled an essay discussing the different opinions entertained in legal circles as well as those expressed in the Imperial Diet. He has defended the Civil and Criminal Codes at great length. Perusing his writing we are constrained to applaud the vigour and energy shown by him in his old age, as well as his firm belief in the Codes compiled by himself. But there are many points in his article which we cannot endorse, and which we shall take an opportunity of criticising when political affairs leave us some leisure. Nevertheless, as the latest views of an elder in legal circles, we are pleased to introduce the essay to the public. It appeared originally in the *Revue Française du Japon*, and has been translated into English and published in the *Japan Mail* of the 22nd and 23rd instant.

A MARE’S NEST.

A CURIOUS example of the growth of a mare’s nest has just been furnished in Japan. On August the 15th a “Notice to Mariners” was issued by the Department of State for Communications, setting forth that, pending the construction of a fort at the northern entrance to Uruga Channel, a temporary light vessel, showing a fixed red light, would be moored to mark the position of a group of cylindrical red buoys. The cross-bearings of the light and all other necessary particulars were given, and the Notification (No. 179) was duly advertised for five days before the first exhibition of the light, and during several days subsequently, the advertisement appearing in several local English papers. Finally, on September 27th, another Notification emanated from the same Department, to the effect that the above light would be withdrawn from September 29th, and replaced by a buoy showing a fixed red light. All this was in due and regular course. Then the quaint part of the business began. First a pilot, bringing a steamer into Yokohama, complained that he had been greatly puzzled by the light. Now of all people pilots are under the most imperative obligation to make themselves acquainted with obstructions to navigation. Some excuse may be found for a ship-master’s ignorance of recent alterations or additions to lights on the coast, but that a pilot should be without such information is not pardonable. In this particular instance the Agents of the steamer must have been acquainted with the Notification, and should have informed the Captain, so that in his case too ignorance is scarcely conceivable. But as for the pilot, considering that the Notification had appeared for several days in journals to be found at clubs, hotels, consulates, and all other public places, his failure to acquaint himself with it amounted to a very culpable piece of carelessness.

The pilot, however, was not the only complainant. A correspondent addressed the *Kobe Chronicle*, writing over the signature of “Master Mariner,” and asserted that the light had caused him much perplexity on his voyage to Yokohama, and that he had been obliged to perform various manoeuvres, more or less troublesome, in order to avoid a collision with the vessel supposed to be carrying it. He “stopped and dodged about for some time without perceptibly nearing the light;” he “hailed to the north-west so as to shut out the red ray,” and he finally “shaped a course for the Honmoku Light-ship, passing close to the mysterious light.” Arriving at Yokohama, he was “astounded to find no

notice of such a light in the papers,” though in point of fact it was published there in prominent advertisements, and he formulated a strong protest against the “Authorities answerable for this neglect.” He further described that, the night after his arrival, “another valuable ship had got equally perplexed, and suddenly finding herself among some buoys, had to go full speed astern to escape.” Assuredly it is a little more than comical that a ship-master should resort to the columns of the local press to complain about his own ignorance, when the very same columns had been offering to him, day after day in conspicuous type, precisely the information he wanted. Towards the close of his letter “Master Mariner,” referring to Yokohama, says:—“There being no Harbour Master’s Office to apply to for information, we were thrown upon our own resources, and although ready to leave by dusk, preferred not to run the risks we had run on the way up, so remained until daylight, thus losing half-a-day’s valuable time.” He adds, also, that “complete ignorance existed among those of the residents whose vocations should make it necessary to know.” Is this conceivable? Is it conceivable that a long official advertisement, published, under the caption “Notice to Mariners,” in all the principal local newspapers, had completely escaped the attention of the residents interested in shipping affairs? And is it conceivable that the master of a steamer visiting Yokohama knows nothing about the Lighthouse Department, where every information as to buoys, beacons, and lights can be obtained in a moment? Finally, is it conceivable that if the master of the steamer did not know this, his pilot was equally ignorant? Such captains and such pilots cannot contribute much to the prosperity of insurance companies.

Perhaps the cream of the whole occurrence is furnished by a Yokohama newspaper which, under the title, “To puzzle Mariners,” runs amok at the Japanese Authorities for neglecting to do what they had been especially careful to do. Taking for his theme “Master Mariner’s” letter to the *Kobe Chronicle*, the Yokohama editor writes:—“Had Master Mariner, in the endeavour to avoid the light, or being misled by its presence, run his vessel ashore, the War Department and the Department of Communications between them would have shared the responsibility.” And again:—“So far as we can ascertain no intimation was previously given of these obstructions being directly in the fairway, an omission which we do not hesitate to characterize as gross carelessness.” This article was published the day after the appearance of the Second Notification, and the writer actually mentions that Notification as the first intimation given, though in the body of the Notification the light and buoys are described as those “notified under date of the 15th of August”—i.e., forty-three days previously. There can be no difficulty in determining where the “gross carelessness” existed in this case. Possibly, however, the incident may be useful, for it should direct the attention of ship agents and insurers to a state of perfunctoryness at once dangerous and inexcusable. The Notifications of the Department of Communications are made in the most public manner and at the most timely dates. If master mariners and pilots do not take the trouble to read these important Notifications, steps should be taken to rouse them to a juster sense of their duty.

THE HON. G. N. CURZON.

THE Hon. G. N. Curzon, Parliamentary Under Secretary of the India Office in the Salisbury Government, has just left Tokyo after a sojourn of about a fortnight. Mr. Curzon paid a short visit to Japan in 1887, and since that time he seems to have interested himself considerably in the country, for his knowledge of all the political problems affecting this section of the Far East, as well as his insight into the relations between foreigners and Japanese in Japan is really remarkable. Doubtless Mr. Curzon, having made a specialty of Oriental affairs,

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

might be expected to be exceptionally versed in matters with which the general run of British officials have little, if any, acquaintance. But after every allowance is made on that account, there remains quite enough to excite our surprise and admiration. If the former Under Secretary of the India Office may be counted at all a fair representative of the men to whose keeping Great Britain's Oriental destinies are committed under a Conservative Government, we cannot wonder at the feeling of trust and thankfulness that pervades British communities in the Far East when Lord Salisbury is in office.

ANOTHER TALE.

HAVING emerged from the stage of snakes, the *Yomiuri* has fairly entered that of tenderness. Let us hope that it will be saved from the usual sequence which would plunge it next into lacrimosity. Lately serpents twisted themselves through all its canards: occupied unhired lodgings in impossible parts of people's bodies; banded together to bully farmers, and in various ways afflicted unhappy folks who had not even enjoyed the compensation generally preliminary to snake-seeing. Then we had love scenes at colleges with poetical embroidery and imaginary bases, and now we are treated to a story which at any rate has the merit of hurting nobody. The anonymous hero is a German said to reside in the neighbourhood of Nagatacho—a reasonably wide designation. Ardently loving music, as most Germans do, he figures at the outset of the story in the character of a player on *gakkō* and *samisen*, a prodigy skilled in Japanese amatory sonnets. Next door resided a Japanese family, respectable but poor, whose only daughter, a girl of entrancing loveliness, was compelled to discharge menial duties in the household by way of supplement to the solitary *Osandon* whom her parents' narrow means permitted them to keep. One day, going to draw water at the well, the young lady heard a mellow but manly voice lilting a love ditty. She looked up, saw the Teutonic neighbour leaning against a fence and emitting amatory strains, dropped her bucket, and did what few comely lasses do under the circumstances—ran away. Next day the same scene repeated itself, and yet again the next, until the timid beauty renounced future service at the humble well, which in the German's eyes had become ere this a veritable *fons Bladiis splendidior vitreo*. No more could she venture out of doors, for there in the street paced the patient Teuton, to and fro from blushing morn to dewy eve, pale with the ravages of unrequited passion, and visibly pining away in the vista of his obdurate *inamorata*. After a season, however, this love-sick sentinel disappeared, and once again the bashful girl began to breathe freely, when, alas! there arrived upon the scene a Japanese of grave demeanour and most respectable appearance. He proved to be an emissary from the German next door, and the tale he had to tell should have moved any heart, for its gist was that the stout Teuton had been struck down and was lying seriously, if not fatally, wounded by Cupid's weapon. The delegate therefore announced himself commissioned to prefer a formal proposal for the young lady's hand, and so well did he plead, skilfully mixing pounds and pence with pathos, that the maiden's mother half relented, and promised to take the matter into *avisendum*. The emissary departed hopeful, but the girl, the wayward girl, fell a weeping. For the magical term of three days and three nights tears bedewed her cheeks, and in the intervals of her sobbing she declared that she should rather die than marry a foreigner. There the story ends. Perhaps it is a tale in parts, "to be continued in our next," but apparently the writer is content to have created a Teuton dying with love for a Japanese maiden, and a lass of Nippon heroic enough to prefer a life of tears to the embraces of a bearded Occidental. God makes all sorts, as Samuel Weller remarked.

QUESTION RELATING TO THE EXTENSION OF RAILWAYS.

ONE of the most important questions of the day in Japan is that of railways. Many rumours have been circulated about the views entertained

in different quarters, but it has hitherto been evident that these tales were based chiefly on hypothesis. The Imperial News Agency, however, now claims to be in a position to set forth the opinions of the various parties interested. We translate its *résumé*, premising, for the information of our readers, that the chief point of public perplexity and complaint is the failure of the Government to organize the Railway Council indicated by the Bill which passed the Diet in May:—

POLICY OF THE GOVERNMENT.

Though one or two influential members of the Cabinet entertain independent views, the majority are in favour of enforcing without delay the Law passed by the Diet with reference to Railway Extension. Count Ito is reported to have said that though the law delegates to the Diet the power of determining alternative lines, and contains also some other defective provisions, yet, since it passed the Diet by a large majority and has been promulgated as law, it must be enforced without delay. If any of its provisions prove impracticable, then they may be amended, but before putting it into operation, there is no valid reason to discuss its amendment.

* * * * *

COUNT KURODA'S OPINION.

Count Kuroda, whose position as Minister of Communications gives him special prominence in connection with the problem, supported the scheme of extension from the very beginning. But since arguments were advanced to the effect that the control of such matters properly belongs to the Administration, and that the legislature overstepped its power in amending the project of law submitted to it; since, too, the organization of the Railway Council has not been fixed, and many singular rumours are circulated, the Count has become considerably less anxious to see the question submitted to the Cabinet. Hence it has been delayed from day to day, and in the meanwhile some of the vernacular journals ventilate reports to the effect that the Government is opposed to the enforcement of the new law. Certain members of the Diet who advocate the extension of railways, hearing these reports, called on Count Kuroda and other Ministers of State, to offer advice. But Count Kuroda persistently refused to admit them, and in the interval he has been consulting the opinion of Viscount Inouye, Director of the Railway Bureau.

* * * * *

VISCOUNT INOUE.

Viscount Inouye has not been in very high favour since many grave questions were propounded in the last session of the Diet concerning railways. It was even rumoured that he would be removed from office. But the recent change of Cabinet has made his position firm, and in the last investigation about railways everything was managed in accordance with his views. He is now understood to have declared that it is not absolutely necessary to organize the Railway Council in haste. To the methods of Viscount Inouye the first sign of opposition appeared in the Head Quarter Staff Bureau of the Department of War.

* * * * *

The officers of the Staff argue that the arrangements made by the Railway Bureau are very inconvenient for military purposes. They have despatched some commissioners to investigate the facts, with a view to determining the course they ought to pursue, and they intend to discuss the question of the Railway Council, for which purpose they are now preparing all the necessary materials.

* * * * *

MEMBERS OF THE DIET AND OTHERS.

The above is a brief account of the state of affairs within Government circles. On the other hand, some members of the Diet, as well as others interested in the question, are greatly excited and have given loud expression to their discontent and indignation. They argue that the object of establishing a Railway Council, as provided by the new Law for the Extension of the Railway System, was to divide the functions of the Government. Hitherto every affair relating to railways has been managed by the Railway Bureau. The Director of the Bureau determines the railway policy, controls railway works, and superintends railway enterprise. In effect a species of Railway Pope has been created in Japan, the result being many abuses. In view of the progress made by Railway enterprise, such power ought not to be vested in the hands of an individual. Hence the Railway Council was established, the idea being to leave works of construction and management in the hands of the Railway Bureau, but to entrust the determination of new lines, their superintendence and other administrative matters to a Council

consisting of representatives of various classes. In this way the abuses complained of would be corrected. The business of surveying the routes of the nine new lines was to be conducted by the Railway Bureau, but the general scheme of the system and other details were to depend upon the views of the Railway Council. The Government, however, instead of taking the steps necessary to carry out this programme, left the whole affair in the hands of the Railway Bureau, which action is distinctly opposed to the spirit of the organization of the Railway Council. The indignation of the persons entertaining the above view was so great that they despatched commissioners to the capital to explain the matter. But the Railway Bureau takes no notice of their representations, and the Railway Council not being yet established, they have no opportunity to appeal. Nevertheless, they are resolved not to abandon their purpose, and have accordingly despatched letters throughout the empire, asking the members of the United Railway Construction Society to hold a general meeting in order to settle a plan of campaign in the next session of the Diet. The principal commissioners connected with the above undertaking came from Akita, Yamanashi, Nagano, Okayama, Kumamoto, and other Prefectures, so it is possible that the question may be forced prominently upon public attention ere long.

* * *

We have merely reproduced above the statements advanced on the authority of the Imperial News Agency. How far reliance may be placed on the details we do not undertake to determine.

THE CHINESE IN AMERICA.

THE Chinese resident in America are not submitting without remonstrance and opposition to the working of the new Exclusion Act. The *New York Herald* says:—

There seems to be a widespread disposition on the part of the Chinese in the city and vicinity to escape, if possible, from compliance with the provisions of the new law compelling all labourers of that nationality residing in the United States to register their names and description with collectors of internal revenue in the districts in which they reside.

The actual work of registry has not yet begun, but collectors are engaged in taking, or trying to take, a census of the Chinese in their districts. The subjects of this inquiry, in almost every instance, decline to give any information about themselves. The Chinese Consul also has refused assistance and information requested of him by General Kerwin, Collector of Internal Revenue in this city.

It will be necessary for the Chinese to furnish, with descriptions of themselves, three photographs for future identification, one of which will be sent to Washington, another retained by the Collector, and the third attached to the certificates issued to the Chinese. Merchants are exempt from the provisions of the act.

The Celestials have already held one mass meeting at which the law was roundly denounced, and another has been called for the same purpose. They have apparently planned to act in concert in defying the new regulation. It is anticipated that the Chinese will test the constitutionality of the registry law.

Dr. J. C. Thoms, superintendent of the Chinese hospital at No. 40 Hicks street, Brooklyn, who is prominent in the local Chinese colony, said last night:—

"We regard this registry law as an outrage. The Chinese are treated worse here than are the Jews in Russia."

General Kerwin told me last night that he has already begun the preliminary work in connection with the census. The certificates to be issued will not be ready before September 1. His eight deputies have been engaged since Monday in an effort to obtain as accurate an enumeration as possible of the Chinese in his district, which extends from Twenty-sixth street to the Battery and takes in all of the streets in which the majority of them in this city reside. The deputies have found that the Chinese, acting upon instructions from some unknown source, are determined to give no information about themselves.

"As near as we can gather," said General Kerwin, "information or advice of some sort has been brought here from San Francisco, and acting upon it the Chinamen simply decline to answer any questions put to them. I sent to the Chinese Consulate, not with the expectation of receiving any assistance, as I know the Consul to be unfavourably disposed toward the new law, but to secure information of the number of Chinamen in the city. This information was denied us."

"We are cautioned against using force, as there is no compulsion about this thing, but Chinese refusing to register and secure certificates before May 5, next year, will, according to the law, be returned to China. I fancy after a few have been sent back we shall have no further trouble."

Collector Thomas Smith, assisted by Postmaster William Richenstein and Chief of Police Woods, of

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

Long Island City, L. I., began a census of the Chinese there yesterday. Many of the Chinese left for this city with all their belongings rather than stand than in front of a camera.

Collector Large, of Newark, N. J., has notified his deputies to ascertain the number of Chinese in their districts. The postmaster will be requested to assist in furnishing necessary information.

KOREAN QUESTIONS.

MR. HARA KEI, Director of the Commercial Bureau in the Department of Foreign Affairs, having been ordered to proceed to Korea, left Tokyo on Tuesday the 20th instant. The *Nippon* says that he is commissioned to settle two most important affairs; first, that of an indemnity to the merchants who suffered by an illegal Ordinance prohibiting the export of grain from the Kingdom; and secondly, the question of revising the Quelpart Fishery Convention. The Government originally instructed Mr. Kajiyama, Minister Resident in Seoul, to negotiate with the Korean Government about an indemnity on account of the prohibition of grain export, which caused much loss to the Japanese merchants. But Korea is so poor that her Ministers have staved off a settlement on various pretexts, and two years have already elapsed without any arrangement being effected. The domestic troubles of the little Kingdom doubtless command sympathy and suggest the propriety of patience, but, after all, such matters have to be settled sooner or later, and in sending Mr. Hara on his present mission, it can scarcely be asserted that the Government of Japan has showed any undue haste. The Quelpart fishery question, too, is a topic of much importance. The Korean Government—we still quote from the *Nippon*—sent General Le Gendre to Japan to negotiate a revised convention, but no satisfactory understanding has been arrived at yet. The Japanese Government asked for the privilege of fishing along the Korean coast in consideration of abrogating the Quelpart Convention, but General Le Gendre replied that he was not empowered to accede to such a proposal. Mr. Hara is therefore commissioned to negotiate with the Korean Government directly, and it is probable that in the sequel of the negotiations he will make a trip to Quelpart Island. Such is the *Nippon's* account, but we are strongly disposed to doubt its accuracy so far as concerns the fishery question.

Y. A. R. C.

THE "Coming of Age" Regatta of the Yokohama Amateur Rowing Club is fixed to take place on Wednesday and Thursday, the 2nd and 3rd November. The programme as now arranged will consist of four interport events, club fours (senior and junior), double-sculls (senior and junior), pairs (senior and junior), single-sculls, Bluff versus Settlement (fours), scratch fours, and perhaps a race for the Tokyo colleges and man-of-war boats. The entries close on Saturday, October 1st. Strong crews are expected from Kobe and Hongkong in the interport events, and the prospect of some good and exciting sport in very bright. It is a pity that the races and regatta clash; in fact the two events ought not to be held the same week.

THE NAGASAKI AFFAIR.

VERNACULAR newspapers report the fact that the foreigner against whom the commission of a heinous crime was recently charged in Nagasaki, has fled the country, and that, consequently, further proceedings in the matter will be stopped. We regret to say that this information is correct, though perhaps it is as well, on the whole, that the demoralizing scandal of a trial at law should be avoided. The fact that the foreigner had made his escape has been known for some time, though of course no one ventures to assert that his flight constitutes conclusive evidence of guilt in the degree depicted by rumour. At all events, he has not dared to abide and stand his trial boldly as an innocent man would have done, and unfortunately the facts elicited by the Nagasaki police leave no room to doubt that a most brutal act was actually perpetrated. We refer to the matter now for two reasons; first, to avert the possibility of any impression among the Japanese that a tendency to extenuate

such a crime or to connive at the escape of its perpetrator could exist among foreigners; and secondly, to point out that although the man has fled from justice and thus escaped the penalties of the law, he has nevertheless undergone a most severe punishment. His career—a lucrative and promising career—in Japan has been completely blasted. He has lost his position, been compelled to abandon his prospects, and finds himself now a disgraced fugitive from the society of all his old friends and patrons. Justice, though technically eluded, has been sternly satisfied, and so also ought to be the most uncompromising among the Japanese critics who have commented on the unsavoury subject.

THE ANTI-CHRISTIAN AFFAIR IN KUMAMOTO.

We observe that the *Yomiuri Shimbun* writes in a very frank and liberal strain about the recently reported anti-Christian acts of Kumamoto local officials, and about the public appeal made by Christians against such treatment. It is just to note that Mr. Matsudaira, Governor of Kumamoto, is conspicuously distinguished by accusations of interference in the general elections of last spring, and that, consequently, any transactions with which he is connected are not likely to be judged leniently by a journal pledged to the cause of the *Kaishin-to*. Whatever this qualification may be worth, the *Yomiuri's* comments have no lack of colour. It says that such proceedings as those of the Governor and the Principal of the Upper Primary School must be attributed to a still lingering conflict between the old ideas and the new. The paltry conservatism of the Governor betrayed him into a distinct violation of the Constitution, and evoked an appeal from leading Christians with which every just man must sympathise. Doubtless—we quote always from the *Yomiuri*—the appeal of the Christians is made in their own interests, but inasmuch as the measure taken by the Governor was distinctly a violation of the Constitution, all good Japanese subjects, whatever their religious convictions, must condemn it. Governor Matsudaira's speech shows plainly that he misunderstood the Imperial Rescript and that his conduct is controlled by the old notions prevailing before the advent of Commodore Perry. "It is to be sincerely hoped that there shall be no repetition of such disgraces."

The *Kokumin Shimbun* also discusses the matter, its general tone being the same as that of the *Yomiuri*. It supplements the Kumamoto news by an assertion that similar instances of intolerance have come to its ears from other places, and it denounces the whole thing as unconstitutional. But its protest is not entered, we are told, in the interests of Christianity, or of any other creed. The violation of the Constitution is what troubles it. If one flagrant breach of the charter of national liberty be condoned, who shall say what may follow? Lads have now been expelled from a public school for studying the Christian Bible. May not the next step be to dismiss all teachers who adhere to the tenets of Buddhism? And what is there to prevent yet another retrogressive measure of denunciation against philosophers who advocate the doctrines of Darwin or Kant? So, little by little, the Constitution may be encroached on, until it is gradually whittled down to nothing at all. Such is the *Kokumin's* rather exaggerated apprehension.

The *Nichi Nichi Shimbun*, as might have been expected, writes in a much soberer and more circumspect strain. It frankly admits that any judgment based on the statements hitherto published must be very unfavourable to the action of the officials concerned. But it suggests that this may very possibly be another example of a rough and superficial version where delicate and subtle issues are really at stake. No verdict should be pronounced by the public until the decision of the Department of Education is announced. It is quite certain that no unconstitutional interference with freedom of conscience will be tolerated by those in power. But, on the other hand, the educational principles which have received the

high sanction of the Emperor must be respected and obeyed. One of these principles, a fundamental one, is that the system of instruction in all Government schools should be strictly secular, including, of course, the inculcation of such moral precepts and ethical injunctions as are essential to the formation of sound character, but excluding religious propagandism of every kind. This is obviously a constitutional necessity. The same law that ensures freedom of conscience to all Japanese subjects, forbids that children at Government schools shall be subjected to the influence of any particular creed. Outside school the students are absolutely free to follow the bent of their own convictions, within the limits of law, but inside the precincts of the school neither Christianity, nor Buddhism, nor any other religion must be allowed to exercise sway. It is for the Department of Education to judge whether this condition was fulfilled at the Kumamoto school. The *Nichi Nichi* does not undertake to pronounce an opinion one way or the other, but it evidently thinks that the Governor and the Principals of Government Schools in that Prefecture understand their Constitutional duties, and that, so long as the Department of Education does not condemn their action, the probabilities are all against their having acted illegally.

THE TANKO RAILWAY COMPANY.

It was understood, says the *Shogyo Shimpō*, that a loan of 1,500,000 yen would be raised by the Tanko Railway Company for the purpose of augmenting the capital of the company. The Directors of the Company proposed to add 1,100,000 yen to the railway capital and 400,000 yen to that of the coal mine. But at a meeting of the principal officers held on Wednesday, the 21st instant, one of the members of the Committee expressed the opinion that at present it is not necessary to raise more than 1,100,000 yen, which should be applied to railway purposes alone, since the coal market is not prosperous just now, and with its existing capital the Company can supply from 300,000 to 400,000 tons of coals annually, which is amply sufficient to meet the demand. When the market improves a little, the projected loan of 400,000 yen may be raised for coal-mining purposes. This proposition was approved unanimously, and a resolution for raising a loan of 1,100,000 yen only was passed. The money is to be advanced by the Fifteenth National Bank at 6½ per cent. interest per annum, and is to be paid back in 25 years from 1894.

Hitherto the coal mined by the Tanko Company has been sold by the *Baitan Gumi*, with which a contract was made to undertake the sale of all the coals produced by the Company for seven years. The contract was carried out during the last two years. But it appears that the *Baitan Gumi* finds the arrangement somewhat inconvenient, and that the Company also has incurred some loss. Consequently the Company proposed to abandon the contract, and to arrange for the sale of the Coal by establishing a special department for the purpose. To this the *Baitan Gumi* agreed, on condition that some 10,000 yen, the amount of loss incurred by it, should be paid by the Company, the *Baitan Gumi*, on its side, undertaking that all its customers should be transferred to the Company. The arrangement having thus been completed, the *Baitan Gumi* will close its office shortly.

THE FOOCHOW DISTURBANCE.

THE FOOCHOW correspondent of the *North China Daily News*, writing about the recent disturbance at that place, says:—

To make the reason of the great discontent amongst the people clear, I should preface my account of what has taken place since the execution with a brief sketch of events that took place prior to it, now a matter of history. You will recollect the Tekhua salt riots of twelve months ago. They originated in a singularly indiscreet step taken by the local Salt Tsotai to maintain the salt revenue, which had been previously falling off; he taxed the consumers instead of the dealers, irrespective of their consumption, and on such an immoderate scale, that the people drew up a petition, praying the authorities to have their new mode of collecting the tax withdrawn. The petition was presented in due course by the head-man of the locality, a man

of good means, good standing, and very greatly respected. To their consternation this man was thrown into prison for daring to present such a petition, and all those who had signed it were fined. This action on the part of the authorities seems to have tried their patience beyond endurance. At any rate they were not going to allow their friend to remain in prison; they collected a sufficiently strong force together, released him by force, and carried him back with them. Thereupon the authorities despatched a magistrate, supported by a troop of soldiers, to demand the return of the prisoner or take the consequences. A fight ensued, in which the military were routed and the magistrate killed. This was the beginning of the Tekhua rising, for the people having defied the authorities with success, resolved to keep it up, unless, of course, their petition received attention and their friend was allowed to go free. They quickly organised a very considerable force, and called upon their headman to be their leader, but he would have nothing to do with it. He had, however, to supply the rioters with funds, under compulsion and his name was put upon their flags, against his wish and in spite of his strong protest. Realising his helplessness amongst his countrymen, who apparently had lost control over themselves, he fled, and was not again heard of until the 22nd of last month, when he was brought into Foochow in chains. He was taken first to the Provincial Judge, and subsequently to the Viceroy's *yamen*, where he probably underwent some sort of examination, but he had no regular trial, and this is what the people complained of so bitterly. Before his execution, the following day, he protested his innocence, but it was of no avail. His head was severed from his body in a clumsy and cruel fashion, and the order was given for it to be sent to Tekhua for exposure in the market-place there.

It is difficult to reconcile the action of the government in executing this man with the murmurs of the people regarding it. In spite of my best endeavours I have not been able to find out that the man was guilty of anything more heinous than undertaking the presentation of the petition I have made mention of. It was not his fault that his means and his name were made use of to assist the Tekhua rising. If the government were possessed of information that he was a party to their rising, the should have made it known to the people. This would have pacified them; they would have been content to know that the law had simply followed its course; as it is, general discontent and ill-feeling prevail.

When the news of the execution reached Tekhua the people were bowed down with grief, but this tenderness was quickly followed by the more poignant feelings of indignation and revenge, and they organised a force to intercept the head on its way to their town. They vowed that it should not arrive as the head of a criminal, but as that of a sainted martyr to the cause of justice. They carried their point. They met the escort with the head near Shansien, and after a severe fight, in which they were victorious, they returned to Tekhua with the head of their friend. Warned of their approach, the whole of Tekhua turned out in deep mourning to meet them. Clad in white, unshaven, and with unplaited hair, they came, while the air was rent with the loud weeping of the multitude. It is described as a most affecting scene. Here my news of this trouble ends for the time being, excepting to add that a strong military force has been sent from Foochow up to Tekhua, and I am sorry to think of the further trouble in store for these people. There can only be one end to it, of course, and there will be a great amount of suffering before the end comes.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

A CAMERA field day will be held on Sunday, October 2nd, at No. 8, Sanchome, Ai-oicho, Honjo (the residence of Mr. A. J. Hare), beginning in the morning. The first of the regular monthly meetings of the Society will be held at the rooms of the Geographical Society (Chigaku-kiokai), Nishikonyacho, Kyobashi, Tokyo, on Friday 7th October, beginning at 5 p.m., and there will be a meeting at the same place and hour on the first Friday of every month, until further notice. Members are requested to bring anything they think will be photographically interesting to the Society, particularly any samples of work done during the past summer.

JAPANESE EMIGRANTS AND THEIR SAVINGS.

According to the *Nippon*, the savings of the Japanese emigrants in Hawaii, which have hitherto been partly deposited in the Finance Department and partly sent to their families by postal money orders through the Japanese Consulate, are now to be deposited in the Yokohama Specie Bank, or sent direct in money-orders by the emigrants themselves. The change is said to be very inconvenient to the emigrants. By the original arrangement, 15 per cent. of their wages have to be deposited, and these deposits have accumulated to 800,000 yen, the sum deposited monthly amounting to about 20,000 yen. Instead of 6 per cent. al-

lowed by the Finance Department, they will only receive 4 per cent. from the Specie Bank, and whereas no charges were imposed on money-orders sent through the Consulate, now the usual fees will have to be paid. The loss thus incurred by the emigrants is estimated at 42,160 yen per annum, which, of course, must come out of their savings. Mr. Ando Taro, late Director of the Emigration Bureau, is responsible for the change. The *Nippon* expresses sympathy with the unfortunate labourers, and hopes some attempts will be made by those interested in emigration to redress the grievance.

THE GREAT FIRE AT ICHANG.

The *Shenpao*, as translated by the *North China Daily News*, gives the following particulars about the great fire at Ichang:—

Further intelligence has reached us from Ichang giving particulars of the casualties in the recent fearful conflagration, which razed a great portion of that city to the ground, and rendered thousands of people destitute and helpless. In order to recover the bodies of the unfortunate victims in the river a barrier was constructed and put across the stream after the fire, so as to prevent the bodies from drifting down. This method was successful, and up to the present time over two hundred bodies have been recovered, and the rescuers are still hard at work scouring the river. The houses consumed by the flames at Shipa were formerly the homes of over nine hundred families, besides the dwellings of thirty families in other part of the town. Nearly two hundred boats and craft of all descriptions were also consumed. In removing the debris and rummaging amongst the ruins some horrible scenes were witnessed. Soon after the catastrophe good people were hard at work examining into the extent of the damage, and began distributing money to the distressed survivors from the fire. The benevolent societies are now appealing to the public to raise subscriptions for the relief of the destitute people. It is said that 4,000 strings of cash have been obtained from various quarters which will be distributed amongst the people to alleviate, in some measure, their great suffering.

CHINA TEA.

Mr. CONSUL PHILLIPS, in his Report on the trade of Foochow for 1891, gives, on the authority of Mr. R. S. Westall, the following notes on the business in tea:—

In consequence of orders from Peking, recommendations were posted in the various tea countries by the local authorities to improve the quality of the teas this season, as a means towards the resuscitation of the trade. Some of the tea-men in the Peking, Paklum, and Panyong districts, did their best to further this end, and to a certain extent succeeded; but, on the other hand, judging by results, no other conclusion could be arrived at than those making teas in all other districts had disregarded the recommendation. The former were buoyed up with hope at the opening of the market, when they obtained for a few of their best chops prices 20 per cent. higher than the highest price paid last season, that they were going to make their fortunes, and congratulated themselves on having followed the guidance of the Mandarins. Their satisfaction was, however, short-lived, as the demand for fine tea—at any rate, high-priced fine tea—fell away, and as they persistently refused throughout the season to meet buyers in the matter of price, they were left at the close of the year with the bulk of these teas on hand. There were exceptions to this rule, but, as far as foreigners were concerned, whether they bought of these men at the high price or of others who submitted to a reduction, they lost money on their ventures. The prices paid for medium teas at the opening of the market, although no higher than last year, were thought by many to be dangerously high, considering the low values ruling in the London market, and the telegraphed sales towards the end of July proved that they were so; indeed, the losses made on shipments up to that time were on the average, heavy. Then, as a natural consequence, prices declined and remained low, though not low enough, as it turned out, for the well-being of those who shipped, as the forced sales of the increased supply of Ceylon and Indian teas in Mincing Lane further depressed prices in that market, and if losses were comparatively light on these autumn shipments, there were, none the less, on the balance, losses. As regards common tea, it was scarcely to be expected that it would touch a very low point here after the 'boom' which took place through speculation in London in January last; nevertheless, what is known as 'type' standard was bought in August to lay down at 5½d. per lb., at which price it remained until the middle of October, when it rose to 6d. on account of scarcity; such of these teas as have already been sold have not brought back the money paid for them, as far as is known at present; therefore, the season has not been a profitable one for shippers. As, however, there are still five months wherein to realise the season's export, now virtually complete, it may be, considering the exceptionally favourable statistical position of China tea in London, that the result of the year's trading will not turn out to be so unfortunate as was at one time expected.

To the natives the season has again been one of severe losses. The little profit made on common tea went no way to make good a tithe of the money they lost on the better kinds. Those of them who have been engaged in the particular branch of the trade of making tea and bringing it down to their market appear never to have heard of the competition of India and Ceylon, or, if they have, cannot bring themselves to believe that tea can be produced in any country other than their own. According to a late report,

however, they are at length alive to the true state of the case, and are combining to face the difficulty.

From what is known of the cost of preparing tea and bringing it to their market, the ingenuity of these Chinese will be taxed severely. The cost of growing may be a bagatelle, and labour we know is cheap enough, but the lekin and petty exactions of the officials as the tea is in transit, will, as matters stand, make it a very difficult thing for them to compete with India and Ceylon. The only chance of success lies in these exactions being reduced. Then there is the export duty. However fair it may have been at the time the last treaty was signed, it is galling for those interested in the trade, both the Chinese and the foreigner, to know that 25 per cent. to 30 cent. on the average value of tea has to be paid.

Again, the supply of Congou shows a serious falling-off. The deficiency is 50,000 chests, or 13 per cent., the figures being 345,000 chests against 395,000 chests last season, and (to show how rapid the decline of the trade is) 850,000 chests in 1880. Of other kinds, Souchong and Feloo have been in supply about the same as last year, while Oolong and scented tea show an increase. But Congou is the backbone of the trade, the total yield of the four last-named descriptions being only 90,000 chests. A noticeable feature is the larger business done this year in the manufacture of brick tea by the Russian houses. But a small proportion of the tea used for this purpose is included in the above figures of Congou supply, the remainder being brought down to these firms under contract in bags. Altogether 100,000 chests, consisting entirely of dust and broken leaf, were manufactured in this way and shipped to the north, the increase representing about 37,000 chests.

ROBBING A WRECK.

We have never heard of any instance of dishonesty in Japan in connection with the wreck of a ship. But a case is now given in the columns of the *Fiji Shimpo*. On the 23rd ultimo, says our contemporary, the sailing ship *North American* was wrecked off Shiwaki Division in Tokushima Prefecture, and her cargo was sold by auction to a merchant of Kobe. He despatched two sailing-ships—one to Yuki Division and the other to Shiwaki Division—and hired about a hundred coolies to transport the camphor with which the ship was laden from Shiwaki to Yuki. Some 20 members of the Division Council of the former place, instigated the coolies to steal 30 cases of camphor, 20 cases of camphor-oil, and 4 cases of porcelain, the total value of which is estimated to be about yen 2,500. The goods were buried in the ground, and the purchaser of the cargo having no suspicion of such a dishonest act, his ships sailed back to Kobe. The police, however, soon discovered what had happened. On the 3rd instant they arrested 20 members of the Village Council as well as 16 others. The preliminary examination of the incriminated persons was concluded on the 10th, and they were sent to the Criminal Court of the District for trial.

INSPECTION OF SCHOOLS.

MR. KONO TOGAMA, the new Minister for Education, is credited with a resolve to develop the practical side of education in Japan. In pursuance of that purpose he deems it necessary to inspect the existing schools and colleges, and it is stated that he recently sent a message to the Imperial University, requesting that a day be appointed for his visit. This Faculty replied, however, that they were very busily engaged in the compilation of the Budget, and that it would be desirable if the Minister's visit were postponed for a few days. Mr. Kono thereupon decided to inspect the High Normal School. At 8 a.m. on Friday last he left his official residence and drove to the School, accompanied by a Private Secretary. After inspecting every class, he visited the attached High and Elementary Schools. Subsequently, he inspected the Female High Normal School; returning to his residence at 5 p.m. His Excellency is expected to pay his next visit of inspection to the Fine Arts School, and the Imperial Library in Ueno Park, and he will probably proceed to the Tokyo Industrial School in Asakusa on the following day. We take these facts from the *Nichi Nichi Shimbun*.

ACCIDENT TO THE "KOBE MARU."

OUR Moji correspondent, says the *Kobe Chronicle*, writes under date Saturday the 24th:—The *Kobe Maru* when coming into port here at about midnight fouled the Black Buoy (at the south-west end of the bank), with a strong current running at the time. After working hard all night they managed to clear the mooring-chains of the buoy from the propeller by 7 o'clock this morning. Whether the propeller was damaged or

Original from

not I cannot say, as it was wholly under water. The ship dragged the buoy quite a distance out of its proper position towards the Moji shore. She is to leave as soon as everything is put to rights again.

IMPROVEMENTS IN TSUKIJI.

We notice with pleasure the building and enlarging of certain houses in Tsukiji during the past summer. The elegant brick buildings of the Protestant Episcopal Mission on the south side of Shinsakaicho are not only pretty, but evince fine architecture and workmanship, and present an imposing appearance in that neighbourhood. On the opposite side of the street the mission of the Evangelical Association has enlarged houses Nos. 44 and 50, which, with the present commodious verandas, make desirable premises.

EARTHQUAKE IN GERMANY.

REPORTS from Germany state that in the early part of August a severe earthquake was felt at Ems and vicinity. The shock was so strong that the water in the wells was churned into wavelets, while a great many houses were so severely shaken that the inmates fled to the streets for safety. In Nassau and Nieder-Lahnstein a number of chimneys were thrown down and the school students frightened into a panic. Great anxiety was felt at the time, and not a few thought that the houses would tumble down.

THE GREAT MUSICAL TREAT.

AFTER all that has been said and written in Yokohama about the anticipated musical treat to be offered to residents here, it would appear, if a Hongkong paper is trustworthy, that the whole affair, so far as this community is concerned, is a black "frost," as Mr. Harley, having landed in Hongkong solus, is proposing to local amateurs in the Crown Colony to help him out with a concert, and his company is—well, *non est*.

THE ASSAULT ON A CONSTABLE.

ON Tuesday morning, at the German Consulate, Alfred Jansen, was sentenced to four weeks' imprisonment for his assault upon Tomita Chozo, a police-constable, on the 22nd ult. The defendant, who had followed a customer out of his grogshop, No. 106, Settlement, and assaulted him, struck Tomita several blows when the latter came upon the scene and attempted to restore order.

MR. CONSUL GARDNER.

MR. CONSUL C. P. GARDNER, who is charged with the care of British interests at Hankow, has been rewarded by Her Majesty with the Companionship of St. Michael and St. George. Readers of the Blue Books know what an able and resolute part Mr. Gardner played during the anti-foreign riots in the Yangtze Valley. It is pleasant to see such merit as his so speedily recognised and so signally rewarded.

RECOVERY OF STOLEN PROPERTY.

WE learn that the Police have succeeded in making a big haul of valuable property stolen some time ago, and have most of the thieves in custody. The robbery had been going on some time before it was discovered, and several thousand dollars' worth had been removed. The case was placed in the hands of Inspector Kawada, who soon got on the track of the thieves, and there is hope that the remaining portion of the plunder may yet be recovered.

PROMENADE CONCERT.

ON Saturday night a concert was given in the garden of the Hotel Métropole, Tsukiji, Tokyo, by a military band, the enclosure being gaily decorated with coloured lanterns. A capital programme was played, and the dining-room being cleared for the purpose, an impromptu dance was got up. It is probable the directors of the hotel will repeat this entertainment at frequent intervals.

TELEGRAPHS IN JAPAN.

WE read in the *Fiji Shimpō* that the length of the telegraph land-lines in Japan, is now 3,123 *ri* (7,820 miles), and the total length of wires

9,333 *ri* (23,332 miles), while the length of submarine cables is 214 nautical miles. This system is managed by 442 offices, of which the majority combine the functions of posts and telegraphs.

DR. BAEZL.

DR. BAEZL, Professor of Medicine and Clinical Surgery in the Imperial University, Tokyo, passed through here, says the *Nagasaki Express*, a few days ago, on his way to Germany, on leave of absence, and was entertained at a Japanese dinner at "Koyotei" by a number of local medical men.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The position of the Opposition *vis-à-vis* the Government forms the topic of an interesting discussion in the columns of the *Fiji Shimpō* and *Nippon*, which are perfectly independent in politics, and can at any moment say just what they like about the Government or any of the existing parties. Careful perusal of the writings of these journals must convince the least intelligent reader that the Opposition is now in an awkward position, and that, despite the vaunting declarations of their organs, the political parties opposed to the Government enjoy a very small amount of the confidence of the educated and independent classes. The *Fiji Shimpō* laughs at the inconsistency of Opposition politicians who are delighted with the supposed disposition of the Government to adopt some of the measures proposed by themselves. They are reminded by our contemporary of the fact that the Cabinet of to-day is a clan Cabinet in a new disguise, and that the coming into power of the present Ministers of State cannot but cause indefinite delay in the consummation of the cardinal aim of the Opposition, namely, to wrest power from the clan Government. The Opposition politicians, if they mean to be consistent, ought therefore to be more than ever prepared to wage a stout fight with their new opponents. It is, says the *Fiji*, a great mistake to suppose that the Government is prepared to adopt the programme of the Opposition, because a few Governors who made themselves obnoxious by their active interference in the last general elections have been either removed or dismissed. These changes in the personnel of the local Governors would have been necessary in any case, as their continuance at their posts had become an insurmountable obstacle to the smooth conduct of local administration. Those who view the changes in the light of an inclination on the Government's part to adopt the Opposition's programme will one day find, to their cost, that they have been reckoning without their host. Our contemporary thinks that the statesmen composing the present Ministry, having been the real rulers of the country during the past decade, are morally bound to accept responsibility for the mistakes made in domestic and foreign policy throughout that period, mistakes which have brought about the difficulty now existing between the Government and the Opposition. What the mistakes were, our contemporary defines in another article which will be referred to presently. It concludes by advising the Opposition to indicate clearly the past errors of the Government, and force the latter to correct them as far as possible.

The *Nippon* goes farther in disclosing the helplessness of the Opposition. It delivers itself of the opinion that the Opposition is now quite unprepared for an encounter with the Government, being in truth, utterly disorganized. The party diametrically opposed to the Government, viz., the *Kaishin-to*, seems to rejoice at the approaching opportunity of directly measuring strength with the real leaders of its adversaries. But even that party is in the dark as to the policy to be pursued in the coming session of the Diet. Meanwhile, the Government, in the opinion of the *Nippon*, is secretly gathering strength. The Ito Cabinet does not give perfect satisfaction to the Tokyo paper, but such a group of statesmen can never be sighted. The Premier, Count Ito, is declared to be, after

all, the greatest statesman of the present day. He has no equal in the difficult art of holding the elder statesmen in unity and harmony, even Count Okuma being far inferior to him in this respect. Moreover, Count Ito is now bent upon avoiding all the showy policy of former days, and is doing his best to pursue a programme of solid achievement. The way in which he and his colleagues dealt with the local Governors at the time of the recent conference of the latter, indicates the high capacity of the new Ministry. In their policy towards the Diet, the present Ministers of State will be found to be very different from their predecessors. Will the Opposition be able to meet such a Government in the coming session with any hope of effective resistance? Our contemporary strongly doubts it. In fact, the Opposition politicians are perplexed as to the policy they should pursue toward the new Ministry. The *Nippon* recommends them to recall to the capital all of their friends who are now lecturing in the provinces, and in conjunction with them to consider the programme they mean to pursue next session.

The Cabinet, too, is the recipient of sundry counsels from metropolitan journalists. The *Fiji Shimpō* repeats its recommendation that the new Ministers of State ought to devote themselves to correcting the mistakes committed by them in the past ten years. Among these mistakes are mentioned the hasty and forced redemption of the fiat currency, causing disastrous disturbances in the financial world; the enactment of many troublesome and pernicious laws and regulations; the introduction of inconvenient formalities in all departments of officialdom; repeated blunders in connection with the question of Treaty Revision; and an inconsistent policy toward the peninsular kingdom. Another, and perhaps more serious, blunder committed by these statesmen, in the *Fiji's* opinion, is the rapid access of honours accruing to officials, as, for example, the ennoblement of high officials, and their assumption of ranks (*kurai*) even more exalted than those of the greatest of the former *Daimyo* or *Kuge*. The *Fiji* earnestly recommends Count Ito and his colleagues to correct their past mistakes as far as possible, by way of fitting conclusion of their long and brilliant political career.

The *Kokkai* offers singular counsel to Count Ito. It recommends nothing less than the immediate dissolution of the present Cabinet, and the organization of a new one by politicians of the younger generation with Count Ito at their head. Why is such heroic measure to be taken? Not on account of any misconduct of the present Ministers of State, but merely for the sake of educating younger politicians in the art of statesmanship. A more impractical scheme has never been propounded by a responsible newspaper of the *Kokkai's* standing. Possibly our contemporary is merely jesting.

The report that the Cabinet has tried to weaken the so-called Extreme section of the Upper House by offering official positions to some of its leading members, has furnished the *Kaishin-to* papers with a long desired topic for reviling the new Ministers of State. They remind the latter of the fact that such a time-serving policy will never answer their purpose, and they challenge them either to adopt some of the reforms proposed by the Opposition, or boldly to stand forth and fight a conclusive battle with their adversaries.

Keen competition is going on between the Oriental Radicals and the Radicals proper, for mastery of the eight provinces of the *Kwan-to*. Originally the provinces around the capital were regarded as the legitimate field of Mr. Oi Kentaro and his followers. The great influence which they at first possessed in the councils of the Radical party was mainly due to this circumstance. But gradually in these provinces younger men of ability made their appearance. The new aspirants for political fame do not in any

way regard themselves as Mr. Oi's followers, which circumstance, supplemented by the fact that Mr. Oi's section numbers few representatives in the Lower House, has led to a steady diminution of *Kwantō-kai* influence. Probably the dissatisfaction which recently culminated in the secession of Mr. Oi and his followers from the Radical ranks was largely due to a sense of their lessened weight in the Party's councils. At all events, having organized themselves into the *Kwantō-Kai* or Oriental Radicals, they have been endeavouring to recover something of their influence in the Kwantō district, and there can be no doubt that they still exercise there an amount of power not to be despised by any politician. The Radicals, on the other hand, have apparently set their hearts on annihilating their late associates' prestige in that region, and of course the result is considerable friction. The Oriental Radicals held a large meeting on the 25th ultimo at Shimodate in Ibaraki Prefecture; and the Radicals held a counter meeting yesterday in Mito the capital of the same Prefecture. The Radical organ, the *Jiyū*, has published a damaging attack on the Oriental Radicals, whose new organ is to make its appearance to-day. We may expect a fierce controversy between the two. It seems fair to defer any detailed allusion to the *Jiyū's* strong aspersions until its opponents have had an opportunity to defend themselves.

As to the Budget for the coming fiscal year, it is rumoured that the Cabinet intends to effect a reduction of some 4 million *yen* in the ordinary expenses of the Government. How far this report is true, we cannot say; but it seems very probable that the Ministry is willing to economize public expenditure to the utmost degree, and that in this respect the Opposition will not find much ground of complaint. Meanwhile, it is interesting to note a significant article in the Radical organ from the pen of Mr. Hoshi Toru, President of the House of Representatives. He insists on a further reduction of public expenses, declaring himself strongly convinced that there is room for extensive economy in that direction. He admits the urgent necessity of completing the defences of the country, and of developing national industry and commerce, for which purposes he would not grudge the outlay of large sums. But as to the method in which funds should be obtained for those ends, he is of opinion that the only plan is to save out of the expenses of the Administration, the burdens borne by the people being already heavy enough. He strongly recommends the Cabinet to compile next year's Budget on the most economical basis possible, but he refrains from clearly stating how much reduction he deems possible or desirable. Thus he does not commit his party to any definite course of action with regard to the Budget, except that reductions of some sort on the ordinary expenditure of the Government are demanded.

The Railway question continues to occupy much attention. Complaints are made against the Cabinet's delay in nominating a Railway Council in accordance to the Law for the Extension Railways. Some papers advocate the simultaneous commencement of work on all the lines to be constructed within the next dozen years. Each member of the House of Representatives, anxious to please his own constituency, demands that the first attention be given to the line in his particular locality. To reconcile these conflicting claims the newspapers alluded to above advocate the impartial but impossible plan of commencing all the lines simultaneously. The *Kokumin Shimbun*, taking a broader view, hopes that the question may be discussed not from a local but from a national standpoint. Its own opinion, based on general considerations, is that a commencement should be made with the lines situated in the provinces contiguous to the Sea of Japan, since that side of the country has been too long left unprovided with facilities of steam communication. The *Nichi Nichi Shimbun* also strongly recommends the Ministry to

organize the Railway Council as quickly as possible, and at the same time traverses some of the singular notions entertained by certain of its contemporaries.

The alleged persecution of Christians by the Governor of Kumamoto has awakened widespread interest. Some of the prominent Christians in the capital have called upon the Ministers of State, and have, moreover, published an open letter on the subject through the columns of the leading metropolitan papers. The charges brought against Governor Matsudaira are supported by circumstances apparently worthy of credit. Kumamoto is one of the most unreasonably conservative places in the Empire, political as well as socially; and it is supposed that Governor Matsudaira was weak enough to yield to the clamours of the old-fashioned folks under his charge. The metropolitan papers, without distinction of sect or party, have taken the affair up as a question affecting not only Christians but the people at large, for the reported action of the Governor of Kumamoto is a breach of the express provisions of the Constitution. The Tokyo papers call upon the Cabinet to deal with the offending functionary in a severe manner, and remark that, should the matter be passed in silence, the Cabinet will certainly be called to account.

Mr. Nakai of the *Yomiuri Shimbun* is writing a series of interesting articles on Korean subjects. In one of these articles, he discusses the effects of the completion of the Siberian railway, his forecast being that the line will inevitably be extended into the Korean peninsula. To counteract the increase of Russian influence in that kingdom, the writer recommends, on the one hand, that China construct a line to Sōul, and, on the other, urges Japan to lay a line from Fusan to Sōul and thence to Ninsen. Commercially speaking, Mr. Nakai is of opinion that the port destined to become a depôt Japan's side for the new trade to be opened up by the Siberian line, will be, not on Maizuru, as some persons think, but Shimonoseki and Moji.

The *Hochi Shimbun* has commenced an essay on the Korean question, strongly condemning the high-handed manner in which the Japanese Government has hitherto dealt with the Korean Government, and the insulting behaviour of Japanese residents in Korea towards the natives.

The reports so busily circulated in Europe, affecting the fair fame of Mr. Hitrovo, the new Russian Minister to Japan, have found their way to Japan, and created some ill-feeling. The *Nichi Nichi Shimbun*, fearing the spread of such rumours in an exaggerated form, has taken the trouble to reproduce all that has been said on both sides. In a moderate editorial, our contemporary warns its countrymen against giving credence to sensational stories, and avows itself convinced of the untrustworthiness of tales originated by a paper fiercely opposed to Russia, and circulated by other journals of more or less similar predilections. Our contemporary sympathizes with Mr. Hitrovo for the rumour with which he has been pursued by his enemies, and recognising in him a man of unusual capacity, is glad to welcome him among the Diplomatic Representatives in Tokyo.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In the Christian cult the month sees nothing of note other than a general spirit of preparation for the great conference of next year. The voices that have spoken in the Orthodox press have been chiefly the more liberal ones, and the conservatives have been for some time quiescent. There is a general cessation of controversy all along the line. But the Buddhist ranks are experiencing tumultuous disorder. First, there is deep dissension between opposing parties in several sects. This is the case with

the Nichiren, the Tendai, the Shingon, and especially the Soto sect. The difficulties in the first, as was related about this time last year, were outwardly consequent upon an alleged usurpation by Mr. Kobayashi of the position of chief priest of the sect, by means of a restriction of the franchise and an irregular election; but, behind it all, the division probably rests on some difference of method or principle, and, though events have confirmed the position of the Kobayashi section, there is still a great deal of bitter feeling. In the Soto sect the strain has reached the breaking point in the West. The temples of Noto and Echigo (they still keep up the old provincial names) not long ago decided to make a final separation from the main body. Two representatives from the East were sent to counsel peace, but in vain. Then representatives of the Tendai, Rinzai, Shingon, Shin, and other sects met, and resolved that the separation was on the whole a desirable step. But now the news comes, that the Home Department, which controls religious affairs, has refused to sanction the secession; and this checkmate has left affairs at a standstill for the present. In the Shingon sect it is the older and the younger generation that seem to be at odds. Peace-makers protest in vain against the folly of dividing the forces of Buddhism in a moment of the greatest danger. If, as appears, the difficulty is at bottom one of educational methods, then there is a radical and persistent cause for this division among the followers of Kobo Daishi. It is said that the education of the priesthood has failed to keep pace with the general educational methods of the nation at large and is still floundering in the ruts of antiquity. It follows what is called the "pouring-in" (*chunyu-tek*) method, ladling out to the neophytes stated quantities of the teacher's opinions and forcing them to swallow these willy-nilly, without question or argument. One result is that the young men obey in outward appearance so long as the teacher is present, but when he has gone, they laugh at his musty doctrines. Another defect is the so-called "idolizing" spirit; for the young candidate is obliged to pay absolute and unthinking reverence to certain choice words and sentences of certain ancient saints, and to treat them as inspired and holy utterances, without any attempt to reason upon their meaning or validity. If such be the methods in vogue, then certainly the young men of to-day will soon demand religious emancipation. An association of the chief priests of all the sects has been formed for the purpose of arbitrating and otherwise assisting in the settlement of religious dissensions; but it remains to be seen how much it can accomplish.

Secondly, there has been considerable attention paid of late by the Buddhists to Unitarianism, its doctrines and methods. This has no direct connection with the New Buddhism, and does not indicate any trend of the latter in that direction. But it finds expression largely in the utterances of Mr. Nakanishi Goro, the bold young reformer whose book on the New Buddhism we noticed last spring, and whose notable article on Christianity we summarized last month. Mr. Nakanishi's latest words we give below. But the immediate cause of the talk that has arisen is the announcement by Mr. Saji Jitsunen that he is to become lecturer on Oriental Religions at the Jiyū Shingakko (School of Liberal Theology) of the Unitarians. Mr. Saji, it seems, is, or rather was, a Buddhist, a lay teacher of great note as a scholar; a year or two ago he left Buddhism and published a series of scientific works of an educational character. He has not, it seems, become a Unitarian; but his entry among the faculty of the Jiyū Shingakko has called forth hostile remarks from some of the faithful.

Mr. Nakanishi Goro, in the *Dento* (Shingon Sect), first expresses gratification at the presence of Unitarian workers. Unitarianism, he declares, is the most important movement in Christianity. It aims to make Christianity reasonable. The Unitarian faith, it is true, is negative, while Orthodoxy is positive; Unitarianism rejects the Trinity and the Incarna-

tion, and believes that the human perfection of Jesus is not unattainable by man; this last being an idea which Buddhism also shares. Unitarians also lay great stress on morality and believe in the constant progress of humanity. How lofty their religion is, compared with Orthodoxy. If there were no Buddhism, we would glad extent our hands to embrace Unitarianism. We hold fast to Buddhism, because we believe it contains still greater truth; but Unitarianism is acceptable to us, because its doctrines are lofty, its faith liberal, its morality pure. Welcome, Unitarians, as friends!

In another article (in the *Keisei Hokugi*, edited by himself) Mr. Nakanishi's devotion to his country's religion comes more to the front, and he urges his brethren to take up earnestly the cause of reform, lest these very excellencies of Unitarianism draw away from Buddhism those who are looking for new light. Hostile to Buddhism, he thinks, are the forces of materialism, scepticism, and Christianity. But most to be dreaded is Unitarianism. Attractive to Buddhists by its rationalization of Christ and of miracles, and its postulation of Evolution as the law of the universe, it is nevertheless founded essentially on Christianity; it is in short Christianity rationalized. But its rejection of the superstitions of Christianity, its insistence on the Christian spirit only, and its harmonizing of religion with science and humanity,—all these are dangerous to those sheep of our fold whose steps are already beginning to stray. It is true that Dr. Channing has expressed opinions quite at variance with the central truths of Buddhism. But still Unitarianism tolerates many shades of opinion, studies Buddhism with a desire to reach its truth, and does not wage bitter war upon it, as other Christians do. It is blindness and folly to oppose Buddhism without knowing its principles, and it is equally blind to reject Unitarianism without reflection. The test of truth is not tradition, or custom, or yet popular opinion. Truth is the law of the universe; it cannot be produced by us or destroyed by us. There are to-day many who are proudest of Buddhist truth and yet know it least. Buddhist truth changes not; but its priests are degenerate and cannot keep up with the world's progress. If Unitarianism continues its work here, there will be found many intelligent Buddhists who will embrace its principles,—an untoward result, surely, for Buddhism. Let us hope that we may find some means of furnishing within our own fold religious principles meet to satisfy these dissatisfied ones and thus hold our own against Unitarianism.

Evidently not all Buddhists think — Mr. Nakanishi does, for in the same *Dento* containing his article, the editor, in the column of jottings, counsels forbearance towards Christians. It is unkind, he says, to attack them in this hour of their distress. Let them alone. Error dies of its own weakness, and truth cannot but conquer in the end.

In the *Dampo* an illustration is drawn from English history to enforce the theme of "Religion the Protector of the Constitution." The *London Times*, it is said, happened once to remark that Christianity in some points did violence to truth. At once a hail of letters poured in upon it from all quarters, asserting that such a statement sapped the foundations of national morality and demanding its withdrawal. The *Times* then withdrew the remark, presumably not out of conviction, but out of regard for public order. The principle is here clearly seen that national order must be preserved, even at the expense of the progress of truth. This is by no means the most commendable principle. But it is none the less a fact that religion and national welfare are linked together. Any religion is good if it has grown up with the country and is fitted to the country,—whether it be Mohammedanism, Buddhism, or any other. At present the ferment in our material civilization is retarding our religious welfare. Religion is no longer bound up with country; each man is for his set

and the result is that the whole moral system of the nation is disorganized. It remains for Buddhism to show itself equal to the occasion, and to link itself as indissolubly with the national welfare as Christianity is linked in Europe.

The long series of articles in the *Dento* on "Japanese Morality" is brought to an end with some observations on the condition of Confucianism. Many people, it is said, are found declaring nowadays that Confucian principles are unjust; that they profit the strong and oppress the weak; that, for example, they teach subjects to be loyal, but not sovereigns to be benevolent, give women duties without rights and men rights without duties, allow parents to make claims on their children but give children none upon their parents; and that such principles can no longer be followed in the present state of society. The writer denies that any such wholesale condemnation can be made of Confucian morality; but admits that the modifications of its doctrines now taking place are for the better. In the last *regime* Confucianism displaced Buddhism among the higher classes, and Buddhism became the belief of the common people. But now the entire nation is being leavened with Western ideas, and though there are excesses in both directions, the general result is on the whole an improvement.

The *Jiyu Kiristukyo Zasshi* (Universalist) comes to us in a new and improved dress, the size being that of a monthly instead of a weekly, as before. The new departure indicates prosperity and a firm hold on the reading public. Mr. Yoshimura writes on "Is Marriage a Failure?" After premising that a man's happiness or unhappiness in the marriage relation depends on right conduct on the part of both parties, he enumerates the circumstances under which harmony cannot be hoped for. These are (1) where the marriage was for money; (2) where the husband spends more money on tobacco than the wife on dress; (3) where any work is engaged in which either does not like; (4) where there is serious difference of opinion; (5) where the husband goes to the theatre and other amusements without taking his wife and children; (6) where the husband insists on dictating to the wife in matters of dress; (7) where the meals are not properly prepared; (8) where either party is lazy and idle. Another writer inveighs against "Fashionable Christian Enterprises." He takes as his illustration the recent resolution of a number of Christians to make a huge bell out of their renounced pipes and send it to the Chicago Exhibition. Such enterprises are as empty and vain as the bell itself; and the same may be said of other enterprises now fashionable—young men's clubs, etc.,—which serve merely to pass the time but do nothing to advance Christianity. Better turn our attention solely to preaching the Gospel.

In the *Shinri* (German) Mr. Minami writes on "The Idea of Jesus." Mr. Maruyama continues his thoughtful series on "The Progress of Christianity," reaching in this number the conflict of the Gospel and Science. He stands on the proposition that if the Bible is from God and therefore teaches the truth, it cannot be in contradiction with the truths of philosophy and science. The question for us, therefore, is simply to discover this harmony between the Bible and Science, knowing that it must be capable of discovery.

In the *Seikyo Shimpō* (Greek) Mr. Owada, writing on "Public Happiness," reproaches his nation with the enshrinement of selfishness as the principle of life. The new doctrines of socialism and the other isms are much talked about nowadays; but much attention to them draws the heart away from the old and eternal truth that happiness is to be found only in serving others. Nothing but the success of Christianity and its principles will enable this truth to prevail over these unsound theories and fads of modern times. Another writer pleads for

Christian education as the only basis of national morality.

Mr. Yokoi's article for the month, in the *Rikugo Zasshi* (Congregationalist), is entitled "Cosmic Optimism." He begins with a quotation from Emerson on cheerfulness and courage, and then enlarges on Matthew Arnold's famous "power that makes for righteousness," the Infinite Power of which all things in the universe are but the manifestation, the pitying and loving Power, leading us on to good and revealing the secrets of the universe. A few have penetrated to these secrets,—Confucius, Buddha, and, greatest of all, Christ, who declared the eternal truth: "God is love." The great question is, what is the true aspect of the Universe? The answer is that it is one of constant progress towards the good, through the help of the universal inspiration and energy acting in the world. When we follow the dictates of love and uprightness, then God is with us; the Universal is our father and friend. Prayer is the putting of ourselves in harmony with these influences. No nation can progress which does not thus put itself in harmony with the universal forces of good; and what this nation now needs is a spiritual resolution directed to this end. Mr. Ukita, taking the somewhat misleading title, "The Essence of Christianity," writes on the abuses of that form of unpractical religion which may be termed "transcendentalism" (*chozen-shukyo*, religion of the beyond). This form of faith lays too much stress on the future and unworldly aspect of religion. Man's chief destiny is conceived of as Heaven, and this world is nothing,—a belief which is nothing more nor less than Buddhism. One of the deplorable results is that the reaction from such a belief leads to atheism, that is a denial that there is anything worth seeking outside of this world. Another is that an excessive sentimentality is nourished, leading men, for example, to despise the institution of marriage because in Heaven there are to be no sexes. Another is that the progress of material civilization is checked, as we see Buddhism has checked the progress of the Orient. Still another is to divert our attention from the vital religions of the day, which need all the thought that our powers are capable of.

In the *Kiristukyo Shimbun* (Congregationalist) is an explanation of "The Decline of Christian Schools." The causes suggested are (1) English is not given as much attention as formerly; (2) French and German are now becoming as important as English, and there have sprung up other good schools that teach these languages; (3) English schools also are more numerous; (4) the national reaction has worked against foreign schools; (5) the general knowledge of the nation is advancing, and greater specialization is demanded; and (6) the methods are not suited to national education; the pupil learns foreign proprieties and standards, but not Japanese; the playing of the organ and singing of hymns are of no use to entertain friends who appreciate only the *koto* and the *samisen*.—If the reader will turn to the other explanations and suggestions that have appeared in these columns during the past year, he will find that the foreign managers are very much in the position of the miller and his son taking the donkey to market.

In the same journal are vouchsafed also some suggestions as to the "Work of Missionaries." There are two great obstacles to their effectiveness,—first, the difficulty of language for, however eloquent in their own tongue, their preaching is never impressive in Japanese; second, the difference in ways of thought, for they cannot be as skilful as they could wish to be in understanding the needs of a given individual or community and in applying the remedy. The chief objects to which the foreign missionaries can devote themselves are, first, to teach in the Christian schools, which just now need our best attention; and, second, to get money; for the time is coming when the annual support from the West must be replaced by an endowment which shall make the schools independent of

MERCHANT CONSULS.

IT was not surprising that a misconception should have existed at the outset of the Portuguese jurisdictional complication as to the real reason of Japan's action, or that the general public should roughly consider the question to be one between Consuls *Missi* and Merchant Consuls. But time enough has elapsed and sufficient explanations have been publicly given to place the matter beyond the reach of such errors. It is surprising, therefore, to find the *Hyogo News* writing in its issue of the 22nd instant:—"We could see no reason at the time for Japan's objecting to Merchant Consuls as such, providing a careful selection was made, but Portugal, by contemptuously ignoring the representations of the Japanese authorities, has put herself out of Court." What our contemporary means by "a careful selection," and how, from a number of totally untrained persons, any process of selection could obtain men competent to discharge judicial functions, we do not profess to understand. All merchant consuls in countries where jurisdictional duties devolve upon them, are an indefensible anomaly, and any Power content to entrust the administration of justice to such persons, in respect of its nationals in Japan, whether few or many, is guilty of a distinct breach of treaty obligations. That such breaches are suffered to continue in practice is simply because, having been permitted at the outset when Japan lacked perception to protest, they have acquired a sort of prescriptive title to toleration. It is certain, however, that did any State attempt to establish a system of Merchant Consuls in this country *de novo*, or did any State seek to revert from a system of Consuls *Missi* to Merchant Consuls, Japan would object most strenuously. Portugal's procedure, however, was not a mere reversion to Merchant Consuls. Her Consuls at the outposts had always been merchants, so that her system, though at no time comparable with that of a Power having properly equipped Consular Courts, was not open to any more serious objection on the score of *personnel* than were the systems of certain other small Powers. The reality in her case was that, prior to 1887, her arrangements for the discharge of the jurisdictional functions devolving on her under the treaty were not even so efficient as the arrangements made by other States represented by Merchant Consuls. The Portuguese Consuls were invested with powers which amounted only to those of a committing magistrate, and in order that, for the purposes of any particular case, their competence should be extended to something like efficiency, reference to Macao was necessary. To this exceedingly defective system Japan called official attention in 1883, and received distinct

assurances that steps should be taken to amend it. There was no question then of Merchant Consuls as such. Objection might justly have been taken to a system in which the men entrusted with judicial functions lacked legal training of every kind. But such an objection, being equally valid against all systems of Merchant Consuls, was not specially urged in Portugal's case, the eminently defective feature with respect to her Consuls being, not that they were untrained merchants, but that they did not even possess the competence of other merchant Consuls, since they only discharged the functions of committing magistrates and were not entitled to receive *exequaturs* from the Japanese Government. Portugal, as we have said, undertook to amend this state of affairs, and did apparently amend it in 1885, but the Nagasaki incident of 1887—when it was found that no Portuguese Consul in Japan possessed authority to issue a warrant for the apprehension of the thief—furnished concrete evidence that the corrective measures nominally taken were practically defective. In the sequel fresh reforms were introduced, the upshot being that the Consuls at the outposts were reduced to the rank of Vice-Consuls and made dependent upon a Consul-General *Missus* in Tokyo, in whom was vested competence to fill up the flagrant lacunæ previously existing in the system. It was this arrangement, built up after years of practical experience and in deference to Japan's representations, that Portugal suddenly overthrew in 1892, paying not the slightest heed to Japanese remonstrances, and taking not the smallest trouble to provide against the flagrant defects which the system elaborated in 1887 had been designed to remove. To describe the Portuguese procedure as a return to Merchant Consuls, after the fashion of certain other minor Powers, is therefore an evident misconception, which ought not to have been possible in view of the full explanations already furnished. We judge from the present tone of the *Hyogo News* that it is anxious to treat the question in a spirit of fairness, and we therefore recapitulate these easily understood facts.

MAYOR FUKUSHIMA AND HIS RIDE ACROSS ASIA.

EVERYBODY remembers the marvellous tale published by a so-called Berlin correspondent of an American journal with reference to the causes which started Major FUKUSHIMA on his remarkable ride across Asia. Journalistic methods in the States are so uncommonly smart that correspondence from a distant centre of interest can be made to grow up at any minute under the pens of the every-day copy-manufacturers in the office of the newspaper itself. Such a feat has long ceased to be astonishing. Indeed, it has become so familiar that one may find folks

of not wholly perverted morals who persuade themselves to imagine that for an editor to write a letter to himself in the name of a fictitious correspondent, date it from a place thousands of miles away, and fill it with matter purporting to be the outcome of personal observations conducted *in loco*, is nothing more than a pleasantly adroit device for enhancing the consequence of his newspaper and tickling the fancy of his readers. But we are not aware that even these liberal-minded critics have ever agreed to condone, not alone the manufacture of a correspondent, but also the fabrication of the whole subject of correspondence, with the least possible attention to truth and the utmost possible deference to imagination. That appears to be precisely what happened in the case of Major FUKUSHIMA's American historian. Every incident of the tale had its origin in the nimble fancy of the imaginary correspondent. The beautiful German lady of high degree who loved and was loved by the gallant Major; the morose brother who marred the course of true love; the ingenious wager devised to start the lover on a tour which should separate him finally from his innamorata or make him famous enough to aspire worthily to her hand—all these things were airy fictions without the tiniest fragment of truth to colour them. It would not have mattered much, so far as the Major personally was concerned, that a composer of newspaper romance should have taken him as a theme. But, unfortunately, there happens to be a fond and faithful Mrs. FUKUSHIMA in Japan, to whom, awaiting the return of her lord from long exile, these stories penetrating, caused no little grief and perplexity. 'Tis hard for confidence to hold its head above all shocks, when thousands of miles of separation, years of absence, and the famed charms of beauteous ladies conspire to suggest disquieting fancies. The American romancer did not reflect upon these contingencies, we imagine, nor if he had would they have greatly influenced a writer so splendidly untrammelled by conventionalities. Happily for Mrs. FUKUSHIMA's peace of mind, there arrived recently in Japan a gentleman who shared Major FUKUSHIMA's quarters in Berlin, possessed his full friendship, and is acquainted with the minutest details of his life ever since he landed in Europe. From this Mr. TETSUYA HAYAKAWA, who laughs very heartily at the extravaganza in which his chum has been made to figure, it has been learned that the ride across Asia had its origin in a genuine ambition to procure information at first-hand about an undertaking one of the most important of the time from an Oriental point of view. Major FUKUSHIMA appears to be naturally imbued with the love of travel. When Count YAMAGATA visited the West in 1890, the Major, then Military Attaché of the Japanese Legation in Berlin, expressed to the Count a strong desire to

travel in Eastern Europe, and the Count approving of the project, the Major was subsequently enabled to journey, under commission from the War Office in Tokyo, throughout the Balkan Peninsula, visiting Servia, Roumania, and Bulgaria, and making himself acquainted with the whole region down to Greece. This tour whetted his appetite, and when public attention began to be keenly directed to the Siberian Railway project, the Major conceived the idea of exploring the route on horse-back, and learning as much as possible of an enterprise so vital to Japan. His objective point originally was Vladivostok, but by degrees the programme grew to include the transit of northern China and exit at Peking. The Japanese Government have done what they could to facilitate things for the enterprising officer, and the Chinese Government also, at the instance of the Japanese Legation in Peking, have shown much good will, furnishing the Major with a passport which ought to secure him safe passage at every point of the Middle Kingdom lying on his route. The journey, if successfully accomplished, will be a very memorable feat, and the Major will deserve all the credit that must attach to him, not only as a man of exceptional pluck and endurance, but also as the possessor of much unique and valuable information. It is a little hard that an enterprise conceived so deliberately and prompted by such solid motives, should be distorted by a sensational penny-a-liner into the silly sequel of a giddy love-affair. But these accidents may befall any one in such times as ours, and if the Major's big ride did not begin in pique, as the American Munchausen pretends, let us hope that it may not end in pathos, as some wiseacres predict.

"CROOKHAVEN."

IT cannot surprise anyone to learn that an advertisement now appearing in the columns of some local foreign newspapers with reference to the sale of a house and land at Kamakura, should have evoked unfavourable comment from the vernacular press. The advertisement is inserted by a local firm of auctioneers, who announce that they "have received instructions from Mr. OKI, to sell by public auction (unless previously disposed of privately), at their Sales Rooms, No. 77, Main Street, Yokohama, at 2 p.m. the healthily and beautifully situated property (in all 1,648 *tsubo*) comprising the 6-roomed villa with extensive verandah, &c., known as "Crookhaven," at Reozen-yama, Sakanoshita, Kamiakura, together with the valuable household furniture, &c., the whole forming a most comfortable winter or summer residence, complete with every requisite for a family," and so forth. At the end of the advertisement is the following significant note:—"The transfer can only be made to a Japanese subject." Now, it is

is an open secret that several plots of land in Kanagawa Prefecture and elsewhere, outside the limits of the foreign settlements, have been purchased with foreign money and are held by Japanese in trust for foreigners, who, in many cases, have built villas there to serve as summer resorts. This procedure illustrates very forcibly the advantages resulting from the extension of foreign enterprise beyond the Settlements. Places previously possessing no market value except for inferior agricultural purposes, if even for that, are converted into building sites; large sums of money are expended in making them beautiful and attractive; the value of the land throughout the whole locality is appreciated; custom is brought to local tradesmen; in short, from every point of view, the advantages to the Japanese are incomparably greater than those accruing to the foreigner. It may indeed happen, in some rare cases, that the latter reaps a profit of a few *yen* from the investment when he comes to dispose of the property, but in an experience spreading over a quarter of a century, we have never heard of anything of the kind. The virtually invariable rule is that the foreigner sinks far more money in the place than he ever gets, or expects to get, out of it. But that does not distress him. From the outset the speculative element played a very insignificant part in the transaction. What he wanted was a pleasant retreat from the worry and wear of business, and since he rates the enjoyment derived from his villa at a very liberal figure in *yen* and *sen*, an apparent loss of capital at the close of the transaction troubles him very little. Japan is all the gainer. Unfrequented places are converted into fashionable resorts, and gradually the exquisite spots along her coasts or among her hills receive the appreciation they deserve. Were the country thrown freely open to foreign residence, this process would be greatly accelerated. No speculative purchases of land would take place, as Mr. OKI KENTARO and his disciples profess to think; but here and there throughout the empire pretty villas would spring up, and year by year larger sums of foreign money would be devoted to enriching the nation and rendering the country more attractive and habitable. At present, however, this most desirable consummation has to be compassed *sub rosa*. The foreigner buys a piece of land in the name of a Japanese, builds on it, surrounds the building with a more or less costly garden, and has practically no security except the good faith of the Japanese who lends himself or herself to the transaction. Of course the affair is contrary to the strict letter of the law, and if Japan suffered in any way by the breach, foreign public opinion would frankly condemn it. But, as we have shown, so far from suffering, she is a material gainer, and what is more, the Authorities are, in the present, powerless to prevent such doings.

From time to time Japanese journals of heroic proclivities, like the *Nippon*, for example, inveigh against the Government for allowing foreigners to "whip the devil round the post" under the shadow of borrowed native names. But, as is too frequently the case with irresponsible writers, these journalists never seem to consider what means the Government has at its disposal to prevent the abuses in question. So long as the forms prescribed by law are strictly complied with, the Authorities are without competence to interfere in any ordinary transaction of buying and selling. Suppose that on the occasion of the owner of a piece of land and its new purchaser, presenting themselves at the local Registration Office, as prescribed by regulation, and taking the duly formulated steps to alter the title of the property, the registration officials were to subject them to a cross-examination, prying into the motives of the transfer, the *provenance* of the purchase money, the uses to which the property was to be applied, and so forth—suppose that anything of that kind were attempted, should we not have a chorus of public indignation against officials who dared so flagrantly to abuse their position, and so unwarrantably to interfere with freedom of contract and the liberty of the subject? In effect, the acquisition and tenure of land outside the Settlements by foreigners in Japanese names are inevitable incidents, quite beyond the range of official control. They represent a feature of the progressive intercourse inaugurated when the Settlements were first opened, and thenceforth irresistibly facilitated by the course of every-day events in a country where all things, except the text of antiquated treaties, oppose themselves more and more to uncivilized isolation and restrictions. Did Japanese newspapers consider these things a little more carefully and from a more practical standpoint, we imagine that they would complain less about the transactions in question. So far as concerns this particular advertisement, however, we cannot deny that their comments are in great part justified. The wording is obtrusively clumsy. That a Japanese landowner is at liberty to entrust the sale of his property to a foreign auctioneer, and to have it sold in a foreign auction-room among foreign bidders, can scarcely be denied. But why not preserve the semblance of the fiction, if the reality is to be practised? No Japanese would advertise himself as "Mr. OKI." There are thousands of Mr. OKIs in the empire, and not one of them would think of inviting the public to identify him by his prenom only. Then again, the appended note is simply an invitation to doubters. "The transfer can only be made to a Japanese subject." What on earth is the use of such a superfluous declaration, unless it be intended as a covert announce-

ment that a foreign purchaser is looked for? We do not wish to attach importance to a mere question of phraseology, but truly we think that in the interests of the community at large more circumspection ought to have been employed. Whoever may be represented by Mr. Oki, he appears either to lack discretion, or to be selfishly careless about other people's convenience. Thus much admitted, however, we should like to ask the *Nippon*, since it figures conspicuously as a critic in this instance, to descend for once, by way of novelty, from the pedestal of general denunciation, and to tell the public precisely and by what particular methods of procedure it would have the Authorities interfere to prevent transactions such as it denounces in this case. One longs for a grain of practicality to leaven the bushels of critical chaff scattered abroad by irresponsible writers in the vernacular press. Something eminently to Japan's advantage is happening; no literal provisions of law are violated in the process; no Constitutional means of interfering exist: yet we have this empty outcry raised.

TOKYO IMPROVEMENTS.

SOME time ago we reproduced from the *Nichi Nichi Shimbun* a note referring to large building projects in hand, under the direction of the Mitsu Bishi Company, at Maru-no-uchi. We are now able to give a fuller and somewhat corrected account of the scheme. The spacious area of open ground extending within the outer city moat from Sukiya-bashi to Tokiwabashi, consisting of about 80,000 *tsubo*, is to be gradually divided into blocks averaging 700 *tsubo* in size, intersected by secondary thoroughfares ranging from 30 to 48 feet in width. The main outer thoroughfares which already exist are being widened by the Municipality, in accordance with the general plan of city improvement, and will be 120 feet in width. The building blocks thus formed are to be gradually covered with substantial fireproof structures suited to a variety of tenants. Ground will also be rented to those desirous of building, upon certain conditions as to character of construction, it being considered important to insist on fire-proof erections and to preserve as much as possible some uniformity in arrangement. Central in position, adjoining the projected railway terminus, the new Bank of Japan, and Municipal Offices, there is no doubt that this locality will within a few years become a most important and valuable commercial quarter. The secondary and back streets will permit of the erection of buildings of a cheaper class than those facing the main outer thoroughfares. Shops and small tenements will occupy such positions; for it is found in Japan that the shopkeeper has a prejudice against wide streets which remove him from the traffic. In a portion of these

internal thoroughfares, there will probably be covered arcades, which, when lighted by electricity, should form a great attraction at night. Facing the main thoroughfares the buildings will of necessity be of greater height and more imposing style. On one of the principal corner lots facing the present Department of Justice and close to the new Municipal Offices, one large block of buildings, about four hundred *tsubo* in area, has been already commenced. A considerable portion of this will be temporarily occupied by the offices of the Mitsu Bishi Company and their Bank, known as the 119th National Bank; the remaining part being divided into spacious tenements for business and professional tenants. The building will present two well proportioned façades to the main streets, executed in red brick with stone dressings. It will be of uniform height, divided internally partly into two and partly into three stories, with a low basement. Though of considerable elevation, its extensive frontage renders its height in no way excessive and not greater proportionately than the height of ordinary two-story brick buildings. Such height will, nevertheless, be sufficient to give a certain architectural dignity to a structure that faces a street as wide as those of the largest European capital. Fronting such a thoroughfare a building of lower elevation would look mean and insignificant. In addition to this, as unnecessary height in the ceilings has been avoided, and as the floors, which are fireproof, are constructed with steel joists anchored into the walls and acting as earthquake ties, it will be understood that the structure possesses greater strength, stiffness, and security than ordinary buildings of much lower elevation. The staircases are also to be of stone and iron, so that the whole represents a first-class fire risk. Much has been said as to the bad nature of the soil in this locality, and indeed, as is the case more or less in all the level parts of the city, the ground is such as to necessitate artificial foundations of a complicated and somewhat expensive character. Very successful experiments have, however, been made upon the foundations prepared for the new building, and, in spite of the softness of the soil, they have been practically proved able to sustain a weight several times greater than that to be placed upon them. This building block will be followed by another of somewhat similar dimensions, placed on the opposite corner lot facing the inner moat. The second block of buildings will be entirely occupied by the combined offices of the Tokyo Marine Insurance Company and the Meiji Life and Fire Insurance Companies. The large and increasing business conducted by these three companies has justified them in projecting extensive and handsome offices in a more central position than heretofore, and they have gladly availed themselves of the opportunity afforded by

the Mitsu Bishi Company's building projects. Other schemes are on the *tapis*, which it is hoped before very long will assist in converting this valuable open site into the model city quarter which it is destined to become.

COTTON YARN MANUFACTURERS AND THEIR EMPLOYÉS.

THE Japan Cotton Yarn Manufacturers' Guild recently held a general meeting to consider certain important labour questions. Some of the resolutions passed by the Guild are declared by the *Keisai Zasshi* to be extremely pernicious to the interests of the factory hands, so much so, indeed, that the latter's liberty and rights are virtually placed at the mercy of their employers. It is stipulated, for instance, that no labourer discharged for misconduct by one member of the Guild, shall be employed by another; that when labourers in the employ of any member of the Guild go on strike, their names are to be communicated to the rest of the members, so as to obviate any chance of their employment by the latter; that a labourer actually or lately in the employ of any member of the Guild, shall not be employed by another member without the consent of the former; that in the event of any member of the Guild discovering that one of his labourers was formerly in the employ of another member, the former shall immediately suspend the labourer and take steps to seek his late employer's consent; that, when any member of the Guild engages a labourer who professes to have had no experience of spinning work, the new hand shall be carefully watched in order to determine whether he has had such experience, and that if it appears that he has, then he shall be discharged at once. It will be seen from these instances that a labourer who has once been discharged from a spinning factory, can never again find employment in any of the factories throughout the country, however skilled he may be in his work. The effect of such autocratic stipulations will be to place the employed entirely at the mercy of the employers. Naturally the Tokyo periodical strongly condemns so cruel a combination on the part of the cotton yarn manufacturers. Our contemporary considers that the acme of tyranny is attained when a manufacturer is allowed to interfere between one of his former hands and the latter's new employer. This it denounces as impardonable and even vindictive. The Rules of the Guild, of which the above provisions form a part, have, of course, no legally binding effect: any member of the Guild may, if so inclined, disregard them with perfect impunity. But the members of the Guild, alive to their own interests, will probably hold fast by their combination, so as to reduce their employés to a state of practical slavery. There is from evil possible under such a

system may be judged when it is remembered that there are 35 spinning factories throughout the country, whose owners are all members of the Guild, and that the total number of hands employed in these establishments is 22,618, of whom 5,739 are men and 16,879 women. The wages are very low; the average for men being 16 $\frac{57}{100}$ *sen*, and for women 8 $\frac{4}{10}$ *sen per diem*. The Japanese working man is good-natured and patient. But there is a limit even to his long suffering, and sooner or later difficulties such as are experienced in the West will arise between capital and labour in this country. It is, says the *Keisai Zasshi*, of vital importance to manufacturers to profit by the experience of their *confrères* in Europe and America. Before the threatened evil befalls them, they should devise measures calculated to secure the continuance of the smooth and mutually beneficial relations hitherto existing between master and servant in Japan.

No explanation is offered of the reasons that have induced the owners of factories to adopt such drastic measures for their protection. If any ground for combined action existed, we should have thought that it was entirely on the side of the operatives, concerning whose lot many pitiful tales are told. Already the hardships imposed on them seem to call for legislative interference. The subject was recently alluded to in our own columns, and is ably discussed in the last annual report of the American Board Mission. We learn with surprise, therefore, that factory owners have organized a union for the purpose of binding still more tightly the shackles in which their employés are held. It looks altogether like a reversal of the proper order of things.

HÆC OLIM MEMINISSE JUVABIT.

No one is surprised to read in the columns of the vernacular press that the vendors of fowling pieces in Japan find customers growing gradually fewer, or that the reason assigned is the extermination of game in all regions within easy access of the centres of population. Greatly changed, indeed, is Japan as a field for the sportsman. It is easy to recall the time when one could obtain a really excellent day's shooting within seven miles of Tokyo. The first foreigners that made their way to Itabashi found a cloud of pheasants there. It was in the winter of 1868. The party consisted of half a dozen officers from the camp on the Bluff. They rode from Yokohama to Tokyo—no other method of progress was possible at that epoch—and after a brief rest at the Tsukiji Hotel, a huge and always unprosperous wooden shanty, turned their horses' heads toward Itabashi. In those days the deadly sword of the Samurai exercised a very real influence upon all the goings and comings of foreigners outside treaty limits. A strictly enforced order compelled every officer to wear uniform whenever he passed beyond the limits of the camp, the theory of men in authority being that the soldier's garb would probably command respect where the civilian's might only provoke animosity. How much justice could be claimed for this view, there were naturally no practical means of determining. The officers themselves derided it, but of course obeyed, as in duty bound, trusting, however, much more to the revolvers which they invariably carried in their holsters than to

the red or blue patrol-jacket on their shoulders. Within the precincts of Tokyo another guarantee of security was provided by the greatly harassed Government. After every foreigner, or party of foreigners, rode a little group of guards called *Bettei*. They sat in the saddle of old Japan, their feet thrust into huge metal shoes that served at once for spurs and stirrups, a saucy-lid lacquer hat on their heads, two swords thrust into their girdle, both of their hands fully occupied manipulating reins of cotton cloth, and their ample sleeves fluttering in the wind as their ponies, nose in air, shuffled along in the peculiar "disunited" gait to which the charger of ancient Japan was always trained. There is no recorded instance of these *Bettei* having effectually exhibited protective capacities in practice. But it is possible that their visible presence deterred many a swash-buckler. They were the kindest and most patient guardians conceivable. Never once was their equanimity disturbed by the frantic efforts of youthful Anglo-Saxons to shake them off, or by the thankless demeanour of the foreigner generally. Imperturbably polite and placid, they discharged their escort duty in precisely the same manner under circumstances the most various. When the party of officers of whom we are speaking set out from the Tsukiji Hotel, their prime and most earnest purpose was to escape from the *Bettei*. It disturbed them to think of going to shoot pheasants under armed escort, and perhaps they were also influenced by the notion that half a dozen stalwart British soldiers could protect themselves well enough without the aid of four or five old-fashioned and inefficient looking Japanese guards. At any rate they managed in the first place to get away unescorted by pretending that they projected nothing beyond a little walking exercise for their ponies immediately outside the Hotel; and no sooner were they clear of the place's precincts, than they rode away at top speed, following the most circuitous routes and adopting every conceivable device to bewilder a pursuer. But it was all fruitless. Long before the Itabashi bridge could be reached, a patter of hoofs sounded in the rear, and the five *Bettei* rode up, perfectly unmoved and immaculately courteous, betraying neither by word nor by look any consciousness of the deceit that had been practised on them or of the chase they had been led. Arrived at the Itabashi tea-house they took up their quarters as though their whole life had been passed forcing their escort upon unwilling travellers or protecting truant sportsmen. The time was Christmas week. No snow had yet fallen, but the days were turbulent with a bitter blast, sometimes swelling to storm force, and always subsiding under the star-light to fitful, ice-laden puffs. For decades the game in those regions had lived undisturbed, its only enemies being the marten, the badger, the kestrel, and a rare biped with snares and nets. Itabashi, Shirako, Owada, the picturesque hills and groves that surrounded them, and the streams that rippled in their neighbourhood under clumps of bending bamboos or among deep-loamed rice-fields, had never heard the echo of fowling piece, or the whiz of Daimyo's arrow. The obtrusive Occidental's breech-loader and the cordon of the feudal magnate's battue were alike unknown in this peaceful district. Two stones' throws beyond the garden of the tea-house and the village bridge of much traffic, a family of Mandarin ducks lived in perpetual residence, their parlour a crystal nook roofed by willows, bamboos, and three sentinel cryptomeria; their dining room a stretch of babbling shallows, where long tresses of water-weeds waved and swayed within easy reach of hungry bills. Not easily disturbed, these gentle birds, when flushed for the first time in history by prowling sportsmen, made only two circles before returning again within range of the barrels that had already decimated their number. Everywhere there was the same pitiful ignorance of danger. A bevy of painted snipe, springing from some sedge-patch, would lazily flap away to a distance of three or four hundred yards, and when driven from their second resting place, would return to their first with just sufficient access of alacrity to signify a protest against

further intrusion. These, however, are incidents subsequent to the doings of that primeval party which took up its quarters in the Itabashi inn on Christmas eve twenty-four years ago. Not one man among the six had ever been in Itabashi before. Splendidly ignorant whether there existed in all the region so much as a wood capable of sheltering a pheasant, or a patch of paddy likely to tempt a snipe, their prospects of sport might have seemed exceedingly slender. But they were not without a guide. Sweet experience in the vicinity of Yokohama had taught them to believe that Japan was a vast game preserve. The dells about Totsuka and the softly shrubbed knolls along Mississippi Bay, were good in those times for seven or eight brace of pheasants on any winter's day, and in the number there would certainly be included some of the immortal copper cock, that swept through the firs like a flash of golden sun-light, and made the hearts of the unsophisticated sportsmen throb so violently and the blood rush to their heads in such a flood that never a *yama-dori* fell except by chance or mischance to the first barrel levelled at him. If the perpetually poached hills of Dickson and Macpherson could furnish such bags, what might not be expected further a-field? In this reasonable faith the six wended their way to Itabashi. And before the perennial bowl of preserved soup and potatoes had been discussed, they had evidence of the justice of their surmise. For in the pauses of the wind's sobbing, there came to them such a cackling of wild geese, such a swishing of mallard's wings, and such a whistling of driving widgeon, that the starlight seemed to be peopled with these musical sounds. All through the early hours of the night, flock after flock of wild-fowl passed inland to the great rice-plains of Musashi, the beating of their wings and the questing of their voices, as they swept above the inn, making those six sportsmen see feverish visions of unparalleled bags and yearn for the dawn of an unprecedented day. Their first care had been to seek local information. Japan, before familiarity fulfilled its wonted task and before ugly international problems soured public sentiment, used to be almost scriptural in its genial helpfulness. "Out of the mouths of babes and sucklings" a man might look for help. Gratefully remembered still by many a keen sportsman, there served a lass at Itabashi tea-house as kind as she was comely. A cast in her eye saved her from the temptations of exceptional beauty, but she was nevertheless emerging from her teens into plump prettiness that no properly constituted individual of the opposite sex could contemplate without emotion, and Providence had implanted in her soft bosom an absorbing anxiety to obliterate that marring cast by perpetual sweetness of disposition and by universal good-nature. How many leal men and true fell in love with sweet O-Také in those sportive days? Alas the record is blurred and misty, and hearts that beat quicker as she piled the snowy rice cup or spread the down quilt, have long been laid in the "grass-grown barrows of the happy dead," or, sadder still, become insensible to such tender emotions. With truth, however, it may be entered in the pages of history that every one of those six officers fell a victim to O-Také's charms before they had been ten minutes in the tea-house, and there is valid evidence that the harassed *Bettei* also forgot their worries in the presence of her sweet ministrations. It was natural, therefore, that O-Také should be consulted at once about the sportsmen's programme, and she showed herself equal to the occasion by referring her questioners to a man destined thenceforth to be the guide and friend of every foreigner visiting Itabashi in search of game, so long as the place remained worth visiting for that purpose. Shimbei was a born poacher. Every twinkle of his piercing little eyes reflected the memory of a leveret's lair or a pheasant's nest, and the wrinkles on his weather-beaten visage seemed counterparts of the snares and gins his life had been spent in setting. He knew little of manners, but much of the value of a silver piece, and he deemed it an infinitely better speculation to be paid for seeing others try to kill game than to

hope to be paid by trying to kill it himself. "Were there pheasants in the vicinity of Itabashi?" The question tickled Shimbei. He dismissed it with a curt but convincing affirmative, and intimated that he should conduct the visitors as early as they pleased the following morning to Uchimata. No one asked about the location of Uchimata. Shimbei's manner had silenced irrelevant inquiries. But Shimbei himself had a query to put:—"How did they intend to get at the pheasants?" The birds would be lying close in thick covers. To drive them out would be difficult; to shoot them in cover impossible. Shimbei, however, did not propound this problem without offering a solution: he could hire half a dozen beaters to do the trick. Of course his proposition was accepted thankfully and he departed to make preparations. His visit raised the hopes of the party to fever heat. In previous shooting expeditions at Totsuka, Kanagawa or on other familiar fields, it had been their custom to beat for themselves, tearing through briar thickets, tumbling down ravines, and discharging five unsuccessful snap-shots for one that found its billet. But here they were on new and apparently amply stocked ground, with a veteran guide and a corps of disciplined beaters. Besides, if the truth must be told, the zest of the prospect was immensely enhanced by a knowledge of its lawlessness. Shooting to the northward of Tokyo was interdicted in those days. The anxiety of the six sportsmen to shake off the *Bettei* had been chiefly inspired by apprehension that these guardians of their persons would interfere to guard the birds also. But the five *Bettei*, formulating no shadow of remonstrance, were imbibing free *sake* in the other wing of the inn, and Shimbei was mustering his beaters in the village. It was an exultant night, that Christmas-eve twenty-four years ago. Did ever such vaulting expectations escape a fall? Before morning the intermittent blasts of wind had swelled into a continuous howl, and the blue sky was completely shrouded in a pall of yellow dust. Dwellers in Japan know well these early-winter gales. Their dynamical force is scarcely inferior to their freezing capacity. They buffet the breath out of a man's body, numb his muscles, and expel all sense from his extremities. To pull a trigger accurately while one is battered and frozen by such a villainous tempest is impossible. But of course the six sportsmen paid no heed to the gale. Shimbei was at hand, dressed in a suit of fireman's padded clothes, and taking the wind as a trivial incident. The three miles between Itabashi and Uchimata were traversed rapidly, and then the strangers saw before them an expanse of country that promised to afford sport beyond their fondest expectations. Long strips of bamboo groves, with wide margins and spacious glades of tempting under-wood, debouched here upon a riverbank, there upon a forest of rustling reeds, and anon skirted patches of cultivated upland or areas where the stacked rice offered a plente of grain to searching beaks. It seemed as though pheasants must flock from all quarters of the country to occupy such haunts. But over the whole region the wild wind was sweeping furiously, bowing the bamboos almost to the ground, making the tufted heads of the reeds dance to clashing music, tearing off the surface of every trodden path or cultivated patch to fill the air with blinding dust, and altogether creating such a racket, uproar, and universal unrest that to point a barrel anywhere seemed idle futility. Any beaters would have been difficult to manage under such circumstances, and as for Shimbei and his corps, not only did it become at once apparent that their unique aim was to drive out the pheasants, without the smallest reference to the position of the guns, but also their movements were so quick and the storm made it so impossible to communicate with them intelligibly, that at first it was simply a frantic rush on the part of the guns to keep within sight of these shouting fugitives. Moreover, when about half of the cover had been traversed thus, Shimbei was observed to wave his arms excitedly, and those within hearing heard him shout "*iru zo*" "*iru zo*" (they are here, they are here). Thereupon the rest of the beaters

quickened their pace to a run, and raised their voices to a babel, the former constantly increasing in velocity and the latter in vehemence, until the whole posse disappeared in a twinkling among the forest of green bamboo stems. After them stumbled and tumbled the panting sportsmen, but before a single gun had been carried within range of the end of the cover, a perfect cloud of pheasants fluttered into the open, and, caught up by the gale, were swept in a second out of sight. Only one man fired, and he was a tyro whom heaven had afflicted with absolute incapacity to judge distances. Truth need not be imperilled by any attempt to estimate, at this long interval, the number of pheasants that emerged from that cover, the first ever beaten at Itabashi in the interests, and to the lasting chagrin, of foreign sportsmen. Like the fish hooked but not landed, their dimensions were probably magnified by disappointment, but it is a sober fact that if there was one bird there were fifty. Of course measures were concerted to avert a similar catastrophe at the next cover. The beaters were ordered to move slowly, keeping in constant line with the guns outside; the latter were distributed so as to command pretty nearly the whole space in front of Shimbei and his company, and the advance was made head to wind. But the Itabashi pheasants in those days did not allow themselves to be easily flurried. They considered the situation, and preferring to rise with the wind under their tails, darted back between the beaters' legs, and were swept like rockets down the gale, leaving shooters and beaters to gaze helplessly at another swirl of scathless plumage as it melted into the yellow dust-cloud that hung on the horizon. It was vehemently asseverated afterwards that this second bevy out-numbered the first. But such a crowd of birds is insulted by minute calculations. Suffice it to know that either the first or the second flight contained four or five times as many pheasants as one could hope to see now in a whole day's wandering over the same district. After that all organized plans were thrown to the ever increasing wind. Every man worked on his own account, even Shimbei and the beaters developing a fresh access of independence, for truth to tell the leather-skinned Shimbei had conceived, and made no attempt to conceal, an unmitigated contempt for the efficiency of foreign fowling pieces or the capacity of those holding them that day. His opinion underwent a radical change at a subsequent date, but that is another story. Christmas, 1868, made him a sneering sceptic, for though five or six scores of cartridges were burned, not as many as five or six birds were bagged, and within the space of two hours the reluctant sportsman had to fly before the tempest. Neither could they wait until it abated. Due the next day in camp, they had no choice but to ride sadly homeward, making now no attempt to shake off the faithful *Bettei*. But what projects were formed on that homeward ride! Given reasonable weather and dry powder, it was evident that six breech-loaders, held fairly straight, might easily bag a hundred couple of pheasants on the first day at Uchimata. That would be a record indeed, and nothing seemed to stand in the way of its achievement a fortnight later. But even while these castles were being built, an unsuspected hand was sapping their foundations. The *Bettei* had entered no protest against the shooting; their instructions did not extend to that. In their brains, however, they carried tablets as faithful as the note-book and pencil of their modern successor, the spectacled constable. That very night the whole story of the doings at Itabashi was reported at head-quarters. No move was made by the Authorities. They preserved ominous silence and prepared a terrible retribution. After a lapse of fifteen days, the same party rode out once more from the camp. A succession of still, sunny days and frosty nights had followed the Christmas tempests, but now in the north a few snow-charged clouds were beginning to pile themselves in delicate equilibrium. A perfect time for pheasant-shooting. Not a soul had been let into the secret of those myriads of birds inviting slaughter among the bamboo groves of Uchimata. Save for that first fruitless day the field was still virgin.

Moreover, to avert all peril of official interference, the baggage had been sent already to Tokyo by steamer, in charge of a loyal henchman, the gun-cases deftly wrapped in horse-sheets, and disguised into the semblance of a bale of blankets. For there were guard-houses with very inquisitive inmates on the southern outskirts of Tokyo, and it was held that if their prying eyes could be eluded, the rest would be easy. The hotel at Tsukiji, too, was carefully avoided, and bridle not being drawn from Kawasaki to Itabashi, the *Bettei* were for once successfully shaken off. Everything prospered at the outset. Without contretemps of any kind the Itabashi tea-house was reached, and the pretty O-Také, kneeling coyly on the mats, received her six lovers as though she had been expecting them at any moment since their departure, and had been longing with strict impartiality for the return of each and every one of them. O-Také had no favourites, but she possessed the artless knack of making every man believe himself her favourite. It was all delightful, from the brightly burning braziers and soft silk quilts to the demure Houri, whose presence imparted an additional glow to everything. But Kosuke, and the baggage, and the guns—where were they? Night fell and with it the first flakes of a heavy snow-shower, but not until the ground was white and even O-Také's smiles had ceased to avert uneasiness, did Kosuke struggle in with the portmanteaux and the provisions, but without the guns. That cleverly disguised bale had been seized by the Customs at Tsukiji. This was the revenge of the Authorities. A cruel revenge, for there was Shimbei declaring that in still weather with a stretch of snow on the ground, the pheasants would lie to be kicked up and would fly as slow as falling leaves, and there was the certainty that hundreds of birds were nesting, three miles away, in the shadow of the thick bamboos at Uchimata. But the weapons of attack were impounded. Effectually had fate interfered to save the lives of those pheasants. The people at the Customs were obdurate. Three weeks elapsed before they consented to surrender the six guns, and the surrender had been preceded by such a discussion that any attempt to organize another expedition immediately would have been out of the question. Next winter, however, was only as far away as Christmas, and there was assurance that by next winter the prohibition against shooting would be removed. So it was, indeed, but in the late summer of that year something happened that materially affected the prospects of sport at Uchimata. Day after day the rain poured in torrents, until the crossing of the Rokujo at Kawasaki became a voyage of over a mile, and the rivers in the Itabashi plain, rising a dozen feet above their normal level, poured through the bamboo groves in deep torrents, destroying all the ground nests, and covering a great part of the district with cold mud, unwelcome for pheasants and fatal to the existence of their food. The discoloured stems of the bamboos, the beaten-down reeds and the prostrate grasses told only too plainly of the destruction that had been wrought, while as for the pheasants, not a small fraction of the former number remained. Very rarely in comparison was the "*iru zo*" of Shimbei and his beaters heard that second season, and no longer did great flocks of birds dot the sky above the bamboo groves. Yet fine sport was still obtainable. Sixty-seven pheasants, eight woodcock, and three duck represented the maiden day's bag of the six guns, and to this total only three were contributed by the man with the perplexed perception of distances. Such shooting is a thing of the past within treaty limits. But in those early days Uchimata and its bamboo groves represented only one of the richly stocked districts. In the hill-side covers above Shirako, scores of pheasants were easily accessible at any time after the leaves had fallen, and along the bank overlooking the Take-no-gawa from Oji to Itabashi birds lay almost as thick as in an English preserve. Never to be forgotten, too, was the first visit to the woods beyond the Gongen Shrine at Oji, a place now resonant with the whistle of the

steam-engine and the rattle of paper-mill machinery. Brooded over twenty years ago by perpetual silence, green spots in glades among the oaks and pines showed where springs bubbled amid *sasa* grass and holly-bushes, the wood sloping upwards to fields of barley and millet, and downwards to a babbling rivulet and a rice valley, golden in summer and richly black in winter. To and from that ideal haunt the woodcock had come and gone for decades undisturbed, and when first their retreat was invaded, something like sixty or seventy birds were flushed within a distance of half a mile. Their numbers saved them. Woodcock have never been plentiful within a day's journey of Tokyo except at that one spot, and any sportsman not a veteran might be excused if he failed to hold straight under such unlooked for circumstances. Yet nineteen of the soft-eyed birds were bagged within an hour, despite the most execrable shooting, and that record is likely to stand long unchallenged. From Shirako to Owada the whole country was a pheasant preserve, above all within the precincts of an ancient *yashiki* called Jinya. There one often kicked a dozen pheasants out of a patch of *sasa* grass, or stumbled on a brood of them sunning themselves beside the prostrate trunk of an ivy-covered tree buried in a bed of azaleas and rhododendrons. Then there were those miles of scrub lying in pockets along the Owada river, a place that literally teemed with birds after the undergrowth in the hill forests had been cut for fuel. For years one could count on a good bag in that lonely valley, but in the early seventies the descending scale was entered, and now a man may pace the whole district without flushing half a dozen pheasants. Snipe, too, peopled the paddy fields by hundreds where the wooded hill ranges recede from each other in the vicinity of Shikimata. It was at this spot that a record bag was made in 1870. A long spell of frost had hardened the whole valley to its very heart, and driven the snipe to the covered springs in the uplands. But one morning in mid-January the snow began to fall in thick flakes through an atmosphere of very perceptibly increased warmth, and the ice-bound fields gradually recovered their look of glistening softness. Covert shooting had become impossible in the blinding snow, and at a little after 11 a.m. the party were wending their way to a farm-house where the tiffin-basket waited, when suddenly the air was filled with a rush of wings, and there swept down from the uplands a countless swarm of snipe. Where on earth the little birds had been hiding, by what conceivable process of congregation they had assembled for their return to the paddy fields, and how many hundreds they aggregated, it was fruitless to speculate. Down they circled, however, and through the white shower one could catch glimpses of their brown bodies busily flitting over the rice patches or scuttling under the shelter of the overhanging ridges. One only of the party turned to follow them. The rest, wet and dispirited, protested the impossibility of snipe-shooting with eyes full of snow-flakes, and trudged on to the beef-stake pie and the whiskey flask. But a little glow of light in the west gave promise of a momentary lull, and the ardent sportsman, though he found that the fields selected by the descending birds were more than knee-deep in tenacious mud, was able to see his sights. He reached the tiffin-house at 1 o'clock, laden with seventeen and a half couple of snipe, the proceeds of sixty-five minutes shooting. And apart from the plenitude of game, what incomparable sport it was to be sure! The glorious sparkling sunshine of a bright winter's day in Japan, the lovely views disclosed at every step, the smiling greetings of the kindly population, and the consciousness that, however wide one ranged, a welcome only was to be looked for, all these things invested a shooting trip twenty years ago with charms that are now, alas, only cherished memories. Shimbei sleeps in the village cemetery; O-Také has lapsed into premature and squalid antiquity; the haunts of the woodcock are invaded by smuts from factory chimneys, and the green bosom of the noble *kiji* flashes no longer across fir coppices and

limbs of leafless alders but lies limp in the shop of the sordid poulterer. "Civilization" has brought these changes in its train, and we have only to be thankful. As for the gunsmith, if he complains that customers for his fowling pieces grow daily rarer, should not the ungrateful fellow remember that pistols have come into vogue with parliaments, and that a six-shooter promises soon to be the constant companion of every member of the Diet? This is indeed *bummei kaika*, as the philosopher observed when he saw an empty champagne bottle reposing among the irises in the Imperial Garden at Fukiage.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

WHAT IS THE MATTER NOW?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is reported as a fact that the shares of The Bank of China and Trust and Loan Co. have been sold in London for ninepence a share. As the shares cost originally £1.10.0, and for the first year of its existence the bank paid a dividend of 18 per cent. and last year declared and paid 8 per cent. dividend, carrying some thousands of pounds to the reserve fund, the question is pertinent, "What is the matter now?" The quotations for its stock have been, for some months past, fluctuating between three and four and one half dollars in Hongkong and Shanghai. It is one of the conundrums of the financial world, especially so with the shareholders of this bank, why such a heavy shrinkage has been possible in London. Just think of it, shares costing £1.10.0 selling for ninepence where money is to be had on average good security at the rate of three to four per cent. a year.

Is it not due to shareholders that the management of the bank should come to the rescue by making an official statement as to the general condition of the institution, and positively state whether there will or will not be a further call made upon their purses to augment the funds of the bank? The management of a bank should be able to stay such a fearful loss to its shareholders as is represented by the difference between £1.10.0 and ninepence, if utter ruin has not overtaken the institution, and they are culpable if they do not make some sign to protect the interests of shareholders who are completely at their mercy.

Yours truly,

A SUFFERER.

September 29th, 1892.

THE KING'S DAUGHTERS.

We have received the following explanation of the origin and objects of this charity, a branch of which, established in Yokohama, was lately *en evidence* in connection with a bazaar and performance at the Public Hall:—

Possibly there are some in Yokohama who have not quite understood the significance of the Order of the King's Daughters, and an explanation would not be out of place, at this time, when the Circle has just received such marked approval and public sympathy.

The Order of King's Daughters is a Christian, but not a sectarian order. The Maltese Cross with 1886 on one side, and I.H.N. on the other, is the seal of the incorporated society. Rev. Edward E. Hale, of Boston, U.S.A., is the President of "Ten Times One is Ten," and under this general motto a great many societies have been formed, consisting of boys and girls, men and women.

They resemble each other in the one wish of the members—to do some good to other people. The King's Daughters Order met for the first time, a little company of ten, on the morning of January 13th, 1886, in New York City. After consideration of the good to be gained, and the good to be done, by binding themselves together by a triple cord whose strands were Faith, Hope, and Charity, they decided to organize themselves into an order or sisterhood of service, adopting the "Ten times one is ten" idea, and hoping by the union of grateful women to increase their usefulness many times tenfold. Mrs. Margaret Bottoms, an Englishwoman by birth, but an American by adoption, is President of this order, which to-day has hundreds of thousands of members throughout the world. In November last, ten young girls met and organized a Circle of King's Daughters here in Yokohama, pledging themselves to promote kindly feeling, for mental

improvement, for the helping of each other in all reasonable ways, for extending a helping hand when needed. Our motto is "In His Name."

Our Circle now has twenty-four members who meet together every Saturday afternoon. It was voted at our first meeting that work should go towards founding a *Free Bed* for women and children at the Yokohama Foreign Hospital. This object we feel to be a most worthy one, and we hope that in a very short space of time our funds will be sufficient to carry it out.

L. B. N. MORRIS, President.

MARION SALE, Treasurer.

King's Daughters Circle of Yokohama,
September 29th, 1892.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, September 1st.

"Amma San" is the title of a charming story by Anna A. Rogers in the September *Cosmopolitan*. It is a very graphic and realistic tale of foreign life in Yokohama; and is powerfully suggestive of a recent scandal and tragedy in that port. Its principal charm lies in its vivid pictures of life.

The Rev. Doremus Scudder has been appointed guardian of his deceased brother's two children, who, with the brother's widow, will reside with him in this city.

Rev. A. A. Bennett, of Yokohama, was one of the speakers on Missionary Union Day at the Martha's Vineyard Institute recently. He is reported to have given some "fine touches" to the religious problems in Japan.

Hon. Hugh Dinwiddie, U.S. Minister to Korea during President Cleveland's administration, has been nominated for Congress by the Democrats of the 1st Arkansas District. His chances of success are good; for in that Democratic State a nomination is about equivalent to an election.

The Canadian Pacific Railway is laying its plans for big extensions, with Chicago as the objective point from two directions. From Detroit it will reach this city by the new Wabash line; so that the route from Liverpool, via Halifax and the C.P.R., to Chicago will be about 24 hours shorter than any route via New York City. On the west it is planning to shorten its main line, and to build directly from Regina or Moose Jaw to St. Paul, and thence to Chicago via one of our roads. Preparations are also making for a quicker route, via Niagara Falls, to New York City.

The line of the Great Northern Railway has been completed from St. Paul and Minneapolis, "the Twins," as they are familiarly called, to Spokane, and will soon reach the Pacific coast. This road will be formidable rival to the other transcontinental lines.

The Inman steamer *City of New York* now holds the record for the fastest eastward trip on the Atlantic. She has just beaten the *Ten-tonic's* time by 1 hour and 46 minutes, and has put the record at 5 days, 19 hours, and 57 minutes. The *City of Paris*, also Inman, holds the westward record of 5 days, 15 hours and 58 minutes.

Chancellor McGill, of New Jersey, has hit a blow at the great "Reading Combine," as it is called, which has run up the price of anthracite coal more than \$1.00 per ton within a few months. He has issued a temporary injunction to prevent the Reading roads from operating the Central Railroad, of New Jersey, on the ground that such a lease caused "excess of corporate power which tends to monopoly and the public injury." It remains to be seen whether this blow will be effectual in breaking the combine of coal producers and carriers, and in lowering the price of coal. The Reading road will, of course, carry the question to higher courts, and fight as long as possible. In the meantime "we, the people" must pay the price of coal or freeze.

The American Bar Association has been in session lately at Saratoga, New York, and discussed various legal questions of national and international importance.

In a previous letter I mentioned the famous Myra Clark Gaines case, the American *Jarndyce v. Jarndyce*, which is a *res adjudicata*. The City of New Orleans has paid over the sum of \$923,788 in full settlement.

Chee Hoshin, Chinese Minister to the United States, passed through here the other day *en route* for Washington. There were with him several Chinamen, who were discussing the question of a Chinese theatre on the Midway Plaisance during the World's Fair. They were hopeful that, in spite of a cost of about \$100,000, it might be profitable. The new Council of Administration has been organized with Mr. H. N. Higginbotham as pre-

This is an average of over 26 per cent. less than the prices ruling in Nagasaki, and may be set down to two causes, inferior quality of coal and lower primary cost in placing it on board ship.

Exports largely increased to all quarters, but it is safe to say that the largest shippers have been the largest losers. There was considerable competition at Moji among foreigners in 1891 (some of whom were new to the business) shipping to various places on their own account, and for Japanese account under advance. The Japanese coal dealers were quick to take advantage of such a state of affairs, and all kinds of rubbish was shipped in place of good coal. Most of the shipments resulted in disaster, but the production went on and was increased in all directions, the Japanese evidently anticipating that this state of affairs would continue indefinitely.

Simultaneously with the increased production, lower prices ruled at Nagasaki and elsewhere. The coal had to be sold or shipped on some terms so as to secure funds to continue working, with the result that at Hongkong, Manila, and Shanghai, Japan coals (outside of Takashima and the coal from the other mines of the Mitsu Bishi Company) can hardly be given away in these times of depression. The small mine owners are in financial difficulties, and no doubt many of them will have to close up. These mines will then probably fall into the hands of the Mitsu Bishi Company and other large companies, who will work them on business methods and regulate production so as to keep prices on a paying level.

Tobacco shows an increase over the export for 1890. In that year it amounted only to 1,677, while in 1891 it increased to 6,177. The harvest shipments took place in spring, but for the coming year the export is expected to be almost nil, as the prices fetched make the production of this article almost prohibitive.

Campor export shows a considerable falling-off from 40,383, in 1890 to 22,832, in 1891, but this is partly accounted for by the fact that a quantity is shipped to Kobe and from there sent to the United States by sailing vessels; the duties are paid in Kobe, the campor being sent from here in bond. The great advance in price during the last few years is said to be caused by the fact that campor is now used in the manufacture of smokeless powder. Till 1888-9 the prices ruled between 10 dol. per picul and 15 dol. per picul, but from that time campor rose in price, and the highest figure was reached about March, 1890, when as much as 56 dol. per picul was paid; the price has since declined to about 35 dol. per picul. The Japanese methods of adulteration and increasing the weight by moisture greatly interfere with business in this article, leaving foreign merchants no firm basis of cost upon which to base their calculations.

Wheat, which in the previous year was exported to the amount of 17,176, almost shows a nil return in 1891, as it only figures to the amount of 800. This was owing to the failure of the rice crop in the autumn of 1890, which caused the wheat to be retained for local consumption.

Dried fish and shell fish, &c., mushrooms, paper, various grains, and beverages which, with a few miscellaneous articles, form the balance of the export trade, are all in the hands of the Chinese, Shanghai being their principal market.

SHIPPING.

The return of the shipping which entered Nagasaki harbour during 1891 shows a slight increase on that of the preceding year, the total being 746 vessels, aggregating 899,732 tons, or an increase of six vessels and 22,000 tons.

There is, however, a decrease in British shipping of 21 vessels and nearly 30,000 tons. There is an increase in Norwegians of 18 vessels and 17,000 tons, and in Russian of the same number of vessels and tonnage. British shipping represents 42 per cent. of the whole, Japanese 37 per cent., German 14 per cent., Russian 4 per cent., and Norwegian 3 per cent. Last year's figures were respectively 45 per cent., 38 per cent., and 14 per cent., leaving 4 per cent. for all other countries. British tonnage has, therefore, decreased 3 per cent., Japanese 1 per cent., and German remains the same.

The total tonnage for the Kiusiu ports amounted to 1,251,013 tons and 1,042 vessels, of which entered at Kuchinotsu 65 British vessels, of 96,957 tons; 83 Japanese, of 43,851 tons; 7 German, of 9,320 tons; and 21 Russian, of 40,611 tons;

and of Moji, 71 British vessels, of 109,840 tons; 6 Japanese, of 5,532 tons; 30 Germans, of 30,711 tons; 6 Russian, of 7,539 tons; and of all other countries 6 vessels of 6,159 tons.

As mentioned earlier in the report, some 600,000 tons of coals were shipped from the special ports, besides over 100,000 tons of rice; and though it cannot be said that all this cargo would have found its way to Nagasaki, there is no doubt that the diminution in the volume of exports and amount of shipping noticeable in the returns for Nagasaki during the two or three past years is due to the opening of the "special ports." There are several foreign firms which have opened branch establishments at Moji to carry on the export trade, but these under present regulations are registered under Japanese names.

PUBLIC WORKS.

The Nagasaki waterworks, which have been alluded to in former reports, were finished in May last, having been commenced in March, 1889. The total cost was 264,357 dol., equal to 44,059, at 3s. 4d. to 1 dol. The town was, however, not supplied with water till the month of May, and the foreign settlement was supplied from the beginning of this year.

The Kiusiu railway was continued during last year to Kumamoto, and Yatsushiro, the total mileage opened being 87 miles, but at present all further work is suspended from want of capital. The shares held by the public are nearly all in the hands of Osaka capitalists, very little money being invested by anyone either in Nagasaki or Kumamoto. A deputation from Nagasaki is now at Tokyo, soliciting the Government for further assistance, and to request that the line between Saga and Nagasaki may be at once started, but it appears to be very doubtful whether assistance will be forthcoming. The distance from Saga to Nagasaki is about 71 miles, and the proposal is to complete the line from Saga to Isukazaki by December, 1893. From Isukazaki to Omura by June, 1895, and from thence to Nagasaki by June, 1896. The estimated cost is 3,443,660 yen, or 573,943, at 3s. 4d. to 1 dol.

LOCAL ENTERPRISES.

The silk industry, about which great hopes were entertained, has not fulfilled the expectations of the promoters. Land being expensive in the immediate neighbourhood of Nagasaki, the farmers can make more money by raising vegetables and other crops which have prompt sale than by planting mulberry trees, which require some time before coming into profit. The silk produce of the whole of Nagasaki prefecture amounted only to about 16,000 dol., and the silk was sent to Yokohama, there being no market at the port. About 4,000 egg-cards are produced in the prefecture for use, of which Nagasaki, however, only took 15 last year.

The tannery mentioned in last year's report is progressing favourably, and is said to turn out good leather.

The glass manufactory is also working successfully, and a quantity is sent to Korea and Vladivostok. The principal goods turned out are tumblers and wine glasses, lamp chimneys, and cheap kerosene lamps. The material used is brought from the mountains of Shinshiu to the Nakasendo.

GENERAL REMARKS.

The result of last year's trade is said to have been most unfavourable throughout all branches; the downward and fluctuating nature of exchange has operated disastrously, and caused a general depression in trade, not only in Nagasaki but all over the East and the rush for speculation in the Japanese share market for railways and numerous other investments has had the usual result of a considerable shrinkage in the value of all shares. Most of the money being tied up, none is available for the ordinary channels of trade. The bad harvests have also contributed, and though the rice crop of 1890-91 was good, the crop last year was far below the average, and speculation by large rice syndicates is causing farmers to hold their stocks for a rise. The wheat crop of 1891 was, however, very good.

I give below a table showing the percentage of decrease in the rice crop last year as compared with 1890, and the increase in wheat in the several prefectures in Kiusiu.

	Rice. Per Cent. Decrease.	Wheat. Per Cent. Increase.
Nagasaki Ken	39	74
Fukuoka Ken	39	210
Miyasaki Ken	23	33
Saga Ken	50	57
Kumamoto Ken	39	70
Oita Ken	23	74
Kagoshima Ken	15	76

It should be remembered that as the rice crop comes late in the autumn, the quantity available

for export is rarely sold until the spring of the following year.

It seems to be the general opinion that we can hope for no permanent improvement until we have railway communication with the interior.

Nagasaki from its commanding position, its magnificent harbour, coalfields, proximity to Korea, and the northern parts of China, &c., will eventually become a very important trade centre. Under proper business management the railway should pay handsomely. Taking all expenses into consideration, coal can be brought by rail from Muke and the Taku district to Nagasaki, and rice from the rice districts, and shipped from here cheaper than from Kuchinotsu and other places as at present. This port should, sooner or later, control the trade of Kiusiu. At present, however, there is no question but that the opening of the special ports of Kuchinotsu, Karatsu, and Moji has operated very unfavourably on the export trade of Nagasaki.

The Japanese population of Nagasaki on December 31 last numbered 59,627, an increase of 2,127 over that of the previous year.

IN THE U.S. CONSULATE-GENERAL COURT.

Before W. D. TILLOTSON, Esq., Consul-General and Judge.—THURSDAY, September 29th, 1892.

ROBERT SHERWOOD V. C. P. LOW.—MOTION FOR POSTPONEMENT.

This morning a motion for postponement of trial in the suit Robert Sherwood v. C. P. Low, was made by Mr. A. Tison, Counsel for the defence, Mr. J. F. Lowder, Counsel for plaintiff, appearing to oppose.

His Honour having opened the sitting, which was in chambers,

Mr. Tison asked whether the plaintiff was ready and pressed the case now.

Mr. Lowder.—Most certainly.

Mr. Tison—I must ask the court for permission to make an application for the postponement of the hearing of the trial of this case on behalf of the defence. In combating the claim or counter claim one witness on our side is indispensable, but that witness is not now in the country. The evidence that he wished to call was to combat the counter claim, as he relied upon the weakness of his adversary's case to enable him to resist it properly. Of course he did not pretend to know, what Mr. Lowder knew about his own case, but he certainly thought that it would require more

than the documentary evidence, which was all his learned friend relied on to support it, for there was no evidence that could at present be testified in Yokohama. He would like to point out that from the multitude of documents which his learned friend possessed there was one letter missing, which, written by the defendant in May, related to a conference that had taken place between the plaintiff and the defendant and the agreements which were arrived at between them. It was in reference to this that the necessity arose of commissioning some one to go to San Francisco to take depositions. He would recapitulate the reasons, which were perhaps known to the Court, why the case had not come up for trial before. A letter of demand of 31st March last reached Mr. Low and was turned over to me just at a time when the Court was much occupied by a trial of importance, lasting over till the middle of April. Mr. Lowder, knowing the position in which I was placed, kindly allowed me time in which to read the documents so as to return an answer. This was done on the 22nd April. Then followed a period of profound calm and it looked as if the suit had gone to sleep, but I saw Mr. Low and Mr. Low saw me. This went on till the middle of July last, till the vacation, a time when in the British Court no more petitions for fresh suits are entered till the middle of September arrives, and the American Court was also in vacation. A motion was brought then, however, but the time of year was not allowed to interfere with the answer being put in. Mr. Low happened to be in the country at that time owing to his wife accidentally deciding to go to San Francisco by a steamer which had just left, necessitating a stop-over. It was not Mr. Low's duty to stop here until the case was over, and I did not consider it his duty to do so. As Mr. Low was going to San Francisco, where the plaintiff lived, I thought there would be an opportunity for them to meet, and that matters would then be satisfactorily settled over there—an arrangement which I am sure Mr. Lowder would not be disposed to regret or oppose. San Francisco was the home of both, and therefore the opportunity offered of a new agreement between the parties—already there had been two, there might be three or four more. I think, therefore, that the plaintiff will not desire to press for trial until Mr. Low's return. I therefore ask for an adjournment, until he arrives here. I may say further, that Mr. Lowder wrote me a note asking when it would be convenient to take trial, and next day I saw Mr. Bernard who wrote Mr. Low by next mail. There has not been time for the answer to reach here yet. On those grounds, or until I have heard from Mr. Low, I ask for an adjournment. According to last advices he was still in San Francisco. I will, therefore, ask for postponement under those conditions, and I don't think that my learned friend can reasonably object to the request.

Mr. Lowder.—In answer to my learned friend, I will reply that Mr. Low has here several days after service of the notice. He was then in a position to give evidence, but as he took no steps to do so I consider that this application is not at all reasonable. Moreover, by rule 65 of this court, a motion of application must be made on an affidavit of facts. According to that rule, I submit that the Court is not in a position to grant the application as there has been no affidavit sworn before it.

Mr. Tison thought that the affidavit was a matter of supererogation.

His Honour.—Mr. Tison, in order to make the record I think an affidavit should be filed, even if the facts are in the knowledge of the Court. It is well that things should follow the rules in case an appeal takes place in consequence of error of procedure.

Mr. Tison.—I will file the affidavit. It is usually done when there is any suspicion of a case being unduly delayed. I ask now for permission to have Mr. Low's testimony taken on deposition, even if it is likely that he should return; or the case could be heard where both parties were, that would be better than hearing it when none were here. I acknowledge that it would be better to hear a man in Court than to take his depositions, in every way it was more satisfactory. I have only one witness, plaintiff himself, and I thought that it would not be well to let the case go to trial without any testimony whatever.

His Honour.—At the time when Mr. Low was here, if I remember rightly, the complaint was filed and the time of answer was enlarged from three to ten days. When the answer was actually filed Mr. Low had gone. That was at the time of year when I had decided not to take up any fresh judicial business. I think that defendant is entitled to an adjournment in view of the fact that it takes so long a time for an answer to return from the United States. It is uncertain whether Mr. Low will come back, therefore I think preparations had better be made to take his depositions

in America; at the same time he can be instructed that he can appear here, in person, if he does not wish to incur the expense. By making these preparations at once the commission could go over by next mail—that day's mail did not allow of sufficient time—and so save some delay in the future. The case might then come on in the winter or early spring. The depositions taken in the United States certainly could not be returned here before the New Year.

Mr. Lowder.—I certainly supposed that my learned friend had taken the depositions before.

Mr. Tison.—I should have done so, had I not thought that Mr. Lowder had taken the depositions himself. I am surprised he did not do so.

Mr. Lowder.—So far as I am instructed I see no necessity for taking the depositions.

Mr. Tison.—I had questioned that.

Mr. Lowder.—There may arise the necessity of my taking them now.

Mr. Tison.—No one present knows anything about the case, Mr. Bernard was in America and Mr. Middleton in New York, I believe, at the time. I will file the affidavit and follow the suggestion of the Court very cheerfully. The matter arose in mid July, the answer was filed in August therefore he thought no harm could arise from the adjournment.

His Honour.—The question now comes up as to the time of adjournment. I suppose Mr. Low comes back at the first of the year?

Mr. Tison.—I don't know, I am not sure.

His Honour.—I have a faint recollection of somebody saying he would return at the first of the year, but whether it was Mr. Low or not, I cannot now say.

Mr. Tison.—An officer of the Court could be sent to take the depositions.

His Honour.—It is not necessary to name such officer.

Some discussion as to interrogatories ensued, and Mr. Lowder said he thought that the evidence was only wanted on the counter claim?

Mr. Tison.—All hinges on that.

Mr. Lowder.—I knew nothing about the arrangement.

The phraseology and nature of the commission having been slightly sketched by counsel, the framing of the questions being left to themselves.

His Honour said—Not to make Counsel more work than is necessary, the affidavit need only cover the first paragraph of the rule, the rest is at the discretion of the Court.

Mr. Tison.—I will proceed to follow the suggestion of the Court.

The Court then rose.

THE CAPTAIN OF THE "MARY ROSE"

A TALE OF TO-MORROW.

By W. LAIRD CLOWES,

GOLD MEDALIST, UNITED STATES NAVAL INSTITUTE.
(FROM "THE ENGINEER.")

III.—SOME STAGGERING BLOWS.

In the first edition, already extensively quoted from, of its issue of Wednesday, April 29th, *The Times* contained the following telegram from its Portsmouth correspondent:—

"PORTSMOUTH, Tuesday, 9.30 p.m.—H.M.S. *Invincible*, guardship at Southampton, arrived here early this afternoon, and is now at Spithead, where H.M.S. *Hero*, *Minotaur*, *Hercules*, *Glatton*, *Gallathea*, *Latona*, *Iris*, *Bellona*, *Seagull*, and *Rattlesnake*, all vessels belonging to the A Division of the fleet reserve of this port, are also at anchor. The ten ships last named represent the only Portsmouth vessels that are immediately available, and several of them are not really quite fit for sea. Moreover, they are all, at present, short-handed. It may be recollected that some time ago, when the five cruisers and two gun-vessels of the Australian Squadron were commissioned, the rule restricting service on the Australian station to men of five years' standing and upwards was suspended in order to provide crews for them, and that, in addition, many men were taken out of the harbour ships. From the depletion which was thus caused, the Royal Naval Barracks have never completely recovered; and in consequence there has to-day been the greatest difficulty in finding for the mobilised vessels even sufficient crews to take them to Spithead. Other ships could be sent thither, if only men were forthcoming. The ten warships that have been commissioned here would, to man them properly, require 2,800 officers and men. Barely 1,200 were available, and, although a few men of the Royal Naval Reserve have offered themselves, and have been gladly accepted, I doubt whether the total number of people now on board the ships in question exceeds 1,500 all told. All kinds of civilians are volunteering, but none of them are accepted pending the receipt of instruc-

tions from the Admiralty. The ships are in the meantime busily engaged in getting in their powder and shell, and work is, while I write, being energetically carried on by aid of the electric light. All the seaward forts are manned, and many of the buoys and beacons have been to-day removed, nor were the usual lights exhibited this evening; but unfortunately the conflict between the naval and the military authorities continues, and it is but too evident that the rapid perfecting of our defensive preparations is being dangerously delayed by the fact that the local command is divided. I learn, as I close this dispatch, that the *Alexandra*, flagship of the Reserve Squadron from Portland, has anchored at Spithead. The *Hotspur* from Harwich, the *Audacious* from Hull, the *Shannon* from Bantry, and the *Neptune* from Holyhead, are expected in the course of to-morrow, and the *Iron Duke* from Queensferry, the *Superb* from Greenock, and the *Belleisle* from Kingstown on Thursday."

The same issue also contained the appended brief reports from Plymouth and the Medway:—

"PLYMOUTH, Tuesday, 11 a.m.—The *Conqueror*, *Achilles*, *Gorgon*, *Hecate*, *Prince Albert*, *Forth*, *Inconstant*, *Thames*, *Spanker*, and *Sharpshooter* have to-day gone out of harbour, and are now anchored with the *Black Prince* within the breakwater. They are the only vessels at this port that are in anything like a state of immediate readiness for sea, yet they are only half manned, and there is no probability, so far as can at present be seen, of providing proper complements for more than half of them."

"SHEERNESS, Tuesday, 11 p.m.—The following vessels of the Medway Fleet Reserve, A Division, are now here, viz., *Benbow*, *Camperdown*, *Northampton*, *Cyclops*, *Hydra*, *Narcissus*, *Arethusa*, *Mersey*, *Medea*, *Medusa*, *Barracouta*, *Grasshopper*, *Salamander*, *Skipjack*, and *Sheldrake*. Though all of them have been officially reported as ready for sea, several—notably some of the cruisers and gun-vessels—are suffering from various temporary defects, and not one is, or at present can be, properly manned, as neither lieutenants nor men are available in sufficient numbers. The *Benbow* is reported to have developed defects in her big guns, and is therefore partially useless. The *Blenheim* is not completed, but she may be got ready in ten days."

It was further announced that the Channel Fleet, consisting of the battleships *Royal Sovereign*, *Anson*, *Home*, and *Rodney*, the belted cruisers *Aurora* and *Immortalité*, and the small craft *Cybele* and *Speedwell*, was at Vigo, and had been ordered home by telegraph, and the Falmouth-Vigo cable. It might be expected at Spithead on Saturday morning. Most of the above-quoted news was of an unsatisfactory nature; for though the mention of so many ships as being more or less ready for sea inspired a certain vague confidence in the mind of the average layman as he sat at his breakfast table, the admission that, owing to lack of men, half of them were really useless, was one the significance of which could not but strike even him who had only the most casual knowledge of naval affairs. To the expert the reports were still more painful, for every expert knew well enough that ships like the *Minotaur*, *Shannon*, *Achilles*, *Prince Albert*, and others were, manned or unmanned, of little value save on paper. Naturally, therefore, the early morning's news, and particularly the terrible intelligence of the catastrophe off Toulon, aroused immense excitement and universal uneasiness. But excitement does not at once betray itself. Men must first meet and talk, and hear one another's views and apprehensions concerning what has happened and what is to come. And ere they had time to meet and talk on that awful Wednesday, more alarming news than had yet reached them arrived, and drove them from a state of repressed excitement into a condition of panic.

The French had struck boldly and promptly and effectively at Toulon, but not only there. Before ten o'clock a second edition of each of the morning papers announced the occurrence of a fresh and more humiliating catastrophe than that which had befallen us in the Mediterranean. The *Standard's* account is here given:—

"PORTSMOUTH, Wednesday, 6.45 a.m.—While lamenting the magnitude of the misfortune that has just overtaken a great part of the fleet assembled here, and the dreadful fate that has overwhelmed I am afraid to say how many hundreds of her Majesty's officers and men, it is impossible to avoid admiring the energy and dash of an enemy who, almost as soon as war is declared, succeeds in planting a deadly blow at our very vitals. What has happened is shocking in the extreme, but it is also marvellous. With a suddenness that seems almost inexplicable, the squadron at Spithead has been practically destroyed. Late last night it seemed ready to go anywhere and do anything; this morning the little that exist of it is a shattered remnant, barely able to

keep itself afloat, and utterly useless for any of the purposes of the immediate future.

"I had, as you are aware, obtained authority from the Admiralty to proceed to sea as a passenger on board H.M.S. *Alexandra* during the Channel cruise, which it was yesterday announced the Reserve Squadron would undertake as soon as it could be assembled at Spithead. The only ships of the squadron to arrive yesterday were the *Invincible* from Southampton and the *Alexandra* from Portland. The latter did not take up her anchorage until between nine and ten o'clock at night; but as she had been previously sighted and signalled, I—with some difficulty—engaged a shore boat and was at Spithead, ready to board her when she appeared. The ships already there were anchored in two lines which stretched from the south-west, nearly abreast of No Man's Land and the Horse Sand to the north-west, abreast of Gilkicker Point and Ryde. The heavier part of the fleet formed the line which lay nearest to the Isle of Wight, and, beginning from the south-east, consisted of the *Hercules*, *Minotaur*, *Alexandra*, *Hero*, *Invincible*, and *Glatten*. The cruiser squadron formed the line which lay nearest to the harbour, and, beginning from the south-east, consisted of the *Rattlesnake*, *Bellona*, *Iris*, *Galatea*, *Latona*, and *Seagull*. There were thus six vessels in each line, the *Rattlesnake* being abreast of the *Hercules*, the *Bellona* of the *Minotaur*, and so on; and there was a distance of two cables between the ships of each line, and of four cables between the lines.

"Most of the ships, when I reached Spithead, were taking in powder and shell, and were doing so by the light of their search-lights, from the hoys and barges which lay alongside. Some ships, also, were completing with coal. All, moreover, were taking in sea stores and supplies of every kind, the result being that night seemed to be turned into day, and that Spithead was crowded with boats and launches. I boarded the *Alexandra* as soon as she had taken up her berth between the *Minotaur* and the *Hero*; but, though it was getting late, there was, of course, no thought of turning in. Indeed, even if there had been no work on hand, and if Spithead had been as quiet as it commonly is at ten o'clock, there was so much anxiety in every ship concerning the news from the Mediterranean, and such continuous expectation that weighty intelligence of some sort would presently be brought off by one of the numerous craft from the shore, that no one cared to go to sleep lest perchance he might not hear the first word of definite intelligence. The few officers who had leisure to sit in the ward-room and smoking-room could talk of nothing but the war and the ships up the Straits. Those who had to be on deck thought, if they did not talk, on the same subjects. The Vice-Admiral and Captain had gone ashore to see the Commander-in-chief; the ship was in charge of the Commander; and I had nothing better to do than to take stock of the scene around me.

"Alongside the *Hero* a hoy was hoisting out powder cases and boxes of ammunition, which were stacked around the turret on her low deck forward and thence gradually removed to the magazine below. The *Minotaur* was filling up with coal, and had a barge on each side of her. The *Iris* abreast of us was, like the *Hero*, taking in her powder, and also a number of huge electro-contact mines—great red-painted iron cases which must have weighed nearly a ton a-piece. We at first did nothing, but soon a coal barge came alongside, and we began not only to fill up our bunkers, but also to pile coal on our decks, for the order had gone forth that every ship was to be coaled to her utmost capacity. Usually when a ship is coaling her ports are closed, and pains are taken to exclude as much as possible the all-pervading dust; but we and the other ships were coating cleared for action, and with half the guns loaded and run out. No vessel had her torpedo nets completely down, as all had craft alongside, but all had a certain number of boats out, and the whole anchorage between the Nab on the east and Hurst Castle on the west was supposed to be patrolled by these and by torpedo boats. A large amount of material in the shape of spars and buoys had been towed out of harbour during the day, with a view to constructing substantial defence booms within which ships might lie in safety; but the work of construction had not been begun, and most of the material was anchored on No Man's Land, where it was to remain for the night. No one, I think I may safely say, thought that there was the slightest probability of our being attacked. At midnight, however, with a view to making all sure, a couple of first-class torpedo boats were sent out by each entrance, and the four were ordered to scout between Christchurch and Selsea Bill, and at the back of the Isle of Wight.

"Portsmouth, as the crow flies, is only about seventy knots—nautical miles—from Cherbourg.

A vessel steaming, therefore, at a speed of fifteen knots, should do the distance easily in five hours. Our enemy must have come from Cherbourg. He can scarcely, indeed, in the circumstances, have come from anywhere else; and he probably left Cherbourg at about nine o'clock, for he came upon us soon after two this morning. The sea was smooth, the night was dark and chilly, and our vitality was at its lowest, as most men's vitality is in the small hours, when suddenly, apparently not more than two or three miles from us, we heard the boom of a gun. In an instant all were on deck. Some declared that the sound had come from the east; others swore that they had seen the flash light up the sky over Egypt Point to the westward. The Commander at once ordered away all the craft from alongside, and directed that the nets were to be fully rigged out; but, as everyone knows, lighters and barges cannot be got rid of in an instant, and long before the order could have been obeyed, we and our satellites were in the midst of one of the bloodiest struggles of which history gives any record.

"Within a minute of the time when we heard the first report we heard others, and saw over Bembridge Point the bouquet of a rocket which, we knew, had been fired by one of our boats as a signal that the enemy was approaching in force. I am not exaggerating, and I in no way do injustice to our officers and men, when I say that a scene of the direst confusion followed. The captain of the *Hercules* was the senior officer present. He signalled by means of flash lights from his mast-head, 'Cruisers will slip their cables and proceed with dispatch to sea in search of the enemy, those lying to eastward of the *Galatea* going out by the eastward, and those lying to westward of the *Iris* going out by the westward entrance. Rendezvous, Spithead, 8 a.m. Battleships will prepare to slip cables and follow—' But the signal was never completed. The shore boats and lighters were still pushing off; our officers were still shouting at them from the bridge and gangways for their delay, and the poor bumboat women were shrieking, partly from fear and partly because they and their goods had been separated, when another rocket and yet another went up from a point well on our side of the Nab, and under the glare of their explosions we saw, not a mile and a-half from us, three or four low-lying black hulls, which we knew could only be those of the torpedo cruisers of the enemy. In an instant, and forgetful of our torpedo boats, which must have sent up the warning rockets, and which must, therefore, have not been far out of the line of fire, every vessel that could bring a gun of any kind to bear opened in the direction of the foe. The roar was infernal, and, for a brief period, the dense smoke hid everything from us; but such slight air as there was gently carried the smoke to the westward, and soon we could see the enemy again. He was apparently none the worse for his reception, and was much nearer to us. Fire was re-opened, and maintained with fury. The *Alexandra* was incommoded somewhat by the ships to windward of her, and fired only occasionally; but the *Hercules*, *Minotaur*, and *Rattlesnake* seemed to blaze away almost without intermission, and the volumes of smoke that came slowly to leeward showed how freely they were spending their powder. The enemy fired very little. We expected to hear him using his torpedoes. And use them he did, but not from the direction which we anticipated. That attack had lasted, I suppose, a quarter of an hour, and there had been little, if any, cessation of the firing from our side, when, to our consternation, a second attack quickly developed itself from the westward. It is quite clear to me now that the eastward attack by three or four torpedo cruisers—probably vessels of the *Condor* and *Bombe* types—was merely a feint intended to amuse us while the real attack from the westward was being made. The *Needles*, or westward passage to Spithead, is not a particularly easy one in any circumstances, and is commanded not only by numerous batteries but also by the Brennan torpedo station at Fort Cliff End; but our enemies chose to take the risk of coming to grief in their attempt to find their way in by that passage, and it must be sadly admitted that the results have more than justified their temerity.

"The real attack was delivered by torpedo boats only, some being of the '*haute mer*' type, and others of the ordinary first-class. The larger vessels seem to have acted as 'division boats,' and there appears to have been four divisions engaged, each division on this occasion consisting of one *torpilleur de haute mer* and three torpedo boats, making sixteen craft all told. I do not pretend to be certain either as to the exact numbers or as to the exact constitutions of the force; but those who had the best opportunities of knowing place both as I have given them. The *Antilla* must have evaded our scouts, possibly by first making the land near Christchurch and then by keeping close

under it; for it was not seen until, almost like a flash, it steamed in close order past Fort Cliff End. Both Fort Cliff End and Hurst Castle were using their search-lights, and it was owing to this fact that the enemy was discovered. But the forts were unprepared for instant action, and ere fire of any kind could be opened, the boats were somewhere abreast of the Bramble, and within ten or twelve minutes' steam of their quarry. Even when the forts did open they did no harm, for the smoke of the action which was raging at the other end of the anchorage was drifting between them and the enemy. Besides, when the search-lights from the forts, or later, from the ships, fell upon any particular craft, they rendered all the other craft of the enemy completely invisible; and the operators, speedily becoming conscious of this fact, and being anxious to show up as many of the enemy as possible, shifted their projectors so rapidly as to confuse the eyes of the gunners. The truth seems to be that the most effective shelter under which a torpedo boat can approach to do damage is the shelter afforded by a search-light played upon some other vessel by the intended victim. Moreover, very few guns could be brought to bear, the chief works being so constructed as to be almost powerless for action on the Solent side, and being mainly designed to impede the foe as he comes in from the west-south-west, not to destroy him after he has got in. Thus the French steamed up without let or hindrance to within quite a short distance of the *Glutton* and *Seagull*, which formed, as I have already said, the north-eastern extremities of our two lines. These ships, or their picket boats, sighted the flotilla when it cannot have been anything like a mile from them. At the first shot from the Fleet, or perhaps before it, the divisions evidently separated in order to act in accordance with orders previously given to them. Two divisions, now formed in single column of line ahead, came up at full speed between our lines. The other two divisions, disposed respectively on the port and starboard quarters of the central divisions, came up also in columns of line ahead, one on each side of the still anchored fleet. The central divisions came on, therefore, at a distance of about two cables from the ships on either beam of them. The other divisions kept about as far outside the lines, and the speed I imagine was fully 18 knots. As the boats executed that terrible rush through us, they were saluted with a perfect hurricane of projectiles; but they did not, so far as I know, fire a gun in reply, and I fear that a good many of our own shot intended for the central divisions must have done more harm to friend than foe. It was fearful work; the very silence of the grey boats made the now brilliantly illuminated, though smoke-dimmed scene the more impressive. One could not help admiring so splendid an exhibition of pluck, even though one was fully conscious of the magnitude and imminence of one's own peril. But there was little time for thought. Our lines were less than a mile in length. Travelling at 18 knots a boat covers a mile in about three minutes, and in about three minutes, and in five or six minutes at the outside, the dismal tragedy had begun and ended. The French launched their torpedoes with wonderful precision, the central divisions discharging both right and left, and the outside divisions, which approached a few seconds later, apparently endeavouring to rectify any mistakes or omissions which their comrades of the centre had been guilty of. Too well, alas, did they do the business. It is as yet too early to send you details, save of what happened to the vessels immediately within my own sphere of vision; but there is no hope, that, by waiting, I can obtain any less disheartening general results than those which I can already give you. The *Hero*, *Invincible*, *Iris*, *Galatea*, and *Bellona* have been sunk or have been obliged to run ashore to avoid sinking; the *Minotaur* has been blown up, the explosion of a torpedo having, it is believed, fired one of the electro-contact mines which she had just taken on board; the *Alexandra* has a great hole in her port quarter and a compartment full of water; and the *Glutton* has a hole in her bows. Only the *Hercules*, *Latona*, *Seagull*, and *Rattlesnake* have escaped uninjured. A torpedo, barely submerged, seems to have actually exploded in contact with the *Hercules*, but that ship's stout construction and armoured belt saved her from anything worse than a very severeshaking. Several lighters and small craft were also sunk; and the loss of life, in one way and another, is, I fear, frightful. It is doubtful whether more than fifty of the *Minotaur's* people survive. The blowing-up of the vessel was so violent that we, who were anchored immediately astern of her, felt as if we were jerked out of the water, and a moment later our decks were covered with and even set on fire by her burning fragments. May I never live to have another so awful experience. Limbs, ragged pieces of charred flesh, scraps of clothing, as well as wreckage, fell on the decks, and in the shock of

the explosion smashed everything in the *Alexandra* that had not already been shattered by the bursting of a French torpedo under her own port quarter. The *Iris* was struck just before we were, and, being in a sinking condition, was run on to the Sturbridge Sand, where she lies with her bows in two and a-half fathoms. The *Bellona* is on the Harrow Bank, immediately under Fort Monckton. The *Galatea* and *Hero* lie sunk at their anchorages; and I am sorry to have to say that, in the struggle, a quantity of ammunition on the *Hero's* deck blew up, killing and injuring a number of people. The *Invincible* sank while endeavouring to run on the outer Spit. The heaviest losses were suffered by the *Minotaur*, *Hero*, and *Galatea*. The other ships have lost very few men killed, but have had a good many wounded; and in all the vessels which were torpedoed there were numerous sufferers from the poisonous and suffocating effects of the explosive gases and from shock. The *Alexandra's* loss is ten killed, and sixty-four wounded or otherwise injured. The torpedo which struck her threw down everyone on board, and raised a column of water of such volume that when part of it fell on deck it washed men into the scuppers just as if it had been a heavy sea.

"The enemy also has suffered, but very slightly in comparison with us. Two *torpilleurs de haute mer* and four torpedo boats are said to have been sunk or blown up, and of those which got away several are known to have been badly damaged. Whether our fire did any harm worth mentioning to the small cruisers which began the affair is more than we can tell. We cannot, however, claim to have done much more than destroy six little craft, and to have worked other harm which, altogether, may represent a quarter of a million. The French have done us damage to the extent of at least two and a-quarter millions in money alone. They may have lost a hundred in killed and wounded; we, at the lowest computation, have lost nearly a thousand. The blow, therefore, is one, the seriousness of which it would be folly to shut one's eye to. It is, as far as the Portsmouth squadron is concerned, a thoroughly crippling one."

"That the French attack was both well designed and well carried out it is impossible to deny. It came swiftly after the declaration of war; it was so arranged as to give the attacking torpedo boats the full advantage not only of the feint from the eastward, but also of such wind as was moving; and it was designed in such a way as to place the torpedo boats, after they had done their work, in a position whence, in case of necessity, they could be rescued by their friends the cruisers. In fact it cannot be doubted that, after their wild rush through our lines, some of the boats must have been very glad to run at once under the protection of their larger consorts; for several of them were certainly badly mauled. Of our own four boats which went out at midnight to scout we have as yet heard nothing; but there is every reason to fear, at least with regard to those which were on the eastern side of the Isle of Wight, that they have been destroyed or captured. The *Rattlesnake* slipped her cable and followed the retreating enemy for some miles, but was recalled by the Vice-Admiral who was returning from the shore when the alarm was first given, and whose steam launch narrowly escaped being run down by the port line of French torpedo boats as the vessels turned at the head of our port line in order to rejoin their friends. The Spithead forts, I should add, did not fire during the engagement. It is rumoured that they had not been supplied with ammunition. The Commander-in-chief has just left harbour in his yacht, the *Fire Queen* to inspect the ships which are damaged or aground, and to settle what is to be done. In the meantime the town is in a panic, other attacks being feared. The blowing up of the *Minotaur* broke nearly every pane of glass in Southsea, and created such alarm that several aged people are reported to have died from fright."

The second edition of each of the morning papers contained a dispatch to the above effect. The bad news, owing to the lateness of its arrival, was printed without comment; but immediate comment was unnecessary—the intelligence spoke for itself. We had been suddenly deprived of the services of five ironclads and three cruisers; which, added to the tale of vessels that had been lost or taken off Toulon, made a total of ten ironclads and five cruisers accounted for by the enemy within forty-eight hours of the commencement to hostilities.

The panic that ensued has had no parallel in the history of the country. The violation of our coasts, and indeed of our chief Naval port was an exploit which the majority of Englishmen had for generations deemed beyond the power of any foreigner or combination of foreigners; and the shock of knowing that it not only could be, but had been effected, threw nearly all men off their balance. The less-educated classes entirely lost their heads

and at hastily summoned meetings in Trafalgar-square and elsewhere wildly denounced not only those who were, but also those who were not, responsible for the disaster. It was, perhaps, difficult to apportion the responsibility among those who might be fairly blamed—among, for example, the members of the Government, the Lords of the Admiralty, and the chiefs of certain departments—but it was ridiculous to blame, as many mob orators did, the admirals and captains who had been concerned. Steadier brains realised this, and their views were substantially represented on this occasion by the *St. James's Gazette*, which, in the course of its reflections that afternoon, said:—

"Let us be under no delusion as to the real causes of our misfortunes. These may be easily catalogued. For years we have had naval manœuvres every summer; and all of these have been full of valuable lessons, to the majority of which we have nevertheless, kept our eyes shut. For years we have had a large number of ships on the list of the Royal Navy; but we have not taken the trouble to make certain that the greater part of these shall always be ready for immediate service. For years we have had a Naval Intelligence Department; but we have not made it large enough to be thoroughly efficient, and we have never taken care that our Mediterranean fleet should be in all respects superior to it. For years we have had it dinned into our ears that divided command at the naval ports—especially with regard to coast and harbour defences—is a source of danger, but we have not listened. For years we have been told that we were lamentably short of stokers, seamen-gunners, and, indeed, blue-jackets of all sorts; but our efforts to increase their numbers have been spasmodic and half-hearted. For years we have been aware that excessively big guns were a broken reed on which to depend, but no action has been taken in consequence. We might extend the lamentable catalogue of our omissions and commissions, but it is useless and undignified to moan over the unalterable. The future only is now our concern. Existing arrangements have convincingly demonstrated their feebleness and inadequacy, some means must be provisionally adopted for properly managing the naval affairs of the Empire. It may be a bad thing to swap horses when one is crossing a stream; but if one's own horse be sinking, there is no better course open: The Admiralty has collapsed; yet, although it is moribund, it still has the power to work harm. Let it, therefore, gracefully and promptly hand over its duties to stronger men. We do not blame their lordships so much as we blame the system under which they have worked. But we have no time for making compliments or for considering excuses. Already we have been hardly hit. Another blow may paralyse us altogether. The safety of the country is the one thing to be thought of, and we trust that neither the Admiralty nor the public will think of anything else. To the one we recommend unselfishness and resignation to the needs of the moment; to the other, calmness, loyalty, and patriotic devotion. Ours is not an inheritance to vanish in a day, but neither is it a treasure to be trifled with."

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 24th.

A splendid function took place on Thursday last at the Pantheon in celebration of the centenary of the Republic, and great fêtes were held in honour of the day throughout France.

Cholera is on the increase in Holland.

London, September 26th.

An imposing service was performed at St. Paul's Cathedral in memory of those who fell at Lucknow, during the Indian Mutiny. Many survivors of the garrison after the relief who then belonged to Havelock's and Outram's forces attended the ceremony.

September 27th.

There has been mutiny among the 1st Life Guards at Windsor, but it is stated to be only a slight affair.

The letter of Mr. Cleveland, accepting the nomination to the Presidency by the Democrats, states that he will adhere to Tariff Reforms which shall include the reduction of duties on raw material, also that he considers it possible to utilise gold and silver on equal terms in the adjustment of the currency question.

The cholera has disappeared from New York.

(FROM MANILA PAPERS.)

Madrid, September 4th.
There is great panic in Paris owing to the cholera; the number of cases yesterday exceeded 300. The epidemic decreases in Havre and Hamburg.

Madrid, September 6th.
The cholera increases in Paris.

Madrid, September 9th.
The cholera in Europe remains the same; Spain in free.

The cholera in Hamburg and Paris continues with great virulence.

Their Majesties the King and Queen of Portugal will be present at the festivities in commemoration of the fourth centenary of the discovery of America.

The epidemic continues severe in Hamburg and Paris.

(FROM THE "SINGAPORE FREE PRESS.")

London, September 8th.
A manifesto issued by the Parnellites charges the Anti-Parnellites with yielding their independence, and urges the formation of an independent party and a prompt reorganisation of the National League.

London, September 7th.
The universal cooler weather is arresting the cholera epidemic on the Continent. Great Britain is reported still free of the disease.

London, September 9th.
Cholera at Hamburg continues to be of a virulent nature, and the daily mortality from this disease is considerable.

London, September 10th.
The officers and crew, except the Captain, of a ship bound for Hamburg, on arrival at Falmouth refused to proceed in the vessel on account of the cholera at the former port. The magistrate who tried the case upheld the action of the crew. The owners of the ship have appealed against this decision.

The cholera is reported to be increasing in Paris.

(FROM THE "MANILA PAPERS.")

Madrid, September 1st.
Cholera has appeared in Venice and Naples. The tobacco manufacturers have re-opened their factories.

The civil war has recommenced in Morocco.

London, September 3rd.
A death from cholera has taken place at Macclesfield; this is the first unimported case recorded in Great Britain. The cholera outbreak entirely absorbs public attention.

London, September 5th.
The Treasury has declared its willingness to allow the mints of New South Wales and Victoria to coin silver, the Treasury receiving the profits but recouping the above named Colonies for any loss they may sustain on the gold currency, and invites concerted Australian action in the matter.

London, September 6th.
The Government of Canada have decreed a quarantine of twenty-one days against all vessels arriving with immigrants, but excepting those from British and Scandinavian ports.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Hotel.

TO CORRESPONDENTS.

J.W.E.—No. 36 cannot be solved by B to II 4. The Black King moves to Q 7, and you are again hopelessly at sea.

SOLUTION OF PROBLEM No. 36.

WHITE. BLACK.
1—K to K Kt 6 1—P to Kt 5
2—Q to B 8 2—K to Q 7
3—Q to R 6 mate if 1—B to Q 7
3—Q to Q B 5 mate if 2—P to K 5
3—Q to K B 4 mate

Correct solution received from Omega, Scachi, and W.H.S.

PROBLEM No. 38.
BY W. A. CLARK.

White to play and mate in two moves.

Played in 1891 at the City of London Chess Club between Mr. F. E. Hamond and another first-class player. Hamond's brilliant conduct of the game certainly deserved the success it obtained.

KING'S GAMBIT DECLINED.

WHITE. BLACK—F. E. HAMOND.

26—K—Q 2 26—Q—P ch.
27—Resigns.

Notes from the Newcastle Chronicle.

(a) A safe and effective method of refusing the King's Gambit.
(b) Castling is perhaps a little stronger, as White dare not go for the K P.
(c) Creating a "hole" which subsequently proves troublesome.
(d) For immediate purposes best; for the future inferior to P x B, which would strengthen his Pawns for the ending.
(e) Preparing an attack on the Q side, where White obviously intends Castling.
(f) 20—P—Q 4 was promising and should have been played.
(g) An admirable preparation for the coming sacrifice.
(h) Another foretelling move of a very high order.
(i) Artistic and unanswerable.
(j) It is immaterial what White does, if 25—K—Q 3, Q x R P ch, &c., winning.

The Yokohama Chess Club will commence its third session on Monday next, when the Annual General Meeting will be held at its old headquarters, the Club Hotel. After the meeting the customary bi-weekly meetings for practice will be resumed.

The match for the championship of America has resulted in a brilliant victory for Mr. Lipschultz who scored seven games against Mr. Showalter's one, with seven draws.

The North of England players are preparing to challenge the South for a big match. This will be an event of exceptional interest.

THE PERFECT GAME.

We grow more thick-skinned as we older grow,
And little care if we win or the foe;
But what we do seek is a stirring game,
Where e'en defeat is free from slip or blame;
A game well fought throughout, nor absent be
The diamond flash of clear-cut strategy.
Such chess were perfect. More do we desire,
Well, an opponent filled with kindred fire,
Phlegmatic, courteous, not too slow or quick,
In mien and gesture free from noise and trick;
Who, winning, will from foolish vaunt refrain,
And, losing, knows when longer fight is vain.
With such a foe and such delightful play,
How bright and full the hours will fleet away!

REPORTS.

The Japanese steamer *Tsuruga Maru*, Captain Shimadzu, reports:—Left Yokkaichi the 23rd September at 3.30 p.m.; had gentle north-easterly breeze and fine weather; passed Omai-saki the 24th at 1.30 a.m. and Rock Island at 4.55 a.m.; moderate north-easterly breeze and fine clear weather throughout the passage. Arrived at Yokohama the 24th September at 11.55 a.m.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 19th September at 9.42 a.m.; had strong E.N.E. winds and overcast rainy weather. Arriving at Nagasaki the 21st at 12.30 p.m. and left the same day at 6.15 p.m.; had moderate variable winds and rainy weather. Arriving at Shimonoseki the 22nd at 7.45 a.m. and left the same day at 10.55 a.m.; had fine clear weather and N.W. winds. Arriving at Kobe the 23rd at 7 a.m. and left the 24th at noon; had moderate to strong N.N.E. winds and

fine clear weather throughout the passage. Arriving at Yokohama the 25th September at 6.20 p.m.

The Japanese steamer *Sendai Maru*, Captain R. Tipple, reports:—Left Kobe the 24th September at 10 a.m. and arrived at Shiwotsu at 0.50 p.m. Left at 3.31 p.m.; passed Oshima at 9.54 p.m. the same day and Rock Island the 25th at 2.55 p.m. Arriving at Yokohama the 26th September at 9.17 p.m.; had fresh N.E. winds with cloudy weather throughout the passage.

The Japanese steamer *Omi Maru*, Captain F. Brown, reports:—Left Otaru the 22nd September at 1 p.m.; had light to moderate N.W. winds and fine weather. Arrived at Hakodate the 23rd at 7 a.m. and left the 24th at noon; had gentle westerly wind and fine weather, heavy easterly swell. Arrived at Oginohama the 25th at 10 a.m. and left the same day at 1.30 p.m.; had moderate easterly wind, fine weather, and light easterly swell. Arrived at Yokohama the 26th September at 1 p.m.

The British steamer *Oceanic*, Captain Smith, reports:—Left Hongkong the 20th September at 4.20 p.m.; had strong N.E. winds to Turnabout, moderate to fresh N.E. gale to Yokohama; thence to port strong N.E. winds and head seas the entire passage. Arrived at Yokohama the 26th September at 4.03 p.m., making the passage in 5 days, 22 hours, and 1 minute.

The Japanese steamer *Miike Maru*, Captain MacMillan, reports:—Left Kobe the 25th September at 2 p.m. and arrived at Yokohama the 27th September at 1 a.m.; experienced fresh E.N.E. winds and head sea throughout the passage.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Otaru the 25th September at noon; had light N.W. winds and fine clear weather. Arriving at Hakodate the 26th at 6 a.m. and left the 27th; had fresh S.E. winds and overcast sky; midnight increasing to fresh gale with heavy head sea and constant thick rain. Arriving at Oginohama the 28th at 3.15 p.m. when met steamer *Kumamoto Maru* putting in for shelter; at 2 p.m. barometer 29.54; at 4 p.m. barometer 29.56. Left Oginohama at 5.45 p.m.; had moderate breezes and overcast weather and head sea; at 8 p.m. barometer 29.59; at midnight falling to 29.55; on the 29th at 2 a.m. set in thick, heavy rain, remaining so to Inuboye, which was passed at 9 a.m. weather remaining thick with rain; barometer falling steadily, moderate N.W. winds; at 4 p.m. barometer 29.40; at 6 p.m. barometer 29.38; at 6.30 p.m. weather clearing. Arrived at Yokohama the 29th September at 7.40 p.m.

The Japanese steamer *Saikio Maru*, Captain Cunner, reports:—Left Shanghai the 23rd September at noon; had gentle N.E. winds and fine weather till noon on the 23rd; thence in Nagasaki fresh wind and sea (E.N.E.), arriving the 25th at 7 a.m. and left the same day at 5 p.m.; had moderate N.E. winds and cloudy weather to Shimonoseki, arriving the 26th at 5.55 a.m. and left the same day at 10.52 a.m.; had moderate N.E. and easterly winds and dull weather in Steep Bluff; thence to Kobe, moderate easterly winds with frequent heavy gusts, arriving the 27th at 7.55 a.m. and left Kobe the 28th at 3 p.m.; had light variable winds with occasional showers to Oshima; thence till at 8 a.m. on the 29th gentle northerly winds with heavy rain; from Rock Island to port strong N.E. winds with frequent heavy showers. Arriving at Yokohama the 29th September at 7 p.m.

The Japanese steamer *Tsuruga Maru*, Captain Shimadzu, reports:—Left Yokkaichi via Handa the 29th September at 9 a.m. and arrived at Yokohama the 30th September at 5.30 a.m.; experienced fine, clear weather with light westerly winds and smooth water in noon; thence continuous rain and light northerly winds.

The Japanese steamer *Hiogo Maru*, Captain Fukui, reports:—Left Kobe the 29th September at 7.05 a.m. and arrived at Yokohama the 30th September at 1.45 p.m.; experienced gentle to moderate north-westerly breeze and fine weather throughout the passage.

The Japanese steamer *Kumamoto Maru*, Captain Olsen, reports:—Left Fukaura the 26th September at 10.30 p.m.; had moderate north-easterly winds and fine clear weather to Siriyasaki, which passed the 27th at 8.55 a.m. the wind hauling to S.E. and increasing with gathering clouds and rising sea; passed Kuro-saki at 6.30 p.m. when it set in thick with heavy rain squalls; towards daylight the 28th blowing a moderate gale with continued rain and high sea, barometer steadily falling; steered for Kinkasan, and getting a position decided to go in to Oginohama for shelter, ship going bows under and labouring heavily. Arrived at Oginohama at 10.30 a.m. and left again the 29th at 5 a.m.; barometer steady at 29.39; thick rainy weather with light westerly winds and heavy southerly swell; at 6 p.m. wind and sea increasing with heavy, rainy, thick weather, barometer

meter falling to 29.35; at 6 p.m. blowing a fresh gale from N.N.E. put ship head to northward and slowed engines; at 10 p.m. weather clearing in westward, barometer stopped falling; put ship on her course again; passed Inuboye-saki the 30th at 1.10 a.m.; Noshima at 8 a.m. and arrived at Yokohama at 12.30 p.m. lowest barometer 29.28.

LATEST COMMERCIAL.

IMPORTS.

There has been quite a briskness in the market, with more life than has existed for a long time past, and dealers have shown a desire to operate in a way that they have not done for several seasons previously, evidently showing that the trade of the country has improved vastly under the influence of good crops of produce of all kinds and good prices for their exports, whilst the diminished stocks, owing in a great measure to so long a period of unremunerative business to importers, has curtailed the usual supplies, with the result that the buying of the past month has virtually cleared the market of nearly all superfluous stocks and secured most of what is on the way, so that sellers have now but little to offer and dealers are inclined to pay up for what they want. The business in Italian Cloths has been very active and large, with quickly advancing prices for especially the better qualities. Turkey Reds have also been dealt in to a very large extent at improved rates. Prints and Velvets have participated in the improvement to a less extent, and Flannels, Cloth, and Blankets have all had increased attention at better prices.

Cotton Yarn has been dealt in, but moderately as regards the Ordinary counts of Single Yarns, though an advance has been paid on previous quotations, both for spot and arrival; in Two-folds there has been much more activity, and sales to arrive have been made at considerable rise in prices for Fine Counts, but the pressure to clear off some old stock has kept down rates for immediate delivery, and as supplies are now very reduced, higher prices seem to be anticipated by the trade. Exchange is quoted 2/10½ for Sterling Bank Bills on demand. Sales for the week, including some items omitted in last report, comprise 850 bales English Yarn, 10,000 pieces glb. Shirtings, 2,000 pieces 8½lb., 1,000 pieces 7½lb. T-Cloths, 5,000 pieces Prints, 2,000 pieces Cotton Italians, 900 pieces Velvets, 50,000 pieces Turkey Reds, 520 pieces Silk-faced Satins, 1,220 pieces Flannel, 15,000 pieces Italian Cloth, 7,200 pieces Mousseline de Laine, 480 pieces Cloths, and 15,000 pairs Blankets.

Brown Takao	35.60 to 3.80
Brown Daitong	3.75 to 3.95
Brown Canton	6.10 to 6.30
White Java and Penang	5.30 to 7.65

EXPORTS.

RAW SILK.

Our last issue was of the 23rd instant. Since that date settlements on this market amount to 2,928 piculs, divided thus:—Hanks, 64 piculs; Filatures, 1,121 piculs; Re-reels, 736 piculs; Kakeda, 982 piculs; Oshu, 25 piculs. In addition to these figures, direct shipments have been 109 bales, making the total operations for the week 3,050 piculs.

Again settlements for the week are abnormally large, and very high prices have been paid, showing the top notch so far for the present season. All sorts have been in demand—Filatures, Re-reels and Kakedas receiving the lion's share of attention; Hanks and Oshu sorts were less wanted.

In our last we spoke of \$900 per picul for Best Filatures. This figure was quickly exceeded in the great rush which took place a week ago. \$930 is said to have been paid for some Extras, and holders are very strong, although the market is much more quiet than it was. Some of our neighbours believe that prices will yet see \$1,000 per picul for *Shinshu* Filatures, while others assert that the top pinnacle has been reached and that we shall go no higher. Time only can decide between these rival prophets.

Arrivals come in freely from the interior, but at one time stock was down to about 5,000 piculs. A quiet market the last two days, with small sales, has again increased the stock to 6,000 piculs. It is worthy of note that the visible supplies to date are 26,000 piculs, the same being much more than half our estimated crop, although but three months of the season has yet passed over our heads.

Exchange has remained fairly steady all through the week, fluctuating but slightly with the price of silver in London. Rates are nominally a fraction above last week's quotations, but probably they could be somewhat shaded with a firm offer of business in hand.

There have been two shipping opportunities since we last wrote, the French mail steamer *Sydney* taking 1,003 bales for Europe, while the *Oceanic*, leaving port to-day, has on board 2,185 bales for the New York trade. The English mail, leaving to-morrow, will also have a good shipment for Europe, and the present export figures reach 17,100 piculs, against 13,645 piculs at the same date last year and 3,966 piculs at the end of September two years ago.

Hanks.—Business in this class has been small, holders asking too much for their wares. Best *Shinshus* are worth \$690, \$675 being asked for good *Chickibu*, of fine size. *Hachiogi* have been done as high as \$570, and with the small stocks on hand, holders are very firm.

Filatures.—Very high prices have been paid for good silk, \$930 being reported for some Extra Filatures, fine size. The same grade of silk, coarse size, is held for \$920, and while there is not large buying at the moment, holders are very strong and believe that will get their prices eventually without any difficulty.

Re-reels.—These are in good demand. *Five Girl* chop has been weighed up at \$850; *Tengensha*, same price; *Tortoise* chop \$745. The market is more or less disorganized, holders not knowing how much to ask for their silk.

Kakeda.—These, which were neglected a week ago, have received a sudden boom and the settlements for the week are nearly 1,000 piculs. Prices have been driven up to what look like a dangerous figure—Extras, \$880; No. 1, \$840, and other grades in proportion. The stock is reduced to very small proportions, being only 300 piculs, and holders are proportionately strong.

Oshu Sorts.—A small business this week, sellers keeping out of the market. The stock has increased somewhat and is well held at quotations.

WASTE SILK.

Settlement for the week amount to 1,600 piculs, divided thus.—Cocoons, 30 piculs; Noshi, 1,253 piculs; Kibiso, 317 piculs.

Much less has been done than during the previous week and some holders are reported to be feeling a little nervous and would like to be moving of at some slight reduction on quotations. It would appear that prices have been forced up too much, the present attitude of consumers being averse to such quotations as we can give from here. Altogether, prices are unchanged from last week; it would seem that better might be done with a firm offer in hand.

There has been only one shipping opportunity the French mail steamer *Sydney*, which left port on the 25th. She carried several parcels of Waste and Cocoons for Europe, and the total export to date amounts to 3,447 piculs, against 3,305 piculs last year and 1,868 piculs at the same date in 1890. The *Carmarthenshire*, now loading, has on board about 100 bales Cocoons for New York, which are not included in our statistics of this date.

Pierced Cocoons.—Very small business, both sides assuming an attitude of observation.

Noshi.—Considerable business has been done, but the firmness of holders stops the trade. Meantime, quotations are nominally unchanged.

Kibiso.—About 300 piculs have been settled on the basis of last week's quotations, but shippers are now looking for some reduction which hitherto holders will not grant.

In other sorts no business.

1y:

THE GREATEST WONDER IN MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the world. May 1st, 1890.

AWARDED GOLD MEDAL L'POUL INTERN'L EXHIBITION, 1889.

"THE REAL CUP O' KINDNESS."

Perfect blendings of the Choicest Brands of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely untempered with.

MATURED IN SHERRY CASKS.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters BOS are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

BOS

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them *unique and unrivalled*.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate.—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in square white bottles, labelled and capped, the quality being notified by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 8TH, 1892.

BIRTH.

On the 5th October, at Kobe, the wife of R. VON KRENNCKI, His Imperial German Majesty's Consul, of Daughter.

SUMMARY OF NEWS.

THE new Hunting Regulations have been issued.

THE appointment of Mr. Suyematsu Kencho as Chief Commissioner of the Law Bureau in the Cabinet Office took place on the 30th ult.

THE appeal case of Messrs. Mourilyan, Heimann & Co. against the Governor of Kanagawa Prefecture has been decided in favour of the latter.

THE *Choya Shimbun* has been suspended, an article published in the issue of the 1st inst. being regarded as likely to disturb the country's foreign relations.

THE confectioners of Okayama Prefecture will meet on the 11th inst. to consider a petition to be presented to the Diet for the abolition of taxes on confectionery.

A SLIGHT earthquake was experienced in Tokyo on the morning of the 1st inst. at 2h. 6m. 31s. Another feeble shock was felt at 9h. 21m. 36s. the same forenoon.

THE funeral of the late Mr. Adachi Toshitsuna, ex-Governor of Fukui, was held in the capital on the 30th ult., the ceremony being attended by more than one thousand persons. The coffin, guarded by a battalion of infantry, left the house of the deceased at Negishi.

Shitaya, at 2 p.m. The interment, which was in accordance with Shinto rites, took place in the cemetery at Yanaka.

H.I.M. THE EMPEROR will leave the capital on the 22nd inst. to attend the Autumn Manoeuvres of the First and Second Army Divisions to be held in the plains of Yashu province. He is expected to return to Tokyo on the 27th inst.

AN exhibition of fine art objects (pictures) promoted by the Japan Fine Art Society, was opened in Ueyo Park on the 1st inst. Some 250 new designs and 200 productions of ancient Japanese artists had arrived up to that day, and more exhibits were expected.

MR. IWASAKI at present heads the list of largest direct City tax-payers in Tokyo, contributing yen 6,278.32 towards the municipal treasury; the next is Marquis Tokugawa Shigetugu, whose taxes amount to yen 2,331.16; he is followed by Prince Mori, with yen 1,437.21.

THE residents of Nagoya have presented a gold cup to Mr. Kajima Hidemaro, an ex-Kaishin representative in the Lower House for Hyogo, in recognition of services rendered by him in the revision of the new Regulations for the Organization of Cities and Prefectures.

THE libel suit raised by Mr. Hiranuma Senzo the big money-lender of Yokohama, against Public Procurator Odate of the Tokyo Local Court, which was rejected by the Procurator's Bureau, has been thrown out by the Tokyo Court of Appeal.

DURING July last cotton thread to the amount of 765,037 *kwanme* (one *kwanme*=8½ lb.) was manufactured at 34 spinning mills throughout the Empire, the number of spindles in use being 323,784. The total quantity of cotton used was 880,635 *kwanme*, 13,885,571 pounds of coal being consumed.

THE following answers have been obtained from 139 boys in a school attached to the Okayama Ordinary Normal School who were questioned as to the occupation they would best like in after life:—Soldier, 42; merchant, 41; scholar, 19; medical man, 16; Government official, 6; engineer, 5; farmer, 4; advocate, 3; Shinto priest, 1; banker, 1; and druggist, 1.

THE foreign trade of Fusan, Korea, during the month of July last, amounted to yen 197,815 in value, of which yen 69,222 represented imports, and yen 128,593 exports. The following are the values of commodities (over yen 2,000) imported from and exported to Japan:—Exports yen 3,184 ox-hides, yen 7,716 sea-weed and yen 54,532 rice; Imports: yen 11,577 *karreisha* (a description of thin muslin), yen 2,292 cotton goods, yen 4,091 copper, yen 6,051 tin, yen 2,519 mats, yen 5,683 salt, and yen 2,242 timber.

THEIR Imperial Highnesses Princes Komatsu Akihito and Kitashirakawa Yoshihisa in company with Counts Ito, Kuroda, and Oyama, Viscounts Nire, and Mr. Mutsu, Ministers of State; Marquis Tokudaiji, Grand Chamberlain; Counts Oki and Kawamura, Viscounts Kabayama, Sano, Fukuoka, and Tanaka, and Mr. Ozaki, Privy Counsellors; Mr. Hanabusa, Vice-Minister for the Imperial Household; Viscount Kagawa, Grand Master of Services to H.I.M. the Empress; and Mr. Tsutsumi, Director of the Bureau of Imperial Works, dined at the Palace with the Emperor on the 30th ult.

THE Yokosha and five other paper mills at Fuji, Kobe, Yokkaichi, Oji, and Senju, manufactured 2,027,070.78 *kin* (one *kin*=1½ lb.) of paper during August last, the sales during the

month amounting to 1,858,395.81 *kin*. Classifying the output under its different varieties it is found that of ordinary printing paper, 1,485,419.10 *kin* were manufactured and 1,263,740.35 *kin* sold; of superior printing paper, 30,213.00 *kin* manufactured and 37,280.17 *kin* sold; of miscellaneous paper, 207,886.18 *kin* manufactured and 186,556.93 *kin* sold; of coloured paper, 62,041.50 *kin* manufactured and 66,750.60 *kin* sold; and of wrapping paper, 241,511.00 *kin* manufactured and 304,067.76 sold.

A TELEGRAPHIC message from Yamaga in Kumamoto Prefecture, received by the Imperial News Agency, reports that during the night of the 29th ult. a large number of *soshi* belonging to the *Kokken* Party, aided by a company of constables and district officials, broke into several houses of the *Min-to* partisans and intimidated *Min-to* electors to vote for the *Kokken-ha*, in the election of members of the Village Assembly. At 9 o'clock the following morning they behaved in a disorderly manner, flourishing drawn swords in the *Min-to* club, and attacking many other residences. Some four or five were more or less severely wounded. A party of gendarmes is now engaged in restoring order. A later telegram from the district announces that the *Kokken* partisans used firearms in order to prevent the *Min-to* electors from approaching the voting station. A telegram dated the 3rd inst. states that the disturbance has not yet been quelled. It appears from the above messages that the mischief was entirely due to the *Kokken-ha*, but a report from the district which was received by the Tokyo News Agency entirely contradicts this. The report says that about 9 o'clock on the night of the 1st inst. several *Min-to* partisans stoned the residence of a man belonging to the *Kokken-ha*. The occurrence was at once reported to the police authorities, who were soon on the spot. A crowd of roughs, consisting of over one hundred persons, resisted the police for some time. Some six *Min-to* persons were arrested. This report is said to have been corroborated by another telegram received by the Home Department.

BUSINESS still continues to move along the upward curve of the cycle, but transactions have not been so extensive as last week, owing to the scarcity of supplies in Yarn, and other staples. Yarn rose 30 to 50 cents in sympathy with demand. T-cloths and 8½lb. and 9lb. lines of Shirts went off at full rates. In Metals the demand keeps steady, but Galvanized sheets, being somewhat sought after, are up 20 to 30 sen on the week. Shortness of supply in this instance also helped to push up prices. Kerosene, notwithstanding the arrival of 104,137 cases of "Comet" and 66,500 "Chester," has remained firm at late quotations. The stocks of Sugar, both Brown and Whites, are lower and holders, having things all their own way, have advanced prices, but buyers continue to take freely. Sales of Tea were mostly for the higher grades. The export is about the same as last year now—about 26,400,000 lb. The Silk market is quieting down after the spurt of the last few weeks, and prices are falling slightly all round. Cable advices from home consumers have something to do with this perhaps. European and American houses are vigorously protesting against the late high prices paid for Waste, saying that they cannot afford to pay them. The interior merchants are moving their stocks down rapidly, and at present 7,400 piculs of Raw are on the market. The Japanese are still looking forward to high prices in Waste, but unless the big buyers begin speculating against each other again, their hopes will not be realised. Exchange advanced slightly, in sympathy with silver in London, but closes firm at 2/10½.

EDITORIAL NOTES.

THE "AJIYA" AND FOREIGN POLITICS.

We have more than once alluded in these columns to the existence of many Japanese, politicians and otherwise, who believe that the only exit from the embarrassing groove into which domestic politics have drifted is to divert the energy of the nation to foreign affairs. The *Jiji Shimpō*, the *Choya Shimbun*, and several other journals in Tokyo, have chosen Korea as the most suitable point on which to focus the attention of their nationals, while others advocate, for the same purpose, the colonization of Mexico or of the South Sea Islands. It was even feared, several weeks ago when the military party held the ascendancy in politics, that something desperate might be undertaken in Korea or elsewhere, though such an apprehension never troubled serious folks, and is now seen by all to have been entirely without foundation. Every one understands very well to-day that the statesmen now in power will never permit any ill-considered or precipitate enterprise abroad. On the other hand, these same statesmen thoroughly recognize the vital importance of preparation on Japan's part to respond to any summons for the assertion of her rights abroad, while at the same time they lament the dissipation of national energies over useless and pernicious contests in petty domestic politics. It is stated that Count Ito, in his recent instructions to the local Governors, alluded to the importance of diverting national attention to foreign affairs, so that the country might be united against possible foreign dangers. Commenting on this topic, the *Ajiya* of the 19th ultimo, strongly opposes the idea of directing public attention to foreign questions. It thinks that the political contest between the Government and the Opposition has not yet reached its bitterest stage, and that until it shall have reached and passed that stage, there would be not alone no expediency, but even decided disadvantage, in attempting to apply any extraneous remedy for the purpose of calming the heat of the contest. To try to divert the nation's mind from domestic politics at the present moment would be simply to produce an artificial state of calm which would assuredly be succeeded by a tremendous reactionary outburst of tempest. The wisest course, in the opinion of the Tokyo periodical, is to let things take their natural course. Moreover, however much the Japanese may be divided in domestic politics, the *Ajiya* is persuaded that they will never lack patriotism in moments of national peril, and that their effective union at such times may be confidently anticipated.

THE WORLD'S FAIR.

The Committee of the Chicago World's Fair have issued an imposing chromo-lithograph giving an "official bird's-eye view of the World's Columbian Exposition," as it will appear when finished. There is nothing like an object lesson in such matters. This picture will probably excite more desire among the general public to visit the Fair than all the glowing accounts circulated in print have excited. Nor can we wonder that such should be the case, for the artist has contrived to convey an impression of magnitude and magnificence quite bewildering. How many buildings are included in the scheme of the Fair, it is impossible to tell, for though sixteen—every one of them stupendous enough to dwarf lake-steamers to the dimensions of mere punts—are unmistakably shown, the central edifice a town in itself, there are also to be observed in the back-ground, a further group of erections too hazy to be clearly identified, but differing sufficiently from ordinary houses to suggest the impression that they too belong to the Fair. Whether they do or do not, however, the assemblage of buildings is vast enough to excite curiosity to the utmost pitch. Obviously a visitor of ordinary patience and inquisitiveness will require about a fortnight to complete an observant circuit of the little city. Inscribed cursorily on the margin of the big picture are a few stray notes, short but suggestive. Thus we read that the Machinery Hall covers

17½ acres of area (twenty-one thousand *tsubo*), and that the Gallery of Fine Arts, with an area of 5 acres (six thousand *tsubo*), has one lineal mile of hanging space. Fancy inspecting a whole mile of pictures by the best artists of the time! The management, organization, and advertisement of this stupendous undertaking up to the present time are thoroughly characteristic of American energy and enterprise. It is impossible to foresee anything but an immense success for the Fair, which will be the biggest thing of the kind ever witnessed under the sun, and will enable visitors to obtain a comprehensive idea of the standard reached by nineteenth-century civilization.

MONUMENTAL PAVILION.

As the promulgation of the Constitution and the opening of the Diet are among the most remarkable national events that have occurred since the establishment of the Empire, a feeling grows that some kind of a monument ought to be erected. A certain Mr. Shimizu of Shizuoka is a prominent promoter of the idea, and has obtained a great number of influential supporters throughout the empire. He proposes to erect a three-storied pavilion in the Hibiya enclosure, in front of the Diet buildings. The section of the pavilion will be about 90 square feet; and in the ground floor a monument will be erected; in the first-storey portraits of distinguished statesmen and politicians of the day will be hung; and in the second storey a statue of His Imperial Majesty the Emperor, standing with a copy of the Constitution in his hand, will be erected in the middle of the room; iron railings will fence round the building, which is to be lighted by electricity. The work will be completed in three years. But it is rumoured that the Hibiya district is unsuited for the foundations of such a heavy building, so by the advice of architects, the Sumida Garden, at Mukojima, along the river, will probably be chosen. The work will be commenced as soon as the promised subscriptions are collected. If it is not, concludes the *Yomiuri Shimbun* which publishes the above news, promoted by dishonest speculators, it will be a worthy and fine affair.

YOKOHAMA SILK MERCHANTS' GUILD.

So much friction developed itself recently among the Japanese silk merchants in Yokohama, that the Governor of the Prefecture thought it necessary to direct them to organize a guild. This, however, only added fuel to the fire. Each party proceeded to form a guild on its own account, and each guild applied to the Prefectural Officials for a charter. The latter found themselves seriously perplexed in making a selection, and the dilemma appeared farther than ever from a solution when Messrs. Otani Kahei and Hara Rokuro came forward as arbitrators, and addressed themselves with much earnestness to the task of appeasing the disputants. The result was that these two gentlemen were commissioned to compile a scheme of organization for a guild including both parties, and this they accomplished so satisfactorily that their draft was adopted and signed by both sides. It was presented to the Kencho for approval on Tuesday last, and thus the long friction was at length terminated. We are promised a statement of the Rules of the Guild in a few days.

THE LATE DR. LAMBUTH.

A TRIBUTE to the memory of the late Rev. Dr. J. W. Lambuth has been offered in the form of a very beautiful little volume, containing the funeral addresses delivered by the members of his mission last April, when his body was laid in the Kobe Cemetery, and containing also photographs illustrating his work in China and Japan. Dr. Lambuth served as a missionary for forty years, of which the last six were spent in Japan, where he founded the Mission of the Inland Sea. It is easy to gather from the words uttered by his fellow-workers, to whom every detail of his career is familiar, that he was one of those men whose pure enthusiasm and absolute integrity of purpose make of life "one grand sweet song." Whatever direct success

may attend the theological teaching of these devoted exponents of a great cause, no one can ignore or belittle the useful influence of their example. Their singleness of purpose and the blamelessness of their daily lives are object lessons which do not fail to impress the people among whom they labour. Dr. Lambuth, during his thirty-four years of work in China and six in Japan, seems to have avoided public recognition as far as possible. His death has brought him into prominence which in life he never courted. The resolutions passed by the Japan Mission of the Methodist Episcopal Church, South, in grateful appreciation of his high qualities and large usefulness, tell the general public for the first time what manner of man he was. His story reminds us again of the impressive fact that while scoffers sneer and men of sordid purpose devise libellous interpretations of the missionary's motives, the missionary himself toils on quietly and faithfully, raising no voice against his traducers, but showing to the public that the faith he preaches shines in the life he leads.

THE VERNACULAR PRESS ON THE NEW DIRECTOR OF THE LEGISLATIVE BUREAU.

MR. SUYEMATSU KENCHO having been appointed Director of the Legislative Bureau, a post vacated lately by Mr. Ozaki Saburo, the vernacular press naturally comments on the fact. The *Mainichi Shimbun* (a *Kaishin-to* organ) says, that though Mr. Suyematsu is a Pro-government member of the House of Representatives, he is not disliked by his political opponents, inasmuch as he is always frank, and his ability is undoubted. When Count Ito, his father-in-law, became Minister President of State Mr. Suyematsu found himself in some perplexity. He declared that he had no intention of becoming a servant of the Government, but that if he joined the Popular Party, he would be his father-in-law's enemy. Fortunately, however, his dilemma is now solved by his nomination to office. No one ventures to allege that the appointment is unsuitable; on the contrary, it is most suitable. But, concludes the *Mainichi*, since Mr. Ito Miyoji has been appointed Chief Secretary of the Cabinet, and Mr. Suyematsu Director of the Legislative Bureau, people passing along Nagata-cho declare that the "Family Government" is now in power.

The *Nippon*, with its wonted brightness, writes as follows:—"How many men are there in this world who are as able and as well-informed as Mr. Suyematsu? He can write well; can argue well; can lecture well; can translate well. He is the author of a good novel; has translated the *Genji Monogatari* into English; has revised a Japanese play; has edited the "Readers" used in Primary Schools; has compiled moral lessons for students. An artist, a master of literature, a journalist, a Director of a Bureau, and a member of the Diet. All these qualifications he possesses, though Count Ito, his father-in-law, in a critical mood, called him "a teacher in a Primary School." He is the happiest man alive, and every body envies him. To this "school-master" an important appointment was given yesterday—he is now Director of the Legislative Bureau. It is said that the Bureau contains many officials fond of controversy, and that it is consequently somewhat difficult to manage. But, with the Minister President of State for father-in-law, and his own frank and jovial countenance, for assistant, Mr. Suyematsu will manage the Bureau without much difficulty, especially if he laughs his loud laugh every now and then!

VISCOUNT SHINAGAWA.

WHATEVER more solid success Viscount Shinagawa may achieve on his present political tour, he can at all events claim the credit of having set the public tongue wagging. In Kumamoto, at a largely attended meeting, he is reported to have declared that while holding the portfolio of Home Affairs, he did everything in his power to influence the result of the general elections. The words attributed to him are:—"The official who managed all affairs connected with the general elections was the Minister of State for

Home Affairs, and I, Shinagawa, then occupied that position. I interfered as much as possible. It was I that interfered. I never say what is not true, and I pledge you my word before heaven." This statement has been eagerly seized by the Opposition press and used as a basis of attack not only against Viscount Shinagawa but also against Count Matsukata. The latter, say his assailants, is now proved to have spoken falsely when he assured the Diet that there had been no official interference. But the *Choya Shimbun* points out that both Viscount Shinagawa and Count Matsukata are misinterpreted. The latter did not tell the Diet that there had been no interference. The position taken from first to last by the Matsukata Cabinet was that whatever the local officials did had been done by them, so far as the Government knew, in their private, not in their official, capacity, and was consequently within their rights as Japanese subjects. It was entirely a question of the different interpretation put by the Cabinet and the Opposition on the competence of officials to separate their individuality from their office. Moreover, the *Choya* denies that Viscount Shinagawa's words can be read in the sense of a confession that improper interference was exercised at his instance. His declaration amounts to nothing more or less than this, that he considered it all important in the interests of the nation to secure the return of good men, and that he did everything lawfully within his power to achieve that result.

The incident is most extraordinary—extraordinary above all, as we think, in the credulity shown by the public. People actually appear to have no difficulty in believing that Viscount Shinagawa stood up before a big audience at a public meeting, openly confessed that he had abused the authority vested in him as a Minister of the Crown, and swore a solemn oath that he had done the very thing which, when in office, he and all his colleagues emphatically denied. Does not that slightly over-tax the faith of any ordinary man? However, Viscount Shinagawa is apparently inclined to allow these wonderful versions of his speech to circulate without let or hindrance. If he really did make to a Kumamoto audience open confession of the crime of unlawful interference, the balance of his mind must be seriously disturbed. We shall, doubtless, know one day, what he actually did say. For the present, it seems idle to draw inferences from a version so extremely improbable.

THE EARTH'S AGE.

REFERRING to the question of the age of the earth and the various methods that have been employed to calculate it, Sir Archibald Geikie, writing in *Nature*, says:—"In problems of this nature we can only measure the rate of changes in progress now, and infer from these changes the length of time required for the completion of results achieved by the same processes in the past. The rate of degradation of the land is capable of actual measurement. Denudation and deposition must be equivalent to each other. Actual measurement of the proportion of sediment in river water shows that while in some cases the lowering of the surface of the land may be as much as $\frac{1}{30}$ of a foot in a year, in others it falls as low as $\frac{1}{2500}$. In other words, the rate of deposition of new sedimentary formations, over an area of sea-flow equivalent to that which has yielded the sediment, may vary from one foot in 730 years to one foot in 6,800 years. If now we take these results and apply them as measures of the length of time required for the various sedimentary masses that form the outer part of the earth's crust, we obtain some indication of the duration of geological history. On a reasonable computation these stratified masses, where most fully developed, attain a united thickness of not less than 100,000 feet. If they were all laid down at the most rapid recorded rate of denudation, they would require a period of 73,000,000 of years for their completion. If they were laid down at the slowest rate, they would demand a period of not less than 680,000,000. There is no reason to think that

the rate of organic evolution has ever seriously varied; at least no proof has been adduced of such variation. Taken in connection with the testimony of the sedimentary rocks, the inferences deducible from fossils entirely bear out the opinion that the building up of the stratified crust of the earth has been extremely gradual. If the many thousands of years which have elapsed since the Ice Age have produced no appreciable modification of surviving plants and animals, how vast a period must have been required for that marvellous scheme of organic development which is chronicled in the rocks! After careful reflection on the subject, I affirm that the geological record furnishes a mass of evidence which no arguments drawn from other departments of Nature can explain away, and which, it seems to me, cannot be satisfactorily interpreted save with an allowance of time much beyond the narrow limits which recent physical speculation would concede."

THE IDAHO TROUBLES.

THE News Agency says that although no reply has yet been received from the Japanese Consul in San Francisco, Mr. Chiuda, to the instructions issued by the Foreign Office in Tokyo that he should proceed to Idaho and conduct an investigation into the circumstances of the recent anti-Japanese demonstration there, intelligence is to hand that the persons who behaved with violence towards the Japanese were not American but European immigrants of the lowest classes, whose motive was nothing more than a desire to get rid of all inconvenient competition in the field of labour. It is probable that the United States Government will adopt stringent measures to restrain these lawless persons in future. Any feeling engendered in Japan against the people of America in consequence of the regrettable occurrences, ought, therefore to be altogether laid aside.

COMPRESSED AIR.

HERR FRANZ BENDT gives the following interesting account of the uses to which compressed air is put in Paris:—

A new method for the transfer of mechanical power over great distances is by means of compressed air. The plan is, in general terms, as follows: Air is submitted to pressure in compressors, and then transferred, with measurable force through pipes to an ordinary steam-engine. The air enters this and operates it like steam under pressure. The method has already had practical application for special purposes. Mayerhofer, for example, drove and regulated Paris clocks with compressed air. The transfer of power by means of atmospheric pressure, did not, however, excite any widespread interest, until Viktor Popp, in Paris, gave practical application to a special modification of the principle.

Paris is singularly adapted for the introduction of such an enterprise, possessing as it does a widespread network of subterranean canals through which the pipes containing the compressed air could be laid in all directions. Where no such facilities exist, the expense of providing for the conduct of the pipes will be an obstacle, for it goes without saying that the cost of imbedding an electric wire will be very light in comparison with the cost of laying iron pipes or cylinders of considerable diameter.

Popp's first experiment, which may be taken as a guide for all future enterprises in this direction, is in the neighbourhood of Belleville, Rue St. Fargeau: Here eleven steam-boilers and eight steamengines operate the atmospheric compressors. These last again compress the air into eight reservoirs, subjecting it to a pressure of six atmospheres. This condensed air, representing a force of 2,000 horsepower, flows through a main-pipe seven kilometres long for distribution to different parts of the city.

The first establishment has been recently extended, and new centres are in course of erection. Especially noticeable is the great central on the Seine, on the *Quai de la Gare*. At present it operates up to 10,000 horse-power, but it is designed for 24,000. To this end the main pipe, with a diameter of 300 millimetres will be supplemented with a new network of mains of 500 millimetres for "short distances."

The great value of such central establishments is directly apparent. They will enable the artisan and private house-holder to command mechanical force at a cheap rate, free the city from the intolerable noise and smoke and soot of the steam-engine, and locate all danger from explosions due to high tension at a distance. The method of power-transfer by atmospheric pressure has one special advantage not shared by the electric method. The air, rushing through the distributing pipes under a pressure of six atmospheres, enters the working machine very much chilled, and can be utilized, not only to drive the machine, but also for the distribution of cold air

through the apartments. The system has consequently received considerable application for cooling purposes. One of the principal establishments for this purpose is in the *Bourse de Commerce*, in the vaults of which cold air cellars are erected for the storage of food substances, which it is not desirable to send at once to the market. On the military side, too, the possibility of utilizing this method for the maintenance of a supply of fresh provisions, in the event of Paris being subjected to another siege, has not been overlooked.

Compressed air is admirably adapted to tunneling and mining, and in this department it is no slight advantage that the escaping air improves the atmospheric conditions of the cutting, in lieu of vitiating it with the noxious gases of combustion.

For the moment there is fierce strife between the electricians and the supporters of atmospheric pressure. However, such disputes are to be welcomed as in the public interest, for their tendency is to provoke a spirit of emulation leading to further progress and the general benefit of humanity.

THE UNITED CHAMBERS OF COMMERCE.

THE conference of the United Chambers of Commerce throughout the empire was opened at Kyoto on the 26th ultimo. The following places were represented by the number of members printed after each:—Tokyo 2; Osaka 3; Kyoto 2; Kobe 2; Otsu 2; Kochi 1; Nagoya 2; Hakata 2; Sakai 2; Sendai 1; Kanazawa 1; Kumamoto 1; Shimonoseki 1; Hiroshima 1; and Gifu 2. The first proposition discussed was submitted by the Osaka Chamber of Commerce. It ran as follows:—

A Chamber of Commerce shall superintend all the commercial and industrial associations in the district.

For the above purpose, the Department of Agriculture and Commerce shall issue a Departmental Notification.

This proposal led to much discussion, but the majority being in favour of it, it ultimately passed. Proposals presented by the Kyoto Chamber of Commerce were next considered. They were three in number, and ran thus:—

1. Amendment of the Regulations relating to the Chambers of Commerce.

The provisions of Arts. 1, 5, 6, 7, and 10 shall be amended.

2. Establishment of a Central Commercial Council.

The Central Commercial Council shall be superintended by the Minister of State for Agriculture and Commerce, who shall choose its members. The Council shall prepare replies to such questions as may be asked by the Departments of Agriculture and Commerce, of Foreign Affairs, of Home Affairs, and of Communications, on commercial matters. It shall also compile drafts of new Laws or Regulations relating to commerce.

3. Matters relating to the national taxes on lands and buildings belonging to Chambers of Commerce.

A petition shall be presented to the Minister of State for Finance asking for the abolition of national taxes and local taxes on the lands and buildings in the occupation of Chambers of Commerce.

The first of these three proposals was handed over to a committee, appointed for the purpose of investigating the existing Regulations relating to Chambers of Commerce. The second proposal was read, but a final vote upon it was postponed. The third was thrown out. Then a proposition submitted by the Kobe Chamber of Commerce was read:—

Amendment of the Regulations relating to Chambers of Commerce.

The provisions of Arts. 1, 4, 5, 6, 7, 9, 12, 14, and 19 shall be amended.

This measure also was handed over to the Committee. A proposal submitted by the Sakai Chamber of Commerce was next discussed and rejected. It took the following form:—

Establishment of Japanese Products' Bazaars in foreign countries.

A petition shall be presented to the Diet urging the advisability of establishing Japanese Products' Bazaars in foreign countries where Japan has Consulates. This petition shall be communicated to the Ministers for Foreign Affairs and for Agriculture and Commerce also.

The next proposal had reference to local taxes and was presented by the Kochi Chamber. After much discussion between Mr. Matsumura (Kochi) and Mr. Tamura (Osaka), it was decided to appoint a Committee of 12 members, and hand the proposal to them for investigation. A proposition relating to the amendment of Chambers of Commerce Regulations submitted

by the Kumamoto and the Hakata Chambers, was also handed to a committee, and the meeting closed at 2.20 p.m.

INDIAN METAL WORK.

THE Indian Art Metal-Work Exhibition, at the Imperial Institute (says a home paper), has attracted far fewer people than its importance deserves. Perhaps this is to be accounted for by the fact that it is situated in the midst of fine displays which may be seen gratuitously, and that consequently a charge for this of either one shilling or half-a-crown, according to the day, and sixpence for a catalogue, appears somewhat startling by comparison. The wisdom of this course appears to be doubtful if, as it should be, the object of the executive is first to make the place largely and widely known, and to enlist the sympathy and subscriptions of the public. The entrance fee appears the more exorbitant, as only a small portion of the building is completed and open, and a considerable portion of the show is of goods from the shops of various London tradesmen. Most people who are accustomed to the art in metals of Western countries, or even of Japan, will feel that in this Indian work too much reliance is placed upon the effect of wealth of metal and ornament. The impression left upon the mind is of a lavish use of gold and silver and an overloading of ornament. About the only base metals employed are brass and copper, which are too much akin to gold in colour. One longs for sober iron, or for the rich dark alloys produced by the Japanese, whose restraint in the use of metal and ornament would be most valuable for Indian workers. One cannot but appreciate the more the workman who knows the value of undecorated or decorated surfaces, or has for his maxim, that "brains are of more value than the melting pot." It is right that everyone should be an enthusiast about his own hobby; but to one who knows the casting in bronze of other nations, the remark upon the label of the brass figures from Vizagapatam—repeated too in a couple of instances—"For skilful modelling these are the finest I have ever seen," appears too partial to carry any weight. For the authorities also to label a debased and hideous figure of Krishna as "beautiful" is to detract from the value of any criticisms upon these subjects.

HOTEL CHARGES.

Things happen in this empire concerning which an extraordinary degree of ignorance exists among the foreign residents. One of these bewildering incidents is a keen competition which took place during the summer months between inn-keepers in anonymous districts of the north and east. The inn-keepers, in their anxiety to overcome each other, reduced their prices so greatly as to entail heavy loss on themselves, and attract an immense number of foreign guests, one result being that favourite places of resort like Hakone and Miyanoshita found their visitors reduced by some thirty or forty per cent. Now it is a very good thing, says the *Yomiuri Shimbun*, from which we extract these interesting particulars, that hotel charges should be reduced in the interests of travellers, but it is not a good thing that owners of hotels should allow competition to betray them into making heavy losses. "Next year, we shall have eighty thousand visitors, and if each of them spends a thousand yen the total will be eighty million, an amount which Japan must be careful not to lose." The various hotel-keepers throughout the empire are therefore about to meet in conference for the purpose of determining the prices to be charged to tourists for board and lodging. We (*Japan Mail*) should be greatly indebted to the *Yomiuri Shimbun* if it will explain a little more explicitly in what part of Japan inn-keepers were so kind last summer as to reduce their prices to a level of disaster.

THE JAPAN MAIL STEAMSHIP COMPANY.

We find in the *Nichi Nichi Shimbun* a statement that the Japan Mail Steamship Company has applied to the Government for permission to issue bonds to the total value of 2,000,000 yen.

Some two years ago the Company conceived the project of gradually reducing its capital from eleven million yen—the amount at which it was originally fixed—to 8,800,000. During 1890, a reduction to the extent of 250,000 was actually effected, but since that time things have remained *in statu quo*. The price of the Company's shares being now comparatively low, a project has been conceived of purchasing 1,950,000 yen worth by issuing bonds bearing interest, presumably at 5 per cent. Doubtless the Company would have no difficulty in placing such bonds in the market, its credit being good for very much more than 2½ millions. The transaction looks wise. It would enhance the value of the remaining shares, and facilitate the payment of better dividends. There can be no question that the capital of the Company was originally fixed at too large a figure.

RAILWAY COUNCIL.

On Saturday the 1st instant at 10 a.m. the following persons were nominated members of the Railway Council, their names being duly announced in the Cabinet:—

PRESIDENT OF THE COUNCIL.

Lieut.-General Kawakami Soroku, Sub-Director of the General Staff.

MANAGER OF THE COUNCIL.

Mr. Den Kenjiro, Secretary of Department of Communications.

MEMBERS OF THE COUNCIL.

Viscount Inouye Katsu, Director of the Railway Bureau.

Major-General Kodama Gentaro, Vice-Minister for War.

Mr. Kawazu Sukeyuki, Vice-Minister for Communications.

Mr. Arishima Takeshi, Director of the National Debt Bureau.

Mr. Saito Shuichiro, Director of the Commercial and Industrial Bureau.

Mr. Furusawa Shigeru, Director of the Postal Bureau.

Dr. Matsumoto Shochiro, Sub-Director of the Railway Bureau.

Colonel Takahashi Korenori, Director of the Second Bureau in the Head Quarter Staff.

Captain Arima Shinichi, Director of the Second Bureau in the Naval Staff Board.

Major Yamane Takeaki.

Major Yamaguchi Keizo.

Dr. Ishiguro Isoji, Engineer of the Public Works Superintendence Office.

Viscount Tani Tateki, Member of the House of Peers.

Viscount Hotta Masayasu, member of the House of Peers, and Director of the Chikuho Railway Company.

Mr. Kawada Koichiro, member of the House of Peers, and Director of the Bank of Japan.

Mr. Komuro Shinobu, member of the House of Peers.

Mr. Wakao Ippei, member of the House of Peers.

Mr. Watanabe Koki, member of the House of Representatives.

Mr. Murao Yamato, member of the House of Representatives.

Mr. Sato Satoji, member of the House of Representatives.

Mr. Minoura Katsuto, member of the House of Representatives.

Mr. Ito Daihachi, member of the House of Representatives.

* * *

Thus the Council numbers twenty-two members. Out of these 12 are officials; 5 members of the House of Peers; and 5 members of the House of Representatives. Messrs. Sato, Minoura, and Ito were members of the Committee for the examination of the Bill relating to the Extension of Railways. Messrs. Sato and Watanabe are members of the National Union; Mr. Minoura is a member of the *Kaishin-to*; Mr. Ito is a member of the *Fuyu-to* and Mr. Murano is an Independent. The various political parties are all represented.

THE TIDE AT YOKOHAMA.

SOME interesting examples of surviving superstition are furnished from time to time in the columns of European and American journals, where we find records of miraculous cures effected by contact with saintly relics, and solemn exorcisms practised by priests to expel demons from the bodies of young maidens. To this catalogue has now to be added the

latest utterance of the vernacular press, gravely copied with every evidence of credence by English local journals in Yokohama and Kobe. The construction of the breakwater in Yokohama harbour, say these refreshingly simple writers, having narrowed the entrance to the harbour, "there has been a considerable change in the tides, they being a foot higher than before." Some of the journals that have helped to circulate the news of this wonder would probably have hesitated had they recognised that they were ascribing supernatural powers to the Engineer-in-Chief, whose capacities it has been their pleasure to decry. But superstition and ratiocination have never been companions. Awed by the stupendous fact that the projection of a few yards of masonry across the entrance of a tiny estuary on the coast of Tokyo Bay has modified the attractions of the sun and moon, and actually added a foot to the flow of the tide, these victims of superstition did not pause to think whether demon or god was at work. The phenomenon overwhelmed them. They recorded it with all haste, that the general public might know what wondrous events were occurring in this remote corner of the Far East. And being desirous that their audience might fully share the awe consuming themselves, they took care to add that "this change in the tides was not foreseen before the work was taken in hand." The Engineer-in-Chief was not conscious of his own supernatural powers. He failed to appreciate that a few blocks of concrete placed in the sea under his direction would represent an agency capable of vying with the attractions of the heavenly luminaries. Such a man should be carefully looked after. There is no telling what appalling results he may not achieve "without foreseeing them."

THE "LONDON AND CHINA EXPRESS" AND THE PORTUGUESE AFFAIR.

WE ventured to predict that when the *London and China Express* had received full information of the facts of the Portuguese jurisdictional question, it would adopt a tone very different from that of its first article on the subject. Our forecast has been fulfilled, for we find the following article from a correspondent in the issue of the paper just to hand:—

The mail has brought full details of the Japanese-Portuguese incident which you have already alluded to. From the facts, which I have received from a correspondent who understands the matter, unpleasant as they may be for Portuguese subjects, the situation was brought about solely and entirely by the negligence of their own Government, in not providing proper officers for the administration of justice. The stipulations concerning jurisdiction in the Treaty of 1860 between Japan and Portugal are similar to those contained in the Anglo-Japanese Treaty of 1858, and there are at present about 140 Portuguese subjects in Japan. For reasons of economy, or for want of a proper consular service, the Portuguese Government had from the beginning neglected to provide in a proper manner for the obligations which by the Treaty they had incurred. First, there was no regular Consul at all, or, at any rate, no Consul of Portuguese nationality. Later on the Consular officer who was appointed was not a paid official, nor had he sufficient legal powers. Already, some sixteen years ago, the Japanese Government, through their representative at Lisbon, had occasion to complain about this, and, in 1882, the Japanese Government again approached the subject with a greater measure of insistence. The result was that a full consulate was created during the year following, and a Consul "missi" was appointed to fill the post. But even this proved insufficient, for, when it was in 1886 necessary to prosecute a Portuguese subject for larceny at Nagasaki, it was found that there was a hiatus in the jurisdiction somewhere, which allowed the offender to escape without arrest. This circumstance brought on a still more energetic protest from the Japanese, with the consequence that at least the Consul "missi" was invested with jurisdiction all over Japan. In May this year this Consul announced his intended departure from Japan, as the post had been suppressed altogether. Nothing, in spite of the previous protests of the Japanese Government, had been arranged about the future exercise of jurisdiction, and when the Imperial Government insisted upon knowing how this was to be managed, the answer of the Consul was that he

was not aware that any provision had been made by his Government! The Japanese Government thereupon announced to the Portuguese Government the light in which they would be compelled to regard the action of Portugal, namely, as a distinct abandonment of jurisdiction on their part. On June to the Consul left Japan without any arrangements being made, and the Japanese Government, still hoping that the Portuguese Government would at the last moment have a due regard to the obligations involving on them by Treaty, avoided acting with precipitancy, and gave the Portuguese Government notice that they would assume jurisdiction only on and after July 1. The only reply was, that an answer would be sent in due course.

It became now the duty of the Japanese Government to provide for the government and judicial administration of the 140 Portuguese left on their soil—not only in regard to their own subjects, but also in respect to the other foreign residents in the country, this was incumbent on them. Foreign Governments whose subjects should suffer injury from Portuguese would have certainly been within their right to hold the Japanese Government responsible for any state of lawlessness existing among the subjects of another Treaty Power in Japan. The Japanese Government, considering the action of the Portuguese Government as a tacit but distinct abandonment of the jurisdictional Treaty right, now empowered the Imperial Japanese Courts to assume jurisdiction over Portuguese subjects in Japan. There was no other course open to them.

We know now that the Portuguese subjects have protested against this measure, and it also seems that the Portuguese Government has at last been awakened from its diplomatic lethargy, and that it has confided the protection or jurisdiction over its subjects to the French Consulates. The incident may, therefore, now be considered as closed.

Viewed in the light thrown now on the incident, and reduced to its proper significance, the action of the Japanese cannot but be applauded. To the British and other Governments who at great expense have maintained a large staff of Consular and official officers in China and Japan, the system of merchant Consuls has been an old nuisance for years past, and the Government of Japan is only doing its duty when it insists by all means at its disposal that those Governments who desire the enjoyment of extraterritorial jurisdiction should also provide the means for its due administration. If Consular jurisdiction is not worth while paying a small consular salary for, the sooner it is given up to the territorial Sovereignty the better.

This account is accurate with one exception namely, the statement that the Portuguese Government has confided jurisdiction to the French Consulates. The French Representative in Tokyo has indeed consented to discharge the duties of *Chargé d'Affaires* and Consul-General for Portugal, but the latter office, by express reservation, does not include jurisdictional functions. We do not imagine that any unprejudiced writer with the facts of this incident before him, could hesitate for a moment to approve Japan's action.

THE KOBE PRESS.

BOTH the *Kobe Herald* and the *Hyogo News* have increased the size of their sheets. The two journals took this enterprising step on the same day, namely, on the day (October 1st) when the port of Hyogo was opened to foreign trade and shipping. We can scarcely suppose that such simultaneous action was a mere coincidence. Competition doubtless kept each journal informed of the other's projects. The foreign community of Kobe is the gainer, for both the *Kobe Herald* and the *Hyogo News* do credit to their producers and supporters so far as the general standard of newspaper excellence is concerned. The latter, always bright and full of vitality, is marred only by one failing—a strong tendency, temporary we trust, to paint Japanese character in the darkest colours; the former, well balanced and well written, evidently aims at playing an impartial and strictly just role. It is a surprise, we confess, that Kobe can afford to support so many newspapers. In addition to the *Herald* and the *News* the community has the *Chronicle*, a journal the editing of which displays remarkable literary ability and range of information. Three newspapers in a place so small must be perplexed to find their account. But the development of journalistic

enterprise has been a feature of recent years in Japan. Yokohama possesses now no less than six live journals, and has buried several. What is there that so strongly attracts folks to essays of this nature? Looking across the water to a place of such comparative wealth and importance as Shanghai, we find only two newspapers, and apparently no one is sufficiently sanguine to add to the number. We suspect that there will be some more funerals ere long.

CHINA TEA.

MR. CONSUL PHILLIPS, in his Report on the trade of Foochow for 1891, gives, on the authority of Mr. R. S. Westall, the following notes on the business in tea:—

In consequence of orders from Peking, recommendations were posted in the various tea countries by the local authorities to improve the quality of the teas this season, as a means towards the resuscitation of the trade. Some of the teamen in the Pakling, Paklum, and Panyong districts, did their best to further this end, and to a certain extent succeeded; but, on the other hand, judging by results, no other conclusion could be arrived at than those making teas in all other districts had disregarded the recommendation. The former were buoyed up with hope at the opening of the market, when they obtained for a few of their best chop prices 50 per cent. higher than the highest price paid last season, that they were going to make their fortunes, and congratulated themselves on having followed the guidance of the Mandarins. Their satisfaction was, however, short-lived, as the demand for fine tea—at any rate, high-priced fine tea—fell away, and as they persistently refused throughout the season to meet buyers in the matter of price, they were left at the close of the year with the bulk of these teas on hand. There were exceptions to this rule, but, as far as foreigners were concerned, whether they bought of these men at the high price or of others who submitted to a reduction, they lost money on their ventures. The prices paid for medium teas at the opening of the market, although no higher than last year, were thought by many to be dangerously high, considering the low values ruling in the London market, and the telegraphed sales towards the end of July proved that they were so; indeed, the losses made on shipments up to that time were on the average, heavy. Then, as a natural consequence, prices declined and remained low, though not low enough, as it turned out, for the well-being of those who shipped, as the forced sales of the increased supply of Ceylon and Indian teas in Mincing Lane further depressed prices in that market, and if losses were comparatively light on these autumn shipments, there were, none the less, on the balance, losses. As regards common tea, it was scarcely to be expected that it would touch a very low point here after the 'boom' which took place through speculation in London in January last; nevertheless, what is known as 'Type' standard was bought in August to lay down at 54d. per lb., at which price it remained until the middle of October, when it rose to 6d. on account of scarcity; such of these teas as have already been sold have not brought back the money paid for them, as far as is known at present; therefore, the season has not been a profitable one for shippers. As, however, there are still five months wherein to realise the season's export, now virtually complete, it may be, considering the exceptionally favourable statistical position of China tea in London, that the result of the year's trading will not turn out to be so unfortunate as was at one time expected.

To the natives the season has again been one of severe losses. The little profit made on common tea went no way to make good a tithe of the money they lost on the better kinds. Those of them who have been engaged in the particular branch of the trade of making tea and bringing it down to their market appear never to have heard of the competition of India and Ceylon, or, if they have, cannot bring themselves to believe that tea can be produced in any country other than their own. According to a late report, however, they are length alive to the true state of the case, and are combining to face the difficulty.

From what is known of the cost of preparing tea and bringing it to their market, the ingenuity of these Chinese will be taxed severely. The cost of growing may be a bagatelle, and labour we know is cheap enough, but the lekin and petty exactions of the officials as the tea is in transit, will, as matters stand, make it a very difficult thing for them to compete with India and Ceylon. The only chance of success lies in these exactions being reduced. Then there is the export duty. However fair it may have been at the time the last treaty was signed, it is galling for those interested in the trade, both the Chinese and the foreigner, to know that 25 per cent. to 30 per cent. on the average value of tea has to be paid.

Again, the supply of Congou shows a serious falling-off. The deficiency is 50,000 chests, or 13 per cent., the figures being 345,000 chests against 395,000 chests last season, and (to show how rapid the decline of the trade is) 850,000 chests in 1880. Of other kinds, Souchong and Pekoe have been in supply about the same as last year, while Oolong and scented tea show an increase. But Congou is the backbone of the trade, the total yield of the four last-named descriptions being only 90,000 chests. A noticeable feature is the larger business done this year in the manufacture of brick tea by the Russian houses. But a small proportion of the tea used for this purpose is included in the above figures of Congou supply, the remainder being brought down to these firms under contract in bags. Altogether 100,000 chests, consisting entirely of dust and broken leaf, were manufactured in this way and shipped to the north, the increase representing about 37,000 chests.

THE METAL MARKET.

S. W. ROYSE & Co.'s report, for August 27th, says:—In our report at the end of last month we were able to note the commencement of an improvement in the Pig Iron trade. This has been more than maintained during the current

month, and prices have steadily improved, the total in value of Warrants being about 28. 8d. per ton. Stocks in public stores at Middleborough have decreased (being now only about 16,000 tons), and the month's shipments are good, being returned as 45,698 tons up to the 22nd inst. The foreign demand continues strong, and higher prices are naturally looked for. The Manufactured Iron trade is, however, in an unsatisfactory state; orders are wanted, but fresh business coming forward is only small. Copper has again given way, though only to a small extent. Tin commenced well, but has dropped about £4 per ton during the month. Spelter has lost ground, and is easy. Lead also has been giving way, but is now a little firmer.

YOKOHAMA TOWN COUNCIL.

THE Yokohama Town Council held its meeting on the 3rd instant, in the rooms of the Traders' Association Hall. The meeting commenced at 7 p.m. and there were 25 members present. Mr. Otami Kahei presided. The accounts of revenue and expenditure for 1891 were read and passed unanimously. A proposal was then introduced for presenting to the Minister of State for Finance a petition with reference to the loan of 1,101,712,555 yen, due to the Treasury on account of the Water-works, which have now been transferred to the Town. The draft of the Petition was read and approved *ntm-con*. It ran as follows:—

The sum of 1,101,712,555 yen was granted to the Kanagawa *Kencho*, for the purpose of constructing Water-works in Yokohama. But in accordance with the Regulations relating to Water-works, promulgated in February 1890, the above mentioned Water-works have become the property of the Town. Permission is therefore sought that the sum may be repaid out of the profit accruing from the Works, after the running expenses and the cost of preservation have been deducted.

(Signed) SATO KIZAYEMON.

Headman of the Town and member of the Yokohama Council.

(Addressed) Minister of State for Finance.

The next question discussed was the proposed new railway from the pier to the station. Mr. Asada's draft of a recommendation on the subject was submitted for consideration; and approved unanimously. The gist of the draft was that, as the proposed route is extremely inconvenient for various reasons, the Town Council requested the Government to re-consider the matter, and adopt a new route. Finally, the resignation of Mr. Kimura Riyemon from the Town Council was discussed, and granted. The meeting was closed at 6.20 p.m., and as no other measure of urgency is on the tapis, the Council will not meet for some time.

With regard to the objections advanced against the projected route for the railway in question, we find a statement in the *Mainichi Shimbun*. The line is for the purpose of conveying goods from the new pier—which will be constructed, in connection with the Harbour Works, near the Custom House—to the present Station of the Tokyo-Yokohama and Tokyo-Kyoto roads. The route selected is from the pier, westward, *via* the Japanese Hatoba and along the shore behind the Japan Mail Steamship Company's premises. In order to carry the line the coast will have to be filled through a distance of 568 *ken* (1,136 yards) and to a height of six feet, and it is against the building of this embankment that protests are raised. For, say the objectors, all the space eastward of the Customs Pier is appropriated to the Foreign Settlement, and the sea-face westward of the pier is alone reserved for the 130,000 Japanese inhabitants of Yokohama. This portion of coast they compare to a man's gullet, by which alone nourishment can be conveyed to his body. The number of steamers annually entering Yokohama Harbour is 1,500, with an aggregate tonnage of 220,000, and the quantity of goods landed in the year is 2,600,000 tons, giving an average of 7,123 tons daily. This incoming of merchandise is regarded as the breath of the town's nostrils, and it is asserted that if an em-

bankment six feet high be built all along the sea-front westward of the Customs, the whole of the goods must be landed at the Customs Pier, a necessity which the critics condemn as highly inconvenient. Further, apart from the general disadvantage of having a bank so solid and high built between the town and the sea, they point out that the drainage of the place would be seriously affected by the work, and that in time of heavy rain, the water, pent up by the embankment, would flood the streets. It seems plain, however, that this last objection has no valid basis, since the engineers in charge of the works might be trusted to provide proper facilities for drainage purposes. However, the desire to reserve the sea-front is not unnatural, and will probably be favourably entertained by the Authorities. The alternative scheme proposed by the petitioners is to build the line in the sea, 300 feet from the shore. This would involve an additional expenditure—we quote the *Mainichi's* figures—of 100,000 yen, no inconsiderable figure when there is question of a line little more than half a mile in length. We wonder how long, too, the space between the present fore-shore and the projected line would remain unreclaimed? Unless the growth of Yokohama suffers some retardation, of which no appearance at present is visible, the strong probability is that operations of filling in would very soon be undertaken. However, this is certainly a point concerning which the inhabitants of Yokohama may justly assert a title to be heard. The only question is, will the Treasury, having already disbursed such great sums on account of the Yokohama Water Works and the Yokohama Harbour, be willing to put its hand into its pocket again.

COLLISION AT SEA.

We find it stated in the *Kokkai* that on the 29th ultimo, at 12 p.m., a collision occurred between a foreign steamer and a Japanese junk of 200 *koku* burden, off the Sanshu coast near the islands of Oki and To. The junk belonged to a merchant residing in the Shoto Islands, and was en route to Nagasaki to load coal. It is claimed that the steamer proceeded on her way without taking any notice whatever of the collision, or making any attempt to save life, the result being that one of the junk's crew was drowned, and the other three barely escaped by swimming ashore, the junk going to the bottom. The men informed the police of the affair, and asserted that the steamer, so far as they could judge, was sailed by foreigners. Steps were accordingly taken to identify the vessel. It was found, on instituting inquiries at Kobe, that no steamer had left that port on the day in question, southward bound, except an English ship of 1,745 tons, called the *Moyune*, which sailed for London that day *via* Nagasaki and Shanghai. Application was accordingly made to Messrs. Strachan & Co., the Agents of the steamer, who replied that she was then in Nagasaki harbour, where further steps are to be taken in the matter.

A SINGULAR AFFAIR.

THE Metropolitan Police have arrested Kojima Tadasato, a Barrister, Kawai Aijiro, *Banto* of Messrs. Isaacs Bros. of Yokohama, and Kaminishi Keizo, the charge against them being that they extorted a sum of 12,500 yen from Count Tokugawa. From the vernacular press we obtain the following account of this singular affair:—On the 9th of March last one Hisamatsu Shige, a respectable looking woman of about 28 years of age, came to the residence of Count Tokugawa in the Shimo Totsuka Division. She said that she has heard of the Count's desire to raise money on his estate, and that she was about to marry a very wealthy foreigner, who wished to purchase land in the neighbourhood of Tokyo. Would they therefore allow her to have an interview with the Count? The Count's Factor replied that his master would not see her, whereupon she asked permission to inspect the estate, which she was allowed to do, for Count Tokugawa had for some time been trying to raise a loan on the

property. Some days afterwards the woman re-appeared, and said that though her projected alliance with the foreigner previously mentioned was broken off, another foreigner was ready to advance money on the estate. She was sent away, however, without any definite arrangement having been made with her. Things remained thus until the beginning of May when Kojima Tadasato, a Barrister, came to Count Tokugawa, and informed him that he had heard a rumour about the Count's trying to raise money on his estate through Hisamatsu Shige, but that, as she was a woman not to be trusted, he, Kojima, would undertake to procure the money if the Count needed it. What answer Kojima received we do not learn, but at the end of the month he came again, and declared that there were two persons ready to advance money, one to the extent of 5,000 yen and the other to that of 2,000 yen. The Factor, who saw Kojima, refused the offer on the ground of extortionate interest. But on the 2nd of July, the Count being in immediate need of funds, mortgaged his estate to a Mr. Adachi for a sum of 30,000 yen. The following day Kojima reappeared, and in an interview with the Factor and the Steward of the Count, said that he had asked Mr. Kashiwara, a fellow-barrister, to induce some one to advance money, and had received a reply that a capitalist had been found ready to lend 1,500 yen. If therefore, the Count would agree to advance 500 yen to Kojima, the negotiation could be concluded at once. The Factor refused this offer as he saw no valid reason to advance the sum asked for by Kojima. The latter showed much umbrage, but left the house and did not appear again. Meanwhile one Awano Kiusaku paid a visit to Kiso Masayoshi—who had been commissioned by Count Tokugawa's Factor to look for some person willing to lend money on the estate—and said that a certain Mr. Martin in Yokohama was prepared to give the necessary accommodation. Mr. Hida, the Factor, was then introduced to Awano, and made an appointment with him to go to Yokohama on the 4th of August. On that day Kinoshita, the Steward, went to the Shimbashi Station with Kiso. There they met Matsushima Kichijiro, and Mori Zenjiro, who also were said to be connected with the affair, and the whole party proceeded to an inn near the Yokohama Station, to await the coming of the foreigner who should advance the money. Presently a Mr. Rosa (Da Rosa?) of No. 24, Yokohama, came to see them, and Amano declared that through this Mr. Rosa's agency a sum of 50,000 yen would be lent by the Chartered Mercantile Bank, but that as the transaction was to be arranged by Mr. Rogie (Roger?) the Manager of the bank, a sum of 100 yen was required by way of security, which amount the Count handed over. On the 8th of the same month, Mr. Rosa, accompanied by Mori Zenjiro and Kiso Masayoshi, came to Count Tokugawa's for the ostensible purpose of inspecting the estate. Mr. Rosa, having looked at the place, said that the Count being one of the highest noblemen in the empire, and having such an extensive property in his possession, it was not necessary to mortgage the land at all; any sum of money could be advanced on his personal security, and he therefore advised the Count to adopt the latter course. If he did so, however, it would be requisite that he should pay a sum of 100 yen by way of security. The Count again complied, and the 11th of the month was fixed for the completion of the transaction. The Factor went to Yokohama on that day, but Mr. Rosa asked for a delay until the 20th on account of the non-arrival of a steamer. When the 20th came, Mr. Rosa said that as he had no cash in hand, he should give the Factor 40,000 cases of kerosene oil, and if Count Tokugawa, on his part, would hand to the Bank a document acknowledging the loan, he should receive in return a written authority for the delivery of the oil, which could then be sold by Rosa at once, and the money handed to the Count. The Factor agreed to this arrangement, and the 28th of August was fixed for the transaction. Once more the Factor went to Yoko-

hama and once more a postponement was made until the 30th, on the plea that a certain clerk of the bank was absent. The 30th saw the Factor introduced to one Kaminishi Keizo, a seller of kerosene oil, and on the 3rd of September a Mr. Wett (?) representing himself as a large shareholder of the Chartered Mercantile Bank, came to see Count Tokugawa, with fresh assurances that all would be right. On the 5th Rosa again appeared on the scene with a request that the Count should pay him a sum of 300 yen to cover expenses incurred in sending a telegram to Europe for the purpose of ascertaining the market price of kerosene. The Count, however, refused to be bled any more. Nine days later the *soi-disant* money-lenders rose another step, and announced that though it had originally been arranged to lend fifty thousand yen only, they had succeeded by clever management in getting the amount increased to eighty thousand, in consideration of which service they asked the factor to write a promissory note for 2,000 yen to be paid out of the above sum as a commission for the people engaged in the transaction. The factor wrote the note, but on the 15th of September, Kaminishi Keizo and Kiso Masayoshi came to the Count's residence, and explained that as so much delay had occurred in connection with the loan from the Chartered Mercantile Bank, they thought it advisable to borrow money from Messrs. Isaacs Bros., 120 Bluff, who were ready to advance it. The Factor refused this proposal, as the negotiation with the Chartered Mercantile Bank was not yet concluded. On the 16th, Rosa sent a communication that he could not give 40,000 cases of kerosene, but that he should hand over 25,000 which would realise 50,000 yen. The Count now began to grow impatient. He said that as so many changes had been made in the agreement, he desired to abandon it altogether, but Rosa and the others declared that if the agreement was broken off so suddenly their reputation would suffer seriously. In deference to this objection, the Count consented to continue the transaction, asking only that it be completed quickly. At this stage the assertion was renewed that the Bank could not be depended on, and that the loan had better be obtained from Messrs. Isaacs & Co., and apparently the Count agreed to this change, for from the 16th to the 18th of September we find him corresponding with Kawai Aijiro, the *Banto* of the above firm. Still there was no question of ready money but only of kerosene oil, which should be sold by Kaminishi Keizo. The 18th of September was fixed for signing the final agreement, wherein it was stated that the property belonging to Count Tokugawa might at any time be registered in the name of the creditor. Inasmuch, however, as the Count had already borrowed a sum of 30,000 yen and had duly registered the lender as a mortgagee of the estate, it was settled that the new registration should take place three or four days after the completion of the transaction, so as to enable the Count to pay off the original mortgagee first. On the 21st the Factor went to Yokohama to bring the affair at length to a conclusion, but Kawai did not put in an appearance for some time, and when he did turn up, he said that he has just come from Tokyo where he had been to inspect the Register. To his alleged astonishment he had found that the estate was already mortgaged to some one else, and he therefore declared that no agreement could possibly be made in the sense desired. The Factor, much angered by such deceit, said that though the affair had gone so far, if Kawai sought to excuse himself on such grounds, the Count would have no more transactions with him, and without further parley, he set out for Tokyo. On the 22nd of September Kojima Tadasato, the Barrister, who had not been heard of since the beginning of July, appeared once more at the Count's, and announcing that he represented Messrs. Isaacs & Co., proceeded to say that the firm had made an agreement with the Count to exchange a quantity of kerosene oil against his estate, but on the day when the transaction should have been completed they had discovered that the estate was already mortgaged to some one else. It was apparent, therefore, that the

Count had attempted to obtain the kerosene oil under false pretences, and the firm insisted upon completing the transaction. Further, a certain sum of ready money must at once be handed over as a guarantee of good faith. If the Count attempted to revoke the agreement, the firm would institute legal proceedings against his Factor and others, on the ground of obtaining goods under false pretences, while, at the same time, a suit for breach of contract would be brought against the Count, and his property attached. The Factor replied that he should give a definite answer in a day or two, and on the 25th Kojima and Kawai came again, bringing with them the various documents relating to the negotiation, as well as two promissory notes, one drawn in favour of Kawai for a sum of 10,000 yen, and the other in favour of Kojima for 2,500 yen. They promised that, if the Count would sign those two promissory notes, all the documents relating to the agreement should be returned to him, but if he refused, his property should be attached at once. The Count at last signed and stamped the notes, but so soon as the visitors had left the house, the facts were communicated to the police, and the three men were quickly arrested.

From information obtained in Yokohama, it appears that the above case must not be judged by the details which the Japanese press has published, and which alone have been submitted to the public thus far. The version given by the vernacular newspapers suggests that certain persons combined as pretended money-lenders, and ultimately took advantage of an unimportant incident to withhold the promised loan, after which they threatened the Count with all sort of pains and penalties for breach of contract, the upshot being that he consented to purchase their complacency by giving promissory notes for large sums. But the other side of the story is that the transaction, so far as the lenders of the money were concerned, was perfectly *bond fide*. Kawai Aijiro, *Banjo* of Messrs. Isaacs Brothers of Yokohama, arranged the loan in all good faith. The firm did not propose to advance cash, but were prepared to hand over a large quantity of kerosene oil to the Count's Factor, who would have converted it into money. Presumably the transaction was conducted in Kawai's name, for a main feature of the compact was that Count Tokugawa's property in Tokyo should be hypothecated as security for the debt, and it would of course have been illegal that a foreign firm should figure as the mortgagee. Kawai, however, when he proceeded to Tokyo to register the hypothecation of the property, found that this had been already done on behalf of a previous creditor, by whom 30,000 yen had been advanced to the Count. Not considering it to his employers' interests to carry out the agreement under such circumstances, he signified his resolve to proceed no farther. Now all this tallies sufficiently closely with the story told by the other side, but the point made by the Count's Factor is that the existence of a previous mortgage on the property had not been concealed, but was perfectly well known to Kawai, or at any rate to the persons who were supposed to be advising him, and that, in fact, an understanding existed that, after the transfer of the kerosene oil, time should be given to pay off the original mortgage, by way of preliminary to hypothecating the whole property as security for the second loan. The *Banjo*, Kawai, bears, we learn, a very high character. He has been in the employ of Messrs. Isaacs Brothers for fourteen years, during which time many transactions, affording ample tests of his integrity, have been managed by him with scrupulous honesty. In this case, which unhappily has involved his arrest, he is believed to have been acting with perfect good faith, and his speedy acquittal is anticipated. Whether all parties to the transaction were equally honest, we do not pretend to say. As for Count Tokugawa's friends it is scarcely possible to suppose that they entertained any idea of concealing the fact of a previous mortgage, for they were well aware that so soon as Kawai proceeded to register his claim

against the property, the existence of a previous mortgage must be at once revealed. Evidently the whole facts of the case are not yet in the possession of the public. Another point insisted on by persons whose information ought to be correct is that the ten-thousand-yen bond given to Kawai by Count Tokugawa was not extorted as the price of the former's silence, but was *bond fide* compensation to Messrs. Isaacs Brothers for breach of contract. There is talk of proceeding against the Count, not alone for violating his agreement, but also for attempting to obtain money under false pretences. Grounds for such extreme measures are not apparent on the face of the facts thus far published.

RAILWAY ACCIDENT.

A NARROW escape from the loss of many lives is reported from Shinshu. On the 26th ultimo, the last train leaving Karuizawa had proceeded as far as Uminoura, when suddenly the engine wheels collided against some hard substance. As the train was running down hill the driver could not stop at once, but he soon succeeded in doing so. The place was then examined, and it was found that two large stones had been planted on the rail, both measuring about 3 feet by 2. One of the stones had been smashed into small pieces by the collision, and the other had been thrown into the Narusawa River, which flows below the spot. The front of the engine was greatly damaged as were also seven sleepers, but fortunately no carriage was derailed. Had the carriages left the rails, many hundreds of passengers would probably have been thrown into the river down a precipitous bank, and serious loss of life must have ensued. It is evident that some miscreants had conveyed these heavy stones to the spot for the purpose of wrecking the train. It is difficult to fathom the object of such inhuman attempts. There cannot be much chance of robbery when a train is tumbled down a precipice, and the most abandoned rascal can scarcely be so brutal as to plot the wholesale destruction of human life from pure lust of bloodshed.

THE LAW BUREAU.

THE long vacant post of chief of the Law Bureau has been at last filled by the appointment of Mr. Suyematsu Kencho. It is stated that the position was twice offered to Mr. Suyematsu and twice declined, but that finally he was induced to accept. Mr. Suyematsu resigned the post of chief of the Local Government Bureau in the Home Department in order to enter the Diet where he played a very conspicuous part during the first two sessions. His return to official life will necessitate another by-election, as he will doubtless resign his seat in the House.

THE RAILWAY COUNCIL.

ALTHOUGH the members of the Railway Council have been appointed, its conferences are not expected to open before next month, inasmuch as the Railway Bureau has despatched several experts to survey the routes, and until their reports have been received the compilation of the draft scheme cannot be undertaken. It seems probable under these circumstances that the Bill determining the first works of extension will not be presented to the Diet before the middle of the approaching session.

Several important questions have to be discussed by the Council, but the most important is said to relate to Art. XIII., which runs as follows:—"Should there be in the projected railway system any lines for the construction of which charters have been granted to private companies, either the whole of the lines of such companies must be purchased, or suitable arrangements must be made with them." The general anticipation seems to be that this will commend itself as the first question calling for discussion by the Council.

Should the Council pass a resolution in favour of commencing some new lines within the next

year, the expenditure must be voted in the approaching session, and it will consequently be necessary that the Government submit a supplementary estimate for the Diet's approval.

The expenditure of the Railway Council is estimated at 5,000 yen for the current year. This sum must be disbursed by the Treasury out of the Reserve Fund. About 9,000 yen will be required for next year. The *Kokumin Shimbun* says that these items have already been submitted to the Department of Finance for approval.

Messrs. Kobayashi Harunari, and Yoshita Katsu of the Department of Communications, and Mr. Fujimoto Rempei of the Railway Bureau have been appointed clerks to the Council. It is expected that the place of conference will be the office of the General Staff, but the General Post Office in Nihonbashi is also spoken of as a probable rendezvous.

THE EMPEROR AND A SOLDIER'S SHOE.

THE vernacular press reports that on the 30th ultimo, a Chamberlain in waiting on the Emperor came to the barracks of the Guards, and asked to have lent to him a shoe actually in wear by some common soldier. Lieutenant Chihara ordered a soldier named Koyama Jugoro to take off his left shoe, and hand it to the Chamberlain, who carried it away. Some two hours elapsed and yet the shoe was not returned. Thereupon the soldiers began to speculate what had happened to the Chamberlain? Was he in his right mind when he borrowed a left-foot shoe from a common soldier? What did he intend to do with it? Presently, however, he returned with the shoe, and thanked the officer for the loan of it. The latter, being much exercised by so unusual an event, asked the Chamberlain what had been his business with the shoe, whereupon the Chamberlain replied that, while in attendance on the Sovereign, he had been commanded to go and borrow a soldier's shoe, as His Majesty desired to examine it. The Chamberlain had obeyed. He added that when the shoe was presented to the Emperor, His Majesty had taken it, all muddily as it was, in his hand and examined the leather and the make very carefully with a thoughtful demeanour, ultimately desiring it to be returned to its owner. It may well be supposed that this story created no small excitement in the barracks. The Guards declared that history contained no instance of a Sovereign taking up a muddy shoe worn by a common soldier, and of course enthusiastic inferences were drawn as to His Majesty's benevolent solicitude for the comfort and efficiency of his troops. It is stated that the shoe is to be preserved as an heirloom by the Imperial Guard, and we find no difficulty in believing the report.

THE YOKOHAMA CHESS CLUB.

THE Yokohama Chess Club closes its second year of existence with a very favourable record. It has held 59 meetings during the year, played a long tournament in which three prizes were awarded, as well as a match with Tokyo, seven players a side, and two correspondence games with Tokyo. The match was won by Yokohama by one game—the score standing at 13 to 12—but the two correspondence games were lost. The Club doubtless owes something of its success to the energy and zeal of its President, Mr. J. Griffin, who now retires in favour of Mr. Justice Mowat, a player of local distinction. It also possesses a solid basis of strength in its 48 members, a very remarkable number considering the size of the community. We hope to see some matches arranged this winter with Tokyo, and some correspondence games commenced with the outports. Kobe is said to have good players, and Shanghai could certainly give a strong account of itself. There is, of course, a difficulty in bringing about contests with places where no chess clubs exist. The Yokohama club is, we believe, the only club in the Far East, and consequently its challenges find no recognised recipients in any of

the other ports. This difficulty was the real cause of the failure to arrange a return match between Tokyo and Yokohama. The men playing for the former place, not being members of any representative association, felt themselves under no obligation to champion the capital, and preference was thus given to other engagements. It is surprising that Kobe, generally so energetic in all matters of the kind, does not organize a Club. And Hongkong's case, considering the circumstances of the colony, excites even more wonder. The last intelligence we had of chess in Hongkong takes us back to 1866, when a tournament was played there, a considerable number of players competing. Among the residents in those days were an American gentleman and his wife, both players of unusual strength. The former had been President of a Chess Club in America; the latter was a staunch devotee of the Evans Gambit, which admirable conception she had studied with such daily diligence for so many years that almost every possible variation of it was familiar to her. She invariably exercised her lady's privilege of prescribing the form of *début*, and few amateurs could be found capable of contending with her in her chosen field. Another of the strong players of Hongkong a quarter of a century ago was Mr. (afterwards Sir) W. Rennie, elder brother of Sir Richard Rennie, who also occupied a high place among Shanghai's chess champions. We cannot suppose that there is any paucity of skilled amateurs in the southern colony at present, but, strange to say, there appears to be no disposition to organise a Club.

TOKYO.

IN answer to the question—What is Tokyo, and "is it true that it is burned down every seven years?" an American Journal—*Inter Ocean*, replies:—"Tokyo, the principal city and capital of Japan, was formerly known as Yedo. It is a very old city, and on August 26, 1889, the people of this city celebrated the 300th anniversary of its founding. Its history is as follows:—An officer of the army, on the first day of the eighth month, in the year 1589, having received a gift of territory from the ruler of the country, took possession of the castle overlooking the Bay of Yedo, and made it his seat of government. The vassal in this advantageous situation soon became strong enough to defy his ruler, and on the death of his master he deposed the chosen heir and extended his sway over the whole country. The ambition of this ruler was to found a dynasty whose position and power would be unconquerable. He therefore, we are told in Japanese history, turned all his energies toward the building of a fortress which would enable his descendants to hold their position indefinitely. Around an open space containing about nine square miles he built a wall, and inside of this wall reared a mass of defenses so complicated that their plan is still an unsolved problem of military engineering. This design to establish a stronghold so impregnable that no attack would ever be made upon it was successful, for up to this time the castle of Yedo has never been assaulted or besieged. It remained the home of the successors of this first ruler, and the stronghold of their government until the dynasty was overthrown, and the Mikado came into power in 1868. The shrewd founder of Yedo insured the growth of his capital by decreeing that each of the lords of the surrounding provinces, which were all tributary to him, should reside within the limits of the city six months every year. This drew population so extensively that before it was 100 years old it had 1,000,000 inhabitants. The growth of the city was irregular, blocks of houses being separated here and there by intervening gardens and groves. There is no city in the world that equals Tokyo in the size and beauty of its public parks and gardens. Outside of the central portion of this city there are miles of buildings in European styles of architecture, and this is the business portion of the city. Twice, in 1656 and in 1854, this city has been very seriously injured by earthquakes, and previous to the present century many con-

flagrations have occurred, owing to the fact that formerly the houses were built very slightly of wood, and were therefore very combustible. The story that Tokyo is burned down every seven years is absurd, and has no foundation whatever in fact." "Miles of buildings in European styles of architecture in the business portion of the town" is rather more than facts warrant, unless the writer has reference to the Ginza and vicinity, where "semi-European style of architecture" would more correctly apply.

THE HONGKONG BANK AND THE HYOGO CHAMBERS OF COMMERCE.

SOME correspondence has taken place between the Japanese and Foreign Chambers of Commerce in Hyogo with reference to the Hongkong and Shanghai Bank. The *Kobe Herald* prints the correspondence, and we re-produce it on account of its general interest, without attempting to speculate on the origin of the wonderful English of the Japanese Chamber's letter:—

(TRANSLATION.)

Kobe Japanese Chamber of Commerce,
13th September, Meiji 25th.

M. BROWN, Esq.,
Chairman, etc., etc.,

We learn through the newspapers that the Hongkong and Shanghai Bank has refused the remittances for abroad and stopped the cash in credit; and some business men are anxious about the matter. Bank is the most important organ of trade, especially that particular Bank which has been doing much in the Oriental trade and not a little in developing the trade in this country; and it was understood that the Bank's Capital was so ample and its business carried so straightly that we have entirely trusted. Now we do not see why the Bank so suddenly stopped the transaction as mentioned above, which may cause great deal of inconvenience in our commercial circle; thus it is necessary for us to investigate the matter, to make certain whether there is any such fact or not, and before doing so we shall be very glad to be informed of your view respecting the question.

Yours, etc., etc.,

T. YAMAMOTO.

Hiogo and Osaka
General Chamber of Commerce
Hiogo, 28th Sept, 1892.

The Chairman,

Kobe Japanese Chamber of Commerce.

SIR,—I am in receipt of your favour of 13th inst. inquiring whether the newspaper reports circulated, that the Hongkong and Shanghai Banking Corporation had withdrawn "all the transaction of remittance for abroad, and also cash in credit" were correct.

In reply I beg to say, on behalf of the Committee of the Chamber, that the reports referred to, are unfounded, in so far as they give the impression, that the Bank is in financial difficulties or has failed. If it is true, however, that in its current business, the Bank has deemed it wiser, to exercise greater and stricter discrimination, but it has in no way placed obstructions in the way of fair, and legitimate trade.

The opinion that you express that a Bank is a most important organ of trade, is perfectly correct, and the Bank above named has been, and now is, a most powerful factor in the commercial trade of this country. Its transactions have always been characterized by liberality and strict integrity, and you will agree with me that without these traits, commerce cannot flourish or even be encouraged. The utmost reliance is placed in our great local institution about which you have been pleased to make inquiries, and as time progresses, I am sure that it will be found, that the confidence reposed upon it, by reason of its wise, and careful management, will not have been misplaced.

Thanking you for your letter, and appreciating the interest you take in commercial matters.

I remain, Sir, your obedient servant,

M. BROWN, Chairman.

THE "MATSUSHIMA KAN."

The *Hongkong Daily Press* says:—

The Japanese turret ship *Matsushima* arrived at Singapore on the 21st inst. from Toulon *via* Colombo. She is one of the three sister ships designed by M. Bertin for the Japanese navy at the time when he was Chief Navy Constructor to the Japanese Government, and with the *Isukushima*, has been built and fitted out at La Seyne by the Forges et Chantiers de la Méditerranée. The third ship, the *Hashidate*, has been built and fitted out in the Japanese Government Arsenal at Yokosuka, much of the machinery, the guns, and gun fittings and appliances being sent out from Europe. The *Matsushima* is a vessel of 4,278

tons, is armed with 28 guns, carries a crew of 197 men (15 officers, 8 warrant officers, and 174 sailors) and has engines of 5,400 h.p. The following particulars of this ship are taken from the *Marine Engineer*:—Below the water line the three sister ships are identical in design, but above this line the *Matsushima* differs from the two others in that she has the one large 65-ton gun carried by each vessel, mounted aft of the funnel, instead of forward, as is done on the *Isukushima* and the *Hashidate*. The principal dimensions of the ships are:—Length, 324 feet 10 in.; beam, 50 feet 10 in.; depth, 35 feet; draught (mean) 21 feet 2 in. The ships are deck protected throughout their entire length, but carry no side armour. Thirty centimetre (11.8 in.) Creusot steel armour is fitted to the barbettes tower of the heavy gun, and as a further protection the ships are extensively divided into watertight compartments. Mild steel has been used throughout as the material of construction. Double military tops, armed with quick firing and machine guns, are fitted to the mast, also of steel, and above these is rigged a pine top mast, for signal service. The armament consists of one 32-centimetre (12.6 in.) Canet B. L. R. gun, with a weight of 65 tons, and a length of 42 feet. The projectiles are of chrome steel, and, fired by means of smokeless powder, have, it is calculated, sufficient power to pierce 4 feet of iron armour at the muzzle. There are ten 12 centimetre (4.7 in.) Armstrong B. L. R. guns in the battery on the main deck, and one in the *Matsushima* forward on the upper deck. Six quick firing and 11 single barrelled machine guns of the Canet system, two of the latter being mounted in the lower of the two military tops, and four torpedo discharging tubes, firing Whitehead torpedoes, complete the armament. The ships are propelled by two three-bladed propellers, driven by triple expansion three cylinder engines of the horizontal type situated in two engine rooms, one forward of the other. Steam is supplied by six cylindrical marine boilers, arranged in groups of three, placed athwartships, each boiler having three corrugated furnaces of the Fox type. The contract speed of the sister ship is 16 knots, a rate which was exceeded by the *Matsushima*, and her gun trial also proved highly satisfactory.

A BULLOCK AND A BULL.

A CERTAIN Mr. Hughes, when walking along the bank of a ravine in the Waterfall Valley at Kobe, saw a bullock-cart approaching him. What happened afterwards we do not exactly know. One journal says that in stepping aside to avoid the cart, Mr. Hughes fell over the ravine. Another affirms that the bullock charged him and drove him down the precipice. At all events it is certain that he fell down a steep place and cut his head severely. A Japanese doctor was speedily summoned. But, says a Kobe journal, "this doctor was unable to do anything owing to his ignorance of the language." There appears to be a novel and interesting method of treating broken heads in Kobe: the doctor has to use his tongue. Does he pronounce some formula over the patient, or in what respect is the use of the latter's language necessary for the stitching and dressing of a scalp wound?

DENING V. TANAKA HEIZABURO.

THE above case came up for adjourned hearing in the Tokyo Court of Appeal on the 26th ult., and a verdict was again delivered in Mr. Dening's favour on the 30th ult. It will be remembered that Mr. Tanaka appealed to the Supreme Court, basing his case on a weak point in the wording of the judgment of the Court of Appeal. The result of this action was the referring of the case back to the Court of Appeal for a second hearing. The particulars of the evidence were again carefully gone into, and, after taking four days to consider the question, the Court confirmed its former finding, but in an abbreviated form. We hope to give fuller particulars later on. Mr. Tanaka still has the right to appeal, but it seems almost certain that if he does the case will be dismissed. In view of the time and money spent in litigation, we sincerely hope that Mr. Dening will succeed in obtaining at least a large part of the sum owing to him.

MOURILYANN HEIMANN AND CO. V. THE GOVERNOR OF KANAGAWA KEN.

THE hearing of the appeal against the judgment of the Yokohama Local Court, by which, it will be remembered, the case was decided in favour of the defendant with costs, was held on Thursday, the 29th ultimo, at the Tokyo Court of Appeal. Mr. R. de B. Layard, of H.B.M.'s Consulate, and Mr. Mitsuhashi, Councillor of the Kencho (on behalf of the Governor), watched

the case throughout. Messrs. Okamura and Harada conducted the appeal for the appellant firm, while Messrs. Takahashi and Koide were for the respondent. The arguments of counsel on both sides concluded the same day, and on Tuesday last judgment was delivered, dismissing the appeal with costs.

ARBITRATION.

On the 14th of July the *Kirishima*, a steam barge belonging to the Harbour-works Bureau, collided with the *Spindrift*, a steam launch owned by the Canadian Pacific Railway Company, in Yokohama harbour. The latter alleged that the collision had resulted from mismanagement on the part of *Kirishima*, and demanded compensation for the injury to the steam-launch. Mr. Utsumi, Director of the Bureau, drew up a full account of the accident, and submitted it to the Minister of Communications for his decision. But as one of the parties was a foreigner, the Minister could not apply the laws of the country, and he consequently declined to have anything to do with the case. The parties then negotiated, and at last agreed to ask the Marine Bureau to act as Arbitrator. The request was granted, and an inquiry was held by the Bureau. The captain and others of the *Spindrift*, as well as several of the crew of the *Kirishima*, were examined by Mr. Ito and Mr. Yokoi. Both parties stated their case. After hearing all the facts and arguments, the examiners came to the conclusion that the collision had been caused by want of skill and defective management on both sides, and that both were equally to blame. This decision was communicated to the Director of the Harbour-works Bureau, but whether the C. P. R. Company will agree to it or not, is, says the *Nichi Nichi Shimbun*, a question remaining to be answered. It is, however, tolerably certain that if the Company consented to arbitration originally, it will not dispute the arbitrators' finding, especially as the action of the Company has been liberal and considerate throughout.

THE TROUBLES IN KUMAMOTO PREFECTURE.

ALLUSION has already been made to the troubles in Kumamoto Prefecture in connection with the election of members of a Divisional Assembly. The *Fiyu*, a Radical organ, now publishes particulars furnished by a correspondent. The story is probably exaggerated, and the communication loses something of its value by not being dated, but we give it for what it is worth:—"On the 29th ultimo, some 80 rowdies came to Dakema Division, and captured 23 supporters of the Popular Party, who were qualified to vote. The inhabitants of the Division were perplexed and astonished by this sudden outbreak of violence, but the mystery was explained on the following day, when a notice appeared to the effect that the re-election of one half of the members of the Divisional Assembly was to take place on the 7th instant. The supporters of the Popular Party, extremely indignant at such a mean trick on the part of the Local Authorities, assembled to consider what course they ought to adopt. There was every sign of a disturbance, and so soon as the fact was reported, the Director of the Yamaga Police Station, accompanied by the whole force of police at his disposal, came to the Division. Communications were simultaneously sent to various other stations of police and gendarmes in the neighbourhood. At 9 a.m. on the 1st instant, the head quarters of the Popular Party were attacked suddenly, and one man was killed on the spot, another being seriously wounded, and two captured. The rest retreated to concert defensive measures. *Soshi* belonging to the Pro-official Party are now marching about the streets with drawn swords, and behaving in a most disorderly manner, but the police not only do not arrest but secretly assist them. The discomfited supporters of the Popular Party are anxiously awaiting the arrival of some gendarmes."

If the *Fiyu* believes this tale, very few of its readers will be equally credulous, we imagine. One would suppose that the so-called Popular Party were the most quiet and inoffensive folks

in existence, and that they were perpetually subjected to all sorts of violence at the hands of their political opponents, the police aiding and abetting the latter, and the sufferers taking it all lying down. But the adherents of the Popular Party have made their record already. Their advocates should remember that folks in Tokyo know a little about their doings. Since the *Fiyu*'s head-quarters were established in Shiba, peaceful citizens shrink from visiting that part of the city, so probable is the presence of rowdy *soshi*, and no respectable woman can walk past the group of *jiurikisha* waiting outside the Party's office, for the drawers of these vehicles—private vehicles, be it observed—have somewhere imbibed a spirit of ribald insolence that prompts them to most objectionable licence of language. The meekness and mildness that induce the much maltreated Radicals of Kumamoto to turn the other cheek to unmerited and unprovoked cuffs, are qualities too unfamiliar elsewhere to be easily imagined.

THE DEATH OF TENNYSON.

THE telegraph this morning brings us the sad news of the death of Lord Tennyson. There had been nothing to portend such a misfortune. Latest intelligence from England spoke of the great poet as enjoying excellent health, though ripe age rendered his tenure of life always uncertain. Tennyson has been the idol of the British public for sixty years. No singer ever touched the chords of his time with more truly sympathetic finger, and none, after Shakespeare, has left so many exquisite thoughts enshrined in the memories of his countrymen. The foremost critics of the age have discussed and sought to analyse his divine gift, but in the presence of the irreparable loss which the nation suffers by his death, the poignancy of universal grief would be insulted by recalling these estimates. We are only conscious that we owe to the immortal poet music the sweetness and nobility of which have elevated and beautified our own lives, and will continue to sound with unimpaired melody through the lives of our children and our children's children. For him the night has come "that knows not morn," but the sunshine of his rare genius remains with us, and will always remain.

A YOKOHAMA MERCHANT AND HIS DIAMONDS.

THE *San Francisco Chronicle* of the 17th ult. says:—"Samuel Sondheim, a New York wholesale jeweller, arrived from Yokohama yesterday on the *China*. In making out his baggage declaration he neglected any mention of jewellery, but he was searched, as a precaution, and nine bracelets, containing from fourteen to thirty diamonds, to say nothing of rubies and sapphires and a butterfly pin with ninety more brilliants, came to light. Mr. Sondheim says the jewels were made in the United States, but he will have to prove it, or the whole lot, valued at \$1,250, will be confiscated."

Exaggerated rumours as to this affair have been circulated in Yokohama, but we have been authoritatively informed that they have no foundation. The articles were manufactured in America, and imported into Japan by the firm about five years ago, so no question of smuggling can be entertained.

THE DISTRESSED TURKS.

A MONTH ago, says the *China Mail*, eleven destitute Turkish seamen were landed at Hongkong from Yokohama by Captain R. Blanke, of the German mail steamer *Nürnberg*. After remaining in the Colony for fifteen days the men were sent to Port Said by the Colonial Authorities, who now, through the Colonial Secretary, sue Captain Blanke for recovery of \$591.25, being \$41.25 for fifteen days' subsistence of the eleven men in Hongkong, and \$550 for passage of the men from Hongkong to Port Said. Mr. J. J. Francis, Q.C., was retained for the defence. The case came before Mr. Justice Pollock on September 28th, and was dismissed, his Lord-

ship holding that plaintiff had not brought his case within the provisions of the Ordinance.

ALCOHOLIC POTATOES.

MR. TAKAMINE is a well known chemist in Japan, but the *Yomiuri Shimbun* introduces him to us in a new character. Residing some time ago in France, we read, he observed that the refuse of the potatoes from which brandy was distilled served no useful purpose and was rejected as valueless. After long experiment with this refuse, Mr. Takamine found that he could obtain whiskey from it. He patented his invention, and sold the patent to a certain capitalist for ten thousand dollars. A big company was formed, and Mr. Takamine received shares of the face value of six hundred thousand yen, upon which he ultimately realized seven hundred thousand. This is very wonderful and admirable.

JAPANESE EMIGRANTS TO HAWAII.

MR. IRWIN, Minister Resident and Consul General for Hawaii, says the *Shogyo Shimpō*, has requested the Kanagawa-Kencho to collect 400 men and 100 women from Hiroshima Prefecture; 300 men and 75 women from Yamaguchi Prefecture; and 200 men and 5 women from Niigata Prefecture; to emigrate to Hawaii. The Kencho has communicated Mr. Irwin's desire to the Governors of those Prefectures, and it is expected that the emigrants will proceed by the *Yamashiro Maru*, leaving Yokohama on the 15th proximo.

LOCAL HONOURS.

AMONG the list of successful candidates in the Oxford Local Examinations for the year 1892 we have pleasure in noting the name of Miss May Moss, second daughter of Mr. C. D. Moss, chief clerk of H.B.M.'s Court for Japan. The young lady is studying at Ellenborough House, Cheltenham (The Misses White), and her record runs—Junior Pass List, Div. I. Passed in Preliminary subjects, Religious knowledge, English (Shakespeare), French, Drawing. Distinguished in German (23rd).

HIROSHIMA SCHOOL OPENING.

THE *Kaikoshiki* (formal opening) of the Hiroshima *Eiwa-jo Gakko* took place on Sept. 30. A large number of invited guests were present, and the occasion proved a most enjoyable one. The Rev. Y. Yoshioka, of Kobe, was the speaker of the meeting, and gave a brief but entertaining address. The rebuilding of this school in less than a year from its destruction by fire, speaks well for the M. E. Church South Mission. The school is now well equipped and we wish it a useful future.

NORTHEAST SHANTUNG PROMONTORY LIGHTHOUSE.

REFERRING to Notice to Mariners No. 254, dated the 12th April, 1892: Mr. A. M. Bisbee, Coast Inspector, by Order of the Inspector General of Customs, issues the following: Notice is hereby given that on the 25th instant the Light at this station was altered from a fixed in an Occulting Light, showing thirteen seconds of light following by two seconds of eclipse every quarter of a minute.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

A cloud of uncertainty hangs over the political situation. The strenuous efforts of the Progressionist organs to induce the new Ministry to announce its policy have been in vain. There is no probability that the Cabinet will do anything of the kind until the Diet meets. Meanwhile, the *Kaishin-to* journals indulge in speculations as to the programme likely to be pursued by the Ministry. The *Mainichi Shimbun*, for instance, supposes that the Ito Cabinet is bent upon adopting a negative and defensive policy towards the Diet. In 1885, Count Ito pursued an exactly opposite course, and the energy—continues our contemporary—which he manifested in carrying out various reforms of the most drastic nature led many people to entertain extravagant hopes of improvement in the Government,

which were, however, destined to be entirely disappointed. But in the present instance, more care seems to be taken to prevent the enemy from attacking the Cabinet than to devise methods of assault upon the enemy. No doubt the Progressionist organ is far from being pleased with such a policy on the part of the Government, but it cannot in justice reprove the latter openly; for the Opposition politicians, those of the *Kaishin-to* in particular, have been wont to advise the present Ministry's predecessors to adopt the very policy which Count Ito and his colleagues are now represented as having decided to follow. The *Mainichi*, therefore, confines itself to asking the Cabinet with what ultimate purpose it intends to pursue a negative and defensive policy. Is it for the purpose of merely postponing the day of the demise of clan Government, or for the purpose of preparing for the smooth transfer of the administration to the hands of the Popular party? Our contemporary hopes that the latter may be the object of the distinguished statesmen composing the present Cabinet.

Notwithstanding the general uncertainty of the political situation, it is tolerably plain that Count Okuma's followers, as we have more than once noticed, will persist in their indiscriminate opposition to the Government. For a time, their organs were apparently unable to find a suitable basis for attacking the Cabinet, but they have at last discovered a pretext in the question of official interference in the elections of February last. Most people thought that this question had been long since disposed of; in fact the Opposition journals themselves apparently entertained no idea of again dragging the topic into the field of discussion until the recent remarkable speech of Viscount Shinagawa in Kyushu, declaring—so the report runs—that he had interfered in the elections to the limit of his capacity. The *Kaishin-to* papers have eagerly seized upon the report, and make no secret of their purpose to embarrass the Government by once more advancing the subject as a topic of censure in the coming session of the Diet. Their programme no doubt is to condemn the present Cabinet for alleged neglect to punish officials guilty of interference in the general elections.

The Radical organ, the *Yiyu*, also discusses the same question. Saying nothing about the re-introduction of the matter in the Diet, our contemporary merely expresses a hope that the Cabinet will not hesitate to take proper measures for settling the matter once for all.

The *Kokkai* has a very interesting series of articles on the necessity of reforms in the Government. It is disposed to approve the wisdom of the negative policy which the present Cabinet is supposed to have decided on pursuing, for it believes that the prime object of the Cabinet is to restore harmony between the Executive and the Legislature. The restoration of such harmony is indeed of vital importance, for the strained relations between the Diet and the Government have hitherto prevented the carrying out of necessary reforms and important undertakings. But while, on the one hand, endeavouring to arrive at some sort of mutual understanding with the Opposition, the Cabinet should not, on the other, forget to undertake reforms, alike in the system and in the methods of administration. Hitherto the *Kokkai* has refrained from expressing its ideas on this subject, seeing that the excitement of the contest in which both the Government and the Opposition were plunged, made it impossible for sober and impartial opinions to be stated with any chance of receiving fair and unprejudiced attention from the combatants on either side. But now that comparative calm has been restored, the *Kokkai* thinks it advisable to give free expression to its views on administrative reform. In the first place, the Statesmen in office are told to correct their tendency to legislate, not from any unavoidable necessity of the case, but for the sake of legislation itself. Secondly, they are recommended to subordinate legisla-

tion to the needs of the people. Thirdly, all attempts in the direction of artificially developing industry or commerce should be avoided. Fourthly, the custom, hitherto not infrequent, of sacrificing practical benefits for the sake of maintaining theoretical uniformity in the general system of administration, should be corrected. Fifthly and lastly, the Cabinet is reminded of reforms that should be introduced in the present system of local Government. Each of these points is fully discussed, but we cannot enter into details here.

The inconsistency of the Opposition forms the subject of an interesting article in the *Nichi Nichi Shimbun*. Last year the Opposition politicians rejected every measure proposed by the Government. But now, without any apparent cause, they themselves contemplate proposing the very measures they refused to consent to in the last session of the Diet. Lately they were transported with delight at the supposed punishment of local officials who interfered in the elections of February last. But now they complain of the Cabinet's indulgence to those officials. Lastly, the clamour which they are now making over the reported confession of interference in elections by Viscount Shinagawa, proves that they were not by any means convinced of the truth of interference when they preferred charges against the preceding Cabinet in the last session of the Diet. These circumstances lead our contemporary to conclude that the so called Popular Party is after all eminently deficient in all the qualifications of a responsible Party.

The organization of the Railway Council has been warmly welcomed by the vernacular press, for fears had begun to be entertained in several quarters that the Government might put off the carrying out of the Railway Construction Law, with the object of ultimately ignoring it altogether. These fears have been effectively dispelled by the step just taken. But with regard to the constitution of the Council, the Opposition journals are not satisfied. They complain that among the twenty-four members of the Council the Popular Party is represented by two only, namely, Mr. Minoura of the *Kaishin-to* and Mr. Ito (Daihachi) of the *Yiyu-to*. In case of a divergence of views, the representatives of the Popular Party, it is feared, will be always hopelessly out-numbered by officials and the latter's partisans. But this is not the point which mainly troubles the Opposition journals. They apprehend that the Council will be dangerously dominated by the military members, inasmuch as officers of the Army and Navy are largely represented, and the post of President has been conferred on General Kawakami instead of on Viscount Inouye, who had been universally regarded as the most suitable occupant. They admit the importance of consulting strategic interests in the selection of route, but where commercial and military considerations clash, they advise the members of the Council to give preference to the claims of commerce.

The *Nichi Nichi Shimbun* undertakes to expose the fallacy of some of the views entertained by its contemporaries on the above subject. It alleges in the first place, that there is no ground for the slightest apprehension of military views preponderating in the Council's deliberations, since several new members have still to be appointed from among civil officials. Secondly, it is chimerical to be troubled about the possibility of conflicts of opinion among the members of the Council. Such conflicts are inevitable and not necessarily injurious. On the contrary, they very often conduce to the discovery of the truth. Thirdly, many writers seem to regard the Railway Council as a body invested with executive functions. But it possesses no such function; its sole duty being to formulate opinions on given subjects to the Minister of Communications. Fourthly and lastly, what has just been observed should suffice to refute another silly notion, namely, that the Council is to exercise any control over the Executive

in regard to railway affairs. The *Nichi Nichi* then goes on to express its own views on the general subject of railways. It frankly confesses dissatisfaction with much of what the Government has undertaken in this direction in the past. As to the question whether the narrow or medium gage should be adopted in Japan, our contemporary is distinctly in favour of the latter. It also holds that the Government did not show wisdom in changing the original plan of laying a line along the Nakasendo instead of the Tokaido. Moreover, in selecting sites for stations, and in fixing upon particular routes for railways, the authorities have not escaped charges of corruption. But these things belong to the past, and our contemporary hopes that the present Cabinet will not lay itself open to such discreditable accusations.

The vernacular press seems to be convinced that some changes must be introduced in the organization as well as the personnel of local Governments. The *Kokumin Shimbun* recommends abolition of the posts of Chief Police Inspector (*Keibuchō*) and Chief Revenue Officer (*Shuzōtō*), whose functions it would delegate to Secretaries. Councillors (*Sanji-kan*) too, might be abolished without creating any inconvenience, these officials having at present little to do. The work devolving on Governors under the existing system is declared to be too light, and it is urged that some of the business conducted by Secretaries might be transferred to the Governor. In short, the *Kokumin* contends that local Governments contain a number of highly paid officials who have no real *raison d'être*.

The *Mainichi Shimbun* strongly urges the Minister of Home Affairs to show no mercy to three of the local Governors who have not yet been punished for their misbehaviour at the time of the last general elections. These Governors are those of Kumamoto, of Kagoshima, and of Saitama, particularly the first, whose alleged illiberal attitude towards Christians has greatly increased his unpopularity with the press. Some papers even go so far to refrain from placing the title of "Mr." before his name and speak of him as "that Matsudaira" or simply as "Matsudaira." The two other Governors mentioned above are almost equally unpopular; and in the case of the Governor of Saitama, about fifty of the inhabitants of the locality recently visited the capital to lay their grievances before the Minister of Home Affairs. The *Mainichi* believes that Count Inouye is not the kind of man to turn a deaf ear to the earnest representations of the people.

The *Kokumin Shimbun* recommends Mr. Mutsu, the Minister of Foreign Affairs, to devote his attention to the condition of Japanese emigrants in the Hawaiian islands. Their number is now said to exceed twenty thousand, so that they constitute the largest community of all the nationalities represented there. But the position which they occupy is anything but enviable; their lot is to work in the field like animals, without enjoying any public rights. In order to enjoy such rights they must become naturalized, and they are advised to do so by all means. The Minister of Foreign Affairs is also urgently called upon to see that his nationals in Hawaii obtain a share in the Government of that country. What hobby will the *Kokumin* mount next?

The Korean question still engages journalistic attention. The *Yiji Shimpō* has again recommended the abolition of the Tientsin treaty, denouncing it as a decidedly inconvenient compact. The *Nichi Nichi*, in reply, shows that the treaty is not at all inconvenient, Japan being the gainer by it. The *Hochi Shimbun* has also something to say on this subject. The fact that the question is so persistently discussed by every section of the vernacular press, and the phase which the discussion has now assumed, suggest the advisability of treating it at greater length than the limits of this summary permit.

Original from

THE NEW RUSSIAN REPRESENTATIVE TO JAPAN.

WE observe with regret that the singular rumours circulated about M. HITROVO, the recently appointed Russian Representative at the Japanese Court, are finding their way into the Japanese press where they may work much mischief. To people gifted with calm judgment, the stories told in the columns of European newspapers about the conduct of the former Russian Diplomatic Agent at Bucharest read like wild romances. The accusations preferred against that official are based on documents said to have been sold for a sum of thirty thousand francs to the Bulgarian Government by one JACOBSON, formerly Dragoon to M. HITROVO, but now known to be a bitter foe of that official. They profess to be copies of correspondence which took place between M. HITROVO and the Asiatic Department of the St. Petersburg Foreign Office, and they represent M. HITROVO as having addressed to the Department a proposal that certain sums of money should be paid to men who were prepared to take part in a *coup d'état* in Bulgaria, the object of which was the assassination of Prince FERDINAND, or, to speak more accurately, his removal by dynamite. To this proposal the Department is made to return an explicit assent, and thus, not only the Russian Minister at Bucharest, but also M. ZINOVIEFF, the Chief of the Asiatic Department in the Russian Administration, figure in the rôle of vulgar assassins and conspirators of the clumsiest type. This statement of the issue involved is, in itself, sufficient to throw discredit on the whole story. Many journalists make it their business to educate among the public the lowest possible estimate of the Russian Government and its methods, but truly, when we are asked to believe that the foreign policy of St. Petersburg rests on such pivots as dynamite and the dagger, we find our imagination incapable of the flight. Let us, however, for the sake of those who can credit such chimeras, examine the matter a little further. In the first place, has it ever been heard of in the history of any administration conducted with ordinary efficiency, that documents of such a terribly compromising character became public property. After the lapse of a century or two, official archives are sometimes placed at the disposal of historians, but here we have presented to the public a series of secret despatches which, in the most brutally frank language, set forth the details of a disgraceful and criminal scheme concocted and set in operation by the Representative of a civilized SOVEREIGN and his trusted Minister. Is that conceivable? Is it conceivable that a traitorous Dragoon could have had it in his power to bring lasting disgrace on his country by selling such documents to her enemies? And even granting the extraordinary

recklessness of management which this idea involves, is it conceivable that such despatches could ever have been written? Here is the point that above all others outrages reason. Men engaged in nefarious conspiracies like that of which a Russian Representative and a Russian Minister are accused on the venal testimony of a dismissed subordinate—men engaged in such plots do not commit their programme to the keeping of formal official despatches. The idea is ludicrous. The more audacious the villainy of which the two high officers of the Russian Crown are supposed to have been capable, the wilder does the hypothesis become that they would have embodied in official despatches—despatches to be perused and copied by a common clerk and preserved in the archives of a Department of State—the most damning details of their abandoned designs. Over and above these considerations, in themselves more than sufficient to reduce the whole tale to the level of a comical canard, we have the eloquent fact that, after the publication of the alleged despatches in the columns of the Bulgarian newspaper, and after the outburst of excitement fanned by credulous or unscrupulous agitators, the central figure in the whole plot, M. HITROVO himself, is publicly received in audience by the EMPEROR and EMPRESS of Russia. It is scarcely necessary to describe what that means. The CZAR knows exactly what M. HITROVO did and what he did not do in Roumania; the CZAR knows every word written by the Asiatic Department to his Minister at Bucharest. Yet the CZAR, and not only the CZAR but also the CZARINA, a lady whose noble qualities all Europe applauds, receive in audience with every mark of favour this Minister who is supposed to have been the deviser and director of a murderous plot against the life of a European Prince; who is supposed to have employed dynamite for the purpose—dynamite used by a Representative of the Russian EMPEROR to destroy a brother SOVEREIGN!—who is supposed to have conducted his nefarious schemes with such clumsy recklessness as to entrust them all to the keeping of despatches; who is supposed to have committed the unpardonable error of reposing vital confidence in untrustworthy agents; who is supposed to have mismanaged affairs so grossly that a great national scandal resulted; who is supposed, in short, to have done everything which the Representative of a civilized SOVEREIGN ought not to have done, and to have left undone everything that could avert the scandal of his villainous intrigues. Assuredly this review of the situation places the EMPEROR and EMPRESS of Russia in a very remarkable light. If the CZAR and CZARINA are to figure before the world as openly sanctioning the use of dynamite to destroy obnoxious sovereigns, Russian Nihilists may go about

their murderous business with uplifted heads. By and by this mad tale will be covered with the ridicule it deserves. To us it would not have seemed worthy of any analysis did we not observe a disposition to circulate it on the part of certain Japanese journals.

THE PORTUGUESE CASE IN KOBE.

IT is thoroughly characteristic of the criticism to which the foreign communities in Japan have unfortunately grown accustomed, that the appearance of a Portuguese suitor in a Japanese Court seeking redress against one of his own nationals should be ascribed, almost in so many words, to underhand contrivance on the part of the Japanese Government. The reflected image of their own principles and motives which these critics present to public view by persistently placing on the meanest and most despicable basis every action and incident distasteful to themselves, is more than sufficient to discredit their arguments. However, they must be left to the enjoyment of their own standard. The smallest injury it inflicts on them is to make them ridiculous. For what could be more comical than to suppose that an international problem like the surrender or continuance of Portugal's extraterritorial jurisdiction in Japan, could be affected, in the slightest degree, by the voluntary action of a solitary and insignificant Portuguese subject in having recourse to a Japanese tribunal instead of instituting a suit before his own Consul? We have very little doubt that where there is question of a claim preferred by one Portuguese subject against another, the suitor will always prefer a properly constituted, well equipped and impartial Court of Law to the amateur magistracy of a gentleman who possesses no legal knowledge and whose private sympathies have generally been enlisted on one side or the other before he sits in his public capacity. Mr. DA SILVA, in making his appeal to the Japanese District Court, was probably swayed by this consideration, but it is at any rate a little too farcical to imagine that the Japanese Government can have descended to the discreditable and perfectly useless trickery of secretly influencing his choice of tribunal. Dismissing this absurdity, a word may, perhaps, be added with advantage about the position of Portuguese subjects towards the Japanese Government. It has been rightly stated that when the Imperial Ordinance of July was promulgated, announcing the resumption of complete jurisdiction by Japan over Portuguese subjects, the fact was officially notified to the Portuguese Vice-Consuls in this empire, for the information of themselves and of their nationals. What measures, if any, the Vice-Consuls took to convey this knowledge to their nationals, we are not concerned to inquire. That is their business.

It appears plain that the Japanese Government, at any rate, has complied with all the requisite forms. Publication in the *Official Gazette* and an official intimation to the Portuguese Vice-Consuls comprise the total steps prescribed by the occasion. It is conceivable, of course, that resistance may be offered by individual Portuguese to the practical consequences of the July Ordinance. Such a contingency must be assumed to have received due consideration at the hands of the Japanese authorities. In the case, for example, of a Portuguese Vice-Consul summoned as a witness before a Japanese tribunal, his refusal to recognise the jurisdiction of the Court would naturally be followed by Japan's ceasing to recognise him as Portuguese Consul. But it is to be hoped that unpleasant incidents of this nature will be avoided. Practical protests against the new system cannot be entered by the Portuguese residents with any useful effect. It is for the Governments of the two countries to decide such matters. The present position, so far as concerns Japan, does not admit, and evidently cannot be allowed to admit, of any equivocal interpretation. Japan has assumed jurisdiction by Imperial Ordinance, and she will assuredly permit no resistance to the lawful exercise of her jurisdictional functions within the limits of her own territories. We must credit her with resolution to face the consequences of a course deliberately entered upon.

THE RAILWAY COUNCIL.

IT is impossible for persons interested in the well-being of Japan to view without some misgivings the composition of the Railway Council, as gazetted on the 1st instant. The chairman of the Council is a Lieutenant General, and among the members are four whose names are borne on the active list of the Army, one belonging to the Navy, and one, Viscount TANI, a retired General whose opinions about the empire's needs are known to be largely tinged by martial considerations. Thus, out of twenty-two members, a compact body of six, including the President, may be expected to exercise all their influence in the interests of a strategic system of lines. We confess that nothing surprises us more with regard to the Council than to find that the man who has so successfully directed Japan's railway affairs from their very inception to the present day, and whose thoroughness and soundness have won the respect and confidence of all serving under him, is relegated to a place among the members, side by side with inexperienced officials and members of the Diet, instead of being gazetted at the head as President. It is necessary to assume that some good reason exists for this anomaly. Possibly Viscount INOUE thinks that he can exercise more influence and play a more useful part as an ordinary member than he could

as President. He is not likely to be concerned about the mere question of position as compared with the prospect of rendering valuable service. At all events, unless the place assigned to him in the Council is of his own choosing, we must admit our total inability to understand it. That, however, though too conspicuous a feature to be passed without comment, is a question apart from the preponderance of the military element, which we set out to consider. Is it really to be supposed that Japan intends to be guided chiefly by strategic considerations in determining the routes and localities of the important railway extensions which she now projects, or may we assume that the presence of so many Army men in the Council portends nothing more than a reasonable and moderate representation of military views? It is to be sincerely hoped that the latter hypothesis is warranted, but appearances are against it. Japan owes a great deal to Germany and France in military matters, but she would be committing an unfortunate mistake did she model her railway policy on the theories prevailing in either country. She has no frontier upon which the rapid massing of a strong army is a problem of perpetual urgency. Her territory is not contiguous with that of any enemy whose menacing preparations necessitate a correspondingly efficient system of defence. Happily for herself, her immunity in this respect resembles that of England, and like England she is at liberty to be guided almost entirely by economical principles in constructing her railways. We can conceive no chain of circumstances likely to subject her to any serious strain in the matter of massing troops. There is not a country in the world that could throw upon her shores a force strong enough to suggest any prospect of a successful engagement. The completion of the trans-Asian railway will certainly increase the potentialities of a land attack, and in view of that undertaking there is cause for paying some attention to the military problem in mapping out the new lines. What we fear, however, looking at the composition of the Council, is that not Commerce but Commisariat is to be principally considered, and such procedure would assuredly be a great mistake. The first thing to think of is the bringing of centres of production within reach of centres of consumption. After that the military problem may be taken into account. Material development is what the country wants above all things. There is something almost ludicrous in the notion of an island empire in the far Pacific spending millions to lay a network of strategical railways, when money cannot be spared to procure a fleet of even medium strength. We may be wrong in anticipating such a disastrous policy, but we cannot be wrong in recording our verdict against it so long as there exists the smallest chance of the country being committed to it.

SUSPENSION OF THE "CHOYA SHIMBUN."

THE *Choya Shimbun* has been suspended for publishing an article which the Authorities apparently think likely to disturb the friendly relations between Japan and Russia. This is a matter of opinion, and frankly the sympathies of many persons will be with the *Choya Shimbun*. The impression produced upon the mind of most Englishmen by the incident will doubtless be that if the relations between the two countries are so tender as to depend for their preservation on measures of this kind, some healing influence is much to be desired. We ourselves hold very strong opinions about the irresponsible and indiscreet utterances of certain journals under the régime of free speech now so fashionable. International amity is needlessly and perpetually disturbed by the vapourings of editors who substitute extravagance of language and violence of sentiment for sober logic and sound reflection. Constantly in the East the public is insulted by the spectacle of gross intemperance and shameless unfairness coolly exhibited in newspaper columns, the inference inevitably being that the writers believe their readers as incapable as themselves of distinguishing truth from falsehood and justice from injustice. It would certainly be an advantage, in the interests of moral decency and international amity, that some restraints should be imposed on these perpetual mischief-makers. Granting all this, however, we doubt, more than doubt, whether such restraints can be usefully and efficiently devised and applied by officialdom. Japan, in one moiety of her practice, is plainly influenced by the same misgiving. She refrains from official protest of any kind against the persistent attempts made by an English newspaper published and circulated in her territories, to stir up disaffection and sedition. Her Government is pelted with epithets designed to destroy its prestige; her statesmen are ridiculed; her Cabinet is accused of deliberately flouting the people; her Prime Minister is charged with flagrantly violating the Constitution; yet she holds her peace. She has the good sense to appreciate that to recognise in such degraded and dishonest criticism a possible cause of domestic disturbance or international umbrage would be to insult the loyalty of her own people and to underrate the discernment of foreigners. Prudence also teaches her that the most unworthy disputant may acquire vicarious respectability from the nature of the opposition he encounters, and that a newspaper intrinsically beneath contempt would derive some measure of importance from official notice, even in the form of a penalty. But it would seem that Japan does not find herself at liberty to adopt this large-minded and wise procedure in every instance

where other nations are concerned. That is a misfortune the evident consequences of which do not affect herself alone. The case of the *Choya Shimbun* is particularly difficult to view with unmixed approval, for truly the article which has involved it in trouble cannot be considered intemperate, whatever may be thought of the judgment that dictated it. On the whole it is a calm and moderately worded *resumé* of events and proceedings seemingly regarded with dissatisfaction by a section of the Japanese nation. The premises and conclusion may be wrong or right. As to that we say nothing. But no one imagines that by suppressing such utterances the discontent they indicate can ever be removed. We are strongly disposed to think that as a recognized supporter of the Government the *Choya Shimbun* has suffered where other journals might have escaped. The Authorities have probably thought that an inch of indulged freedom in such columns might be held to condone an ell of licence in hostile sheets. It is to be regretted that a robust spirit cannot be suffered to control these matters. The fate of the *Choya Shimbun* can scarcely promote that friendship in the supposed interests of which it was conceived. On the contrary, we shall not be greatly surprised to find this incident ultimately added to the catalogue of causes provoking umbrage in sensitive quarters. Amateur eyes, however, are not always capable of deciphering the sign-posts along diplomatic paths, and it may be that the education or instincts of Englishmen render them over-prone to a *laissez-aller* policy.

THE LONDON "TIMES" AND THE PORTUGUESE QUESTION.

WE reproduce elsewhere a letter which appears in the columns of *The Times* from its Tokyo correspondent on the subject of Portugal's forfeiture of jurisdictional privileges in Japan, and a leading article which *The Times* writes by way of comment. It will be observed that the London journal's editorial takes precisely the view which has always been advanced in these columns, namely, that the conventional surrender of jurisdiction by Japan implies a reciprocal obligation on the part of the Powers profiting by that surrender to provide an efficient substitute, and that, whereas England and certain other States have fulfilled this obligation, several of the smaller Powers, "while claiming all the privileges to which they are entitled by treaty, neglect to provide Courts of competent jurisdiction and capacity, and appoint Consuls who are merchants only and entirely without legal education and experience, to exercise the judicial authority involved in the right of extraterritoriality." This general failure of duty

having been stated briefly, but in such a manner as to invite the condemnation of all unbiassed persons, *The Times* then proceeds to show in what respect Portugal has been exceptionally blame-worthy, and to detail the course of events that compelled the Japanese Government, last July, to exclude her from the toleration extended to some other States, which, while sinning equally with her as to the qualifications of their Consuls, were distinctly less open to censure in respect of the competence of their extraterritorial tribunals. The view taken by *The Times* is precisely what might have been expected from the leading English journal, a newspaper commanding the best sources of information and reflecting the just and liberal sentiment that generally sways British public opinion. We observe one inaccuracy in the London journal's article. Misled, probably, by a decidedly misleading sentence in its correspondent's letter—"The Portuguese residents are, in fact, in the position of subjects of a non-treaty Power"—*The Times* writes:—"Portugal has lost the right of extraterritorial jurisdiction in Japan, and with it all the advantages enjoyed by a Treaty Power." It is, of course, incorrect to say that Portugal has lost "all the advantages enjoyed by a Treaty Power." She has lost nothing but her jurisdictional privileges. As to other things, she remains on precisely the same footing as the subjects or citizens of all the Treaty States. There appears to have been some misunderstanding with regard to this point, even among persons who had not the same excuse as *The Times* to err. It was stated in the local press of Yokohama, shortly after the promulgation of the Imperial Ordinance of July 4th, that because of Japanese action, no Portuguese national could obtain a passport to travel outside Treaty limits, and that all His Most Faithful MAJESTY'S subjects were immured in Yokohama during the heat of summer. Such was not the case. Pending the Lisbon Cabinet's designation of an official to represent Portugal at the Japanese Court, Portuguese subjects were necessarily unable to obtain from the Government in Tokyo passports for general travel in the interior, the machinery for securing such a privilege being deficient. But that was not a consequence of Japan's action in revoking Portugal's jurisdictional commission. It was a consequence solely of Portugal's failure to delegate her diplomatic representation to the Legation of some other State. So soon as she did so, things returned to their former basis, and in the meanwhile no Portuguese subject was necessarily immured in Yokohama, local passports, authorizing travel to Miya-noshita and the Hakone district being always available.

The Times, with its customary insight, puts its finger on the vital point of

this international incident. If Portugal, having forfeited her jurisdictional privileges, should adopt the common-sense course of seeking to obtain the *quid pro quo* which Japan is always willing to give for the surrender of those privileges, and should obtain it, the occurrence would cause no very great concern to the subjects and citizens of other Powers, inasmuch as the possibility of Portuguese competition becoming embarrassing is not seriously regarded under any circumstances. But the contingent danger of such a break-away is disquieting. Should some more important country, prompted by Portugal's example, step out of line with the other Western States, and conclude a separate arrangement with the Japanese Government on her own account, the general situation of extraterritorial jurisdiction would become exceedingly unstable. This is the real cause of the uneasiness exhibited by so many local writers in view of the recent event. Their disquiet is perfectly natural. Nothing is less to be desired than that a question demanding careful and deliberate adjustment should be subjected to the feverish influences of international rivalry. But instead of putting the saddle frankly on the right horse, instead of attacking the really untoward potentialities of the affair, these critics have invited ridicule by attempting to defend on its own merits a case too flagrant to admit of any extenuation or justification. Portugal has been wrong beyond all room for doubt or cavil. It was always on the cards that Powers taking such a trivial view of their responsibilities might seriously complicate a system which, as *The Times* truly says, is at best a makeshift, and tends constantly to become an anachronism. What we have to do is not to render absurdly contradictory our own exacting attitude towards Japan by upholding the jurisdictional laches of notoriously defaulting States, but to insist that all shall practically satisfy the conditions upon which they lay such imperative stress in her case.

ELECTION TROUBLES IN KUMAMOTO.

KUMAMOTO PREFECTURE is a veritable hot-bed of political bigotry. Conservatism flourishes there to a degree not often to be met with in other parts of Japan. It is suspected in some quarters that if the Governor, Mr. MATSUDAIRA, really allowed himself or the school-masters under his control to adopt the anti-Christian course recently attributed to him, an explanation will probably be found in the character of his surroundings, for unless a Governor's creed be exceptionally liberal, he can scarcely bear up against the constant pressure of conservative influences. Be that as it may, the conservatives are not less resolute than

sequence is that the so-called "People's Party" fares ill on occasions of political contest. In Kumamoto, as our readers doubtless remember, much excitement and disturbance occurred during the general elections, and Governor MATSUDAIRA was freely charged with exercising undue influence to secure the return of pro-official candidates. What particular action of his provoked this accusation we do not know, but since the present Cabinet has shown no mercy towards local officials who suffered zeal to outrun propriety at the time of the elections, and since Governor MATSUDAIRA remains undisturbed in his position, we may fairly infer that no proof of indiscretion could be established against him. The fact seems to be that the Radicals are resolved to associate every act of the Conservatives, directly or indirectly, with the Government, and that out of this determination accusations have grown up which have no basis in fact. At present the state of affairs in the Prefecture lends colour to the latter view, for in connection with the election of a member of a Divisional Assembly—the smallest representative body in the empire, presided over by an elected Headman, and entirely beyond the pale of Government interests—disturbances are taking place which almost overshadow the commotion of last spring. The *Hochi Shimbun* publishes a telegram, dated at Kumamoto, the 3rd instant, 7 p.m., which says that on the occasion of re-ballot for a Divisional Assembly representative for Dakema in the Yamaga District, one *Min-to* (Popular Party) partisan was killed, and several received more or less severe wounds. The *Kaishin-to* organ adds that during the day (4th instant) following the receipt of this telegram, it despatched two inquiries by wire to Kumamoto, but failed to obtain any reply, from which it infers that the disturbance had become so bad as to make telegraphic communication impossible. Naturally, the Radical journals throw all the blame on their political opponents. They allege, among other things, that the day of election was to have been kept secret so as to avert disturbance, but that intelligence of the date fixed was privately conveyed by one of the Prefectural officials to the Conservative Party, who were thus enabled to master the situation. Whether this be true or false, it is plain that great excitement prevails in the Prefecture, for we read that even the conduct of ordinary agricultural pursuits has been interrupted for some time, the farmers finding it unsafe to work in the fields unless they have help within easy reach. The *Fiji Shimpō* publishes a telegram sent from Kumamoto on the afternoon of the 4th, which says that the police found it necessary to arrest two hundred and fifty of the Popular Party, and that a raid was made on the police station by the friends of the impounded politicians for the purpose of rescuing the prisoners. From

this it would seem that, whatever may have been the case during the early stages of the disturbance, the chief offenders against law and order at the close were the Radicals. Governor MATSUDAIRA'S position is doubtless difficult, and every impartial person must be unwilling to take a harsh view of his conduct; but he certainly has not achieved the ends of good administration, for both discontent and disorder are rife in the districts under his control. He nevertheless enjoys the reputation of being a very able official, and the Home Office, under its present chief, is not likely to condone any shortcomings. But what hot politicians the Japanese are, to be sure! A Divisional Assembly (*son-kai*) is a body with comparatively insignificant functions. Its members cannot be said to enjoy any special consideration or to exercise any considerable influence. Yet farms are left lying fallow, heads are broken, multitudes do battle, arrests have to be made by hundreds, and police stations are raided, all in the interests of two or three candidates for such an assembly! Truly Kämpfer's insight, so conspicuously displayed in many directions, did not err when he said that the Japanese would fight to the death for a principle. That, at any rate, is a trait of the national disposition which must now be fully recognised and reckoned with.

TAXATION IN JAPAN.

PROFESSOR DROPPERS has addressed to our columns an interesting letter on the subject of the land tax. We have to thank him for the full and explicit information he affords as to the sources of information relied on by him in forming his estimate that the tax amounts to twenty-five per cent. of the net produce of the land. The subject has been much talked of, and the fact that a thoroughly convincing figure has not yet been arrived at, indicates the difficulty of the task. Japanese fiscal administration has had much light thrown on it by the recent researches of Professor DROPPERS, but, while according a just measure of praise to the industry of this gentleman in collecting statistics and to his insight in employing them, we must confess that we are not yet convinced of the correctness of his conclusion as to the ratio between the land tax and the produce of the land. A simple explanation will suffice to indicate our reason for disagreeing with him. Let us take his very clear statement, namely, that the land tax amounts to twenty-five per cent. of the net produce of the land. We are not quite certain whether he intends to limit this estimate to the rice crop only, but we reject such an interpretation since it would deprive his statement of all significance as an *exposé* of the burden of taxation. The annual rice crop of the empire is thirty-eight million *koku* in round numbers. Professor DROPPERS seems disposed to

take a larger figure, but it is well to assume moderate bases of calculation. The net crop, we are told, is 15 per cent. less than the gross yield. Hence, 25 per cent. of the net crop of rice is a little over eight million *koku*. During the present year the price of rice has averaged about 7 *yen* per *koku*, but if we put it at the low figure of 6 *yen*, the value of eight million *koku* is forty-eight million *yen*, an amount which exceeds by about six million *yen* the total land tax collected by the Government. In other words, by applying Professor DROPPERS' ratio of 25 per cent. to the rice crop alone, we obtain a figure considerably greater than the total amount actually levied by the Government as land tax. Even if the price of rice be assessed, for the purposes of this calculation, at only 5 *yen* per *koku*, 25 per cent. of the net crop would represent the whole land tax. But what then becomes of the other produce of the land: tea, silk, tobacco, millet, barley, buckwheat and other cereals, beans, root crops, vegetables, drugs, cotton, hemp, dye plants, timber and so forth? It will certainly not be an excessive estimate to put the total annual value of all this produce at 150 million *yen*, and if here also we apply Professor DROPPERS' estimate of 25 per cent. of the net crop, we obtain an additional amount of nearly 32 million *yen*. Hence, finally, 25 per cent. of the total net produce of the land represents 80 million *yen*, or nearly double of the tax actually levied.

Let us look at the matter from another point of view. The value of the rice crop—supposing the yield to be 38 million *koku* and the price 6 *yen* per *koku*—is 228 million *yen*. Assessing all the remaining produce—tea, silk, cereals, root crops, &c.—at 150 million *yen*, we have the total produce represented by 378 million *yen*. Now the land tax is 42 million *yen* in round numbers. Hence it appears that the land tax is 11 per cent. of the gross produce, which is about one half of Professor DROPPERS' estimate.

The above estimate is sufficiently striking. But there is still another item to be included, namely, the tax on urban lands. Professor DROPPERS and the authorities he quotes speak as though the rice crop alone was to be considered in comparing the amount of the land tax with the produce of the land. Not only must all the other crops be considered, however, but also we have to remember that the tax is levied upon building lands as well as upon agricultural lands. The tax paid by the lands upon which all the cities and towns of the empire stand has to be deducted from the total impost before we begin to compute what fraction the latter represents of the agricultural produce.

These considerations induce us to hesitate before accepting the Professor's conclusion. His investigations *in loco* may have led him to fix the burden of the rice crop at the very high figure of 25

per cent. of the net harvest; but if that be the case, then it follows, as we have shown, that all the remaining varied and valuable produce of the land is not taxed at all, and that the urban lands escape altogether. We find it impossible to credit anything of the kind.

A word as to the nature of the impost levied on the land. We have more than once spoken of the impost as "rent," not "tax," and Professor DROPPERS now denounces this as "loose writing." It involves the theory, he says, that the State is landlord and that the farmers are tenants, whereas "no one pretends that this is the case." But that is precisely what we do "pretend," and for a very cogent reason. No land-holder in Japan ever possessed a title-deed until such documents were granted by the Meiji Government. Under the feudal system no land-occupier was empowered to sell his holding. He might sell the good-will of it with the consent of his chief, but with the fee simple of the land he had no competence to deal. In 1871, when the fiefs were restored to the Central Government, the latter became not merely theoretical but also practically owner of all the land in the empire. A re-assessment was then made, and the holders were granted title deeds assuring to them the right of perpetual occupation, on condition that they paid to the original owner—the Government—a perpetual rent representing a certain fraction of the assessed value of the land. Professor DROPPERS appears to think that because much of the land thus acquired is now sub-let, the annual sum paid to the Government by the registered holder cannot be regarded as rent. He also lays stress upon the fact that the registered holder is "as much an independent proprietor as any peasant in Europe or farmer in America." But sub-letting does not at all effect the nature of the original arrangement, and the so-called proprietorship is nothing more than the right of perpetual occupation. It is not, of course, pretended that the State is landlord and the occupier tenant, in the ordinary acceptance of the terms. Our position is that, inasmuch as the occupier disbursed nothing originally for his title, but came into occupation simply on condition of paying a certain annual sum in perpetuity, that sum must be regarded as rent rather than as tax. We are disposed to infer from one remark made by our correspondent that he has not considered this part of his subject with the care usually distinguishing his work. He writes:—"The share that goes as rent to the landlord always increases with the advance of prices of agricultural products, but the Japanese land tax remains essentially the same from year to year, and has actually decreased in the last fifteen years." Now, without pausing to dispute the general theory here advanced, we may observe that if Professor DROPPERS' argument has any force, it tells against his own position.

For the condition under which the land came into the possession of its occupiers was that the annual sum payable by them should be subject to re-assessment every five years. The Government has never enforced that condition, but if one evidence of the relation of tenant and landlord be that the former's yearly payment is liable to vary according to the market price of agricultural products, then that evidence undoubtedly exists in the case of Japanese land.

YOKOHAMA LITERARY SOCIETY.

The Annual General Meeting of the Yokohama Literary Society was held in the Van Schaick Hall on Friday evening. There were present, Messrs. J. T. Griffin, A. Wilkin, Rev. G. Meacham, Rev. E. S. Booth, Rev. J. C. Ballagh, G. Sale, O. Balk, J. B. Hartley, L. Pollard, and many ladies. Mr. Griffin, the president presided.

The report and accounts, together with statistical table of attendances—given below—were taken as read, and adopted. The officers for the ensuing session were elected as follows:—President, Mr. Griffin; Vice-president Mrs. Van Petten; Committee, reading and musical, Mrs. Loomis, Miss Efford, Miss Griffin, and Mr. Fenton; Honorary Secretary and Treasurer, Mr. F. Sale. Refreshment Committee; Mrs. Efford, Miss Deyo, Mr. Adams, Mr. Gibbs. A vote of thanks was accorded to the outgoing committees and officers, the late secretary Mr. H. W. Sale, now in Kobe, receiving special mention.

A short but most enjoyable programme of music was given during the course of the evening. Miss Moulson and Mr. Griffin opened with a pianoforte duet; Dr. Russell contributed "Awake, Awake," with violin obligato by Mr. Ramseger; Miss C. Rice, "Sunshine and Rain"; Miss Griffin and Mr. Griffin closing with a Sonata, arranged as a duet, from Mozart.

REPORT AND ACCOUNTS.

The Committee has again to report a very successful season, the Society continuing to flourish in every direction. The members on the roll have increased to 131 and during the past session more true literary work has been done than ever before: the members, friends and distinguished visitors have contributed no less than thirteen lectures, essays, or original papers. The Cash Account shows a balance in hand of \$109.66 while, in addition, the Society possesses considerable furniture, books, and other property quite sufficient for its needs for some time to come.

The Society passed the milestone of its 100th meeting on Friday, 11th December, 1891, when a special "Centennial" programme was arranged, including a history of the birth and growth of the present institution, which began its career as the Yokohama Reading Circle in the autumn of 1855.

Appended hereto for the perusal of Members is the Secretary's "List of Meetings," with attendance table and comparative figures for the last three seasons. The Treasurer's account is also attached, including his explanations, analysis and comparison with the accounts of recent years.

With the presentation of this report the officers and members of the various Committees hand in their resignations accompanied by their best wishes for the continued prosperity of the Society.

LIST OF MEETINGS—SEASON 1891-1892.

Meeting.	Present.	
No.	No.	
95	37	Annual Meeting. General.
96	80	Adoption of Rules. General.
97	130	Goldsmith's "Vicar of Wakefield" (Magic Lantern illustrations.) Lecture by Prof. Dixon.
98	48	A Paper on the Origin of Coat (Substance from a lecture by Prof. Huxley.) Geo. Sale.
99	300	Musical Songs. J. T. Griffin.
100	91	Centennial Meeting. History of the Society, by Mrs. H. Loomis.
101	65	The Dangers of Washing (Original). Mrs. W. H. Smith.
102	93	A Paper on the Customs of Japan (Original). Mrs. D. C. Greene.
103	97	Lecture: "Burns and his Age." Prof. Dixon.
104	85	Evening with Lowell.
105	99	A Paper "Frontier Life on the Prairie" (Original). A. J. Wilkin.
106	120	Evening with Tennyson.
107	86	A Paper "Maxims of Maimonides." Dr. Stephenson.
108	731	"Some Phases of the Moon;" Lecture, by Rev. E. S. Booth.
109	68	A Paper on Carrier Pigeons. W. Barrett, R.N.
110	701	A Paper on The Red Cross Society. Dr. Whitney.
111	125	"Certain lines of research and discovery in modern Psychology." Lecture by Prof. Ladd.

E. & O. E.

H. W. SALE.

Hon. Sec. Treasurer.

CASH ACCOUNT.—The Extras for season 1891 and 1892 are heavy.	
Furniture taken	\$43.86
Rent 50% more	40.00
Printing New Rules	10.45
Piano transport	7.15
July Meeting, Aerated waters	5.10
Extra Meeting over season	7.30
	\$133.91

1890/91.	1891/92.	1892/93.
Receipts	\$274.37	\$399.50
Expenses	274.37	275.75
Cash in hand	\$11.	\$123.74
		109.66

Refreshments have cost more than last season. But the variety and the quality has been better than ever, last season \$86.88, this season \$143.48.

Stationery. A slight increase over last season, \$45.66 against \$30.20 for 1890/91. This is accounted for partly by the fact that all the members' invitations are printed specially for each meeting as it was found to take too much of the Secretary's time to write in the dates and titles of the Meetings on the cards as in previous seasons. A growing society requires new methods from time to time.

H. W. S.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

SHUSHI AND HIS INTERPRETERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Through the kindness of a friend I have lately had an opportunity of reading the very interesting and suggestive papers of Dr. Knox and Mr. Haga upon the philosophy of Chu Hsi, or, as you call him here, Shushi, in the Transactions of the Asiatic Society of Japan. Allow me to remark, parenthetically, that it is surely a mistake to pronounce the names of Chinese philosophers otherwise than as they are pronounced in Chinese. Certainly the converse is never done when treating of Japanese philosophers in China. My own appreciation of the papers in question has been considerably interfered with by the difficulty I have experienced in recognizing familiar designations under so strange a form. This, however, by the way. My present object is to offer a few observations upon the subject so ably treated by the two scholars above mentioned.

It must be clear to all that the only key to the cosmogonical philosophy of Chu Hsi is to be found in a correct terminology. Once discover the true translation for *ri* (理) and *ki* (氣) and the theory becomes plain enough. Now there are two methods by which the systems of Chinese thinkers may permissibly be examined. The first is by interpreting them by other systems—working, that is, upon the lines laid down in Comparative Mythology. The other is by dealing with them upon their own merits, isolating them from all other speculations by whomsoever indulged in, and approaching them with a perfectly open mind. The second of these methods is surely the fairer of the two; it is also the likelier to be really fruitful, for the reason that if, upon examination, the system we are studying is found to present features similar to those of other systems, the discovery will have been arrived at by a process free from bias and predilection, and must, therefore, be all the more significant. Now the late Canon McClatchie, a Chinese scholar to whom the utmost respect is due, unfortunately chose the former. He was a great student of Chu Hsi, but he was not an unbiased student. Paganism, said the Canon, is Paganism all the world over, and therefore Paganism as we find it in China must be

interpreted by Paganism as we find it in Greece. And so this excellent clergyman proceeded forthwith to identify Shang-ti (上帝) with Jupiter; and, as Jupiter was a person of exceedingly immoral habits in his domestic life, every possible passage relating to Shang-ti had to be, and was, interpreted in a correspondingly unfavourable sense. However, as on another page he identifies Jupiter with Pan Ku (盤古) and Shang-ti with Chronos, Baal, and Buddha (佛), this is not worth going into. Suffice it to say that, in order to understand Chu Hsi, Canon McClatchie turned up his Anaximenes and one or two more authorities upon creation, and in consequence of what he found there immediately translated *li* by Fate (ἀνάγκη) and *ch'i* by Air. These renderings are surely most unfortunate, and would never have been adopted but for the Canon's irresistible predisposition in favour of what I may call the homogeneity of Paganism. Of course *ch'i* means air, just as it means vapour, courage, temper, feeling, influence, aspect, and a variety of other things. But in cosmogony it means simply nebula; the primordial cloud, which, formed by the accumulation of discrete molecules, was the immediate germ whence proceeded the universe as it exists to-day; and as those constituent molecules were essentially material, the true sense of *ch'i* is to be found nowhere but in the word Matter. *Li*, on the other hand, is that which acts upon it and directs its movements—immaterial, self-existing, and intelligent; and this is nothing else than mind.

Nothing, I think, can be clearer than the truth of my contention when we come to compare the theories of Chu Hsi with those of our modern thinkers. The first sentence of his forty-ninth chapter runs as follows: "In the entire Universe, where there is no Mind (*li*) there is no Matter (*ch'i*) and where there is no Matter there is no Mind." Immediately we are reminded of an almost identical saying of Rothe's: "Es gibt ohne Welt keinen Gott." The idea in both cases is that the Universe, whether differentiated or undifferentiated, is the eternal manifestation of the Eternal Reality; that manifestation is as necessary a property of that Reality as the existence of the Reality itself; that the Eternal Reality is never *only* Reality, but always being manifested in Matter and its transformations. We then come upon another utterance of considerable interest, to the effect that "Mind first existing, then certainly Matter exists; and Matter, when accumulated, forms Mass"—that is, the diffused elementary particles come together and solid shapes are the result. Nothing could be more in harmony with the latest scientific hypotheses than the latter part of this sentence. The former part, which implies, or at least suggests, a time before the manifestations of Mind had taken place, and thus appears at variance with the first sentence of the chapter, may, I think, be easily explained. "It is quite true," says Dr. Chapman, in his work on 'Pre-Organic Evolution,' "that the Reality referred to is termed 'Cause' in the proper philosophical sense of that word, and consequently the Manifestation is 'effect'; but the point to be carefully noted is that the causal connection thus noted is logical, not chronological. . . . The phenomena which we, from our point of view, arrange as before and after one another, are only, according to the Spencerian conception, the continuation of one great act, as it were, of the Eternal Reality, which has been going on ever since, if one may use such an expression, the Reality has been in existence—that is, from eternity." Here, again, we find a curious and striking similarity with the theories of Chu Hsi. "Abstractly," says Dr. Knox, "*ri* precedes *ki*; but really there is no *ri* apart from *ki*, nor any *ki* apart from *ri*. Nothing is prior, for both are eternal. . . . Wherever there is *ri* there is also *ki*." "The universe is not created, but is an unending process."

I therefore fully agree with Dr. Knox that the philosophy of Chu Hsi was pantheistic. Mr. Spencer certainly does not call himself a pantheist; but it is difficult to resist the conclusion that had Chu Hsi known as much physical science as exists to-day he would have formulated a philosophy differing in no marked degree from Spencerianism. Even as it is, both systems deal with the intensely interesting subject of pre-Organic Evolution, and lead to very much the same conclusion. We are even reminded, by Chu Hsi's theory of the inseparable companionship of Mind and Matter, of Professor Clifford's theory that each particle of Matter is accompanied by a corresponding particle of Mind stuff. The same doctrine is reached by different methods and different trains of thought.

Much more evidence might be adduced, but I think I have said enough to establish the opinion I have expressed above. Surely it is a more satisfactory conclusion to find that the philosophy of Chu Hsi is virtually at one with the philosophy of the best European thinkers, than that it was a mere

phase of the contradictory and childish mythologies of old. Permit me to ask two questions before concluding. What does Dr. Knox mean by saying that Lieh-tzu (列子) lived in the age preceding Confucius (p. 39)? He was considerably later; probably, indeed, a very little earlier than Mencius. And I should very much like to know whether Korea has produced any writers upon either the Confucian or the Taoist system? This enquiry is prompted by a remark of Dr. Knox on page 3 of the Transactions under notice.

Yours obediently,
October 2nd, 1892.

F. H. B.

WHAT IS THE MATTER NOW?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—That the shares of the Bank of China, Japan, and Straits, Limited, are very much depressed at the present moment every one knows; that they have been and are unduly depressed most people believe; most people also believe the management when they say it will not be necessary to make a call, and "Sufferer" must have heard this in common with all shareholders; but if he still doubts, would another denial from the management satisfy him? I fear not.

"Sufferer" is just a little out in his figures. I think the shares are £15.50 paid up, but the first issue was allotted at 10/ premium=£1.15.0 and the second issue at 100 per cent. premium £2.10.0. The first year the Bank paid 16 per cent. on 25/ and not 18 per cent. on 30/ as "Sufferer" says. Whilst sympathizing with "Sufferer" on the present depression, I think a little sympathy might also be extended to the management who have so skilfully piloted the Bank through the unprecedented hard times, without having had to make a call; and now that better times are undoubtedly dawning, let us hope the call will not be necessary, and the shares will soon rise to their proper value.

Yours truly,

BETTER TIMES IN STORE.

Yokohama, October 1st, 1892.

TO THE EDITOR OF THE "JAPAN MAIL."

"Better times in store" has given one more good reason for making the enquiry: "What is the matter now?" According to his figures the average paid up cost of the shares of the Bank of China, Japan, and Straits, Limited, is £22.6. The current quotations are Tls. 2.50 in Shanghai, market nominal, \$3.50 in Hongkong, vide Bisset & Co.'s report. I will ask "Better times in store" to mention, if he can, any solvent monied institution that has suffered such a heavy depreciation in its stock value as is here shown. If there is no need for a repletion of the capital paid in, it is passing strange that matters should be as they are. It is incomprehensible, away beyond the conjecture of a puzzled community, why, if serious losses have not been experienced, shares should stand at the figure they do. To say that the management should have sympathetically extended to them for their skilful pilotage of the bank through the unprecedented hard times without having to make a call, is kind indeed. It might be eminently proper for the shareholders to present the management with a substantial testimonial at Christmas time, if they shall have enough of their investment left wherewith to purchase the thing. It may be the proper thing to thank a set of men to whom you confide the trust and management of nearly three million dollars of your money if at the end of two years and a half you are able to realize in the open market \$700,000 for your millions. Where the trouble lies no fellow can find out. Yokohama is said to have done well, Hongkong reports no heavy losses, Shanghai went into the Exchange business, and the Courts said pay the penalty. "Better times in store" does not seem secure in his idea that a further call will not be made. I with him say, "Let us hope the call will not be necessary."

Yours &c.,

A SUFFERER.

THE TYPE-WRITER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Type-writer has come to stay. Just as the fountain pen seemed to be approaching perfection, the Type-writer comes in, and goes as far ahead as that was ahead of the gray goose quill.

Merchants now dictate their letters to a clerk who takes them in shorthand, and then writes on the Type-writer. With the pen a person can write from twelve to twenty-six words a minute; with the Type-writer an amateur ought to write forty; an expert can more than double that speed.

It is according to reason that the Type-writer should be the swiftest; only one stroke makes a letter. When a Japanese writes the ideograph for "salt" he makes about twenty strokes; when we write it

we make about ten; the Type-writer is satisfied with four. It is said that fifteen characters a second have often been made by experts. That is equal to one hundred and sixty words a minute. That is a spurt, and is done with words which have been repeatedly practised upon by the operator. To maintain a speed of eighty or one hundred words a minute on ordinary matter for a long time, puts one into the list of experts.

It is said that only one person in five hundred who studies shorthand succeeds in learning it. I am disposed to accept the statement, for I belong to the four hundred and ninety-nine. Type-writer exchanges are numerous in the United States, and they will sell any make, they say, at a reduction. This means, that a great many persons who buy, fail to make a success of it, and sell to the second-hand men.

What are the difficulties? It takes time to get ready to write. Where one can pick up a sheet of paper and begin to write, it is much easier than to arrange the Type-writer. It requires constant practice to acquire speed on the Type-writer, and at first it is slower than the pen. Impatience to write fast leads a man to override himself, so that he does not succeed as well as he would if he were more prudent. A fine little book, "Type-writer Speed" says: "The way to learn to write fast is to write slow. Speed is of slow growth, and comes imperceptibly."

The difficulty of composing while writing is another reason, probably, which has led some to sell out, and to go back to the pen. With the pen one does not have to stop and think how to form the letters, such familiarity with the Type-writer will not come to the ordinary man. Some operators can write blindfold, or with the eye constantly on the copy.

Another objection may not occur to many. When I wrote a letter, especially if I was in a hurry, the receiver did not read it in a minute; he had to work his passage. Then he could come back the next day and see whether he had worked out the wrong interpretation. Thus the letter lasted a while.

On the Type-writer a letter does not admit of so many permutations as it was customary to give to one of Horace Greely's epistles.

There is probably a physical reason which has caused some to give up. The Type-writer placed on a table of the ordinary height is very fatiguing. It should be much lower. After all, it is likely that some are adapted to it and others are not, so before you buy a Type-writer you would do well to consider whether you will be supple and patient enough to succeed.

For manifolding the Type-writer is excellent. A stencil paper can be placed in the machine, the ribbon removed, the writing done, then the stencil paper placed in a frame aid with a printing roller a large number of perfect copies taken.

Does the reader know any way to ink the ribbons? If so please let the fraternity know.

G. T. S.

October 1st, 1892.

TAXATION IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a short criticism in the *Japan Mail* of September 6th on my article on Taxation in Japan you take exception to my statement that the national land tax requires at least 25 per cent. of the net rice crop of the farmer, and you say:—"But if we understand what Mr. Droppers has advanced on this subject, he relies chiefly on information furnished by farmers in certain districts of the country, and it is impossible to feel that isolated assertions coming from such an obviously biased source and unchecked by independent research can be accepted as conclusive." Perhaps the best answer I can give to your doubt as to whether I am right, will be to mention the various sources of my information.

My first knowledge of the subject was derived from various works, written some years ago, on the economic conditions of Japan, such as Rein, Fesca, and more lately Rathgen. In the two former works are estimates of the burden of the Japanese land tax that are even higher than mine, and Rathgen's (whose account of the taxes is most admirable) is certainly not lower. These are important authorities, two of whom have made careful and detailed studies of the agriculture of Japan. Moreover, in a pamphlet entitled "Land Reform in Japan," Professor Eggert of the Imperial University says:—"These 2½ per cent. of the taxable value of the land are equal to about 30 per cent. or even 40 per cent. of the annual harvest, besides which additional local taxes, e.g. the so-called land rate, increase the heavy burden of the Japanese farmer." My statement of the matter was that the national land tax required on an average at least 25 per cent. of the net crop of rice, an estimate which is far more moderate than the previous

one, and when we take into consideration the meaning of the word *net*, moderate from every point of view.

My second source of information is the Land Tax Reform Bureau. This Bureau, you will remember, began its work in 1873, and finished it, I believe in 1882 (of this last date I am uncertain), and based the value of the land on the amount of the average net product, which was estimated to be 85 per cent. of the gross product, the remaining 15 per cent. being allowed for the so-called expenses of production, namely, seed, manure and other small outlay of capital, but, curiously enough, not including the wages of farm labour. It was from this net product that the tax, amounting to 3 per cent. of the value of the land, was to be subtracted; the remainder was net profit to the owner or cultivator and was calculated to be not more than a return of 6 per cent. of the value of the land, or, in other words, twice as much as the land tax. According to these experts, six-tenths of the crop went to the land owner, three tenths to the State in the shape of land tax, and one tenth to the local governments. The State tax was therefore 33 1/3 per cent. of the net crop. It was found, however, that in many cases the farmer did not receive six-tenths of his crop, and thus in 1877 the land tax was reduced 1/3, from 3 per cent. to 2 1/3 per cent. of the value of the land. Even according to this estimate, however, a reduction of 1/3 would leave the general average of the tax more than 25 per cent. of the net crop.

The farmer received 2/3 of the net crop—the national land tax was 1/3 of the net crop—or the tax was 33 1/3 per cent. of the net crop at the rate of 3 per cent. But as the rate was reduced to 2 1/3 per cent. the amount was reduced 1/3, or 33 1/3 per cent. minus 5 1/3 per cent., equal to 27 2/3 per cent. Thus after the year 1877, according to the reckoning of the presumably best informed Japanese, the national land tax absorbed 27 2/3 per cent. of the *net* crop of the farmer. My figure, however, was put at 25 per cent., a proportion which, I am sure, is regarded as extremely moderate by every well informed Japanese.

My third source of information is derived from my own observation of farming conditions in the central part of Japan, and also from the observation and investigation of Japanese students who are interested in the same subject. The latter are not likely to be biased, since in the great majority of cases they own no land and are simply students of political economy. My own study is possibly, as you suggest, biased, because farmers are apt, like other classes, to exaggerate their own burdens. I have, however, always tried to get, not the opinion of farmers but the facts of their farming operations, the exact amount of rice each piece of land yields per *tan*, and how much tax is collected. As the tax is a fixed amount annually, it is not easy to be deceived on these points. I am quite ready to acknowledge that in Gumma-ken, Nagano-ken, and Tokyo-fu where I have particularly studied farming conditions, the tax is, as a rule, higher than in the southern part of Japan. But these discrepancies are easily taken into account, and my modest figure of 25 per cent. of the net crop of rice is altogether too low for some of the central provinces of Japan.

I have still another piece of evidence to offer to prove the truth of my statement. According to Government statistics, the rice crop of 1887 was 39,999,000 *koku*, the largest crop of rice obtained in Japan up to that time. As the previous year's crop was over 37,000,000 *koku*, we are justified in supposing that there was nothing abnormal in the year 1887. Dr. Rathgen, in his *Japan Volkswirtschaft* (page 539), calculates (by dividing the amount of taxes received from rice land by the average price) the amount of rice paid to the Government on this crop as 8,751,400 *koku*, or about 24 1/3 per cent. of the gross crop and 25 1/3 per cent. of the net crop. For the two preceding years, 1886 and 1885, the tax would likewise be about 24 1/3 per cent. of the net crop, while for the year 1884 it was more than 39 per cent., or nearly 40 per cent. of the net crop for the whole of Japan (the total crop of rice being 26,349,883 *koku* and the amount paid as taxes being 8,721,700 *koku*). Dr. Rathgen does not give figures for years later than 1887, but as the three last years I have mentioned are free from any peculiar disturbances, they may be considered as fairly proving the rule that the national land tax absorbs on the average at least 25 per cent. of the net crop.

I am perfectly aware that it is hazardous to generalize off-hand from a few figures on so complex a matter as a national land tax, especially in Japan. In the first place the tax does not vary with the amount of the crop or with the price of rice, but is generally a fixed sum independent of price. Thus, when the price of rice and other agricultural commodities is high and the crops relatively good, the tax is comparatively low and easily paid. In the years of depreciated paper

(1880 and 1881) the farmer was in clover, as his tax was but a small matter. Dr. Rathgen reckons that out of a total crop of 31,360,000 *koku* of rice in 1880, the farmer paid only 4,441,700 *koku* to the Government, or about 14 per cent. of his net crop, and as he also got much higher prices for the remainder of his crop he was in very easy circumstances. But such a period of depreciated paper is wholly abnormal, and does not give any clue to the average burden of taxation. It would be quite as fair to estimate a man's ordinary strength by what he can lift under the stimulus of a good dose of whiskey.

Another difficulty is the enormously disproportionate character of the tax. The *Fiji Shimpō* (May 3rd, 1892) states: "there are inequalities in the rate of the land tax, not only in different prefectures, but in different *kori* and villages, and, strange to say, even in adjacent lands of the same village." For instance, the rate in Osaka-fu is calculated on the average to be about 2 1/3 times as heavy as in Yamaguchi-ken, and these are by no means the extreme differences if we take smaller areas. The *Fiji Shimpō* acknowledges the difference in the rates between different areas to be at least one to four or five. Where such discrepancies exist it is difficult to strike an average; but I have tried to avoid extremes by selecting prefectures which are acknowledged to be normal.

Still another fact to be taken into consideration is the new land year by year brought under cultivation. The normal rice crop is at present about one-fourth larger than it was fifteen or twenty years ago, and this new land is, as a rule, taxed at a much lower rate than the rest, in spite of the various reforms introduced from time to time. It is more than likely that the share of the crop required to pay taxes is far less than 25 per cent.,—probably not more than 10 per cent. to 15 per cent. on this new land. But these are exceptional cases and do not disturb the average percentages of those lands brought under the appraisal of the Land Reform Bureau of 1873-77. In the latter area, comprising, say, four-fifths of the rice land of Japan, I think that an estimate of 25 1/3 of the net crop necessary to pay the national tax is extremely moderate.

There is a great deal of loose writing on the subject of the Japanese land tax, and one example of this, I believe, is the statement frequently made in the columns of the *Japan Mail* that the land tax is not a tax but a rent. Mr. Taguchi, editor of the *Tokyo Economist*, and Mr. Sakatani in the *Hochi Shimbun* also uphold this view. Yet there is little or nothing in the theory that will hold water. If the land tax were a rent the State would be landlord and the farmers would be tenants, cultivating the soil as property of the State. Yet no one pretends that this is the case. In whole prefectures the landlord and tenant system is established, and the landlord demands his rent from his tenants with unflinching regularity, and he pays his taxes to the Government out of these rents. Where the peasant cultivates his own soil as proprietor, he does not regard the government as landowner, but he is as much an independent proprietor as any peasant in Europe or farmer in America. Moreover, the share that goes as rent to the landlord always increases with the advance of prices of agricultural products, but the Japanese land tax remains essentially the same from year to year, and has actually decreased in the last fifteen years. The old theory of feudal times, that the land belonged to the lord of the province, or to the Emperor, was never definitely formulated, and was never more strictly held in Japan than in the feudal period of Europe. As well claim that the tithes paid in England are not taxes, but a form of rent due to the Government, as that the Japanese land tax is rent. Private property in land was recognized anciently in Japan, but theories had to be constructed to suit feudal conditions. Beyond the demands of feudal relations there is no basis whatever in the whole theory, and it is hard to see what reason there can be for advancing it, except as a means of justifying a tax that ought really to be justified on the ground of necessity.

Yours respectfully,

GARRETT DROPPERS.

September 30th, 1892.

PARCELS POST REGULATIONS.

The Department of Communications has promulgated the rules relating to the operation of the Parcels Post System, which are to be enforced from the 1st October, 1892. The following is a translation of them:—

DETAILED RULES RELATING TO THE OPERATION OF PARCELS POST SYSTEM.

CHAPTER I.—GENERAL RULES.

Art. 1.—Parcels post matter will only be received at Post Offices specially appointed for the purpose.

Art. 2.—At the request of the sender, the delivery of any parcel may be certified; or special delivery made; or the parcel can be left at the post office till called for.

Provided, that no special delivery is made in districts where no Parcels Post Office is established.

For the certificate of delivery or special delivery an appropriate fee will be charged, in accordance with the general rules.

Art. 3.—If a parcel is addressed to a district where no Parcels Post Office is established, it will, at sender's option, be forwarded to the nearest Parcels Post Office where it will be kept till called for.

CHAPTER II.—POSTING.

Art. 4.—The word "Parcel" (*kosutsumi*) must be inscribed on the cover of a parcel, which must be taken to the Parcels Post Office, where a receipt for it will be given.

Any parcel deposited in a pillar post will not be considered as a parcel—even if the word "Parcel" is on the cover—and the fee for the ordinary letter post will be levied upon it.

Art. 5.—The sender of any parcel must fill up form A. (appended), and the postal fee and commission will be paid in stamps to be affixed thereto.

Art. 6.—Any parcel to be forwarded by Parcels Post must be carefully packed in such a manner—according to the character and shape of the article—that unless the cover is destroyed no injury can possibly accrue to the article within.

Any parcel, the value of which is to be registered, must be packed in such a manner that the nature of the article cannot possibly be seen from the outside; and at least three seals must be placed on the cover.

Art. 7.—Coins, old coins, old cash, gold or silver, articles of gold or silver, jewels, or articles of jewellery, must be packed in tin cases with cover, or strong wooden cases, and secured so as not to shake about within the case. The covers must be secured with wax, nailed down, or tied with string and then sealed.

Postal stamps, post-cards, stamped wrappers, and other stamps, as well as valuable bonds or notes, must be packed in the manner described in the above provision.

Any article for which the permission of the Post Office must be obtained before it can be forwarded as a parcel, or any article which emits a strong odour, must be packed in a tin or wooden case in accordance with its nature, so as to prevent injury to other parcels. The name of the article must be inscribed upon the cover of the package.

Art. 8.—If the packing of a parcel is considered unsatisfactory at the Post Office, the authorities have power to demand its re-packing by the sender.

Art. 9.—The inscription upon the cover must be correct and in plain writing.

Provided that, if the inscription cannot be written on the parcel owing to its shape or nature, the address may be written on a stick, card-board, or wooden label, which must be tied to the package.

Art. 10.—The inscription on the cover may only comprise the names and addresses of the sender and the receiver, their occupations, firms name, trade marks, and dates.

Provided that the above rule does not apply to any further inscription required by the regulations.

Art. 11.—If the Post Office considers that any parcel contains an article prohibited from being sent by Parcels Post, or that the article is not such as is described on the cover, the official at the Post Office may at any time open and examine the parcel in the presence of either the sender or the receiver.

Art. 12.—If the sender of a parcel by post doubts the accuracy of the address of the receiver, the address may be supplemented or changed at the time of posting, and he may request the Post Office to return the parcel if the receiver's address is not found.

CHAPTER III.—POSTAGE FEES.

Art. 13.—Postal fees and insurance premia must be paid by the sender upon posting the parcel.

Provided that the above rule does not apply in the case of a parcel being returned to its original sender.

Art. 14.—The mileage by which the fees are determined will be fixed in accordance with the

table of mileage determined by the Department of Communications.

If the collection and delivery offices of a parcel lie within the same postal district, the lowest mileage will be applied.

Art. 15.—The weight of a parcel must be in accordance with the scale authorized by the Post Office.

Art. 16.—Should any parcel be re-directed or returned, extra fees will be levied.

Art. 17.—The extra postal fee for re-direction or return of a parcel will be levied on the sender.

In accordance with the provisions in Art. 27, if the receiver requests that a parcel be delivered or re-directed to any other address than that which is inscribed on the cover, the extra fee will be levied on the receiver.

Art. 18.—If the receiver of a parcel refuses to pay such fees for special delivery, or the hire of a ferry-boat, the parcel will be returned to its sender and the extra fee will be levied on him.

Provided that, if the receiver of a postal parcel requests it to be re-directed, he cannot refuse to pay the fee demanded. If he refuses to receive the parcel, he must pay the fees incurred in returning the package to the Post Office from whence it came.

Art. 19.—The amount of unpaid fees or insufficient postage will be added in postal stamps by the Post Office, who will state on the cover the amount to be collected on it.

Art. 20.—No extra insurance premium will be charged on any registered parcel, which is re-directed or returned.

CHAPTER IV.—DEPOSITED PARCELS.

Art. 21.—Any parcel which is left at a Post Office till called for, will not be given to the applicant without the production of a receipt.

The receipt above mentioned must be forwarded to the receiver of the parcel by the sender.

Art. 22.—When the parcel to be kept at the Post Office till called for arrives, its arrival will be communicated to the addressee immediately.

Provided that the above provision does not apply to any parcel which has not the address of the receiver upon the cover.

Art. 23.—The length of time which a parcel will be kept in the Post Office will be 15 days from the day the parcel is received.

When the fifteen days have elapsed the parcel will be returned to the sender.

Art. 24.—When the addressee of a parcel deposited at the Post Office desires it to be delivered, he must present the original receipt for deposit signed and stamped.

Art. 25.—If the original receipt for deposit is mislaid, or the notice of arrival is received without the receipt, the fact must be communicated to the sender. Upon receiving such notice the sender must obtain from the Post Office authorities at the place of departure a duplicate copy of the original receipt, which must be sent to the receiver.

In the above case, the receiver may request the Post Office to prolong the term of deposit.

Art. 26.—If the receiver of a parcel deposited at the Post Office desires to receive it by his agent, he must inform the Post office of the name of the person representing him by giving a power of attorney on the back of the receipt, stamped with his seal under the signature. The process of receiving a parcel by representative will be in accordance with the provisions of Art. 24.

Art. 27.—The sender or receiver of a parcel to be deposited at the Post Office may request the Post Office to re-deliver or redirect such parcel, or to return it. In the case of re-directing, unless the parcel is to be deposited at the Post Office again, the original receipt for deposit will become invalid.

Art. 28.—The provisions in the foregoing chapter are also applicable to specially deposited parcels.

CHAPTER V.—TRANSMISSION.

Art. 29.—If the cover of a parcel is injured during transmission, the Post Office will re-seal it, and the fact will be recorded, the officer in charge stamping it with his seal.

Art. 30.—Any person receiving a parcel addressed to him, must stamp his seal on the receipt of delivery.

If any member of the household or a servant receives the parcel, the fact must be inscribed on the receipt, signed in the person's own name and stamped.

If a parcel is addressed to a person lodging in another person's house, the master of the house will have to sign and stamp the receipt also.

If a parcel is addressed to a person in any Government office, shrine or temple, school, hospital, business firm, association or club, ship, etc., the person possessing the proper authority alone shall sign and stamp the receipt.

Art. 31.—No person who receives a postal parcel can break its seal before impressing his seal on the delivery receipt.

In cases where it is so opened, he is considered

to have received the parcel without prejudice to the Post Office who's responsibility at once ceases.

Art. 32.—If a parcel is not delivered at the first call, owing to the absence of the receiver, it will be attempted to be delivered once more within a week, and if not delivered then, will be returned to the sender.

Provided that a parcel of special delivery will be subject to the time of ordinary delivery.

Art. 33.—If the person to whom a parcel is delivered has altered his residence, the Post Office shall immediately despatch form B. (appended to the rules,) to the sender, asking him to redirect or return it.

When a sender receives the above notice, he must immediately attach the required direction, erasing the unnecessary one, and add the appropriate postal stamps, before returning it to the Post Office.

Provided that any parcel posted in accordance with the provisions of Art. 12 will be returned without the foregoing notice being served.

If the altered address lies within the same postal district, and consequently no additional fees are required, the parcel can be re-directed without any notice being given.

Art. 34.—After the serving of the notice mentioned in the foregoing article upon a sender, five days will be allowed to elapse, reckoned from the expiry of the time for the ordinary post delivery, in which to reply, after which period, no answer being forwarded, the parcel will be returned to the sender.

Art. 35.—If at the time of delivery of a parcel no external sign of injury is noticed, and the weight remains unchanged, the receiver cannot refuse delivery.

"External sign of injury" means, that such noticeable damage has been done that the article within the parcel may reasonably be considered to be injured. Any ordinary rubbing or abrading of the cover in transmission, or increase of weight through dampness or change in the atmosphere, does not come under the provision of the present article.

By the above provision, if the parcel is refused, the reasons for so doing must be stated in writing, and the document handed to the postman.

Art. 36.—Should the addressee refuse to receive a parcel through any of the reasons assigned in the foregoing article, the Post Office, having examined into the cause of complaint, and finding the objection reasonable, will return the parcel to the sender.

Should, the Post Office however, consider the objection unreasonable, the receiver will be summoned to the office and the parcel examined in his presence.

If the receiver fails to answer the summons, and the examination proves that there is no plausible ground for refusing delivery, the parcel will be handed over to him without further delay.

Art. 37.—When the sender of a parcel resides outside the Parcels Postal district where a parcel is returned, the package will be kept in the nearest Parcels Post Office, and the fact notified to him. Upon receiving the notification, the sender must present the original receipt before re-delivery will be made.

If he desire to receive the parcel through his representative, power of attorney must be given to, and presented by such representative.

Art. 38.—After the lapse of 15 days from the date of despatch of the notification mentioned in the foregoing article, should no demand have been made for the parcel, it will be considered as undeliverable postal matter.

Art. 39.—The express provisions in Arts. 35 and 36 will also be applicable in cases where the sender of a parcel receives it back.

Provided that, when a parcel is refused by the receiver for reasons assigned in the 2nd clause of the 35th article, the sender must also state in writing his reasons for receiving it back, which statement must be handed to the postal delivery.

Art. 40.—After the sender has handed his statement of reasons for receiving back a parcel to the postal deliverer, he, or his representative, must immediately proceed to the Post Office and state those reasons to the official in charge.

Art. 41.—Upon completion of the process provided in the foregoing articles, the Post Office officials will open the parcel in question in the sender's presence, and ascertain the amount of damage done, if any. Should the parcel have sustained damage, two copies of certificates of such injury will be prepared, and one handed to the sender.

Art. 42.—Should a sender simply hand his statement of reasons to the postal deliverer, and neither he nor his representative appear at the Post Office, as provided in Art. 40, the official in charge will issue a summons.

If the sender fails to comply with the summons,

his complaint will be considered annulled, and the parcel will be returned to him. In such a case the sender cannot refuse to receive delivery.

Art. 43.—Any parcel for which a certificate of injury is issued will be kept at the Post Office until an indemnity is paid.

If indemnity is not demanded, the parcel will be returned to the sender immediately.

Art. 44.—Any undeliverable parcel will be treated in the same manner as undeliverable letters.

If any undeliverable parcel be subsequently demanded of the Post Office, the fees mentioned in Art. 16 will be levied.

CHAPTER VI.—COMPENSATION FOR DAMAGE.

Art. 45.—Any indemnity or compensation for injury sustained by a parcel while in transit must be demanded of the Head Post Office which controls the office from which the parcel was sent.

When demanding indemnity, an application stating the nature, number and price of the article, and amount of compensation required, as well as the reasons for such demand, must be presented to the head office, accompanied by the original receipt and the certificate of injury.

If the postal fees are also desired to be returned, the fact must be stated in the application mentioned in the foregoing clause.

Art. 46.—If either the original receipt or the certificate of injury is mislaid, the applicant may obtain fresh copies of them from the Post Office.

Art. 47.—The indemnity paid for damage to, or loss of a registered parcel will be determined as follows:—

1. When a parcel is lost or wholly destroyed, the indemnity will be the total amount insured.
2. When a portion of the contents is lost or damaged, the indemnity will be proportionate to the amount of such damage.

Provided that, if the amount registered exceeds the real price, no indemnity will be paid for such excess.

Art. 48.—The indemnity paid for loss of, or damage to, an ordinary parcel will be determined as follows:—

1. When a parcel is lost or wholly damaged, the indemnity will be to *sen* for every 100 *monme* in weight.
2. When a portion of the contents is lost or damaged the indemnity will be to *sen* for every 100 *monme* of such damage.

Art. 49.—In cases where the return of postage as well as indemnity for damage are demanded, the amount will be determined as follows:—

1. When the parcel is lost or wholly damaged, the whole amount of postage will be returned.
2. When a portion of the parcel is lost or damaged the postage will be in proportion to the weight of such damaged portion.

Provided that the estimated amount of postage to be returned shall be proportionate to the fees paid.

Art. 50.—When the Head Post Office receives an application demanding indemnity for damage, the case will first be examined into, and if the demand be considered unreasonable, the fact will be communicated to the applicant. If found to be reasonable, the amount of indemnity will be determined in accordance with the provisions of Arts. 47 and 48 and then notified to the applicant.

If repayment of postage be demanded, its estimated amount will be communicated to applicant.

Art. 51.—When an applicant for indemnity and return of postage fees is dissatisfied with the amount awarded, he must, within 5 days from the day of receiving the notification of the amount, state his reasons for dissatisfaction to the Post Office.

If no such application is filed within the period, the Post Office will consider the applicant satisfied, and act accordingly.

Art. 52.—The application for indemnity for damage may at any time before its settlement be withdrawn at the desire of the applicant, and he can demand back the delivery of the parcel deposited in the Post Office.

Art. 53.—If a parcel is found after an indemnity for loss has been paid for it, the Post Office will notify the sender of the fact.

Art. 54.—On receiving the notification mentioned in the foregoing article, the sender must present to the Post Office an application demanding back the parcel, accompanied with the said notification. At the same time, the money for indemnity for loss and the returned postage which he had received must be returned to the Post Office.

Here follow facsimiles of the forms mentioned in the above Rules, viz:—

(1) Form A.—The form of application to be used when posting a parcel, the form being written in blue, and showing.

- (a) Mileage
- (b) Number
- (c) Weight
- (d) Post-mark

These columns to be filled in by the receiving post office.

Original from

- (e) Name and address of sender.
- (f) Name and address of receiver.
- (g) Date.
- (h) Remarks (i.e., any request as to treatment of parcel, &c.)
- (i) Column for postage stamps, and other columns containing particulars of office of despatch, &c., which are filled in by Post Office.
- (2) Form B.—For the registration of a parcel (written in purple ink).
- (a) Mileage.
- (b) Number.
- (c) Amount registered.
- (d) Weight.
- (e) Post-mark.
- (f) Name and address of sender.

RULES OF THE KANAGAWA PREFECTURE SILK MERCHANTS' GUILD.

CHAPTER I.—GENERAL RULES.

Art. 1.—The present Guild is organised by silk merchants in Kanagawa Prefecture in accordance with Notification No. 56 of the Kanagawa Prefecture, promulgated in the 25th year of Meiji, and is named the Kanagawa Prefecture Silk Merchants' Guild.

Art. 2.—The office of the Guild is established at No. 5 Honcho Ichome, Yokohama; where all affairs relating to the Guild shall be transacted.

Art. 3.—The object of the Guild is to ensure harmonious co-operation on the part of all its members, for the development of the silk trade; and to provide for their united consideration in the interests of their business.

Art. 4.—When a member of the Guild notifies that circumstances have necessitated the suspension of his business, the rights and obligations of such member shall be suspended.

Art. 5.—Every member of the Guild must have a shop in Yokohama, and must deal in silk.

Art. 6.—Members of the Guild shall not only obey the present rules, but also must observe any resolution passed at a general meeting, and must abide by any act done by the President of the Guild in accordance with the present rules.

Art. 7.—Rules relating to the conduct of business shall be determined by resolutions passed at a general meeting, and shall obtain the sanction of the Governor of Kanagawa.

Art. 8.—Brokers who are members of the Guild shall elect two representatives every month, who shall represent them at the general meetings of the Guild.

Art. 9.—Matters relating to brokers shall be determined by resolutions of their own.

Provided that rules relating to the business of brokers, or any other important matter, must obtain the sanction of the Guild.

CHAPTER II.—ENTRANCE AND RESIGNATION.

Art. 10.—Any person desiring to become a member of the Guild must present to the office an application signed by more than two wholesale silk merchants who are members of the Guild as introducers, together with security money, and must sign his name in the book containing the present rules kept at the office; after which he shall request the persons on duty at the office to hand him a certificate.

Art. 11.—When the application has been received, a certificate shall be filled in at the office and handed to the new member. Such certificate must be hung up in the new member's place of business.

Art. 12.—The certificate shall be prepared at the office, and its cost shall be charged to the new member at the time of handing it to him.

Art. 13.—Any person desiring to resign from the Guild, must present his resignation together with his certificate to the office, after he has completed the steps necessary in abandoning the trade.

Art. 14.—When a resignation is received, the office shall see that all the responsibilities of the member as such have been discharged, after which the process of annulling his certificate shall be completed; and his security money shall be returned.

CHAPTER III.—SECURITY.

Art. 15.—In order to secure that the members of the Guild shall obey these rules and conduct their business honestly, they shall deposit the fol-

lowing sums by way of security, in accordance with the distinctions here set forth:—

- (1) Security for a silk merchant yen 500
- (2) Security for a broker:

One who employs a manager
(*tedai*) yen 200

One who has no manager yen 100

Art. 16.—The security shall be held by the office, and shall be paid in either of the following forms:—

- (1) Cash.
- (2) Government Bonds.

Provided that cash thus received shall be deposited in some safe bank by the President, and the interest paid to the depositor. In case of depositing Government Bonds they must be accompanied by a power of attorney.

Art. 17.—In the following cases the President may, with the sanction of the Committee of the Guild, subtract a certain amount from the security:—

- (1) When the subscription for the expenditure of the Guild is not paid.
- (2) When a member refuses to pay his share of any outlay which the members of the Guild agree to incur.
- (3) When compensation for breach of agreement is not paid.

Art. 18.—When, in accordance with the foregoing provisions, any part of the security is subtracted, the member concerned must make up the deficiency within 7 days from the time when notice of the fact is given to him.

Art. 19.—The words "Transaction Prohibited" shall be superscribed on the security when received, and no sale, pawning, or mortgaging of such security shall be allowed.

CHAPTER IV.—GENERAL MEETING.

Art. 20.—A general meeting shall consist of all the members of the Guild engaged in the silk trade, together with two representatives of the brokers.

Provided that the representatives of the brokers may not take part in a debate relating to the business of silk merchants only.

Art. 21.—A general meeting shall be of two kinds. The one held in January of every year shall be termed the "Fixed General Meeting;" and the other, which may be held at any time, shall be termed a "Special General Meeting."

Art. 22.—A special general meeting may be convened either by the President of the Guild, should he consider it necessary, or at the request of one-fourth of the whole members of the Guild.

Art. 23.—The date for holding the Fixed General Meeting shall be communicated by the President to the members, at least 3 days before hand. In the event of opening a Special General Meeting, the reasons for the step shall be notified, and the date shall be communicated as soon as convenient.

Art. 24.—No general meeting shall be opened unless more than one half of the whole number of members be present.

Provided that, if the meeting is held a second time, and yet the attendance does not reach the due half of the whole membership, then more than one third of the whole number shall constitute a quorum.

Art. 25.—A resolution passed at a general meeting must have been voted by more than one half of the whole number of members present. If the number be equally divided, the President shall have a casting vote.

Art. 26.—If the matter be considered of no great importance, the President may communicate the question to every member and form a decision upon their replies, instead of convening a Special General Meeting.

Art. 27.—The detailed rules of debate shall be determined separately.

CHAPTER V.—OFFICERS AND THEIR RIGHTS.

Art. 28.—The following officers shall be appointed in the Guild:—

- President 1
- Vice-President 1
- Committee 5
- Clerks.

Art. 29.—The offices of President and Vice-President shall be honorary; and the term of office shall be one year. They shall be elected at a fixed general meeting.

Provided that they may be re-elected.

Art. 30.—The election of the President, the Vice-President, and the Committee shall be by closed ballot. A Committee of 7 members shall be first elected, and this Committee shall then proceed to elect the President and the Vice-President from among themselves.

Art. 31.—The President shall represent the Guild, control its affairs, appoint clerks and other officers, preside at the general meetings, open the meetings, determine the order of debate, and enforce the resolutions.

Art. 32.—The Vice-President shall assist the President, and shall represent the President when the latter is otherwise engaged.

Art. 33.—The members of the committee shall be present at conferences of the President and the Vice-President, and shall assist them.

Art. 34.—The President and the Vice-President shall observe the condition of the silk trade, and maintain the credit of the Guild, in fulfilment of the object mentioned in Art. 3.

CHAPTER VI.—EXPENDITURE, TAX COLLECTION, AND REPORT.

Art. 35.—The method of compiling the Budget of revenue and expenditure of the Guild shall be determined by a resolution passed at the General Meeting held in January every year. Provided that, if there be any insufficiency in the Budget, a resolution to make good the deficiency may be passed at a Special General Meeting.

Art. 36.—The accounts of the previous year shall be presented to the Fixed General Meeting for approval.

CHAPTER VII.—BREACH OF AGREEMENT.

Art. 37.—Any member who violates these Rules or the rules for the conduct of business, or a resolution duly passed by the Guild, or an instruction duly issued by the President, shall be liable to a fine of not less than 2 *yen* and not more than 25 *yen*, according to a resolution passed at a general meeting. The reasons for the infliction of such penalty shall be minutely recorded, and shall be advertised in the public press.

Art. 38.—When a penalty, as provided in the foregoing article, is inflicted, the facts of the case shall be reported to the Prefectural Authorities.

CHAPTER VIII.—ADDITIONAL RULES.

Art. 39.—Should any disagreement arise between members of the Guild, or between members of the Guild and outsiders, whether Japanese or foreign, and should both parties to the dispute, or either of them, request the Guild to act as arbitrator, the President shall comply with the request in conference with the members of the Committee.

Art. 40.—In case of any dispute connected with a transaction between members of the Guild and outsiders, whether Japanese or foreign, should the parties to the dispute be dissatisfied with the arbitration of the Guild, or, in defiance of such arbitration, insist upon their own view, a special measure may be adopted by a resolution passed at a General Meeting of the Guild.

Art. 41.—Whenever the present Rules are amended or changed, the amendments or changes shall be communicated to the Governor of the Prefecture for approval.

Art. 42.—Business Rules determined according to the express provisions of Art. 7 and resolutions taken by General Meetings, shall have equal validity with the present Rules.

YOKOHAMA CHESS CLUB.

The Annual General Meeting of the Yokohama Chess Club was held on Monday evening at the Club Hotel, the president, Mr. J. T. Griffin, in the chair. There were also present.—Messrs. J. Ph. von Hemert, O. Balk (hon. sec. and treas.), W. B. Mason, S. E. Unite, E. Batavus, J. Davidson, C. A. W. Pownall, E. Schiff, E. C. Fox, O. Kiel, G. Hodges, and the Rev. E. C. Gardner.

The CHAIRMAN announced that the meeting was held in conformity with the Rules of the Club which said that the annual general meeting must be held on the first play-night in October. That happened to be their first play-night for the session, so they would first proceed to business and play afterwards. He opined that the report and accounts having been distributed to members, would render it unnecessary for them to be read aloud—they would therefore omit the reading and put them to the meeting.

Mr. Fox moved and Mr. DAVIDSON seconded the adoption of the report and accounts.—Carried.

ANNUAL REPORT—SESSION 1891-1892.

The Committee of the Yokohama Chess Club have much pleasure in presenting their second annual report.

At the Annual General Meeting held on October 1st, 1891, the following Officers were elected.—President—Mr. John Griffin; Hon. Secretary and Treasurer—Mr. Oscar Balk; Committee—Messrs. J. Ph. von Hemert, J. R. Merian, and E. Batavus. During the year Mr. Merian resigned, and Mr. H. L. Fardel was elected in his place.

The membership shows a slight decrease, there being 48 names on the books against 53 in the previous year. Thirteen members left the Club and eight new members joined.

The Club Meetings were held on Mondays, as before, at the Club Hotel, and on Thursdays during the first half of the session at Mr. Fardel's residence on the Bluff (by kind permission), and during the second half of the session also at the Club Hotel.

During the session a Handicap Tournament was held, for prizes kindly offered by the President (and Mr. Schiff, Thirteen competitors entered, who were divided into five classes. Mr. Meikle (II), with a score of 20 games out of a possible 24, took the first prize, a handsome silver-plated fruit dish. Mr. Fardel (III), with a score of 18, took the second prize, a valuable set of Chinese ivory chessmen.

Mr. Balk (I) and Mr. Batavus (II) tied for third and fourth places with a score of 17 games each.

On December 5th, 1891, the first match was played with a Tokyo team at the Rokumei-kan. The teams numbered seven a side, and the Y. C. C. was victorious by 13 games to 12, although three of its members were playing for Tokyo. Unfortunately, all efforts to arrange a return-match in Yokohama proved unavailing. However, two correspondence games were played with the members of the Tokyo Club who had played in the match, and were both won by Tokyo.

The return of Mr. Griffin from a visit to Europe was made the occasion of a convivial gathering on July 13th, the President being entertained at dinner by about twenty members who heartily welcomed him back to Yokohama.

The accounts are very satisfactory and show an income of \$78.40 and an expenditure of \$161.65, with a balance in hand of \$161.25, besides substantial assets. The Club subscribes to the *British Chess Magazine* and the *Deutsche Schachzeitung*, and the weekly chess column of the *Japan Mail* is reprinted on slips and forwarded to each member.

Their term of office having expired the Committee beg to place their resignations in the hands of members.

For the Committee,

O. BALK, Hon. Secretary.

HON. TREASURER'S REPORT.

RECEIPTS.	
Balance brought forward from last year	\$144.50
Subscriptions and Entrance fees:	
40 Members at \$3	\$120.00
2 Members at \$5	\$10.00
	130.00
Sale of chessmen and boards	30.40
	\$160.40
EXPENDITURE.	
20 Sets chessmen and boards (stock)	\$16.00
10 Meetings at the Club Hotel	48.00
11 Meetings on the Bluff	36.50
Subscriptions to Periodicals	39.90
Stationery, advertising, postages and petty	51.15
	\$191.45
Balance in Treasurer's hands	161.25
	\$322.90

O. BALK,
Treasurer.

Examined with vouchers and found correct.

J. PH. VON HEMERT,

The CHAIRMAN announced that five new members had been proposed, and that their election would require confirmation at that meeting. They were:—Messrs. R. A. Mowat, C. Griffin, Adams, H. Stone (Tokyo), and Kinglin.

There being no objection the election of the five new members was declared.

The CHAIRMAN then congratulated the Club upon its late successful season. He reminded them that this was not to be all laid to the credit of the committee, but to the members themselves. Then, turning to the election of officers, the speaker said that he thought that the club should elect a president of more influence in the community, one that would confer more dignity upon them. They all knew that when the Club started he had tried to induce Judge Hannen to take the presidency. Judge Hannen did become a member and appeared among them, but he would not take the position of president, as he said that his removal to Shanghai was imminent and therefore it would not be fair to the Club for him to take the office. He (the Chairman) thought that the Club could not do better on the present occasion than to elect as his successor the present Judge of Her Britannic Majesty's Court, Mr. R. A. Mowat. He had very great pleasure in proposing him for the office.

Mr. O. KEIL—I take much pleasure in seconding.

Mr. FOX—Would Judge Mowat take the position?

The CHAIRMAN—No doubt he will. I cannot say so positively. I may add that Judge Mowat has been for many years one of the best chess-players in Shanghai. He is a splendid player over the board and an enthusiast in problems.

Mr. W. B. MASON—I think we are all very sorry to lose our president on the grounds which he has himself put forward. If he himself thinks that it will be in the best interests of the Club, then we cannot do better than follow his suggestion. On any other grounds I do not think that we would be willing to lose him.

The CHAIRMAN—I much appreciate your remarks. I do think that it is best to do as I propose. The president of a club is not supposed to hold the office permanently or to be always present at the meetings. I have been president for two years and I think, that on the grounds I put forward, the change would be desirable.

Mr. FOX—On those grounds we accept your resignation.

The CHAIRMAN—Thank you.

His Honour Judge Mowat was then declared elected president.

Mr. O. KEIL—I believe, as does the President, in rotation and change in offices. I therefore propose that Mr. Griffin be our secretary and treasurer for the ensuing year.

Mr. DAVIDSON—I second.

The CHAIRMAN—It seems to me that this is rather a backward progression.—(Laughter.)

think you would do better to have a total change and give me a rest for a year. I am in your hands, however. If you think it necessary, then I must take the office, but I do not hanker after it. I will always do my best as a faithful member of the Club to further its interests as a private member.

Mr. POWNALL thought that after the services which Mr. Griffin had rendered the Club as President, it would only be doing the right thing to pay him the compliment of electing him their secretary and treasurer.—(Hear, hear.)

The election was unanimous.

Mr. DAVIDSON then proposed Messrs. Merian, Balk, and O. Keil as the committee. They would make, he thought, a good, sound committee all round.

Mr. UNITE—I propose, as an amendment, Messrs. Keil, Batavus and Balk.

Mr. O. KEIL—I really do not know what to do on the committee. The Cup is forthcoming all right and I would rather not serve.

The CHAIRMAN—I think, after the generous manner in which Mr. Keil has presented us with a Championship Cup that we should place him in the position.—(Hear, hear.)

Mr. W. B. MASON begged to second Mr. Davidson's motion.

Mr. FOX seconded the amendment.

The vote resulted in a tie—five on each side—and the chairman gave his casting vote for the original motion, which was then carried by six to five.

Mr. POWNALL proposed a hearty vote of thanks to the Committee, President, and Secretary for past services.

Mr. KEIL seconded.—Carried.

The CHAIRMAN in acknowledging the vote remarked that the spirit of unanimity which at present prevailed would go a long way towards making them known not only in Asia, but in Europe also, as a Chess Club. He hoped that he should make the office of treasurer and secretary as successful as it had been in the hands of Mr. Balk.—(Hear, hear.)

Mr. DAVIDSON put before the meeting a proposal to change the Club's place of meeting from the Club Hotel to the Oriental Hotel.

A conversational discussion ensued in which several present declared that they had not been comfortable in the Club's room during the last session, and thought that the matter should be remedied.

Mr. BALK said that he had attempted to get the management of the hotel to let them a better room but had failed. He reported upon the room at the Oriental Hotel and thought that the benefit to be derived from the change would be doubtful.

Eventually the matter was left to the incoming Committee, with a suggestion that as the Club had money in hand—and did not propose to hoard it for their grandchildren as one member facetiously put it—that a little more expense for a better room would not be objected to.

The meeting then dispersed.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, September 12th.
In my last letter I was betrayed, by a mistake in either reading or copying the figures, into a false inference concerning the importance of Commissioner Peck's statistical report on the increase of products and of wages in New York during the year, September, 1890-1891. That increase in each case was a thousand-fold more than I stated, and thus weakens my inference a thousand per cent. I had no intention of misrepresenting; I simply made an egregious mistake. The report, however, has been carefully examined by experts and economists, and has been found weak and faulty in many respects and points; so that it may not, in the end, prove exceedingly useful as a Republican campaign document.

President Harrison has issued his letter of acceptance, which is a very lengthy and detailed discussion of a large number of topics. Mr. Blaine has also written a letter, in which he recommends that the Republicans emphasize the questions of the tariff, reciprocity, and the national banking system.

Not only the new Great Northern Railway, but also the Canadian Pacific, have withdrawn from the Transcontinental Association, and have made a big cut in freight rates from Boston to St. Paul. As other roads have cut still lower, there is a prospect that shippers will be benefited by another "war," which may become, not merely transcontinental, but also trans-Pacific.

The September *Forum* contains an able article entitled: "A Chinaman on Our Treatment of China," and signed by Yung Kiung Yen.

Mrs. Tei Sono, "the first female lawyer in Japan," has been rapidly making friends in this country. She was present, and made addresses at Mr.

Moody's Northfield (Mass.) Conference during the past summer. She has received not only cordial sympathy but also material help for her projected school for the Christian education of high-class girls and women. She has been endorsed and aided here by Dr. Griffis and Bishop Brooks, and will be helped in England by Lady Somerset. She has perfect faith in the success of her undertaking which has progressed so far that she expects soon to return to Japan, via England. She is truly the Niishima of female education in Japan.

A number of prominent Chicago people have recently started on pleasure trips to Japan; among them may be mentioned Mr. and Mrs. Fred. S. Winston, Mr. and Mrs. E. B. McCagg, and Messrs. Goodrich and Holmes. The last two young gentlemen prepared themselves by a summer course of study of the Japanese language under Prof. S. Chôyô in the Parisian School of Languages in this city.

Daniel Dougherty, the noted lawyer and orator of Philadelphia, died September 5th. He was a Democrat, and best known by his two eloquent speeches nominating Honerck (in 1880) and Cleveland (in 1888) for the Presidency.

Two days later, Death struck a more "shining mark" in the person of the beloved Quaker poet, John Greenleaf Whittier, who passed away peacefully, after a short illness, at Hampton Falls, N. H. His body was taken to his home at Amesbury, Mass., and lay in state from 12 till 2 o'clock on September 10th. The funeral was conducted, by his own request stated in his will, "in the plain and quiet way of the Society of Friends," and the body was buried in the family lot in the Friends' Cemetery. Had he lived till December 17th he would have reached the age of 85.

It is scarcely necessary to write much about Whittier's character as a man or as a poet. He and his poems are known the world over; and he is best reflected in his poetry. His writings breathe the sweetness, tenderness, purity, sympathy, charity, simplicity, peace, earnestness and manliness of his life. They may not rank as high as the work of some others, but they are undeniably and thoroughly good. "If not the most sublimely gifted, he was the most divinely blessed of our poets, and the most beneficent."

Whittier's last lines were those written as a tribute to Oliver Wendell Holmes, who is now the only one left of the old coterie. Whittier will undoubtedly be honoured with many tributes, and has already received one by the Hoosier poet, James Whitcomb Riley, who published in the *Indianapolis News* the following lines:—

WHITTIER—AT NEWBURPORT,
September 7th 1892.

"Giftless we come to Him who all things gives
And lives because He lives."

—The poet's last lines.

Hail to thee and all good cheer,
Though men say thou liest here
Dead,
And weep all uncomforted,
By thy faith, reborn mine,
Life still lights those eyes of thine
Clear
As the autumn atmosphere.
Ever still thy smile appears
As the rainbow of thy tears;
Bent
O'er thy love's vast firmament.
Thou endurest—shalt endure,
Purely, as thy song is pure.
Hear
Thy mail hail; good cheer, good cheer.

JAMES WHITCOMB RILEY.

The schools of this city opened September 6th with a largely increased attendance, which is likely to amount to about 150,000. In spite of increased and increasing accommodations and facilities, schools are crowded and intending pupils can not find room.

The first Monday in September is permanently fixed as "Labour Day," and a holiday for schools and business houses. "From Hell Gate to Golden Gate and the Lakes to the Gulf," the workmen celebrated with processions, picnics and orations.

The intelligent and moral people of this country seldom take any interest in pugilistic contests; but they were warranted in giving a little attention to the recent fight at New Orleans between Sullivan and Corbett for the championship of the world. Every one is certainly justified in rejoicing that the big, drunken and debauched bully, John L. Sullivan, was beaten by a well-educated, gentlemanly and temperate athlete, whose victory was due, according to the unanimous opinion of the press and "Sports," to his practice of absolute teetotalism.

Auditor Ackerman's report of the World's Fair expenses for August has been published. The total receipts to September 1 were \$10,400,000, and the total expenditures amounted to \$8,750,000, so that the balance on hand was about \$1,650,000. But, inasmuch as the monthly expenses account exceeded \$1,000,000 in August, and will be still larger in September, and as the former sources of income

are practically exhausted, and prospective sources are not immediately available, another issue of debenture bonds for \$4,000,000 or \$5,000,000 will probably be soon placed upon the market.

The work in Jackson Park is being rapidly pushed forward, so that as much as possible may be completed by the time (Oct. 21st) of the dedicatory ceremonies. The principal exposition buildings are practically finished, except the manufactures building and machinery hall, and are now being cleaned. These two exceptions are nearing completion, and, unless some accident occurs, will be ready by Oct. 21. The work on the State and foreign buildings is progressing rapidly; but not many of them will be finished by that date.

The returns from the Arkansas election indicate that the Democrats have carried the State by an immense majority under the new election law, but with a falling off of 30 to 40 per cent. in the total vote.

It is reported from Italy, that Hon. Albert G. Porter, the U.S. Minister at Rome, has tendered his resignation "to enter politics."

The steamer *Caroline Miller*, which attempted to carry contraband arms during the Haytian troubles, has turned up again under the name of *South Portland*, and now lies in the harbour off Bedloe's Island with a United States officer on board. She is suspected of being loaded with munitions of war for the Venezuelan revolutionists, and may be seized by the Government for violation of the neutrality laws.

This morning's paper announces that the *Kite* has arrived at St. Johns, Newfoundland, with Lieut. Perry and his company. It is reported that only one life was lost; that the party is in good health; and that the expedition was a success. Important discoveries were made concerning the icy regions, and probably will soon be revealed to the public.

The cholera epidemic in still a cause of much anxiety in this country. Sir Edwin Arnold has expressed himself as of the opinion that our fear is groundless and ludicrous; but, while we should deprecate such a degree of worry as might increase or even invite danger, we feel that every precaution ought to be taken. "An ounce of prevention is worth a pound of cure." It was with this idea that President Harrison made a special and hurried trip to Washington to consult about the advisable measures of defense. It was decided to issue, not a proclamation, but a circular, relating to quarantine restrictions upon immigration. In this circular collectors of customs, medical officers of the marine hospital service, foreign steamship companies, State and Local Boards of Health, were instructed that vessels from foreign ports, except those afloat at that date, should be detained for at least twenty days. That very day a case of cholera was discovered in New York City in the person of a Russian who had landed the previous Sunday, but had not since been heard of. The President's circular restored the public confidence somewhat; but Dr. Jenkins, the chief health officer of New York, renewed the anxiety by wild talk to the effect that he looked to the State laws, and not to the President for authority, and that he did not care a— for the President's circular, but would detain a vessel just as long or just as short a time as he pleased. The crisis scarcely seemed a proper time for standing on technicalities or strict interpretation of State rights. The public would naturally feel less confidence in a Tammany official than in a National officer of tried reputation, like Dr. Hamilton, who had been specially sent to New York City to oversee the quarantine arrangements.

The stringent regulations have caused a great deal of inconvenience to some, but have been a source of comfort to the people in general. Tourists coming or returning from Europe have encountered embarrassing delays, and, perhaps, have been unnecessarily detained in some cases. Some of these persons, mostly on the *Normania*, have sent complaints to the press, and have evidently had reason to complain. But their grievances were really due more to the misrepresentations of the steamship company than to the unreasonable demands of the quarantine regulations.

A number of vessels have arrived in New York with clean bills of health, or after inspection have escaped the long quarantine: but many ships have come here infected. The above-mentioned *Normania* from Hamburg has thus far been the most unfortunate. The usual excitement over the matter was increased, when it was reported one day that a vessel loaded with rags from Hamburg had reached New York City through Long Island Sound. But this route will now be carefully watched, and extra quarantine stations have been or will be established at Sandy Hook and on Fire Island. The inhabitants, however, in the vicinity of the latter place have protested, and even used force to prevent landing of passengers from infected vessels. An encouraging feature is the diminution

in the number of deaths from cholera. It is also gratifying that the cholera scare has not yet seriously affected business matters.

Among the forthcoming publications by Houghton, Mifflin & Co., are found: "Japan," a compact history, by Dr. W. E. Griffis, and "An American Missionary in Japan," by M. L. Gordon, M.D. Professor and Mrs. J. M. Dixon are in Chicago en route for St. Louis, Mo.

LETTER FROM LONDON.

(FROM OUR OWN CORRESPONDENT.)

London, August 26th.

"Are we to have a visitation of cholera in England?" is the question uppermost in current topics at the present moment. After raging in Russia for some time, the dread epidemic is travelling west, and already its devastating ravages are being felt as close to us as the port of Hamburg, where, according to an official report, there have been 219 cases during the present week, of which 75 have proved fatal. The following details are given by a correspondent writing from the affected district:—"The streets present a gloomy aspect, which is made additionally lugubrious by the cholera ambulances driving in all directions. The police form cordons round houses in the streets most affected while the dead bodies are removed. The disease carries off its victims with terrible rapidity, causing death within a few hours, and even in one hour, after the appearance of the first symptoms." Special precautions are being taken in all British ports against the importation of the disease through consignments of rags, and the dirty clothes which are worn by many of the destitute Poles and Russians seeking a refuge on our shores, are in most cases committed to the flames. While it is earnestly hoped that these well-timed preventative measures may prove effective in their purpose, an outbreak of the epidemic in any of our ports within the next few days would hardly come as a surprise. However, as our sanitary arrangements are invariably very much in advance of those in existence on the Continent, it is more than probable that in this event the gruesome disease would be kept considerably in check, and its destructive influence limited both in radius and severity.

From morbid conjectures *apropos* the cholera I will turn to things more cheerful—matrimonial affairs to wit. Last week the Duke of Devonshire was married to his old love, the Dowager Duchess of Manchester. The duke and the lady who is now his wife are said to have been very much attached to each other in early life, but indolence, which has always been the chief characteristic of the Duke, induced the lady to receive the attentions of the late Duke of Manchester equally from a motive of pique as with a desire to infuse more energy into her lethargic lover. This seems to have had the contrary effect upon Mr. Spencer Cavendish, as he then was, and the lady he has now married became the Duchess of Manchester. The Duchess was the daughter of the Count von Alten, of Hanover, and in addition to great personal beauty, had a charming vivacity of manner and a sparkling wit which won for her, for more than a quarter of a century, one of the most prominent positions in London society. It is an open secret that even after her marriage the Duchess of Manchester exerted a powerful influence over the Marquis of Hartington, and in any important political course that he adopted she would invariably be his mentor. It is not surprising, therefore, that ever since the death of the late Duke of Manchester, two years ago, speculations have been current as to the date of the marriage which has just taken place, but the difficulty was that the late Duke of Devonshire held strong opinions on the impropriety of second marriages. It is a tradition in the Cavendish family that they should only marry once, and as Lord Hartington held strong views of filial duty, he was prevented from making the Dowager-Duchess his wife during his father's lifetime.

The Duchess of Devonshire was fated, however, not to spend an undisturbed honeymoon, for within 48 hours of the wedding, her son, the Duke of Manchester, more familiarly known in sporting circles as "Uncle Kim," succumbed to an illness with which he had been more or less prostrated for several weeks. The late Duke, of whom perhaps the worst that could be said was, that "he was nobody's enemy but his own," was 39 years of age at his death, and leaves a son of 14, who inherits the title, and two younger twin daughters.

The rumours that have for some little time gained currency which point to Princess Victoria, the daughter of Princess Christian, as the future bride of the Duke of York, have been somewhat strengthened lately by a lengthened visit of the Princess

to Osborne, where she is said to have been in especial favour with the Queen.

Boulogne is to be the scene of a "Beauty Show" to be held next month, which is promised to be of an international character, not omitting Japanese ladies, I believe. More details later on.

Mr. Stead devotes several pages of his *Review of Reviews* this month to a "character sketch" of Sir Charles Dilke, the newly elected member for the Forest of Dean, in spite, he says, of the fact that probably many fathers of families seeing the name of its subject upon the cover of his magazine will refuse to buy it. Mr. Stead deals with close attention to detail with the career of the late Under Secretary of State, from his earliest days, and needless to say, the ingredients, as given, do not always smack of the nicest flavour.

A pretty little scandal has been afloat the last few days in sporting circles, having reference to the threat of a prominent bookmaker to post a Royal sportsman. It is tolerably well known of course, that among the Princes there are those who owe "the Ring" more than they will ever pay, and it is said that one of these personages treated a leading member of Tattersall's with great contempt when spoken to on the subject. A co-operation amongst the fraternity is likely to be the result, and a scandal may ensue which would easily be the first of the season. "Bookies," like a good many other people, don't like to be ruffled, and in this instance if they so determine, they are quite strong enough to carry out their threat.

The l.b.w. law in cricket, as it stands, has often proved of manifest unfairness to the bowler, and public attention is at the present time being specially turned to the necessity of effecting a reform in this matter. Cricket, now, is played on one side of the wicket, the on, and the leg side is almost entirely neglected, owing to the rule that no ball which does not pitch straight can get a man out l. b. w. Such a rule not only robs the bowler of a most deadly style of attack, that from the leg, but gives the batsman an opportunity of using his legs to cover the wicket, instead of his legitimate guard, the "willow." An alteration in the law would doubtless be a step in the right direction.

The Rev. Jrio Jos. Nouri, D.D., S.S.D., the Chaldean archdeacon of Babylon and Jerusalem, who recently made an ascent of Mount Ararat, reports that he discovered there what he firmly believes to be the veritable ark of Noah. Thus he describes it—"The bow and stern were clearly in view, but the centre of it was buried in snow and one side of it had fallen down and was decayed. It stood more than 100 feet high, and was more than 300 yards long. The wood seemed very peculiar. It was dark reddish, almost iron coloured, and seemed very thick. It is between 5,000 and 6,000 years old." The Reverend explorer goes on to say that as it is nearly always covered with snow it would be possible for it to be preserved for ages and ages, perhaps 20,000, or 30,000 years.

The following interesting little advertisement appeared in a Bayreuth paper a day or two since:—

A YOUNG SOLID LADY.

Knowing the German, English and French language seek a place in family as lady society or by children. The young lady goes also in the outland. Ask in the exp. of the stranger lists.

—Do you want anything in this way in Yokohama? "Among the Arthropophagi" is the title of the latest dramatic novelty. The play is written by Mr. Theodore Westmark, the Austrian explorer, who has turned his knowledge of the Dark Continent to effect, and will put on the stage something approximating the Africa he has seen and lived in. Mr. H. M. Stanley will figure as the hero, and the *dramatis personæ* include Mons. de Brazza, the French rival of the discoverer of Livingstone. The prologue shows Mr. Stanley and his friends starting from Brussels for the Congo, and the following are the different scenes:—"On the Equator," "A Victim of Men," "Ou Pourd l'Avant," "King Pokutala's Palace," and "Among the cannibals." The last act includes a realistic encounter with a man-eating tribe.

THE "HIROSHIMA MARU" COLLISION.

The following was issued as an express at 1.30 on Tuesday, by the *Kobe Herald*:—"The *Hiroshima Maru* which arrived here this morning from Nagasaki, has been in collision with the No. 1 *Kure Maru*, the despatch vessel which was anchored off the central Hatoba yesterday. The collision occurred at a few minutes before 3 a.m. to-day, just after the *Hiroshima Maru* had cleared Akashi Strait, and passed Matsuga-no-hana light. The big steamer struck the despatch boat aft, near the engine-room. Neither the officer of the

Original from

watch nor the pilot on board the *Hiroshima Maru* saw the *Kure Maru's* side light. The two men on the outlook confirm this statement. The despatch vessel was attempting to cross the *Hiroshima's* bow. Immediately the vessel's position was observed, the *Hiroshima's* engines were put astern, and to this doubtless is due the fact that the despatch boat was not instantly sunk. Boats were at once lowered, and the *Hiroshima Maru* stood by until the disabled vessel had been beached on Awaji-shima. No lives were lost. The *Hiroshima Maru* proceeded on her voyage at 4.20, arriving here at 6.30 this morning. The steamer will probably have to go into dock, as the stem is twisted and one or two of the bow plates are fractured.

We are able to supplement this information with additional news. Just prior to the disaster the Chief Officer, Mr. N. Tate, with the object of relieving Captain Pyne as much as possible, knowing him to be recovering from an illness, went to the chart-room to report the ship's position, and was proceeding to give effect to the order received, viz., to slow down, as the Commander was not desirous of making the port before daylight, when he caught sight of a mast-head light close ahead. He had barely spoken to the second officer, who was on watch at the time, when he saw that a collision was imminent, and immediately ordered the helm hard a starboard, giving the signal to the engine room, "Full speed astern." The steamer appeared to be endeavouring to cross the *Hiroshima Maru's* bows, and a few seconds afterwards the collision occurred, the huge merchant steamer crashing into the despatch boat just ast the engine-room. Captain Pyne was on the bridge in a moment, ordered the second officer, Mr. V. C. Nightingale, away in the quarter-boat at once with instructions to bring away as many as possible, and to report what help was needed; and kept his command as close to the other vessel as possible. Shortly afterwards the 3rd officer, Mr. Henry Taylor, was ordered to proceed to the wreck in the big pinnace. After some time had elapsed the quarter-boat returned, bringing the Captain of the despatch vessel and a lady. Asked why he had left his ship and not allowed others to leave, for it was feared that the vessel might sink at any moment, the Captain merely said:—"Oh, he would see if his ship could be towed to Kobe, or whether she would sink." It had not occurred to him to remain on board to the last, and to make an effort to beach his vessel. Finally, he returned to his vessel, and sent off in the *Hiroshima's* boat another lady and two children, in charge of a lieutenant, and these five were brought on to Kobe. Fortunately the tide and the impetus of the blow from the *Hiroshima Maru* carried the little vessel towards the shore, and after some time a number of fishing boats took her in tow, the Captain having evidently resolved upon beaching her if possible. In this he was virtually successful, though she toppled over and settled down just as she reached shallow water. A little more delay, such delay as it is easily conceivable would have resulted had Captain Pyne not troubled himself as to what the Captain's presence on board meant, would have put a very different complexion on the affair. The *Hiroshima Maru's* bow shows unmistakable signs of the force of the blow, the stem being turned round and started, and several plates being somewhat staved in, besides the starting of numerous rivets etc. As stated in the express, the steamer will require to go into dock for repairs. The following is an extract from the official log:—"At 2.30 a.m. Matsugahana light abeam half a mile. Altered course to E. $\frac{1}{2}$ S. 2.45 a.m. observed a white light bearing E. N. E. On approaching closer found it to be a steamer with no colored light visible, and crossing the bows to starboard. Seeing the position of the approaching steamer, instantly put helm hard a starboard and engines full speed astern, but owing to close proximity of the two vessels, a collision was inevitable, *Hiroshima Maru* striking the said steamer on the starboard quarter. Instantly lowered boats in charge of Second and Third officers and rendered every possible assistance, standing by disabled steamer until Captain was fully satisfied of his steamer. Steamer proved to be the No. 1 *Kure Maru* bound from Kobe to Kure, Hiroshima. 4.20 a.m. proceeded towards Kobe under easy steam, arriving in port at 6.30 a.m." The *Hiroshima Maru* was bound in from Nagasaki via Shimomoseki, and was to leave to-morrow for Australia, etc.

THE HOTEL FIRE IN KOBE.

Perhaps the most serious fire the Concession has experienced broke Wednesday, and resulted in the total destruction of the Hotel des Colonies. The hotel, as residents know, consists of two buildings—one of two stories and the other of three. At about twenty minutes past nine, as Mr. Boudou, the proprietor, was sitting in his office on the ground floor, one of the servants came in and told him that a fire had broken out on the top story. He ran upstairs, and found that the walls of the room from which water for the adjoining bath-rooms was heated, had caught fire, and that matters were already looking serious. The bathrooms were situated between the two buildings, on the north side, and the fire, which must have been smouldering for some time when discovered, had got into the roof, not only of the three-storied building but of the adjoining one. At once the alarm was given, the fire bell was rung, and within a few minutes the Concession fire engine arrived with Captain Sim and various other members of the Fire Brigade. By this time, however, short as it was, the fire had attained such hold that there was little hope of saving the buildings. Passers by who saw the first outbreak say that its progress was extraordinarily rapid. At five-and-twenty minutes past nine only a little smoke was observed coming from under the roof, yet ten minutes afterwards the whole roof was wrapped in a blaze. By this time Japanese fire brigades began to arrive, and quickly got to work on the flames, and a considerable body of Japanese police came down and reinforced the Concession constables, keeping back the crowd and giving the firemen room to work the hose. The commander of the Japanese man-of-war *Tsukuba-kun* also sent a body of men to assist, and under the direction of an officer they rendered very efficient service. For a while there was a scene of much excitement, guests and boarders bringing out their valuables, and the insurance company's agent directing energetic salvage operations. The coolies worked as only Japanese work at a fire, bringing out heavy and light articles and pitching them on to the ground in a promiscuous mass, apparently caring little in the excitement of the moment whether their endeavours to save property resulted in loss of life. Indeed, in connection with these salvage operations, an unfortunate accident did occur in which one man lost his life. As the fire got complete hold of the roof, various portions of the coping gave way from time to time, and fell into the street in blazing masses. One of these masses of burning material fell just as a large and heavy wardrobe was being lowered into the street, and whether, as is supposed, the men leaning over the verandah were struck and forced to let it go is not clear, but at any rate the blazing coping and the wardrobe came to the ground together with a crash, and when the smoke cleared away a Japanese was seen lying underneath the mass. He was immediately taken out and carried away, but was found to be so severely injured that he died an hour or so afterwards. Fifteen minutes from the time the outbreak was discovered it was seen that both houses were doomed. The fire ran along under the roof with incredible rapidity, and the rooms below were soon a mass of flames. It was curious to note how the flames seemed almost to make the light of the sun pale by comparison, while they were so fierce that it was necessary to stand some considerable distance off to avoid being scorched. Naturally a fire in the Concession drew a very large number of foreigners, and the visitors brought by the *Empress of China*, some of whom were entering the hotel with their luggage just as the alarm was given, showed up in great force. At twenty minutes past ten, about an hour from the outbreak, the double stack of chimneys on the south side, which at the time of the earthquake last year fell through the verandah, came down with a crash, falling right through to the ground floor and bringing a large quantity of blazing woodwork with it. Some portion of the mass of brickwork fell outwards, and it was feared at one time that one of the coolies was buried under the debris, but we are glad to learn that examination has proved this fear to be groundless. By eleven o'clock the two large buildings had been reduced to a mass of smoking ruins, in the midst of which several tall chimney-stacks stood bare and gaunt. Though it was found impossible to save any portion of the hotel buildings the efforts of the firemen to secure the safety of the godowns adjoining belonging to Messrs. I. Marians & Co. were more successful. At one time it appeared as if these godowns, one of which is of wood, were bound to go, especially as the space between was so narrow that firemen found great difficulty in working, but by constantly pouring water upon the walls and extinguishing flying sparks they were preserved from danger, though the roofs are damaged by tiles having been torn off by the coolies, as usual

according to Japanese methods of fighting a fire. Several of the boarders have lost all their belongings and effects—a serious matter in some cases. One gentleman escaped loss by the skin of his teeth. The policy on his effects would have run out yesterday afternoon, and as he had omitted to take steps to renew it he would have been a serious loser if the fire had taken place to-day instead of yesterday. Beyond the instance to which we have referred, where one of the salvage coolies lost his life, no one seems to have been hurt or injured in any way. As the fire occurred in the daytime, all the guests got out safely, but seeing the rapidity with which the fire extended it is unpleasant to contemplate what might have occurred had the fire taken place at night. We learn that the buildings are insured with various companies in the following amounts:—Royal Insurance Co., \$10,000; Liverpool, London & Globe, \$8,000; Commercial Union, \$7,000; Manchester, \$5,000; South British, \$5,000. In addition, the furniture is insured in the Manchester Insurance Co. for \$14,000.—*Kobe Chronicle*.

CRICKET.

BLUFF V. SETTLEMENT.

One of the most extraordinary games of cricket that has been played in Yokohama for a long time came off on Saturday, between the above teams. The Settlement went in first, represented by Tate and Layard, the latter being early retired, but the former, getting well set, made the big score of 60 before he was caught by Mair off Crawford, the batsman having successfully resisted all the attempts of White, Murdoch, and Wheeler to get at his sticks. There was no other score above the 20 of Parlett, and the innings closed for 134. Snow retired hurt, Showler not out, and the last man did not bat. But the extraordinary part of the game has yet to be recorded, and this can be told in a few words. White and Crawford went in and held up their wickets till, including 6 extras, they had beaten their opponents by 9 runs. White, not out, 63; Crawford, not out, 74; and this was against the bowling of Burn, who took five wickets in the match last week, and Edwards (W.) When each bowler had delivered 16 overs, Layard and Tate were put on, but with no better effect, and after their three overs the game closed. If there are two or three more men who can resist the attacks of such bowlers as Burn and Edwards in this fashion, then there need not be much fear about the result of the match pending with Kobe. Following are the scores:—

SETTLEMENT.	
Mr. Tate, c. Mair, b. Crawford	60
Mr. Layard, b. Murdoch	0
Mr. Burn, run out	9
Mr. W. Edwards, b. Murdoch	6
Mr. Dodds, c. White, b. Crawford	28
Mr. Parlett, c. and b. Murdoch	20
Mr. Cocksedge, c. Murdoch, b. White	40
Mr. Crouch, c. Nash, b. Crawford	3
Mr. Snow, retired hurt	14
Mr. Showler, did not bat	3
Mr. Ansdar, did not bat	3
b. & W. 2.	134

BLUFF.	
Mr. White, not out	63
Mr. Crawford, not out	74
Dr. Wheeler	—
Mr. Mair	—
Mr. Murdoch	—

AN INCIDENT OF EXTRA-TERRITORIALITY IN JAPAN.

(FROM OUR CORRESPONDENT.)

Tokyo, July 5th.

A situation of great interest in its bearing on the question of the Capitulations has lately arisen in this country out of a course of combined action and inaction on the part of the Portuguese Government. The extra-territorial immunities which are enjoyed by the Western Powers under their treaties with Japan provide exemption for the subjects of those Powers from Japanese jurisdiction of every kind, with the one exception that civil cases in which Japanese are defendants are heard in Japanese Courts. But the treaties which confer these immunities enjoin at the same time—constructively, at least—that the Powers thus granted exemption from the territorial jurisdiction shall provide efficient substitutes for the Japanese tribunals and laws. In the British Treaty, for example it is stated, in Article V., that "British subjects who may commit any crime against Japanese subjects, or

Original from

be subjects or citizens of any other country, shall be tried and punished by the Consul or other public functionary authorized thereto according to the laws of Great Britain." The treaties with Portugal and other countries contain identically the same provisions. It is clear therefore that, constructively, from the actual terms of those covenants, not to speak of the obligation imposed by plain duty and necessity, each Power is bound to provide and maintain the proper machinery for exercising jurisdiction over its nationals in Japan. The Consular Courts established under these conditions are of many and diverse kinds. While some of the Great Powers—England, the United States, Germany, and so forth—have acted up to their pledges, and have equipped tribunals that are fully equal to the needs of the case, several of the Consuls of the smaller Powers are *merchants only, with neither legal education nor legal experience*, and therefore unqualified to administer justice. Portugal, it is to be remarked, has been a grievous sinner in this respect. For 22 years after the conclusion of her treaty with Japan her sole representatives were unsalaried trading Consuls, with powers so circumscribed as to correspond only with those of a committing magistrate. Judicial control was entirely subordinate to the tribunals of the Portuguese colony of Macao, some 1,500 miles away. Hence, when an offence was charged or a claim preferred against a Portuguese subject in Japan, the Consul could only hold a preliminary examination and then refer it to Macao for instructions. At the end of 1883, as the result of protests made by Japan at the Treaty Conference of the previous year, the above unsatisfactory state of things was somewhat bettered by the appointment of a Portuguese Consul-General to this capital, with diplomatic as well as consular powers. But as the new official's jurisdiction was for some unexplained reason, limited to the metropolitan district, the old evil of subordination in Macao still existed at the rest of the treaty ports. In 1886, under this peculiar system, a Portuguese at Nagasaki who had actually confessed the theft of a hundred dollars from a Japanese was allowed to go scot-free because the Portuguese resident merchant-consul avowed incompetence to issue a warrant for his arrest. After this flagrant miscarriage of justice the link with Macao was at last cut, and in 1887 the Consul-General's Court in Tokyo became the Portuguese tribunal of reference for all Japan. With so much by way of preface, I pass to the direct subject of this letter.

At the close of last year the Portuguese Government, from motives of economy, resolved to abolish the post of Consul-General in Japan, without, however, informing the Foreign Office in Tokyo of their decision, which, in fact, was only made known to Viscount Enomoto, the Japanese Minister of Foreign Affairs, in January, from the lips of the Consul-General himself. No alternative provision was made by the Lisbon Cabinet. It was not even proposed to revert to the original clumsy system of connexion with Macao. To Japan's immediate and earnest remonstrance, coupled with the request that the Consul General should at least be replaced by a properly-qualified Consul with full judicial power, the Portuguese Foreign Office only replied that the matter should be considered. Months passed, nevertheless, without any sign from Lisbon; and the Consul-General left Tokyo five weeks ago, not word as to the fact or the cause of his removal having been said by Portugal to Japan, nor any intimation been made that steps would be taken to reequip a proper judicial tribunal. Meanwhile, Viscount Enomoto had informed the Portuguese Government that, in view of their failure to make arrangements in due time for the proper exercise of consular jurisdiction, Japan would herself be compelled to assume jurisdiction over the Portuguese subjects—about 140 in number—throughout the empire after the 30th of June. No answer having been received to this notification, it was repeated, through the Japanese representative in Lisbon, on the eve of the date already named; but the Portuguese Foreign Office merely replied that the matter would be attended to in due course. Japan waited another fortnight and then took the decisive step of which Portugal had been fully warned. An Imperial Ordinance was issued yesterday, proclaiming that "the stipulations concerning consular jurisdiction which are contained in the treaty concluded with the Portuguese Government on the 3d of August, 1860, shall henceforth cease to be in force."

Portugal's reasons for thus failing to provide for the due judicial control of her subjects in Japan have yet to be heard. Until a more satisfactory explanation is forthcoming, it must be assumed that her having neglected to avert the present mischance, in spite of having had ample time to do so, can only be the result of indifference or carelessness, or possibly of her

having regarded the Japanese *ultimatum* as a mere threat. Japan's view of the case is, on the other hand, clear enough. The Emperor's advisers evidently hold that Portugal, by her failure, after fair warning, to maintain the discharge of the international obligations which she deliberately assumed under the treaty of 1860, has forfeited her title to the immunities conveyed by that treaty, and has practically abdicated her powers of consular jurisdiction. They doubtless hold, too, that by the provisions of the new Constitution the Government of Japan was bound to immediately terminate a state of things which permitted even as few as 140 people, of whatever nationality, to remain within the boundaries of the empire without any properly constituted means for their judicial control. Yesterday's ordinance has done that. By it every Portuguese subject in Japan is placed henceforward under Japanese law, and made answerable to Japanese tribunals. Moreover, owing to the extraordinary inaction of the Lisbon Government, this condition of things has come to pass without the concession by Japan of any *quid pro quo*. Portugal loses everything and gains nothing. The restrictions upon trade, travel, and residence, which would ordinarily be removed in consideration of a foreign Power's acceptance of Japanese jurisdiction, are still binding on the Portuguese in Japan, notwithstanding the extinction of their consular tribunals. *The Portuguese residents are, in fact in the position of subjects of a non-treaty Power.* Nor is there any prospect that the Japanese Government will surrender the jurisdiction now assumed. Yesterday's step is plainly final and irrevocable, if for no other reasons than that re-surrender would be tantamount to the making of a fresh treaty containing extra-territorial provisions, and that no Japanese Government could nowadays venture on such a course. It would be a strange ending of a strange case if Portugal should adopt the only practicable means of escape from her present dilemma, by proposing to make a treaty of equality with Japan similar to that lately entered into by Mexico. With Japan's assent, which certainly would be forthcoming, equilibrium would be more than restored to Portugal. For, while her subjects would then be admitted to the privileges of unrestricted trade, residence, and travel, as a set-off for the forfeiture of consular jurisdiction, they would at the same time have a clear start of the subjects of the other Powers, from whom those privileges must continue to be withheld as long as the present treaties remain in force.—*The Times.*

THE "TIMES" LEADER.

The curious "Incident of Extra-Territoriality in Japan," of which our Correspondent sends us an account in a letter which we printed yesterday, may very possibly be found to mark an epoch in the history of the foreign relations of Japan. Extra-territoriality has, so far, been a characteristic of the intercourse between the Japanese kingdom and the principal foreign Powers. It means that the Japanese Government have agreed by treaty to grant certain privileges to the subjects of the Powers in question, among these privileges being exemption from Japanese jurisdiction of every kind, except in civil cases in which Japanese subjects are defendants. These privileges are accompanied by corresponding restrictions on trade, travel, and residence, and imply a reciprocal obligation on the part of the Powers enjoying them to provide efficient substitutes, in the shape of Consular or other authorized and recognized Courts for the Japanese tribunals and laws. The whole system is a makeshift, no doubt, but it is more or less the natural out come of the peculiar relations which have subsisted in the past between foreign Powers and Japan. It is an inconvenience in many ways, and probably, sooner or later, it will come to be regarded as an anachronism. In the meanwhile, it exists, and, with goodwill on both sides, it can be made to work *tant bien que mal*. The greater Powers, such as England, Germany, and United States, have equipped tribunals that are fully equal to the needs of the case, and, except that the existence of these tribunals involves restrictions on trade, travel, and residence, which are not likely to be relaxed so long as the tribunals themselves are maintained, there is, perhaps, not much exception to be taken to them. But the case appears to be very different with some of the smaller Powers, which, while claiming all the privileges to which they are entitled by treaty, neglect to provide Courts of competent jurisdiction and capacity, and appoint Consuls who are merchants only and entirely without legal education and experience, to exercise the judicial authority involved in the right of extra-territoriality.

Among these smaller Powers Portugal appears, according to our Correspondent, to have been a grievous sinner. For many years after the conclusion of a treaty in 1860 between Portugal and Japan,

the extra-territorial Court of Portugal was presided over by an unsalaried trading Consul whose limited judicial authority was entirely subordinate to the tribunals of the Portuguese colony of Macao, some 1,500 miles away. It need surprise no one to learn that as a result of this manifestly impracticable system there were frequent miscarriages of justice, and in particular that a Portuguese at Nagasaki who had actually confessed the theft of a hundred dollars from a Japanese was allowed to go scot-free in 1886 because the Portuguese resident merchant-consul avowed his incompetence to issue a warrant for his arrest. Such a state of things was manifestly intolerable, and in 1887 the link with Macao was cut and the Consul-General's at Tokyo became the Portuguese tribunal of reference for all Japan. But Portugal does not seem to have been able or willing to maintain for long this not too lofty standard of judicial propriety. At the end of last year the Portuguese Government resolved to abolish the post of Consul-General in Japan, and actually did so without even so much as notifying its resolve to the Japanese Government. The Japanese Government first heard of the matter from the Consul-General himself, and their earnest remonstrances and representations only elicited the reply from Lisbon that the matter should be considered. The Consul-General left. No steps were taken to reconstitute his Court, and the Japanese Government very properly notified to Portugal that in the event of the extra-territorial jurisdiction being allowed to lapse the 140 Portuguese subjects resident in Japan would on a certain date be placed under Japanese jurisdiction. The Lisbon Government again only replied that the matter would be attended to in due course. Again the Japanese Government forbore to act, though they warned the Portuguese Government at the same time that their patience had its limits. At last, on July 4, an Imperial ordinance was issued, proclaiming that "the stipulations concerning 'Consular jurisdiction' which are contained in the treaty concluded with the Portuguese Government on the 3rd of August, 1860, shall henceforth cease to be in force."

Thus has Portugal lost the right of extra-territorial jurisdiction in Japan, and with it all the advantages enjoyed by a treaty Power. Henceforth Portuguese subjects must be content to submit to all the restrictions on trade, travel, and residence which are imposed on other foreigners in Japan, without enjoying the privilege accorded to other foreigners of suing and being sued in their own extra-territorial Courts. "Hippocleides doesn't care" is probably the sentiment of the Portuguese Government, and really, when the character of the Portuguese extra-territorial Court as described by our Correspondent is considered, there is perhaps no particular reason why any one else should care. But the matter will hardly be allowed to rest where it stands. Had they been so minded, the Portuguese Government might, it would seem, have followed the example of Mexico and secured the removal of existing restrictions on trade, residence, and travel, in return for a surrender of their extra-territorial jurisdiction. As matters stand, the jurisdiction is lost beyond recovery, but the restrictions still exist. Such a state of things could hardly be expected to last in the case of any other Power than Portugal, and the probability is, as our Correspondent points out, that even Portugal will at last awake to the consequences of her neglect and be compelled to sue for a treaty of equality similar to that concluded with Mexico. In existing circumstances she will probably get it for the asking, and thus another permanent breach will be made in the fence of extra-territoriality with which Japan has, to her annoyance and mortification, so long been surrounded. The question is how long, in such circumstances, will other Powers think it worth their while to maintain the fence. By submitting to Japanese jurisdiction, the subjects of Portugal would, on the conclusion of a treaty of equality, be admitted to the privileges of trade, residence and travel without restriction, and thus, as our Correspondent points out, they would have a clear start of the subjects of other Powers, from whom those privileges must continue to be withheld as long as the present treaties remain in force. If the *status quo* is to be maintained, it is perhaps as well that this advantage should only be secured by a Power so supine, so dilatory, and so unenterprising as Portugal. But it seems certain that, as soon as one of the more active and enterprising of the Powers thinks it worth its while to purchase greater freedom of commercial intercourse with Japan by the surrender of its territorial jurisdiction, the whole system of extra-territoriality, as applied to Japan, must forthwith come to an end.

THE COTTON SPINNING INDUSTRY IN SHANGHAI.

Mr. CONSUL-GENERAL HANNEN, in his report on the trade of Shanghai for 1891, writes:—

It has long been obvious that there was a wide field for the introduction of cotton spinning and weaving in China. Cotton is grown in great abundance all over the lower reaches of the Yangtze River; there is an almost unlimited demand for cotton fabrics, and labour is cheap and abundant. Two questions, however, presented themselves: the first was whether or no Chinese cotton could be successfully manipulated by European machinery so as to compete with American cotton, and the second, was what was likely to be the attitude of the officials in regard to any attempt to erect mills on the part of foreigners. The latter, indeed, was not left long in doubt. An absurd jealousy pervades the Chinese official mind of all foreign enterprise bearing on native trade, as if their mere success must necessarily mean taking bread out of the mouths, and money out of the pockets, of Chinese subjects. In the present case it was patent to any unprejudiced observer that the introduction of foreign capital for enterprises of this kind could only mean an unmixed benefit to China as a whole. If it succeeded, it would provide cheaper clothing for the people, it would give employment to a great number of labourers, and it would stimulate the production of cotton. But arguments of that nature have little weight in China, and the hostility of the officials was sufficient to deter foreigners from making any serious effect in that direction.

So long ago, however, as 1878, a Chinese company was formed to start a cotton mill. In the Trade-Reports from this Consulate for 1878-1879, a full account was given of the organisation of this company. The project was under the official sanction and protection of the two principal Viceroy, and by way of encouragement a monopoly of the business was granted them for ten years. The company was launched at a time of great prosperity, but long before the mill was ready, evil days had come, the promised capital was not forthcoming, or had been prematurely squandered, and for ten years and more the project languished. After much re-organisation and several changes of management the buildings were at last completed, the machinery erected, and the mill is now and has been for over a year in full working order.

The erection of the mill and its general control, so far as working is concerned, have been under the management of an American gentleman from Massachusetts, to whom no small credit is due for having grappled successfully with the many difficulties incident to the installation of a concern of the kind. So far as it has gone, it has demonstrated satisfactorily, what was long disputed, that Chinese cotton can be woven into cloth of a superior quality. The cloth turned out is an imitation of American drills and sheetings, 36 inches wide and made up in pieces of 40 yards in length, average weight 14 lbs. The present selling price in the Shanghai market is: for drills 2.32 taels and 2.40 taels, and for sheetings 2.35 taels and 2.42 taels per piece.

The working power of the mill at present is 550 looms and 21,000 spindles, and the turn out is 130,000 yards per week. There are at present 4 foreign employés, but doubtless some of these will soon be dispensed with. All the operatives are Chinese, who have been trained to the work within the brief period since the mill began, and they do their work quite as efficiently as foreign hands, though in some departments double the number is still required. The weekly wages for female hands runs from \$1 to \$1½, say 3s. to 4s. 6d., and for males from \$1½ to \$4, or 4s. 6d. to 12s. Cotton, ginned, costs delivered at the mill, 10 taels and 11 taels per picul, or say 3½d. and 3¾d. per lb.

Another venture in the same direction is a mill for the production of cotton yarn similar to that imported from Bombay. This company is also purely native and, with the exception of two foreign employés as superintendents, is entirely run with native hands. The machinery is English, and I understand is of the best description, specially adapted to the manipulation of Chinese cotton. The production is 8 bales per day of 400 lbs. each, and it finds a ready sale at what is understood to be very remunerative rates.

There seems every reason to expect that yarn spinning, now that the thing has once been started, will soon develop into a very large industry in Shanghai. The experience gained so far tends to show that yarn can be produced here at least as cheaply as in Bombay, and considering the enormous import of last year, and the rate at which the demand continues to grow, there would seem to be room for 50 mills of the capacity of the present one before the demand can be overtaken.

Whether the cotton cloth mill is likely or not to

meet with the same measure of success as the yarn mill remains to be seen, but at the present moment it is somewhat doubtful. That a well managed concern would hold its own in the production of strong coarse fabrics is probable, perhaps certain, but good management is a thing not to be obtained with Chinese directors. As an instance of the divided counsels that prevail on the Board of this particular company, it may be mentioned that half the looms are of English and half of American manufacture, that having been the result of the difficulty in agreeing on such a fundamental point as the supplying of the machinery. One party wished the order to go to England and the other to America, and as neither would give way, the result was the compromise above stated.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Hotel.

SOLUTION OF PROBLEM No. 37.

WHITE. BLACK.
1—B to Q B 8 1—Any move
2—Q. R. or Kt mates accordingly.

Correct solutions received from Omicron, Scacchi, Omega, W.H.S., J.D., Digamma, and Ed. B. Ed. B. is also credited with correct solution of No. 35.

PROBLEM No. 39.

BY ED. BATAYUS, YOKOHAMA.

White to play and mate in two moves.

THE FORSYTH NOTATION.

An explanation of this method of problem notation which has been adopted by a few chess publications, may be of use to some of our readers. It possesses certain advantages, of which, brevity is not the least. The board is numbered from left to right, beginning at the top left-hand corner. The figures represent the number of vacant squares, the capitals mean White pieces, and the small letters, Black. The problem by Mr. Batavus above would be stated in this notation as follows:—

5 K3 P k1 k p r p R P B i b r 6 R3 Q4 Kt 10 B 16.

The Annual meeting of the Yokohama Chess Club was held in the Club-rooms on Monday last, 3rd instant. The new officers are as follow:—President Mr. Justice R. A. Mowat, Secretary Mr. Griffin. Committee, Messrs. Balk, Keil and Merian. The club meets for play every Monday and Thursday from 5 to 11 p.m., and visitors to Yokohama, who are chess players, will be cordially welcomed on club-nights.

The great contest of Masters at the Dresden tourney still fills the home chess journals. We transcribe two further games from the *Illustrated London News*. The first is a favorable specimen of the style of the veteran Winawer, while the other introduces a young and rising player, Herr Mackovitz.

CHESS IN GERMANY.

Game played in the Dresden Tourney between Messrs. Winawer and Bardeleben.

(STAUNTON'S OPENING.)

WHITE—MR. W. BLACK—MR. B.
1—P to K 4th 1—P to K 4th
2—Kt to K B 3rd 2—Kt to Q B 3rd
3—P to B 3rd 3—Kt to B 3rd
4—P to Q 4th 4—Kt takes K P
5—P to Q 5th 5—Kt to Kt sq.
6—B to Q 3rd 6—Kt to B 4th
7—Kt takes P 7—Kt takes B (ch.)
8—Kt takes Kt 8—P to Q 3rd
9—Q to B 3rd 9—B to K 2nd

10—B to K 3rd 10—Castles.
11—Kt to Q 2nd 11—Kt to Q 2nd
12—Castles (Q R)

Too dangerous against so experienced an antagonist. The object is to advance the King's side Pawns to the attack on Black's King.

13—Kt takes Kt 12—Kt to K 4th
14—Kt to Kt sq. 13—P takes Kt

P to K R 4th, carrying out the original intent, was now necessary. B takes P, Q to R 5th.

15—P to B 4th 14—B to Q 3rd
15—Q to R 5th

A telling move, rendered possible by White's failure to advance P to K 4th. Black threatens B to Kt 5th, winning the exchange, as well as Q takes P.

16—Q to K 2nd 16—P to Q Kt 3rd
17—P to B 3rd 17—B to K B 4th
18—P to K Kt 3rd 18—Q to B 6th
19—Kt to Q and 19—B to Kt 3rd
20—P to K Kt 4th 20—P to K B 4th
21—Q R to Kt sq. 21—P takes P
22—P takes P 22—P to K 5th
23—Q to K sq. 23—Q R to K sq.
24—P to R 3rd

This is bad, but he had no good move. If K to Kt sq., R to B 6th; s5, Kt takes R, P takes Kt (dis ch.); s6, K to R sq., B to B 7th wins a piece.

25—Kt takes R 24—R to B 6th
26—Q to B 2nd 25—P takes Kt
27—P to Kt 3rd 26—R to K 5th

Clearly the only way to protect the threatened B P. But Black's Bishops now operate with crushing effect, and, though the exchange ahead, White cannot defend his position.

28—K to Q sq. 27—B takes P (ch.)
29—R takes B 28—R takes Kt P
30—K to K sq. 29—Q takes R
31—K to Q sq. 30—B to Kt 5th (ch.)
32—Resigns. 31—Q to B 4th

The two checks threatened are fatal. The position may be studied with advantage. The game is one of exceptional interest.

Game played in the Dresden Tourney between Messrs. Mackovitz and Porges.

(GIUOCO PIANO.)

WHITE—MR. M. BLACK—MR. P.
1—P to K 4th 1—P to K 4th
2—Kt to K B 3rd 2—Kt to Q B 3rd
3—B to B 4th 3—B to B 4th
4—Castles. 4—Kt to B 3rd
5—P to Q 3rd 5—P to Q 3rd
6—P to B 3rd 6—Castles.
7—B to K Kt 5th 7—B to Kt 3rd
8—Kt to R 3rd 8—B to K 3rd
9—B to K 5th 9—Kt to K 2nd
10—B takes Kt

So far, the moves on each side are of a very ordinary character. This capture is of doubtful value, and turns out positively bad, though it has a promising appearance.

10—P takes B 11—Kt to B 2nd
11—Kt to B 2nd 12—Kt to B 4th
12—Kt to B 4th 13—Q to K B sq.
13—Q to K B sq. 14—Q to R 3rd
14—Q to R 3rd 15—Kt (R 4th) to B 5th
15—Kt (R 4th) to B 5th 16—Kt takes Kt
16—Kt takes Kt 16—B takes Kt
17—P takes B 17—Q to B 6th
18—Resigns.

A curious termination. White can defend by R takes P (ch.), followed by R to Kt sq.; or s8. P to Kt 3rd, B takes P (ch.); s9. P takes R, Q takes P (ch.); s10. K to R sq., Q to B 6th (ch.); s11. K to Kt sq. and Black mates in two moves.

A new magazine will shortly appear in London under the title of the *Chess Fortnightly*. Herr Lasker is to be editor, and will furnish the game department with copious and careful annotation.

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

Alfred, Lord Tennyson, Poet Laureate of England, is dead.

TENNYSON, Alfred (Lord Tennyson), D.C.L., F.R.S., Poet Laureate, third son of the late Rev. G. C. Tennyson, the elder brother of the late Right Hon. C. Tennyson D'Eyncourt, was born in 1809, at his father's parsonage, at Somersby, Lincolnshire; his mother, who died in 1865, being a daughter of the Rev. Stephen Eytchey. He was educated by his father, and in due course proceeded to Trinity College, Cambridge. In 1829 he gained the Chancellor's Medal by a poem in blank verse, entitled "Timbuctoo." With the exception of a volume of poems published in conjunction with his brother Charles, when they were boys, and a prize poem, composed whilst an undergraduate at Cambridge, Mr. Tennyson did not publish anything till 1832, when "Poems chiefly Lyrical" appeared, and from 1832 the steady and rapid growth of his fame may be traced. The two volumes then issued were in part merely a republication, but the most important poems were those added to his former productions. It was at once apparent that the author of the "Morte d'Arthur," "Locksley Hall," the "May Queen," and the "Two Voices," was in like the first rank among English poets, a reputation which was more than sustained by the two great works which followed. So well known and popular, indeed, had Mr. Tennyson become before the publication of the "Morte d'Arthur," in 1830, that it seemed only a matter of course, upon the death of Wordsworth, in 1850, that the privilege of wearing "the laurel greener from the brows of him who uttered nothing base" should be offered to him. The "Ode on the Death of the Duke of Wellington" was published in 1852, on the morning of the funeral; and since that occurrence few events of more than ordinary interest in the eyes of Englishmen have taken place without eliciting from the Laureate some poem worthy of the occasion. He has written "Poems chiefly Lyrical," published in 1830; "Poems," in 1832; "The Princess, a Medley," in 1847; "In Memoriam," issued anonymously, in 1850 being a series of elegies—a tribute of affection to the memory of Arthur Hallam, a son of the eminent historian, and the chosen friend of the poet in his earlier days at Cambridge; "Maud, and other Poems," in 1855; "The Idylls of the King," in 1859; "Enoch Arden, and other Poems," in 1864; "The Holy Grail, and other Poems," published Dec. 25, 1869; "The Window, or the Songs of the Wrens," in 1870; and "Gareth and Lynette," in 1872. "A Concordance to the entire Works of Alfred Tennyson," published in 1869, is a remarkable proof of the Laureate's great popularity. At the Commemoration of 1892, the University of Oxford, giving expression to the universal feeling of England, conferred on the poet the honorary degree of D.C.L., and the Fellows of his own college, Trinity, Cambridge, endorsing the judgment of the sister university, subscribed to purchase his bust (by Woolner), which they have placed in their library, and in 1869 they unanimously elected him an honorary fellow of the college. In 1870 Mr. Tennyson republished "The Lover's Tale," a poem which was originally printed in 1835, but soon withdrawn from circulation. In the re-issue it is accompanied with a reprint of the sequel, a work of the author's mature life, "The Golden Supper." After this followed "Ballads, and other Poems." Among his dramatic compositions are, "Queen Mary," 1855; "Marion," 1861; "The Cup," a play which was represented at the Lyceum Theatre, Jan. 3, 1881, Mr. Irving taking the principal character (as also was "Queen Mary"); "The Falcon," produced by Mr. and Mrs. Kendal; and "The Promise of May," a drama in three acts, brought out at the Globe Theatre, Nov. 13, 1882. In Dec. 1883, Mr. Tennyson accepted a peerage as Baron Tennyson of Aldworth, Sussex, and of Freshwater, Isle of Wight. Since then he has published "Becket," "Tiresias and, at the end of 1890; "Locksley Hall—Sixty years After," 1890; "Demeter and other poems,"—Men of the Time.

["SPECIAL" TELEGRAM TO "JAPAN MAIL"]

Kobe, October 4th.

The *Hiroshima Maru* collided with a Japanese despatch boat near Awajishima yesterday. The latter was beached but no lives were lost. The former had a few plates on the bow dented and fractured.

Kobe, Tuesday, 10.22 a.m.

The Hotel de Colonies caught fire at nine a.m. this morning, and was entirely destroyed. The fire is now under control. The premises were insured in the Phoenix and Royal Insurance Societies.

Kepler, Mr. Landers, Mrs. Leigh, Miss Leigh, Miss Bessie Lincoln, Mr. and Mrs. Solomon Lincoln, Mrs. and Miss Lowry, Mr. A. Mass, Mr. and Mrs. Malcolm, Mr. and Mrs. Mann, Lord Cecil Manners, Mr. J. R. Moore, Mr. Moore, Mr. Thos. Mosch, Mr. and Mrs. E. B. McCagg, Mr. T. W. Newcome, Rev. and Mrs. J. L. Nevins, Rev. and Mrs. W. E. Noble, Mr. Nolde, Jun., Miss Sarah G. Noble, Miss Willa C. Noble, Mr. and Mrs. F. O. North, Mr. Oakley, Mr. and Mrs. Chas. Parson, Jun., Mrs. D'Arcy Paul, Miss E. H. Plankinton, Rev. J. T. Scott, Rev. Mr. Seaton, Miss E. R. Scidmore, Mr. S. J. Stephens, Mrs. F. II. Stevenson and daughter, Mr. and Mrs. Chas. S. Smart, Mr. Max Turtill, Rev. Mr. and Mrs. E. N. Walne, Mr. and Mrs. F. S. Winston, and Mr. Frank Worthington in cabin; Mr. R. W. Blake, Lieut. H. C. Burrows, Dr. and Mrs. Grieg and infant, Miss Sinclair, and Mrs. Westwall and children in second class.

Per Japanese steamer *Omi Maru*, from Kobe:—Miss McCause and daughter, and Mr. W. F. Madarag in cabin; Captain McKilsar in second class, and 31 passengers in steerage.

Per American steamer *City of Peking*, from San Francisco:—Mr. F. E. Saville, Mr. L. B. Tate, Miss Davis, Mr. and Mrs. S. R. Hope, Mr. and Mrs. W. B. Price, Miss Patterson, Mrs. Ye Cha Yuen, Mr. Mark B. Grier, Mr. W. B. White, Miss Tate, and Miss E. Houston in cabin. For Shanghai: Miss L. E. Hughes, Miss A. G. Waters, Miss Reynolds, Mrs. J. H. Garther, Miss M. and Miss E. Gray, Miss L. B. Blake, and Miss M. Bomar in cabin. For Hongkong: Colonel J. C. Ardagh, Mr. A. Romanoff, and Mrs. H. Andrews in cabin; 190 Chinese in steerage.

Per American steamer *City of Rio de Janeiro*, from Hongkong:—Mr. and Mrs. Kirk and Madame Piorkowska in cabin. For San Francisco: Miss Wyckoff, M.D., and Mr. J. E. Janssen in cabin.

Per Japanese steamer *Nagato Maru*, from Kobe:—Mr. and Mrs. Butcher, Mr. Woodford, Mr. Newton, Mr. Rikoshio Sing, Mr. Yamada, and Mr. Tmili in cabin, and 17 passengers in steerage.

Per Japanese steamer *Yamashiro Maru*, from Otaru via ports:—Mrs. Sharland in cabin; Miss Yamamoto Kihni in second class, and 42 passengers in steerage.

Per German steamer *Nuernberg*, from Hongkong:—Dr. Mas. Mori, Mr. R. Gartner, and Mr. Lo Fat Sang in cabin; Mr. M. Furunaga and 14 Chinese in steerage. For Kobe: 3 Chinese in steerage.

DEPARTED.

Per British steamer *Verona*, for Hongkong via ports:—Mr. A. Glauret, Mr. and Mrs. Dalton, child, infant, and amah, Major Robinson, Major and Mrs. Wynne-Eyton, infant, and servant, Mr. S. George, Mr. J. Rickett, Mr. Wong Sing She, Mr. and Mrs. W. J. Phillips, Mr. J. H. Hingston, Captain Babinaton, Mr. D. Nowrojee and servant, Mr. J. Pestonjee and servant, Mr. Denning, Mr. Denning, Jun., Sergeant J. W. Edmonds, and Mrs. Ah Kai in cabin; 1 Indian and 1 Chinese in steerage.

Per Japanese steamer *Saikio Maru*, for Shanghai and ports:—Mrs. Wrightson, Mrs. Gerard, Miss Kopsch, Mrs. Drummond and child, Miss L. Masters, Rev. J. H. Worley and family, Rev. H. S. Jefferys, Rev. J. Sharp, Lieut. Takakuwa, Messrs. T. Takanouchi, Gower, John Mill, and J. Inglis in cabin; Messrs. T. Yamaguchi and Jas. Henderson in second class, and 41 passengers in steerage.

Per American steamer *City of Peking*, for Hongkong:—Mr. and Mrs. Geo. W. Dare, Mr. and Mrs. Eckley, Mrs. L. W. Eckley, Lieut. Arbouin, Mrs. Andrews, Mr. Romanoff, and Mr. A. C. S. Manners and native servant in cabin.

CARGOES.

Per British steamer *Varona*, for Hongkong via ports:—Silk, 550 bales; Waste Silk, 181 bales.

REPORTS.

The Japanese steamer *Sendai Maru*, Captain Tittle, reports:—Left Kobe the 30th September at 10 a.m. and arrived at Shiwotsu at 1.20 p.m. Left at 3.35 p.m.; had light easterly winds to Oshima, which was passed the same day at 9.54 p.m.; thence moderate N.E. winds with fine clear weather to Rock Island, passing, the 1st October, at 1.24 p.m.; thence to port light N.E. winds, which continued fine throughout the passage. Arrived at Yokohama the 1st October at 7.30 p.m.

The Japanese steamer *Sakata Maru*, Captain Walter, reports:—Left Hachinohe the 29th September at 3 p.m.; had gentle to fresh southerly breeze and overcast rainy weather and head sea; at 9 p.m. wind very unsteady with very low barometer, overcast, threatening weather and continuous heavy rain. On the 30th at 2.30 a.m. weather clearing up and finer looking; at 7 a.m. passed Yamada with fresh breeze and fine clear weather with heavy south-easterly swell, ship rolling heavily; at 11.20 a.m. passed steamer *Miike Maru* bound north; at 2.45 p.m. passed Kinkasan with light variable winds and calms with heavy south-easterly swell, ship still rolling heavily. On the 1st October light variable winds and clear weather swell decreasing; at 9.44 a.m. passed Inuboye; thence to port had fine, clear weather and moderate to fresh W.S.W. winds; passed Noshima at 6 p.m.; passed Kannon-saki at 10.30 p.m. Arriving at Yokohama the 1st October at midnight.

The Japanese steamer *Takasago Maru*, Captain Nirei, reports:—Left Otaru the 28th September at 1 p.m.; had overcast rainy weather with fresh north-easterly breeze and very low barometer. Arrived at Hakodate the 29th at 7 a.m. and left the 30th at noon; had fresh north-westerly breeze and heavy south-easterly swell and fair weather. Arrived at Oginohama the 1st October at 11.15 a.m. and left the same day at 2.25 p.m.; had fine, clear weather and strong N.W. and northerly winds up to port. Arriving at Yokohama the 2nd October at 2.35 p.m.

The American steamer *City of Peking*, Captain Searle, reports:—Left San Francisco the 17th September; crossed 180th meridian in lat. 46.00 N., on the 27th, 10 days out; on the 2nd October at 8.10 p.m. in lat. 34.40 N., long. 151.47 E. passed and exchanged night signals with O. & O. steamer *Oceanic*. Time, 16 days and 15 hours.

The American steamer *City of Rio de Janeiro*, Captain Smith, reports:—Left Hongkong the 29th September at 2.12 a.m. Arrived at Yokohama the 5th October at 2.39 a.m. Passage, 5 days, 10 hours, and 45 minutes; had moderate to strong N.E. winds with head sea the entire passage.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Otaru the 1st October at 1 p.m.; had strong west and S.W. winds, cloudy, and squally, increasing to moderate gale at midnight; from which time to Hakodate fine weather. Arrived at Hakodate the 2nd at 8.45 a.m. and left the 3rd at noon; had fresh breeze and fine weather, wind decreasing gradually, the following morning fine clear weather. Arrived at Oginohama the 4th at 9.12 a.m., and left the same day at 1.08 p.m.; had light breeze and fine weather until midnight, freshening afterwards to fresh breeze to port. Arrived at Yokohama the 5th October at 1.15 p.m.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Kobe the 4th October at noon; with light winds and fine clear weather off Oshima wind hauled to N.E. fresh and clear with moderate head sea remaining same to arrival at Yokohama the 5th October at 7.30 p.m.

The German steamer *Nuernberg*, Captain B. Blanke, reports:—Left Hongkong the 30th September at 10 a.m.; had throughout the voyage fresh north-east winds (monsoon) and moderate, partly rough, sea. Arrived at Yokohama the 6th October at 4 p.m.

LATEST COMMERCIAL.

IMPORTS.

The activity noted in our last has continued. In Yarns buyers seem handicapped by short supply of spot cargo, and it would appear that they were willing to do considerably more than the sales show, (provided they could get the assortments desired) as prices for Yarns soon to arrive have been advanced 30 to 50 cents. T-Cloths and both 8½lb. and 9lb. Shirtings have been done at full rates. In fact, sales have been made all along the line at current, or in some cases better prices, and at the moment there is nothing in staple goods which seems to drag.

KEROSENE.

We intimated in our report a fortnight ago that part of the cargo of the steamer *St. Andrews* would be carried on to Kobe. She left on the 3rd inst. taking 32,000 cases Russian Oil. Against this, however, we note the following arrivals:—

Steamer *Glennagles*....."Comet".....40,000 cases.
Steamer *Middlesex*....."Comet".....64,437 cases.
Steamer *T. MacLellan*....."Chester".....66,500 cases.

Notwithstanding these arrivals prices have remained firm and close at recent rates.

QUOTATIONS.

	PER PICUL.
Chester	\$1.75 to 1.77½
Comet	1.72½ to 1.75
Devon	1.67½ to 1.70
Russian Anchor	1.67½ to 1.70
Russian Moon	1.65 to 1.67½

SUGAR.

Sales have been active both in Brown and Whites, and there seems less stock than last reported, notwithstanding the arrivals during the week. Holders appear to have things their own way for the present, and have pushed up prices all round, buyers being free takers at the advance.

	PER PICUL.
Brown Takao	\$4.00 to 4.05
Brown Daitong	4.15 to 4.20
Brown Canton	6.20 to 6.25
White Java and Penang	5.50 to 7.75
White Refined	

EXPORTS.

RAW SILK.

Our last issue was of the 30th ultimo, since which date settlements by foreigners amount to 750 piculs, divided thus:—*Hanks*, 7 piculs; *Filatures*, 180 piculs; *Re-reels*, 407 piculs; *Kakada*, 72 piculs; *Oshu*, 81 piculs. In addition to these figures, there have been considerable direct shipments, making the total export business equal to 900 piculs.

Quotations are practically unchanged from last week, although the market is much more quiet, and

buyers would be glad of some reduction in prices which so far sellers refuse. These latter are, however, rather anxious to be moving, although they will not accept the offers which buyers are able to make, and with one or two exceptions, there are no alterations in prices since last week; good qualities being scarce are very firmly held, while medium and inferior grades could probably be obtained on easier terms.

Exchange has gradually advanced to quotations given below in sympathy with an upward market for silver in London.

Arrivals have come down pretty freely of late, the interior merchants hurrying their stock forward, attracted by the high prices ruling here. The present stock list comprises 7,400 piculs of all descriptions, as per details at foot.

There has only been one shipping opportunity since we last wrote, the English mail of the 2nd October taking 550 bales for Europe. The present export figures are 17,611 piculs, against 14,330 last year and 4,577 piculs to the same date in 1890.

Hanks.—A small business in these during the week, but high prices have been paid for good silk. *Shinshu*, \$670; *Foshu*, \$660, with other grades in proportion.

Filatures.—Less doing in this department during the week, although prices are well maintained. *Kameisha* has been done more than once at \$900 per picul, but the majority of shippers do not seem able to pay this figure. They make offers of about \$20 less, which so far sellers will not accept. One parcel *Shojukan* has found a buyer at \$910. In fine sizes, there has not been a large business, but good silks have brought good prices.

Re-reels.—This class has shown the largest results during the present week, medium grades being in special demand. Very ordinary *Foshu* silks have been done at \$720 to \$730; *Bushu* and like quality at the same rates.

Kakada.—These show a smart reduction on the last rates paid, which were more or less fancy prices. At the present values these silks look good and worth the money.

Oshu.—Considerable purchases of medium *Sendai* at 630. *Hamatsuki* are held for higher figures, but with no business doing.

WASTE SILK.

A large business in this market amounting to 2,140 piculs, divided thus:—*Cocoons*, 136 piculs; *Noshi*, 1,207 piculs; *Kobisa*, 797 piculs. Nothing done for direct export this week.

The purchases made seem more or less speculative, and prices have been strongly advanced. Cables from consumers protest against these figures and say they cannot afford to pay them; but some of our buyers appear able to go on at quotations, while on the other hand Japanese are becoming excited and look for still higher prices.

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

There have been two shipping opportunities, the English mail of the 2nd instant taking both *Waste and Cocoons* for Europe, while the Canal steamer *Carmarthenshire* had about 100 bales *Cocoons* for New York. These departures bring the present export figures up to 4,239 piculs, against 3,656 piculs last year and 2,732 at the same date in the previous year.

Pierced Cocoons.—Only one transaction to note at the previous price of \$105 per picul, 75% yield.

Noshi.—A very large business in this class, *Shinshu*, \$110; *Zaguri*, \$105; *Oshu*, \$132½; *Filature*, \$130; *Joshu*, from \$63 to \$76. Holders now stand out for a strong advance on these prices.

Kibiso.—Large purchases in *Filatures* at from \$85 to \$112, sellers now asking an advance of \$10. Ordinary *Mino* has been done at \$55, with other grades in proportion.

Mawata.—The stock is small, consisting chiefly of old fibre, new season's produce only having come forward in very small quantity. No business has been done as yet and no price named.

Sundries.—Nothing done in these. Supplies do not come forward freely of *Neri* and kindred sorts, so that there is no business to report.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

In a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Perfect blendings of the Choicest Brands of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely untampered with.

MATURED IN SHERRY CASKS.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters B O S are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

B O S

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them *unique and unrivalled*.

B O S Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

B O S is sold in square white bottles, labelled and capped, the quality being notified by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of B O S.

Correspondence invited from Firms who desire to handle our Whiskies.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 15TH, 1892.

MARRIAGE.

At Christ Church, Yokohama, on the 13th inst., by the Rev. E. C. Irvine, M.A., BROOKE HYDE PEARSON, second son of Charles Pearson, late 4th Dragoon Guards, to KATE CAMPBELL, youngest daughter of the late John Coleman Griffith of Toronto.

SUMMARY OF NEWS.

MR. NAKAJIMA, ex-President of the House of Representatives, was appointed Japanese Minister to Italy on the 7th inst.

MR. ISHII HACHIROEMON has been chosen as representative for Kamakura in the Kanagawa Prefectural Assembly.

THE resignation of Mr. Isahaya Ichigaki, a member of the House of Peers, was accepted on the 7th inst.

A DESPATCH from Sendai reports that a rumour in current that Governor Funagoshi, of Miyagi, has sent in his resignation.

THE Chrysanthemum gardens at Dangozaka, Tokyo, will be opened to the public on the 20th inst.

MR. ODA SEIBEI, representative of the highest taxpayers in the Upper House for Miyazaki Prefecture, died on the 3rd inst., in the 32nd year of his age.

MESSRS. KOMATSU, President of the Yokohama Local Court, and Sugiyama, a Judge of the Tokyo Court of Appeal, were released from their posts on the 8th inst.

A FATAL explosion took place in an elementary school at Higashiku, Osaka, on the 6th inst. &

4.30 p.m., by which a teacher was killed, and three pupils wounded, two severely.

THE Japanese Standing Squadron, consisting of the *Chiyoda*, *Naniwa*, *Musashi*, *Yamato*, and *Katsuragi*, left Shinagawa on the 8th inst. on a cruise round the coasts of Hokkaido.

THE election to fill the vacancy caused by the resignation of Mr. Kataoka Shutoku, a member of the Chiba Prefectural Assembly, has resulted in the return of Mr. Tsuji Mokichi, a Progressionist.

KAWAMINAMI MASAO, a *shinoku* of Kagoshima, who gave himself up to the Kyoto Police the other day, confessing to having sent a bomb to Mr. Kono, Minister of State, was released on the 5th inst., his statements having proved false.

A SEVERE shock of earthquake was felt in Tokyo on the 8th inst. at 1h. 35m. 54s. p.m. The duration was 20 seconds, and the direction from E. to W., the maximum horizontal motion being 0.2 millimetre in 0.3 second.

DURING a severe blow on the 23rd ult. two fishermen belonging to Takenomura, Nina District, Shimane Prefecture, were drowned by the capsizing of their boat off the shore at Koromura.

THE quantities of tea that arrived at Kobe from the interior during last month, and were sold to foreigners were 552,800 *kin* and 611,700 *kin* respectively, the quantity that remained in stock on the 30th ultimo, being 50,034 *kin*.

THE foreign trade of Soul, Korea, during July last amounted to yen 6,351,969 in value, of which yen 3,252,284 represented imports of Japanese goods, and yen 2,650,100 imports of other foreign commodities, and yen 439,585 exports.

THE 7th inst. being the 3rd anniversary of the birth of H.I.H. Princess Fumi, Imperial messages with presents were despatched to her Palace at Azabu by Their Imperial Majesties the Emperor, Empress, and Empress-Dowager, and H.I.H. the Crown Prince.

PRINCESS MORI, Marchioness Nabeshima, Countesses Ito, Inouye, Matsukata, and Kuroda, Viscountesses Miyoshi, Kabayama, and Mrs. Kuki have been commanded by H.I.M. the Empress to form the Committee of the Tokyo Charity Hospital.

THE following naval appointments were gazetted on the 6th and 7th inst.:—Saito Yuzo to be Paymaster of the *Fingei Kan*, Hagiisawa Kwan-ichi to be Surgeon of the *Itsukushima Kan*, Nakajima Saiya to be Surgeon of the *Musashi Kan*.

MESSRS. HORIBE KATSUSHIRO, Okuda Masaka, and several others of Aichi Prefecture have received Government sanction to establish a go-down company to be called the *Nagoya Soko Kaisha* with a capital of yen 200,000. The premises are to be constructed near the Nagoya Railway Station.

A TELEGRAPHIC message from Kobe brings the intelligence that on the 6th inst., while efforts were being made to float the *Kure Maru*, now lying in deep water, having collided with the *Hiroshima Maru*, the hawsers snapped and the vessel foundered. Two workmen were drowned, and some ten were injured.

SOMEWHAT severe shocks of earthquake were felt at Nagoya on the 6th and the 7th inst. Since the occurrence of the disastrous earthquake of October last, 1,168 earthquakes have been registered at that town. The number of

shocks felt in Tamba and Haguri Districts of Owari Province during the same period, total twice this amount.

NAKANO and Takashima Divisions of Yuraku District in Gumma Prefecture were visited by a violent hail storm on the afternoon of the 1st inst., which raged for about half an hour. Some stones are said to have been over 5 *momme* (one *momme*=58 grains troy) in weight, and accumulated to a depth of almost three inches. Much damage was done to the crops.

A MAN named Yoshino Isobachiro, formerly a reporter on the staff of the *Hokuriku Shimpō*, who enthusiastically supported the interests of the *Fuyu-jo* candidate in the last general elections in Ishikawa Prefecture, was sentenced on the 6th inst. in the Kanagawa Local Court, to major confinement for three years, for having fatally assaulted a political opponent during the election disturbances.

THE hearing of an appeal raised by Mr. Kitahara Rokuzo, of the *Yokohama Boyeki Shim-bun*, against a decision of the Local Court, by which he was sentenced to two months' major confinement for having traduced officials, concluded in the Tokyo Local Court on the 7th inst. He has now been sentenced to major confinement for one and a half months, and fined seven.

SALES in the principal lines of imported goods were somewhat smaller this week, but the lull was to be expected after the large buyings of the previous fortnight. Prices are still maintained, sellers refusing the offers of inland merchants, but the hardening exchange will no doubt enable them to come down a point or so without disadvantage within the next few days. There appears to be a slight scarcity in certain descriptions of woollens and several orders have been booked for arrival. Metals are moving off at unchanged rates, the native stocks having run low. Country traders seem anxious to lay down their winter supplies of Kerosene, fearing a further possible rise, and quotations are firm. A rise of 20 cents. has taken place in Brown sugars, buyers rushing in to replenish their extremely low stocks before a further appreciation of silver takes place. So anxious indeed are they, that delivery has been taken from the hatoba, and "futures," at higher rates, have changed hands in several instances. There is very little to note in Tea, sales being moderate and business lacking life. Another "boom" in Raw Silk took place during the earlier part of the week, and settlements to the amount of 2,178 piculs are registered by foreigners. The "leviathans" managed to clear the ground of certain grades of silk now in free demand in the States, but the market closes steady. Quotations are falling in sympathy with the rise in exchange, but holders still only look with favour at top prices. Owing to the rapid selling during the last three months, summer reelings are getting scarce, while there is some falling off in colour, quality and general preparation. The business in Waste Silk has been chiefly confined to two or three operators, who, competing with one another, have paid high rates for good fibre. Settlements for the week are 2,331 piculs, but stocks are heavy, and everything tends towards a lower market somewhere in the near future. The total export figures of Raw Silk, up to the present, is 19,919 piculs against 14,425 piculs last year, and 4,731 piculs the year before. In Waste Silk the figures are:—1892, 6,674 piculs, against 4,495 piculs in 1891 and 3,828 piculs in 1890. Exchange is slowly advancing and a return to 3/- for sight should not be far distant, provided that silver continues to rise in London.

EDITORIAL NOTES.

COUNT SAIGO.

COUNT SAIGO, President of the National Union, and his followers have been making a political tour in the north-eastern provinces, and their movements have been reported in our columns from time to time. Their absence from Tokyo extended to nearly two months, and it was understood that they projected a visit to Sendai and its neighbourhood after their last meeting at Shirakawa in Fukushima Prefecture. Meanwhile Nagano, Ishikawa, and Yamanashi Prefectures sent invitations to them, but as they had no time to spare, and conferences had to be held in Tokyo soon, they left Shirakawa on Thursday, the 6th inst., for the capital, and arrived at the Ueno Station on the afternoon of that day. There they were met by Mr. Inouye Ki, a Privy Councillor, Messrs. Sone, Furusho, Abe, Maki, and several other members of the Diet, as well as by about a hundred members of the National Union. Proceeding to the office of the Party in Shiba Park, Count Saigo delivered a short speech, in which he declared that he and his followers had been welcomed everywhere, and that he was pleased to think that he had made a large number of new acquaintances. Subsequently Messrs. Arai, Hayakawa, and Ooka related the principal incidents of their travels, and the meeting broke up at 4 p.m.

The *Hochi Shimbun* reports that while Count Saigo and his party were at Honjo in Akita Prefecture, the supporters of the National Union entertained them at a restaurant. Soon after they had sat down to dinner, one of the guests was taken suddenly sick, and presently everybody began to feel ill, Messrs. Nita and Hayakawa, members of the Diet, suffering conspicuously. Some one cried out that the keeper of the restaurant was probably a member of the Popular Party and had poisoned them all. A barrister among the guests forthwith began to talk of a criminal case, and for a moment much excitement prevailed. But fortunately, a very well-known supporter of the Popular Party and his son were among the *invités*, and it was observed at this juncture that the father was tending his son who had been taken violently sick. People began to reflect, therefore, that the thing could not have been instigated by the Popular Party. Subsequent investigation showed that the cook had boiled a certain kind of sea-weed in a copper saucepan to make jelly, and the saucepan being old, the jelly had emerged in a very deleterious condition. Fortunately no one was seriously injured.

The President of the National Union returned from his political tour a few days ago, but has decided to start again for Miyagi Prefecture on Wednesday next. Messrs. Ooka Ikuzo, Furusho Kamon, Arai Go, Kawamura Jun, and Yamana Jiro are to accompany him. The Count is expected to return to Tokyo in about a week.

MR. ITO KENKICHI M.P. V. THE "KAISHIN SHIMBUN."

In connection with the singular occurrence which occupied the attention of the House of Representatives on the closing day of last session, the *Kaishin Shimbun* published a statement to the effect that Mr. Ito Kenkichi M.P. had been engaged distributing bribes to some members of the Diet to induce them to vote for the appropriation on account of constructing men-of-war. This assertion appeared in the columns of the *Kaishin Shimbun* on the 22nd June 1892, and Mr. Ito at once instituted a libel suit against the *Kaishin*. The case came up for hearing on Friday last, Messrs. Miyake, and Aoki, acting as counsel for the plaintiff, and Messrs. Isobe, Kubota, Asakura, and Hatoyama for the defendants, namely, the Editor and Publisher of the *Kaishin Shimbun*. Judge Matsunaga presided, as Chief Judge. Mr. Inagaki Shimesu, M.P., appeared as a witness, and after he had answered the usual preliminary questions, the Judge asked one of the counsel for defendants to explain the

nature of the evidence which they sought to obtain from Mr. Inagaki. Thereupon Mr. Asakura rose and said that the news published in the *Kaishin Shimbun* on the 22nd June, to the effect that Mr. Ito Kenkichi and Mr. Inouye Kakugoro had been guilty of distributing sums of from yen 200 to 800 yen to certain members of the Diet, to induce them to support the appropriation for the construction of men-of-war in the third session of the Diet, had originally been reported by Mr. Segawa Mitsuyuki, one of the staff of the *Kaishin Shimbun*, who alleged that he had received the information from Mr. Inagaki Shimesu, M.P. The defendants therefore desired that Mr. Inagaki should state exactly what he knew on the subject. Mr. Inagaki replied that he had indeed informed Mr. Segawa of the alleged facts, because he believed them to be true. One evening Mr. Kuga had come to him, and implored him to vote for the Bill referred to, saying that if he would promise to do so, an appropriate reward should be given to him. Mr. Kuga had further explained that several members had already consented to vote in the desired sense, and that, as he was distinctly informed, Mr. Inouye Kakugoro and Mr. Ito Kenkichi had been the means of inducing Messrs. Tatekawa Okazaki, and Chiba to pledge their votes in consideration of receiving sums varying from yen 200 to yen 800. Mr. Kuga also represented himself as instructed by Mr. Okamoto Masanosuke, who had been commissioned by Mr. Honshuku, Superintendent General of Accounts in the Naval Department, to approach Mr. Inagaki with a similar proposal, and to offer him yen 200. But Mr. Inagaki, indignant at the nature of such corruption, refused the offer, and told Mr. Kuga that he should disclose the scandalous procedure in the Diet. Mr. Kuga thereupon implored him to keep silence, but he, deeming it his duty to divulge the truth, had told the story to Mr. Segawa, and had subsequently brought up the subject in the House. The result of the latter step had been a secret session on the 14th of June. Returning home somewhat early on the evening of that day, the witness had met Mr. Inouye Kakugoro, who stopped him and said:—"Why did you make such cruel revelations. You have caused me much annoyance." Mr. Inagaki thereupon asked how Mr. Inouye proposed to defend himself, but Mr. Inouye refused to inform him, saying that it would be known soon without telling. "I should not have believed," continued Mr. Inagaki, "the word of Mr. Kuga so readily had not a similar offer been made to me previously by Mr. Okamoto with regard to the question of the land-tax. Mr. Okamoto asked me to vote against the Bill for the Reduction of the Land-tax; and declared that if I promised to do so, he should pay me two or three thousand yen at once. But as I was in favour of the Bill, I declined to agree." Mr. Inagaki further alleged that he had been asked by Mr. Inouye Kakugoro to work with him in pushing his policy, for which service from five to seven hundred yen would be given to him. This offer had been made to him soon after his arrival in Tokyo after the general election, but he had refused to accept it, because Mr. Inouye's policy was different from his. "Having already had all these offers," concluded the witness, "I believed that Mr. Kuga was telling me the truth." The Court, at this stage, adjourned till the afternoon. On its re-assembly, the counsel for the defendants asked the Court to summon Mr. Yamada Toji, Chairman of the Special Committee of the House of Representatives, which had been appointed to investigate the Bribery Case, so that he might be asked to state what had transpired in the secret session. But the application was refused on the ground that such a step would contravene the Law of the Houses. It was proposed to summon several other witnesses, but the Judge considered it unnecessary. Mr. Kubota, counsel for defendants, applied to have the proceedings postponed for that day, in order that Messrs. Okamoto and Kuga might be summoned to give evidence. The Public Procurator supported this application, but the Judge would not grant it. Finally,

Mr. Yamamoto, Public Procurator, argued that though the *Kaishin Shimbun* alleged that the publication of the news had not been for the purpose of libelling Mr. Ito Kenkichi, but in the interests of the public, the evidence adduced by the defendants was not clear enough; nor could the testimony given by Mr. Inagaki be considered sufficient to establish their case. Therefore, the defendants ought to be dealt with according to the provisions in Clause 2 of Art. 358 of the Criminal Law. The Court was closed at 3.20 p.m.

The Judge, in this case, appears to have been guided by the principle that no evidence was admissible except that which bore directly upon the plea advanced by the defence. On the part of the *Kaishin Shimbun* it was not claimed, so far as we can see, that the accusation made in that journal's columns against Mr. Ito Kenkichi was true. The paper did not undertake to prove its allegations, but confined itself to pleading that it had them a trustworthy source, and that it had published them, not with any malicious or libellous intent, but in the interests of public morality. This defence excluded the testimony of any witness except Mr. Inagaki Shimesu, with whom alone the reporter of the newspaper had communicated, and as Mr. Ito figured in Mr. Inagaki's story at third hand only—Mr. Inagaki had been told by Mr. Kuga who had been told by Mr. Okamoto who had been told by Mr. Ito—it is probable that the Court will not consider the basis of the story sufficiently solid, so far as concerns Mr. Ito. But, for the rest, it is an ugly tale. Mr. Inouye Kakugoro figures in an especially equivocal light, for with respect to him there is a direct allegation, namely, that he offered a sum of money to Mr. Inagaki if the latter would support him in the House. Mr. Inouye is not directly implicated in the libel suit, but it is of vital importance to him as a politician to be able to obtain a verdict at the bar of public opinion, and he now stands arraigned on an ugly charge. We trust that the career of a man so gifted is not destined to be tainted thus early by the breath of corruption.

The civil suit brought by Mr. Ito Kenkichi, M.P., against the *Kaishin Shimbun* for libel, was heard at the Tokyo Local Court, on Saturday the 8th instant. The ground of action was that the newspaper had published matter charging Mr. Ito with receiving bribes in his capacity of member of the House of Representatives. We have already reported a portion of the proceedings in the criminal case between the same parties. The Court opened at 11.10 a.m. Messrs. Miyake, Yamamura, and Aoki, represented the plaintiff, and Messrs. Ichijo, Kubota, Asakura, Tomita, Hatoyama, and Isobe appeared for the defendants. Mr. Miyake, counsel for the plaintiff, demanded damages to the amount of 2,100 yen as an indemnity for injury done to his client's reputation. He said that the plaintiff, being a member of the Diet, his conduct is watched by the empire, and no libel more injurious could possibly be uttered than the statement published by the defendants that his convictions had been changed on account of the receipt of a bribe. The indemnity demanded was calculated on the basis of the cost of advertising. The number of newspapers published in the empire was about 120, and in each of them an advertisement of 50 lines would have to be published for 7 days, the total cost of which, estimated at 5 yen per line, would be 2,100 yen. Mr. Asakura, counsel for the defendants, denied that any such indemnity was required, inasmuch as the proceedings of the Court as well as the judgment would be published in the newspapers, which would suffice to rehabilitate the reputation of the plaintiff. Mr. Hatoyama, who also appeared for the defendants, denied that any such precedent as that proposed was recognized in Japan, and argued that as a man's honour cannot be estimated in money, the question of indemnity ought to be left to the Judge. Mr. Isobe, another counsel for the defence, rose at this point and inquired:—"May I con-

sider that Mr. Ito's honour is only worth 2,100 *yen*? a sally which provoked loud laughter in Court. Mr. Aoki gravely replied that the price of Mr. Ito's honour was inestimable, but that 2,100 *yen* only was demanded in connection with the present suit. Mr. Isobe then urged that no such indemnity was required to enable the plaintiff to reestablish his reputation. In France a franc is sometimes asked for, simply as a sign that the complainant's innocence is established, and he thought that such a course would meet the exigencies of the present case. The Public Procurator supported the plaintiff; and the Judge announced that he should deliver his decision on the 14th instant. The Court rose at 12.30 p.m.

The *Kokkai* states that Mr. Kuga, whom Mr. Inagaki Shimesu gave as his authority for the charges of bribery, intends to institute a suit against that gentleman on account of the statements made by him in the Criminal Court, which statements, Mr. Kuga alleges, were fabricated by Mr. Inagaki and are calculated to injure the reputation of the complainant.

MR. OI KENTARO.

A REPORTER of the *Kokkai* recently obtained an interview with Mr. Oi Kentaro, who is now busily engaged organizing the Eastern Radical Party. Mr. Oi said that, in pursuance of his project, he had held a meeting at Shimodate, but that the attendance had been much smaller than he expected, owing to another meeting being held by the Radical Party at Mito on the same day. He was nevertheless of opinion that his strength in the eastern provinces was now an assured fact, and, further, that he can count on a number of supporters in the western provinces, especially in Gifu, Shizuoka, Miye, and Osaka. The ceremony of inaugurating his new party is to take place at the end of the present month; and the avowed objects of the party are to sweep away all the accumulated Administrative abuses; to reconstruct the organization of the Opposition, which is now based on the control of the members of the Diet, and to amend the system of centralized political power in the sense of distributing it among local districts, the prime aim contemplated being to eliminate petty clashing of personal interests, and to concentrate political effort on the great affairs of the country. Such being the objects of the new association, Mr. Oi proposes to commence with the most difficult question of the day, i.e. Foreign policy. The reason of Treaty Revision not being accomplished is, according to him, that the Government has always slighted popular opinion, and the people have always attacked the views of the Government in return. Such a difficult question cannot possibly be settled unless the Government and the people work together harmoniously. Further, as slow and gradual progress is absolutely necessary, the Eastern Radical Party proposes first to approach the problem of regaining tariff autonomy, and when that is settled satisfactorily, other matters relating to foreign policy can be taken in hand.

TROUBLES IN KUMAMOTO.

AFTER midnight on the 29th ultimo, says the *Hochi Shimbun*, Takata Juro, Sakurai Koki, Makino Yuki and other well known members of the *Kokken-to*, assembled to the number of about 600, and, dividing their force into several parties, suddenly invaded Dakema Division. They knocked at the doors of members of the Popular Party, and shouted "Open! Open! An important message from Mr. Masunaga!" Mr. Masunaga being a distinguished member of the Radical Party, the door were opened in most cases, whereupon there followed an inrush of about ten men carrying drawn swords, who bound the master of the house with ropes, and carried him away to the residence of Mr. Hashimoto Kichizo, a member of the *Kokken-to*. These disorderly proceedings continued throughout the night, some forty members of the Popular Party being abducted by force. Strange to say, the police stationed in the village took no notice of what

was going on, nor did they communicate the fact to the Yamaga Police Station. On the other hand, whenever they saw any member of the Popular Party carrying a stick for self-preservation, they took it from him. On the 1st instant when a certain Mr. Takaki Buntaro, a member of the Popular Party, was entertaining some of his friends in his house, fifty men suddenly invaded the place, carrying naked blades. Mr. Takaki and his visitors retreated up-stairs, and drew away the ladder of communication, whereupon some of the rowdies thrust their swords through the mats, and demanded with threats where the fugitives were hiding, but receiving no reply, they smashed every article of furniture in the room and destroyed the *tatami* and *shoji*. At last the retreat of Mr. Takaki and his friends was discovered, and the invaders, forcing their way to the upper story, plied their sticks and fists so vigorously as to disable the unfortunate Radicals, whom they finally bound with ropes and dragged them through the street to the *Kokken-to* club. Messrs. Takaki, Nakamitsu, Masuda, and three others were all seriously wounded. Mr. Shiro Maiao, one of the men captured during the night of the 29th ultimo, escaped and carried information to the Police Station and the local authorities, when some gendarmes at once went to the rescue, and the Public Procurators promised that commissioners should be sent immediately. Mr. Shiro despatched messages to various political friends in the neighbourhood, and these assembled in considerable force and marched to Dakema Village. The rowdies having notice of their coming, built a fortress on a hill commanding the road, and when the Radicals approached, missiles were hurled down on them so that they could not pass and had to beat a retreat. A political meeting of the Popular Party was to have been held at Yamaga on the 1st instant, and Messrs. Furusho Kanjitsu, and Tanaka Kencho were staying in the town for the purpose. But soon as the above disturbance was reported, they retreated to Kumamoto, and gave information to Mr. Nakanishi, Chief Public Procurator, and other authorities. Among the roughs who invaded Mr. Takaki's house Somemaki Kumashichi, Otsuka Eikichi, Mino Tamekichi, Murata Masakichi, and Yamaguchi Chohachi are known, and of these the three former have been already arrested.

We have given these details exactly as they appear in the *Hochi Shimbun*, but they will of course be received with caution as an obviously *ex-parte* statement. Experience has not taught us that accounts of election disturbances published by either *Jiyu-to* or *Kaishin-to* organs can be taken without the proverbial grain of salt, though we do not pretend to think that there is any deliberate intention of misrepresenting facts, or that political bias betrays the writers into stronger partiality than is provoked on similar occasions in our own country. We know what complexion the Radicals in England imparted to the action of the Irish Constabulary, though no more loyal or scrupulous policemen are to be found anywhere. The constables stationed in the Dakema Division of Kumamoto are probably maligned by the *Hochi's* accusation of wilful indifference to the lawlessness of the *Kokken-to* and undue harshness towards the Radicals.

On the 6th instant Mr. Matsudaira, Governor of Kumamoto, who is now in Tokyo, received the following telegram from the Kencho in that Prefecture:—"In the disturbance at Dakema village, one of the *Jiyu-ha* and another of the *Kokken-ha* were wounded, but neither is seriously hurt, nor are the wounds caused by swords. No destruction of any house is reported, but in six houses belonging to members of the *Jiyu-ha*, *shoji* and articles of furniture were destroyed; and one house of the *Kokken-ha* suffered similarly. Five of the *Kokumin-ha* and two of the *Jiyu-ha* have already been arrested, one of the five having been apprehended by a gendarme. There is one more of the *Jiyu-ha* still to be arrested. Hoping to obtain a majority in the election for the Divisional Assembly, the *Kokken-ha* partisans captured 22 of the *Jiyu-ha* members,

and kept them in a closed room, but the police released them, and sent them back to their houses. Things have been very peaceful since." This telegram shows that the stories sent to Tokyo and published by the vernacular press are, for the most part, great exaggerations. Nevertheless it is evident that the violence has been chiefly on the side of the *Kokken-ha*.

THE THIRTY-THIRD NATIONAL BANK.

ON Monday the 3rd instant, Messrs. Shibusawa Eichi, Abe Taizo, and Suyenobu Michinari, who form the Committee appointed to make a final settlement of the affairs of the Thirty-third National Bank, convened a meeting of creditors at the Bankers' Hall. Out of 20 creditors 15 were present. Mr. Shibusawa took the chair, and reported the arrangements that had been come to in various matters relating to the bankrupt concern. Mr. Suyenobu then asked whether resolutions were to be passed by a majority of those present, or whether unanimous approval would be necessary. Were the Commercial Code in force, the express provisions of Art. 1036 would have been adopted—namely, that resolutions in such cases are binding if passed by a majority of those present, provided that their claims aggregate more than a moiety of the whole indebtedness. But no such rule was considered applicable under existing circumstances, and it was therefore decided to submit the question to the Minister of State for Finance. The next business was to determine the amount of the Bank's assets. These were found to aggregate something over 237,000 *yen*, the liabilities being 800,000 *yen*. It was explained that, owing to various circumstances, the whole of the assets could not be collected at once, some were payable monthly and others annually. To call up the whole immediately would involve the necessity of making certain reductions. The Committee therefore asked the creditors whether they were content to entrust the matter to the hands of the Committee. One of the creditors demurred, on the ground that, as ultimate payment must be exacted whether one year or thirty were involved, the best plan would be to make immediate collection. But the remaining fourteen creditors opposed this view, and declared their willingness to leave the matter in the Committee's hands. After some further discussion a resolution was finally taken that the whole management of the affairs of the Bank be entrusted to the Committee.

THE ANTI-FOREIGN TROUBLES IN CHINA.

It appears that the anti-foreign agitation is not at an end in China. Two reports published by the latest files of newspapers in Shanghai show that the spirit of unrest is abroad again. The proximate cause of excitement is the appointment of the well-known and liberal Mr. Wu Tacheng to be Governor of Hunan in place of Governor Chang, who seems to have made himself acceptable to the "patriots" of that peculiarly bigotted province. H.E. Wu is believed, probably with justice, to have been chosen for the governorship because the Viceroy Chang Chih-tung wishes to wean the people to a more liberal attitude, and as the people, or at least a section of them, would much rather remain in their present state of infantile conservatism, they object to the prospect prepared for them. Accordingly, there has been a new crop of anti-foreign literature. Dr. Griffith John conjectures that the old offender Chou Han is the author of the latest brochures. Chou managed to evade the consequences of his original outburst of fanaticism. He succeeded in getting himself officially reported as a fugitive lunatic, whereas the printers who published his writings were thrown into prison. It is suspected that the so-called madman has collected his wits sufficiently to compose a number of fresh essays, the chief purpose of which is to excite popular feeling against the new Governor Wu. The brochures boldly declare that Wu is banded with the barbarian devils, and that the latter, "whose covetous eyes have been glaring on Hunan for several decades with tiger-like fierceness," will quickly follow him in order to erect chapels and open places of business, the

result of which procedure would be "to eternally deprive the countless myriads of Hunan of the wherewithal to support life. There is much more in the same style. The people are openly incited to rebel against Wu's authority, and Kuo Sung-tao, the first Chinese Minister to Europe, as well as the Marquis Tseng, are denounced as devils and foes of their country. The anti-foreign faction cannot be said to be acting with much astuteness when it pits itself thus openly against the authorities.

The second incident alluded to above was a big meeting of students in a temple in Ch'angsha (in Hunan.) The three colleges and the twelve districts of the Fu were represented, the Presidents of the Colleges being present. It is also stated that the notorious Chou Han was among the audience, making himself particularly busy. The purpose of the meeting was to protest against the coming of Governor Wu, but we do not learn that the character of the proceedings was indicated in any way, except by placards pasted on the walls, denouncing the new Governor and inviting the people to exterminate foreigners. The most significant incident of the affair was a distribution of anti-foreign and anti-Christian literature on a large scale. The correspondent of the *North China Daily News* estimates that something like a thousand dollars must have been spent for the purpose of disseminating these vile tracts, among them being an unabridged copy of the notorious "Death Blow to Corrupt Doctrine." Naturally this correspondent observes that such doings constitute a striking commentary on the despatch addressed a year ago by the Tsung-li Yamen to Lord Salisbury, attributing the anti-foreign riots entirely to the circulation of this inflammatory literature, and announcing the Imperial Government's determination to "take most stringent measures for its suppression." It is an interesting fact that among the brochures recently issued, there is one denouncing the Kolao Hui, against which society the Government itself is now carrying on such an active campaign. The appointment of H.E. Wu to govern Hunan is probably the best evidence yet furnished of the Peking Government's resolve to check this dangerous anti-foreign agitation.

A POINT IN THE NEW GAME LAW.

Busy politicians are already beginning to pick holes in the new Game Law. They claim that the Government has acted unconstitutionally in fixing the sums to be paid for hunting licences without consulting the Diet. This criticism is based on the view that such fees are a tax; that the Constitution guarantees Japanese subjects against all taxes not levied according to the provisions of law, and that no law can be enacted without the consent of the Diet. But are license fees a tax? We do not see how such a proposition could be established. An essential element in the definition of a tax is that it is levied for the purpose of defraying the expenditure of the State. A fee paid for the privilege of pursuing game does not satisfy, and cannot be made to satisfy, that definition. It is a purely optional payment, made by a man, not as a unit of the nation, but in pursuit of his own pleasure or profit. If gaming licence fees be a national tax, then the price which the City Authorities of Tokyo propose to charge to any householder who desires to avail himself of the new water supply, will also be a tax. It is altogether a perversion of terms to allege that the sum paid by a subject of his own volition in exchange for a certain privilege, and left unpaid by any one who does not desire to enjoy that privilege, is a tax.

THE LATE NAGASAKI FIRE.

We have considerable pleasure, says the *Rising Sun*, in stating that the contemptible miscreant responsible for the recent incendiary fire at the Great Northern Telegraph Co.'s office, which had a narrow escape from resulting in the loss of several innocent lives, has been tracked, thanks to the vigilance of the police, and a full confession obtained. And what adds considerably to our

feelings on the matter is the fact that the villain in question is the enterprising party responsible for the daring attempt, made a short time ago, to set fire to Dr. Arnold's house, a compliment which at the time was scarcely appreciated, but is now thoroughly understood. The double incendiary, and would-be murderer, is named Fukui Kamakichi, and he was discharged from a very good situation — a store *banto*, on suspicion of having left a door unlocked, when closing one night, with anything but honest intentions. He afterwards succeeded in getting several other situations, but of course lost them as soon as his employers got wind of his doubtful propensities. One of his last situations was at Dr. Arnold's, and from the chain of evidence now unfolded there is not much doubt that both the recent cases of incendiarism were the result of malice engendered in consequence of his dismissal from that place. In addition to this, however, the man must have been a confirmed pilferer, as upon his house being searched a most miscellaneous collection of stolen articles were discovered, many of which were of themselves sufficient evidence of guilt. There is one consolation, now that he is safe under lock and key, and that is, he is likely to remain there for a good few years to come. In connection with the matter it is some satisfaction to Mr. and Mrs. Kragh to know that their servants, who were at first suspected of complicity, are entirely innocent.

WHALING AND SEALING.

THE Russian Naval Authorities seem to have committed a blunder of which the utmost advantage will naturally be taken. The story of the affair appears in the columns of the *Kobe Herald*—

Early on the morning of September 10th the whaling barque *Cape Horn Pigeon*, Captain Scullum, of New Bedford, Mass., U.S.A., was looking for whales in the Okhotsk Sea in Lat. 46.30 N. and Long. about 146° E. The vessel was lying to under lower top sails when a schooner was sighted bearing down upon her. This schooner afterwards proved to be the *Marie*, a new and very fast little craft which had sometime previously been taken by the Russians for sealing. Those on board the *Cape Horn Pigeon*, never anticipating any trouble, quietly waited for the schooner to come up, Captain Scullum thinking she might want to communicate with him about something or other. But when the schooner came near enough, a boat was lowered from her in which a Russian naval officer and nearly a score of sailors, all armed with rifles and bayonets, pulled off to the barque. The officer, followed by his men, boarded the barque, and the long and short of it was that he arrested the *Cape Horn Pigeon* on suspicion of sealing, took her crew on board the schooner, put his own men in charge of the *Pigeon* and brought her into Vladivostok, the schooner arriving in port however, four days before the larger vessel. The result of the affair was that when the case came to be enquired into by the Russian Admiral it was satisfactorily proved that the *Pigeon* was perfectly guiltless of sealing, and after some days her papers were returned to her, her flag restored, and she was allowed to proceed. But she has lost her chance for this season, and her owners can justly claim very heavy damages from the Russian Government for the loss. The crew of the *Pigeon*, it is said, were treated with the utmost inconsideration by the Russians; they were refused food, and had it not been for the humanity of a Chinese comrade they would have starved. The Government allowed the crew 50 kopecks of food a day, well enough in its way—but unfortunately the men could never get possession of even this allowance. An interesting feature in connection with this affair is to be found in the fact that the Whaler was in Vladivostok early in July last, and ought therefore to have been known. The *Marion* was in port when the vessel was taken in under the Russian flag, but nothing could be done. Four days after arrival, however, the Stars and Stripes were again flying from the mast head, and the next thing, doubtless, will be the despatch of official representations to Washington and the lodgement of a claim for fifty thousand dollars, which the Captain estimates to be the amount of his loss.

THE ORIENTAL HOTEL, LIMITED, KOBE.

THE Report of the Directors of the Oriental Hotel, Limited, Kobe, states that the total earnings in working account during the year ended August 31st amounted to \$53,253.52;

showing a profit of \$8,552.26. After making reasonable provision for depreciation, viz.—On Buildings \$500.00, on Furniture \$937.50, on Steam Launch \$60.80, total \$1,498.30, there remains, after the payment of Auditors' fees (\$100,) a balance of net profit for the year amounting to \$6,704.72. From this amount an interim dividend of 5 per cent. on ordinary shares for the half-year ended 29th February, 1892, was paid on the 30th May last, absorbing \$3,700, leaving now available for distribution the sum of \$3,004.72. From this the Directors recommend the payment of a further dividend of 3 per cent. on the ordinary shares, making 8 per cent. for the year, and that the balance of \$784.72 be carried to credit of Reserve Account.

RAILWAY DIVIDENDS.

THE *Fiji Shimpo* says that the private railways expect to declare dividends at the following rates per annum as the result of their working for the last half year,—April to September:—Sanyo Railway, 3.3 per cent.; Kyushu Railway, 4 per cent.; Kansai Railway, 3.6 per cent.; Osaka Railway, 6 per cent.; Ryomo Railway, 6.5 per cent.; and Sanuki Railway, 6 per cent. With regard to the Koku Railway, the line between Tokyo and Hachioji, the *Pomori Shimbun* says that the brisk trade in silk considerably augmented its traffic, and the company is likely to pay a dividend, for the same interval, of 7½ or 8 per cent. As far as we can ascertain the dividends paid by these companies during the fiscal year ended last March, were as follow:—Sanyo Railway, 3.4½ per cent.; Kyushu Railway, 5.1½ per cent.; Kansai Railway, unascertainable; Osaka Railway, 5 per cent.; Ryomo Railway, 6.3 per cent.; Sanuki Railway, 4.2½ per cent.; Koku Railway, 6.6 per cent. The six months of the warm season include the busiest times for railway traffic in this country, but the past summer was not a very favourable one for these railways. Unless they do an exceptionally large business during winter, their dividends for the year, with perhaps one exception, are not likely to touch the figures of the previous twelvemonths.

MEMORIAL PAVILION.

SOME days ago we reported that a certain Mr. Shimizu of Shizuoka proposed to construct a pavilion in Ukojima to commemorate the promulgation of the Constitution and the convening of the Diet. As all necessary preparations have been completed, the promoters are now engaged raising subscriptions throughout the empire. The project has been strongly supported by the wealthy classes of the country, and the amount raised is already large. Mr. Shimizu proposes the erection of a stone monument 30 feet high, 10 feet wide and 2½ feet thick, the stone being obtained from Miyagi, where a beautiful kind called *Kiukmei* is produced. The inscription is to be carved by a well-known stone-cutter, Mr. Miya Kinen, and over the stone will stand a three-storied pavilion, the first floor 48 feet square and 36 feet in height; the second floor 24 feet square and 24 feet in height; and the third, 20 feet square and 20 feet high. In addition to portraits of famous statesmen and politicians placed in the second storey, as mentioned in a previous issue, various documents concerning the Imperial Diet, as well as reports of the proceedings of both Houses, are to be kept, so as to enable people to study the complete history of Parliamentary institutions of Japan.

A CHINESE PLOT IN AMERICA.

WE take the following from the *New York Sun*.—"The arrest of two Chinamen for an attempt to enter the United States by way of Canada has disclosed a plot against the life of the Emperor of China. The officials who searched the men found two cloths covered with Chinese figures and decorated with emblems. They were submitted to an expert in Chinese characters, who reported as follows: "In each case the documents are certificates of membership in Chinese societies. The smaller piece of cloth certifies that Leong Chou has joined a social society called 'Leong Jon How Tong,' at San Francisco. His initiation was on

Jan. 20th, 1883, and cost him \$3. The larger and more highly illuminated document tells a tale which would doubtless be very interesting to the Emperor of China, if known to that individual. It appears that a society exists in China, having for its object the removal by murder of his highness (sic) the Emperor. The society is called Yea Hing. Its President is Yeong Hoo. One Lung is the holder of the certificate in question, and was admitted to membership in Dec. 21st (year not named), in China, for which privilege he paid \$10. The dark red spot just below, on which I have placed a pin, is supposed to be a drop of blood from the veins of the heathen who was admitted to this particular class of highbinders."

COUNT INOUE AND THE KUMAMOTO QUESTION. It is reported in the columns of the *Yomiuri Shimbun* that the Japanese Christians who have been agitating in connection with the charges preferred against the Governor of Kumamoto and the Master of a Primary School there, were received in audience by H.E. Count Inouye, Minister of State for Home Affairs, on the 6th instant. The delegates were Messrs. Yokoi and Hiraiwa, both very prominent among Japanese Christians. In reply to their inquiries Count Inouye said that he already had cognisance of the affair, and had addressed a despatch on the subject to Governor Matsudaira, who had replied that the reports circulated were erroneous. "But," continued the Count, "whether the things reported were true or false, I hold most emphatically that a Local Governor has no business to interfere with the religious convictions of the people of his district. Were such a method of procedure permitted, we should have one Governor extending protection and countenance to the advocates of his own religious creed and seeking to impose disabilities on its opponents, while his successor might very possibly take a precisely contrary line. The result would be intolerable abuses. I have therefore issued most explicit instructions to Governor Matsudaira that on no account is he to interfere with the religious convictions of the people under his jurisdiction." Messrs. Yokoi and Hiraiwa expressed themselves satisfied with this assurance, but whether Governor Matsudaira will like it, is another question. Count Inouye is much too far-seeing a statesman to allow his judgment to be obscured by details in such a matter. Read between the lines, his instructions to Governor Matsudaira evidently mean:—"Rumour may have exaggerated, or even grossly misrepresented, the facts of the case, but I hold it a part of every Governor's duty to avoid the birth of such rumours. A Governor must act so that not the shadow of material shall be furnished for constructing suspicions of a disposition on his part to favour officially one form of religious belief and to discountenance another. An absolutely neutral and impartial attitude must be displayed in all his procedure, and if he becomes the subject of damaging imputations of favoritism, the consequences must lie on his own shoulders."

THE "KAISHIN-TO."

DETAILED accounts were published a few days ago of alleged dissensions among the leaders of the *Kaishin-to*, Mr. Takata Sanaye and others being represented as favouring a moderate policy, while Mr. Ozaki Yukio and his fellow-thinkers advocated implacable opposition to everything official. These tales have now been emphatically contradicted by the principal organ of the *Kaishin-to*, the *Mainichi Shimbun*. It is possible that the smoke was not entirely without fire, but as to this we are not in a position to hazard any conjecture.

ADVERTISING.

THE art of advertising is certainly carried to extraordinary lengths in Europe and America in these enlightened days. Evidently the most perfect form of advertisement would be a leading article setting forth the merits of the object advertised with all possible graces of style and attractions of metaphor or apologue. There is reason to think that even that point has already

been reached by some journals, but the great dailies still adhere to the fiction of avoiding any such collusion. They are steering, however, perilously near a complete fall, as may be seen by the following extract, taken from the columns of the *St. James's Budget*, where it appears in all the glory of leader type and in a place of honour among the leading articles:—

(FROM A CORRESPONDENT.)

Here is a little story which should gladden the heart of paterfamilias and convey a valuable hint to those about to become "English wives." An uncle promised his niece a wedding dress whenever she should stand in need of that commodity. The auspicious day on which such an article would be necessary hove in sight, and the uncle, true to his pledge, presented the young lady with a cheque for £50 with which to make herself beautiful at the important event. The young lady, wisely resolving to have competent advice on so momentous a subject, conferred with a friend who had some six months previous herself become an English wife. "An expensive wedding-dress is an odious extravagance," quoth the youthful matron. "I wish I had never thrown away my money on one."

"And yours was such a beauty!" replied the prospective bride.

"It was; but it is a white elephant now. I have never had a chance to wear it since. And my husband calls it a 'beastly thing,' and says it will never be any use until he's dead and I go to the hymeneal altar again. 'I'll sell it to you for a third of what it cost.'"

"It would just fit me. Our figures are so alike. And the rest of the costume, dear?"

"You can have the whole affair—veil, shoes, all. None has ever seen daylight since my wedding."

A long pause ensued. The maiden was considering the offer. Presently she said, "I'll tell you what I'll do, dear. I don't believe I'll buy a wedding dress at all. I'll hire yours for the occasion just as people hire their flowers for the same ceremonies. How much will you take for the use of it for one day?"

"Two pounds,"

"It's a bargain. What a capital idea! And I shall look just as well as if I had spent the whole £50 on a dress."

And this thrifty young damsel became an English wife in an exquisite costume which was glowingly described in all the ladies' and fashion papers, but for the use of which she paid only £2 sterling. And already, from this small beginning, there is springing up an industry which consists in the application of the "hire system" to wedding costumes. Soon, no doubt, we shall see numerous advertisements in this style:—

Young ladies about to marry.—Do not throw away your money on useless Wedding Dresses, but call at A. B. and Co.'s and see the things of beauty which you can hire for the day at most reasonable prices.

THE CODES.

It is stated that the Government has at last decided to appoint a special committee to revise the Codes and that the following experts will constitute it:—

CHAIRMAN OF THE COMMITTEE.

Marquis Saionji Kinmochi.

MEMBERS IN FAVOUR OF IMMEDIATE OPERATION.

Mr. Ume Kenjiro	Mr. Kishimoto Tatsuo
Mr. Hasegawa Takashi	Mr. Motoo Keizaburo
Mr. Yokota Kuniomi	Mr. Kumano Toshizo

MEMBERS IN FAVOUR OF POSTPONEMENT.

Mr. Obata Yoshine	Mr. Hozumi Yatsuka
Mr. Kinoshita Hiroji	Mr. Matsumo Teichiro
Mr. Tomii Masaaki	Mr. Murata Tanotsu

The *Nichi Nichi*, in publishing the above intelligence, says that both parties are fairly represented, but that the opinion of Marquis Saionji is still unknown. Some allege that he is in favour of immediate operation. The rules of the conference not having been yet prepared, it is difficult to say what method will be adopted in passing resolutions, but if the ordinary procedure be followed, and the chairman be empowered to give a casting vote when the members are equally divided, there is declared to be distinct advantage on the side of those who favour immediate operation, but we do not quite follow this reasoning. To us it seems that a Committee constituted like the above, with a virtually neutral President, may fight for many a year before the issue is decided.

ORIENTAL SOCIALISTS ASSOCIATION.

According to the *Yomiuri Shimbun*, Messrs. Miyaji Mohei, Tada Kanjiro and 125 others, lately organized a club under the name of the Oriental Well-wishers' Association (*Toyo Kiyu-kai*). The first matter taken in hand by the Association was the abolition of the gambling laws. A large number of supporters through-

out the empire joined the Association, and it was decided that a great conference should be held in Tokyo at the end of the present month. Further, the title of the association was changed to the Oriental Socialists (*Toyo Shakai-to*). The members intend to present to the Diet, next session, a petition praying for the abolition of the gambling laws, and they announce that their chief object is to protect labourers, artisans, and small farmers against the tyranny of employers and landowners. It does not appear that they hold any very extreme doctrines like those associated with Socialism in the West, but perhaps time will develop a similarity.

THE MINISTER PRESIDENT AND THE CODES COMMITTEE.

THE *Kokkai* publishes what purports to be a verbatim report of a portion of the speech delivered by H.E. Count Ito to the members of the newly appointed Codes Committee. How this speech was obtained, we do not know. It does not appear in the columns of the *Nichi Nichi Shimbun*, and the *Kokkai* represents Count Ito as having enjoined upon the Committee strict silence with regard to everything connected with their proceedings. Evidently under such circumstances we cannot accept the *Kokkai's* account as absolutely accurate, but it contains nothing that might not have been said by the Minister President. Versions, more or less extended or abbreviated, of almost all official utterances appear in the vernacular press. In many cases they must be partly conjectural. An important instance was that of the speeches said to have been recently delivered by Counts Ito and Inouye to the Local Governors. The proceedings of the periodical conferences of Local Governors are invariably private. No reporters are allowed to be present, and if anything gets abroad, it must be surreptitiously divulged. Hence the speech attributed to Count Ito on the occasion of the meeting of Governors and published by a portion of the vernacular press, could not be confidently accepted as a *resumé* of the views actually formulated by the Minister President. For this reason we did not notice it specially at the time, though as an intimation to the Local Governors that the Cabinet desired to stand aloof altogether from party politics, and that, consequently, the demeanour of the Governors in such matters must be strictly neutral, the speech may well have been uttered by Count Ito. The address now ascribed to His Excellency by the *Kokkai* runs thus:—"The subject which the Government submits for your deliberation is not the enforcement of the Codes, nor yet of a certain portion of them. What you are asked to consider is the effects likely to be produced upon the conduct of business by putting into operation from the beginning of next year such portions of the Commercial Code as are urgently needed from a legal point of view, the Law of Companies and the Law of Bankruptcy, for example; and again, whether if portions of the Civil Code, namely, the Law of Persons and the Law of Succession, be again subjected to revision, the remainder may be put into immediate operation without inconvenience. You, gentlemen, were concerned in the compilation of the Codes; owing to your positions in the Judiciary you have to do with the practical application of the laws, and as Professors in the University you are versed in the principles of law. We trust, therefore, that you will endorse the purpose for which this Committee has been assembled, and that you will employ all expedition in discussing the matters submitted for your deliberation. You will understand that it is not proposed to have decisions adopted by a majority vote in the Committee. What the Cabinet desires is to have the opinion of each member laid before it for purposes of comparison."

The address is said to have been of considerable length, but only the above portion is reported. From it we gather that the object of the Government is to discover whether some *via media* cannot be struck out with respect to the Codes. It will be remembered that at the last moment the House of Peers, when passing the Bill for postponement, added a proviso to the

effect that so soon as the revision of any portion of the Codes was completed, such portion might be put into operation immediately, without awaiting the date fixed in the text of the Bill, namely, January 1st, 1896. This provision was evidently dictated by a spirit of compromise. It completely changed the character of the Bill, for whereas the original proposal was that the operation of the whole of the Codes should be deferred for four years, the effect of the corollary, added at the eleventh hour, was to fix four years as the maximum period for the work of revision, and to sanction the enforcement of each portion simultaneously with the completion of its revision. The House of Representatives passed the Bill with the above rider, and upon the Government devolved the duty of elaborating some practical programme out of this decidedly indefinite outline. Apparently the desire now is to obtain the views of the best experts and most notable publicists, and fortified by these, to adopt some plan. The Committee's views may, and we sincerely hope that they will, indicate a practicable method of satisfying at once public opinion and the undoubted legal requirements of the empire. They may, on the other hand, show that no such method is available, and that the only resource is to undertake the huge and tedious task of revision *ab initio*. It is impossible to exaggerate the importance of the question to the Japanese nation. The Government does well to move with the utmost deliberation, and to adopt every precaution so that the country may not suffer from the effects of precipitate or hysterical action.

Apropos this subject, we may refer briefly to the singular criticisms that have been penned about the Cabinet's procedure in the matter of the Codes. Journalists, with ignorance so crass as to be scarcely credible, have accused the Ministers of deliberately flouting the Diet and public opinion by withholding from the Emperor a Bill duly passed by both Houses of the Legislature. These critics are obviously ignorant of the elementary fact that no such thing as a positive veto is provided by the Japanese Constitution. If a Bill passed by the Diet fails to obtain His Majesty's Sanction, the only method by which the public becomes aware of the fact is a negative one, namely, the non-promulgation of the measure in the form of law. The Constitution itself prescribes no procedure on this point, but the 32nd Article of the Law of the Houses says:—"Bills which, after having been passed by both Houses of the Diet and presented to the Emperor, may receive His sanction, shall be promulgated before the next session of the Diet." Hence, if a Bill which has passed both Houses is not promulgated, the fact that it has failed to receive the Imperial Sanction is negatively established. As to whether a Bill has been presented to the Emperor, and as to its fate when presented, the public, under normal circumstances, can know nothing until the opening of the next session of the Diet. Thus, writers who, on the ground that a Bill passed by the Diet last June has not yet been either promulgated or openly vetoed, accuse the Cabinet of violating the Constitution and flouting public opinion—such writers only exhibit their own ignorance of the whole question.

CEMENT FOR THE YOKOHAMA HARBOUR WORKS. If the materials used in Japanese public works were, as a rule, subjected to the amount of inquisitive criticism that has been lavished by the vernacular press on the cement purchased for the Yokohama Harbour Works, newspaper columns would be filled with this subject to the exclusion of all others. The latest sensation is an action taken by the Tokai Cement Company against the Governor of Kanagawa, because that official, when inviting tenders for the cement required to complete the works, limited the tendering companies to three, namely, the Asano Company, the Aichi Company and the Onoda Company. There is not the smallest doubt that the system of limited tender is permitted by the Law of Finance, and we shall not be surprised to hear that the Court has refused to entertain the suit of the Tokai Cement Company. Mean-

while, however, some of the vernacular newspapers are edifying their readers by suggesting various singular reasons for the action of the Kanagawa Authorities. The simple fact is, according to unimpeachable information, that not every manufacturer of cement in Japan can be trusted to supply a thoroughly serviceable article. It says nothing against the Japanese that such should be the case. On the contrary, considering how new the enterprise of cement-manufacture is, very great credit is due to them for having already attained such proficiency as to be able to supply cement for a work of the magnitude and importance of the Yokohama breakwaters. But the imperative duty of those carrying out the work is to employ only material that can be relied on, and, guided by this consideration, they limited the tenders in the present case to the three companies above mentioned. The journalistic friends of the excluded companies decline, however, to regard the matter in this light, and are disposed to infer favouritism and corruption to an extent that does more credit to their fancy than to their sincerity.

The Onoda Cement Company is especially singled out as the object of attack. The works of this Company are in Yamaguchi Prefecture, and much, if not the whole, of its capital was subscribed by *Shizoku* of Choshu. Naturally, therefore, Count Inouye, though not a shareholder, is interested in the success of the enterprise, and this fact furnishes excellent food for scandal to certain writers. They tell a story remarkable not less for ignorance than for imagination. When cement was first needed for the Yokohama Harbour Works, we read, Count Inouye wished General Palmer to use the Onoda product, but the General declined to do so on the ground that the cement was manufactured according to the German method, of which he had no experience. Now, however, strange to say, the cement has been found suitable, and when General Palmer submitted some objections to Mr. Mitsuhashi, sub-director of the Harbour Works Bureau, the latter declined to hear him, alleging that he had no business to interfere. To this story other items are appended, but they do not profess to be more than mere rumours or conjectures.

Could it have been possible to construct a clumsier tale? In the first place, the process employed at the Onoda Works is not German at all. In all essentials it is English, having been adopted by Germany from England, where there are numbers of works making cement in virtually the same way. In the second place, when General Palmer, nearly two years ago, in the course of an inspection of Japanese Cement Works, reached Onoda, we happen to know that he did not possess the slightest information about the origin or affairs of the Works. He viewed them simply from an engineer's point of view, and he found there first-class apparatus, an ample and judicious expenditure of capital, an excellent modern process, and good materials not only abundant but also within easy reach. The cement itself did not yet satisfy the stringest tests which were considered necessary, but time alone was needed to bring its quality to a high standard, and we presume that eighteen months of intelligent experience have placed the works abreast of the best in the empire. Truly we think that some of the Japanese journals should adopt as their motto "Axes to grind." They allow themselves to become the tools of any person who arrives with a story in which either a foreigner or an official figures, and the consequence is that they often make themselves extremely ridiculous in the eyes of discerning folks.

It is also reported that the Nippon Cement Company, Osaka Cement Company, and all the principal merchants in the capital who are engaged in the cement trade, assembled at the *Seikwa-ro*, Nihonbashi, on the 7th instant. They invited the attendance of Mr. Kanai Tsunenobu, Counsel for the Tokai Cement Company, and obtained from him minute details of

the case. After a long conference they all, except Mr. Asano Soichiro, agreed to assist the plaintiff in his suit. We suspect that they will have their trouble for their pains.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

A REGULAR meeting of the above Society was held on Friday, October 7th, at the rooms of the Geographical Society, Nishikonyacho, Kyobashi, Tokyo, Mr. Edmond R. Holmes in the chair. The minutes of the last meeting were taken as read, as they corresponded with the report published in the *Japan Mail*. After that the following gentlemen were proposed, seconded, and unanimously elected:—Messrs. H. Baehr, F. Grosser, J. Schedel, and R. Mitomo. A set of pamphlets entitled:—"The principles of a photographic lens simply explained," by Messrs. R. & A. Beck was distributed amongst the members, and a printing frame, of ingenious construction, by the same firm, was shown. This frame was of metal, except the back, and was of such construction that the whole of the print could be examined at once. A letter was read from the Secretary of the Photo-Club, Orahais, offering the use of the Club to any member of the Photographic Society of Japan who may visit Algeria. The new "Concentric lens" of Messrs. Ross & Co., was shown by Mr. W. K. Burton, along with work done by it, and by other wide angle lenses of the same focal length. The new lens did not give absolute definition with the maximum aperture of f-16, but it gave exactly the same definition at the edge as at the centre of a fairly large sized plate. With an aperture of f-22 it gave absolute sharpness very nearly to the edge of a plate 22 by 12, the lens being 12 inches focus and a flat object at right angles to the axis of the lens being focussed. In fact, the field was truly flat, and this was the first lens of which such a statement could be made. A "Universal" lens by the same firm was also shown. This was of the type of the "Rapid re-symmetrical," but was twice as rapid. It was an outcome of the new Jenel-optical glass. Mr. K. Ogawa, as well as Mr. Burton, spoke of its high qualities as a portrait lens. The Foreign Secretary had been asked to report on a sample of Mr. J.B. Obernetter's plates. He had found them very rapid, although not quite up to the rapidity of the most sensitive plates in the market in Japan, and of exceptionally good quality. A very ingenious portable metal tripod stand, each leg going into a small tin box less than 3 inches long, was presented to the Society by Mr. R. Mitomo. A set of small prints on bromide paper were shown by Mr. K. Arito, and were much admired. After a vote of thanks to the Chairman the meeting resolved itself into a *conversazione*.

UNION INSURANCE SOCIETY OF CANTON, LIMITED.

THE following report will be presented to the shareholders of the Union Insurance Society of Canton, Limited, at the nineteenth ordinary meeting to be held at the Society's offices, Hongkong, on Monday, the 10th October. The net premium collected for the year 1891, after deducting returns and reinsurances, amounts to \$1,298,031.71. After providing for a bonus of 20 per cent. on contributions paid in May last, there remains at credit of working account a balance of \$241,947.21. From this sum the Directors recommend the payment of a dividend of \$7.00 per share, equivalent to 28 per cent. on the paid up capital of \$25 per share, and an addition to the reserve fund of \$42,000, raising the reserve to \$842,000. The balance remaining of \$129,947.21 they propose to carry forward to meet liabilities and claims still outstanding, and thus close the account for the year 1891. The position of the Society for the present year, as far as it can be ascertained, is as follows:—Balance of working account to the 30th June 842,392.37; add estimate of premium to 30th September, \$330,000.00—\$752,392.37. Estimate of losses to pay, \$240,000.00—\$512,392.37. Since the general meeting the directors have had to deplore the death of the Hon. Phineas Ryrie, which took place on the 22nd February last, and the Hon. J. J. Keswick resigned his seat on leaving the colony. Mr. A.

G. Wood and the Hon. J. J. Bell-Irving were invited to join the board. In accordance with clause 110 of the articles of association, Messrs. D. R. Sassoon and C. J. Holliday retire, but offer themselves for re-election. Messrs. J. H. Cox and R. Lyall, auditors, retire, but offer themselves for re-election.

THE COUNT TOKUGAWA CASE.
KOJIMA TADASATO and others concerned in this strange case are now undergoing a preliminary examination before Judge Okada, and many witnesses have been summoned. It is rumoured that the result of the examination will probably be that a charge of obtaining money by false pretences will be framed against the prisoners. Several vernacular journals, the *Mainichi*, the *Fumuri*, etc., publish a report that when the barrister, Mr. Kojima, was negotiating with Count Tokugawa, Messrs. Oi Kentaro and Hisamatsu Shigeru, his fellow-barristers, advised him to abandon the affair, but Kojima refused to follow their counsel. Mr. Hisamatsu then went to see the Factor of Count Tokugawa and recommended him not to allow the Count to sign any promissory notes Kojima might bring, as such a proceeding must prove disadvantageous to both parties. But the Count signed the notes for some unexplained reason. As soon as Messrs. Oi and Hisamatsu ascertained the fact, the former went to Yokohama to find Kojima, who had preceded him, but unfortunately he failed to meet him. Returning, therefore, he waited for Kojima at the Shimbashi Station with Mr. Hisamatsu. Once more they advised Kojima to abandon the thing *in toto*, but he flatly refused to do so. His well-wishers, indignant at his obstinacy, declared that their friendship with him must cease thenceforth, and with that the three parted. The following morning Kojima was arrested. We give these stories for what they may be worth.

ROWING NOTES.

There appears to have been a certain amount of difficulty in getting up "Fours" to take part in the coming regatta, and, judging from the appended list of names, there will undoubtedly be more "squalls" amongst our oarsmen before the day arrives. A glance at the list of names will suffice to show this. Out of 26 men no less than 6 take part in both "Seniors' and Juniors'." This must produce discord before long, for, to do justice to his comrades, a man, say in the seniors', must put "all he knows" into that boat whilst there is time to practise. How Messrs. Hood, Gibbs, Eyton, Smith, Watt, and Kingdon, can manage to row in Juniors' and Seniors' we find it difficult to understand. Evidently there is no distinction between Juniors' and Seniors' here. This is, or appears to be, a sore point, and places the Committee in a most uncomfortable dilemma. Why not run the Club "Fours" as they are done in Kobe, where all who have graduated as "Griffins" have the option of rowing in the "Fours" at a following regatta. The words "Senior and Junior" otherwise are misnomers. Seven crews could easily be made up, and, although the club possesses few boats, the rowing could be done. The "Griffins" could row in a distinct race. A few boats ought to be made with fixed seats for Griffins, and no man allowed to enter a race where sliding seats are used until he shows a certain knowledge of rowing. Here is a suggestion for the Committee. It is a suggestion, that, if carried out, would revolutionize rowing in Yokohama. At the present time men absolutely raw and with no idea of rowing, are being continually put into Club Fours, much to the chagrin of old and experienced oars, who have the disagreeable work of getting the tyros into some sort of shape before the races. Quality not quantity is what should be aimed at. The latter we have, and the former we have, but the one is swamped by the other. Up till now the weather has been unfavourable for rowing. Northerly winds—and plenty of 'em—have produced heavy seas, and the undaunted "Four" venture out, and patronize the Creek. One hardly dares to offer a word of advice to our four representatives, yet, judging from what was done a few nights ago in the Creek, one might

be allowed to suggest to a certain member that he screw less. This is a common failing, and will prevent the boat getting a good "way" on. Of the Fours mentioned below, very little can be said, as only a few of the most enthusiastic have been out. When this rough weather clears off there will be a rush for boats, as well as a rush for men. Seniors will want some of the juniors, and the juniors will stand on the beach and cry aloud for their strokes. One more word with regard to the Interport race. We hear that Moore, the best of the Kobe men, cannot come up for the event. This brings down the betting on Kobe.

SENIOR FOURS.

Black boat—Kingdon, bow; Hall, 2; Hood, 3; Barton, stroke; —, cox.
Green boat—A. B. Smith, bow; P. Morriss, 2; J. Eyton, Jr., 3; Campbell, stroke; —, cox.
Blue boat—Watt, bow; Thompson, 2; Bengen, 3; Lane, stroke; —, cox.
Red boat—Gibbs, bow; Blanchard, 2; Burn, 3; Martin, stroke; —, cox.

JUNIOR FOURS.

Red boat—Mair, bow; Watt, 2; Kingdon, 3; Hood, stroke; —, cox.
Blue boat—Abbey, bow; Rogers, 2; Crouch, 3; Gibbs, stroke; —, cox.
Black boat—L. Eyton, bow; Kilgour, 2; Marshall, 3; J. Eyton, Jr., stroke; —, cox.
Green boat—C. Abenheim, bow; Favre-Brandt, 2; Schmidt, 3; A. B. Smith, stroke; Campbell, cox.

HARBOUR REGULATIONS.

It is twenty-five years since a harbour-master of Yokohama was appointed through the zeal of Sir Harry Parkes. It proved an easy billet, for owing to the impossibility of getting all the Powers to agree to any draft of harbour regulations, Captain Purvis' functions never went beyond drawing his salary. Since then the question of harbour regulations has been repeatedly on the tapis, and if its history could be accurately written, a remarkable tale of how not to do it would be the outcome. Yet everyone admits that some machinery for proper supervision and arrangement is essential, above all now that we are to have a harbour with breakwaters, piers, railways and all the luxuries. Accordingly, the Government has decided once more to undertake the work of compiling regulations, and the Minister of State for Communications, having been commissioned to choose a committee for the purpose, has nominated—says the *Nippon*—the following gentlemen:—

Mr. Kurino Shuichiro, Director of the Political Bureau in the Foreign Office.
Mr. H. W. Denison, Legal Adviser to the Department of Foreign Affairs.
Mr. Utsumi Tadakatsu, Governor of Kanagawa Ken.
Mr. Egi Chu, Councillor in the Department of Home Affairs.
Mr. Ishikawa Ariyuki, Controller-general of the Revenue Bureau.
Commander Dewa Shigetō, Department of the Navy.
Mr. Kawazu Sukeyuki, Vice-Minister for Communications.
Mr. Tsukahara Shuzo, Director of the Marine Bureau.
Mr. Komatsu Kenjiro, Councillor in the Department of Communications.
Captain J. M. James, Marine Bureau.

The above members of Committee are to hold their first conference on the 18th instant in the Department of Communications.

THE VERNACULAR PRESS ON THE APPOINTMENT OF THE CODES COMMITTEE.

THE appointment of the Codes Committee has roused journalistic interest to a high pitch, and furnished for the Opposition press an excellent topic to attack the Government. And not the Opposition press alone, for the *Nichi Nichi Shimbun* figures in the van of the assault, showing a degree of uncompromising hostility that must surprise the public. Our contemporary, having given a short history of the Codes, and then emphasized the fact that their postponement was voted by both Houses of the Diet, and only waits to be sanctioned by the Sovereign, proceeds to point out that four (query, three?) months have already elapsed, and yet the Government have taken no decided step, so that

it would almost seem as though the official intention were to ignore the resolution of the Diet altogether. The next session is drawing nigh, and the Houses will find no difficulty in passing a Memorial to the Throne on the subject, so that to stave off the question now is only to bring it on in a more acute form two months hence. Referring to the appointment of the Codes Committee, the *Nichi Nichi* argues thus:—"We do not say that the opinions of experts are unnecessary; nay, they are most important. But since the Bill has passed both Houses of the Diet, it is a legislative fact, and the Government will ultimately have to adopt a definite policy, even though a committee of experts be assembled to investigate the matter. If the Cabinet fail to adopt such a policy, it will be liable to the charge of shirking its responsibilities. But the Ito Cabinet knows well what is meant by a Responsible Government, and neither the Minister President nor his colleagues will venture to have recourse to any shuffling measure. Nevertheless, they must perceive that such a great undertaking as is apparently to be entrusted to the Committee cannot be accomplished in a month or two, and yet only about 50 days remain before the opening of the next session of the Diet. Do they really think that the task can be completed in so short a period, and that there will be enough time for the Committee to pass resolutions, for the Imperial sanction to be obtained, and for the Codes to be promulgated before the next session commences? If they do not, then the appointment of the Codes Committee can only be to perform the burial rites of the Bill passed by the Diet. Can such an act be called an act of the Ito Cabinet?" The *Nichi Nichi* concludes its first article on the subject by declaring that the only measure feasible for the Government is to obtain the Imperial sanction to the Bill, and then to devise machinery for amending the necessary parts of the Codes afterwards. In a second article, the same journal writes that the Codes are known to be full of defects and that their revision is imperative. To that end the Bill for postponement must become law. But if the Ito Cabinet consider it necessary to enforce the Codes whether they are perfect or not, what occasion is there to appoint a Committee now? In short, the Cabinet seems to lack courage to decide this, the most important topic of the day. The *Nichi Nichi* alleges that even those who desire the immediate operation of the Codes acknowledge their imperfection, while those who are in favour of postponement acknowledge their necessity, but urge that the present drafts require much alteration. Such being the case the two sides will be of one mind ultimately, if only the task of revision be completed. Why then does the Government hesitate to seek the Imperial sanction so that the Bill postponing the date of operation may become law?

The *Hochi Shimbun* views the question from several different stand-points, and concludes that if the Government approves the Bill passed by the Diet, it should become law at once; but if not, then the Codes should be enforced at once. Our contemporary finds it very strange that the Government neither expresses its opinion on the subject, nor adopts the resolution of the Diet, but simply appoints a Committee to formulate new views. But the *Hochi*, whatever may be the value of its general criticism, seems to write without due reflection; for the Codes cannot possibly be enforced before the date now actually fixed, January 1st, 1893, and the Government in of course not called upon to express any opinion until the Emperor's sanction has been given or withheld.

The *Mainichi Shimbun* attacks the Government roundly. It says that if the Ministers of State consider the resolution of the Diet worthy of respect, they ought to act on it at once; and if not, they ought to enforce the Codes at once. It sees no necessity for handing over the question to a Committee, and it charges the Cabinet with pusillanimity for having recourse to such a device. Moreover, it asserts that the persons appointed as members of the Committee,

with two or three exceptions, are all administrative officials under the control of the Cabinet. Is it a correct procedure on the part of a Cabinet composed of all the renowned statesmen of the empire to leave to the decision of subordinate officials one of the most important questions of the day, concerning which both Houses of the Diet have already passed a resolution?

The *Yomiuri Shimbun* argues that both Houses of the Diet having considered the problem profoundly, made all the necessary investigations, and passed the Bill after full debate, the Government, unless it regards the Bill as of little moment, is bound to seek the Imperial Sanction. If the Cabinet is perplexed, the proper course is to adopt the resolution of the Diet. But this view does not seem to have occurred to the Ministers. For a long time the Bill was laid aside, and now a committee is appointed to investigate it. Even though the Government has no intention of treating the Diet slightly, the latter cannot fail to draw the inference:—"A resolution adopted by 600 members of the Diet appears to have less weight than that of a committee composed of 12 young men. How small is the confidence which the Cabinet places in the opinion of the majority of the Diet!" The *Yomiuri* avows that it finds no words to defend the Cabinet.

The *Kokumin Shimbun* holds that the appointment of a Committee is too late. It would seem that though 60 (?) days have elapsed since the formation of the Ito Cabinet, their opinion on the question is still unsettled, and they intend to make up their minds after the Committee's report is received. How easy-going! The tone of the *Kokumin's* article is one of scornful reproach. It concludes that the Government does not propose to leave the resolution of the Diet forever inoperative, but intends to enforce a portion of it, and leave the rest for future consideration. That is not a manly method. If the Ministers deem it is necessary to enforce the Codes immediately, let them so do without hesitation. If they scotch the Bill by entrusting its investigation to the hands of a committee, who will be held responsible for the result?

All these journals from which we have quoted, with the exception of the *Nichi Nichi Shimbun*, belong to the Opposition. The *Hochi*, *Mainichi* and *Yomiuri* are *Kaishin-to* organs, and the *Kokumin* is strongly Radical.

COUNT YAMAGATA AND THE JUDICIARY.

H.E. COUNT YAMAGATA delivered, on the 8th instant, to a meeting of the Chief Judges of Appeal Courts and the Chief Public Prosecutors, a speech which we translate from the *Nichi Nichi Shimbun*:—"Gentlemen, I have requested you to assemble to-day, for the purpose of considering some points connected with the future policy of the Department of Justice. It has fallen to my lot to be appointed to the control of this Department. I cannot claim to have any experience in judicial business, and my one constant solicitude is that I may not prove unworthy of the trust reposed in me. Happily I am able to hope that with the assistance of you, gentlemen, whose knowledge of judicial affairs is extensive, I shall be able to discharge successfully the duties of my onerous position. Reviewing the situation, I find that, owing to the labours of Count Yamada when he presided over this Department, the various Codes of Law have been gradually compiled; the organization of the Law Courts has been put into operation; the basis of the Judiciary's independence has been firmly established; and the several affairs relating to the dispensation of justice have been almost brought to a state of completion. If this rate of progress can be preserved, there will be no difficulty in raising our judicial system and the conduct of its business to the standard of Western States. Yet, though the laws be ever so complete, if their practical application be not attained, neither can the foundations of the Judiciary's power be made sure, nor the advantages of the Codes be realized, nor the good results obtainable under the Con-

stitution be achieved. I observe that the newspaper press has of late been publishing rumours that reflect injuriously upon the conduct of this Department's business. These may be merely the gossip of the hour, but things that have no existence do not cast shadows, neither can there be smoke without fire. We cannot treat such rumours with complete indifference, and I earnestly hope that the officials upon whom judicial responsibilities devolve will devote themselves with such sincerity and judgment to the discharge of their duties, that no material whatever shall be furnished for the voice of evil report. In the management of affairs I need scarcely remind you that abuses spring from two sources, from the measure itself and from the men that apply it. The laws may be as beautiful and flawless as jewels of the finest water, but they will be futile and profitless if the men that administer them are incapable of the task. On the other hand, if the laws be faulty, evil consequences are inevitable. Therefore, what I would ask of you, gentlemen, is to consider the measures that should be adopted if the officials charged with the administration of justice are not properly qualified, and the method that should be employed to revise or supplement the laws in the event of their imperfection. I ask you, gentlemen, who are well versed in judicial business, to give me the benefit of your full counsels on the present occasion, and I trust by your co-operation to be able to avoid any serious errors."

This is a very significant utterance of the Minister of State for Justice. The vernacular press has been complaining of late, with considerable warrant, that there still remain in the Judiciary men of the old school who are not versed in foreign jurisprudence or competent to deal with the issues coming before the Courts of Law under the novel circumstances of the present era. That this should be the case is inevitable. The reconstruction of the Japanese Judiciary has been in progress for only twenty years, an interval much too short for the complete weeding out of men of the old school, whose presence was of course unavoidable. Little by little the ranks of the Judiciary have been recruited from students of the *Meiji* era, at first by a system of selection and subsequently in accordance with the method of public examination. But the process has necessarily been gradual, and before the old hands could be pushed out, the promulgation of the Constitution assured to the Judges life tenure of office. Under these circumstances, the final reform of the Judiciary must be aided by the Judiciary itself. The Judges must employ the pressure of conscience and counsel to eliminate any elements that impair the efficiency of the Bench. It is a distinctive trait of Japanese disposition that men are always ready to bow to the dictates of right, provided that those dictates can be clearly demonstrated. The Judges to whom Count Yamagata addressed himself will know how to facilitate the reform he has in view.

Although the Constitution guarantees tenure of office to all Judges, under the provision that "no Judge shall be deprived of his position unless by way of criminal sentence or disciplinary punishment," the Administration is not entirely without means of removing incapable men. For in the law by which disciplinary rules applicable to judicial functionaries are fixed, "all details as to suspension from office,"—we quote from Count Ito's Commentary—"as to placing on the Retired List, as to transfer of appointment, and as to superannuation, are to be mentioned." Thus, in the Law of the Organization of the Courts, we find the following two articles:—

Art. 74.—When a Judge becomes so enfeebled, either physically or morally, that he can no longer discharge his functions, he may receive from the Minister of Justice, in virtue of a decision by a general assembly of Judges of Courts of Appeal or of the Supreme Court, an order to retire from the Judicial Service.

Art. 77.—Judges, when they retire from the service, shall receive a pension, in conformity with the Law of Pensions.

These provisions have already been enforced

since Count Yamagata came into office. For Judge Komatsu Seiji, Chief Judge in the Yokohama Local Court, and Judge Sugiyama Kobin of the Tokyo Court of Appeal, have been ordered to retire under the Law of the Organization of the Courts. Judge Komatsu received his appointment in 1875, and was then employed in Osaka. Promoted to be Director of the Bureau of Civil Cases in 1887, he was transferred to the chief judgeship of the Yokohama Local Court in 1891. Having been one of the Commissioners for the compilation of the Codes, he is doubtless regarded as a man of ability, but apparently he is past his work. Sugiyama Kobin was a semi-official in 1869; in 1877 we find him serving as Secretary of the Department of Justice, and in 1887 he became a Judge. It is stated that two other Judges, fearing the same fate, have sent in their resignations, namely, Judge Hashimoto Gennosuke, of the Tokyo Court of Appeal, who became a semi-official in 1871, a Public Prosecutor in 1881, and a Judge in 1883; and Judge Ryokaku Hikoroku, of the Yokohama Local Court, a *Sanin* of the tenth grade whose record we are unable to trace.

NARROW ESCAPE FROM DROWNING OF SIR CECIL SMITH.

THE Penang correspondent of the *Straits Times* wires on September 24th as follows:—"As the police steam pinnace was coming down the Kinta River on Thursday with his Excellency the Governor and Messrs. Treacher, Denison, and Hanson on board, she struck a snag, and sank. All the officials were saved; but the Governor sank twice before he was rescued. Two servants are missing." It appears that Governor Sir Cecil Smith had been inspecting the railway and works at Kotah Bahru and was on his way down to Teluk Anson. After going about six miles down the river, and just at the confluence of the Perak and Kinta rivers, the launch which contained the Governor struck a snag, was apparently swung round by the current, capsized, and sank. Everyone on board was precipitated into the water. The attention of the other launch, which was about two hundred yards ahead, was attracted to the mishap by a shout, and she was immediately turned back to render assistance. In the meantime his Excellency had been rescued by a Perak Malay, and by the time the other launch reached the spot all were safely on shore except a Chinese boy and a Malay, who sank and were never seen again. Fortunately the catastrophe occurred only about from twenty to thirty yards from the bank. A Malay was steering the launch at the time; but no blame whatever is attributed to the steering, for it is impossible to tell where a snag may be. A quantity of baggage was lost. The accident occurred about 1 o'clock. After a brief rest, the Governor and the whole party embarked on the other launch and went straight on to Teluk Anson, reaching there the same evening. At once his Excellency embarked on the *Sea Belle* and came straight to Singapore. He experiences no bad effects from his immersion and is attending to his official business as usual.

MEMORIAL ON TREATY REVISION.

In the last session of the Diet the members of the *Fiyu-to* proposed to present to the Throne a Memorial on the Subject of Treaty Revision, which was supported by the members of the *Kaishin-to* and some others. But disagreement arose among the *Fiyu-to* members on the question of mixed residence. Mr. Oi Kentaro's party, the *Kwantai-Kai*, announced their intention of proposing an amendment of the memorial, in the sense of forbidding mixed residence, but before they could obtain the requisite number of supporters, the session came to an end. Since that time the *Fiyu-to* have made careful investigations on the subject, and the estimate formed by Count Itagaki and other distinguished members of the *Fiyu-to*, during their visits to the provinces, with reference to the trend of popular opinion, convinces them that mixed residence must be allowed if they hope to obtain recognition of Japan's international equality. The *Yomiuri Shimbun* declares that there is now one member of the *Fiyu-to* who expresses a

different opinion on the subject, and that, consequently, the intention of the Party is to present the Memorial next session. All the members of the *Fuyu-to* are said by our contemporary to be bent upon energetically and harmoniously co-operating with the Government and the people for the attainment of this important object of national ambition.

THE "SEMMON GAKKO" AT WASEDA.

We observe that Professor T. Ogawa has become Head Master (*Kocho*) of the *Semmon Gakko* at Waseda, in succession to Professor S. Tahara. Mr. Ogawa recently returned from the United States where he made a special study of collegiate management, and since his appointment to the *Semmon Gakko* in May, the results of his exceptional training have made themselves apparent in many improvements effected in the curricula of the School and its several departments—Law, Politics, Judicial, and Literary, the last including both Japanese and English divisions. Our readers are aware that the *Semmon Gakko* owes its inception and much of its support to Count Okuma, who has devoted not only his great influence, but also large sums of money to rendering the institution a thoroughly excellent place of education. The Board of Directors, with the Count at its head, has of late been accomplishing much to better the condition of the place and its surroundings, so that the institution with its pile of solid brick buildings, its fine auditorium, and its well-kept enclosure presents a most attractive and business-like appearance. The *Semmon Gakko* is now the largest educational institution in Japan, after the Imperial University. Since August of the present year it has received some 350 new students, for whose admittance room had been made by recent extensions, so that the actual attendance in the various departments now numbers 750, being 150 more than the greatest number shown in the previous records of the place. The faculty has been correspondingly increased, so that it amounts to sixty instructors. We note with pleasure that the Literary Section, especially the English, is in a flourishing state. About 250 students are attending the English classes, more than 100 of them being in the Higher Literary Course. This Section is under the charge of Professor Tsubouchi, Editor of the *Waseda Magazine*, and the Rev. F. J. Stanley is the English Instructor, whose lectures to the higher classes on English Literature do not suffer by comparison with those delivered at the Imperial University. It is reported that Count Okuma has under consideration a project for converting the *Semmon Gakko* into a University, and it certainly seems to be worthy of that status.

EXCHANGE WITH THE UNITED STATES.

THE United States Mint assay value of the Japanese Silver *yen* has been officially fixed, until further notice, at sixty-six and four tenths cents (\$66.4) in United States Currency, at which rate all fees paid at the Consulate-General, Yokohama, will be received. Invoices should be made out, in Silver *yen*. In accordance with the foregoing the following tariff of fees is established:—For Invoice Certificate *yen* 3.77, for extra Copy of Invoice *yen* 3.00, for Currency Certificate *yen* 1.50, for Landing Certificate *yen* 3.77, for Bill of Health *yen* 3.77, for endorsement to Bill of Health *yen* 0.75.

SHANGHAI V. HONGKONG.

HONGKONG has been badly beaten at cricket by Shanghai. The match took place on the Shanghai ground, the Shanghai team scoring 314 runs in its two innings, and the Hongkong team 157, or just half of the former total. Seven matches have now been played in all between the two places, and of these Hongkong has won two, Shanghai four, and one was drawn. The *North China Daily News* gives the following record of the matches:—

The first was in February, 1866, at Hongkong, and was won by the Hongkong team by an innings and 264 runs; it may be noticed that one of the then Shanghai team is still a resident of this port, and is still among the leaders on the cricket field and the tennis lawn. The second and third matches were

played at Shanghai in May, 1867, the former being won by Shanghai by an innings and 36 runs, and the latter, a single-innings match, by 91 runs, Hongkong, it seems, only playing ten men. The fourth match was played at Shanghai in October, 1889, after the celebrated forty days of rain. The scores were very small, Hongkong making only 147 altogether, and Shanghai 149 with three wickets to fall. The fifth match was played again at Shanghai in September, 1891; Hongkong batted first, and made 268 runs. Shanghai in the first innings made only 180, and had to follow on. When 300 runs were scored, the innings was declared closed with two wickets still to fall, the not-out batsmen having made 20 and 50 respectively. Hongkong went in again requiring 213 runs to win, and when stumps and the match were drawn, their score stood at 72 for four wickets. The sixth match was played at Hongkong in February last, and won by the home team by an innings and 132 runs.

Our Shanghai contemporary concludes, not without apparent reason, that, on the whole, Shanghai possesses better cricketers than Hongkong, but we greatly doubt whether, in arriving at this dictum, sufficient allowance is made for difference of ground. We do not allude to the general fact that Shanghai possesses one of the best pitches in the world—though that must always count for a good deal in the education of a team—but rather to the radically unlike natures of the grounds. The Hongkong pitch is characteristically fast and bumpy; the Shanghai, almost exactly the opposite. It is well nigh impossible for a player who has been batting or bowling habitually on either ground to perform the same operations successfully when suddenly transferred to the other. We who speak, played in both the interport matches of 1867, and we can well remember how curiously badly the best Hongkong bats—they were good ones—shaped on the Shanghai ground. They hit short to leg and high to the off, and altogether were not in it. Shanghai has sent a team to Hongkong only twice, and on both occasions the northerners sustained crushing defeats, being beaten in 1866 by an innings and 264 runs, and in 1892 (February) by an innings and 132 runs. Another match played now in Hongkong would probably end in a victory for the home eleven. A notable illustration of what the change of ground signifies was furnished by the scoring in a scratch match played subsequently to the big event. The sides were England v. Ireland and Scotland, and the best men of the Hongkong and Shanghai teams were engaged. Captain Dunn and Quartermaster Sergeant Jeffkyns, the two great willow guns of Hongkong, who had remained long enough at or behind the wicket in the first match to become more or less familiar with the pitch, made great scores—88 and 98 respectively—but five others of the southern cracks could knock up only 14 runs between them. The Yokohama and Shanghai victories have much more in common. It is a veritable pity that the great settlement cannot be induced to send a team here.

THE SHANGHAI MURDER CASE.

THE trial of the United States Marshal, James A. Frame, for the murder of the saloon keeper Geo. Lemon, at Shanghai, concluded on the 1st October, after a lengthy trial. Mr. Leonard, U.S. Consul-General in delivering judgment said:—James A. Frame, It is not necessary for me to speak at any length to you. I will simply say that you have had as fair a trial as could possibly be given, in which you have been prosecuted with great fairness and defended zealously, and the Court has endeavoured to arrive at a perfectly fair judgment in your case. The Court finds a verdict,—in which all the assessors agree,—that you are not guilty of murder, as charged in the complaint or information, but that you are guilty of manslaughter, and I adjudge and sentence you therefore to imprisonment for one year and six months from this day in the gaol of the Consulate-General and to pay a fine of \$100.

The sentence—eighteen months' imprisonment and a fine of \$100—pronounced upon Frame for shooting Lemon in a Shanghai gin-shop, is commented upon adversely by more than one newspaper. The United States Consul-General, in pronouncing sentence, did not attempt

to offer any explanation of the reasons which had influenced the Court in framing its verdict, and this singular reticence is unfavourably commented on by the *North China Daily News*, which journal appears also to think that the prisoner did not receive his deserts. Other newspapers adopt a similar tone as to the inadequacy of the sentence, but in every case their analysis of the case seems defective in one important respect: they fail to show that any grounds existed for ascribing malice pre-pense to Frame, and of course without malice pre-pense there can be no "murder" in the eyes of the law. Frame was a man of excellent general conduct and peaceful disposition; he was an official of the United States Consulate in the discharge of his duty; he had often, when discharging similar duty, been in danger, yet it did not appear that he had ever resorted to undue violence; he was perfectly sober at the time of the occurrence; and finally, he had no special reason to bear enmity towards Lemon, who seems to have been nothing more than a somewhat truculent saloon-keeper, quick to resent the invasion of his gin-shop by a Consular official. Yet the advocates of the murder theory would have us believe that this man went into a saloon and deliberately shot Lemon—the latter was playing cards with two visitors and while his wife was looking on, and having shot him, immediately went and gave himself up. We find great difficulty in reconciling all these facts with the theory of murder. It is distinctly a pity, however, that the Consul-General did not think it worth while to take the public into his confidence as to the bases of the verdict.

DEATH OF MR. TONG KING-SING.

A DISTINGUISHED and widely respected Chinaman has been lost to his country by the death of Mr. Tong King-sing, the organizer and for some time Chief Director of the China Merchants Steam Navigation Company. The *North China Daily News* has the following notice of his decease:—

News was received yesterday of the death of a man of light and leading among Chinese civilians, though indeed he was a titular official, Mr. Tong King-sing, to whom more than to any other civilian, the solid progress in the arts of peace that China has made in the last twenty years is due. We gave a sketch of his life only last June, when we reported the banquet that was given to him at the Gordon Hall, Tientsin, to celebrate his sixtieth birthday, and need only now recapitulate the chief points in his career. He began life as an assistant in an auctioneer's office in Hongkong in the early days; was afterwards a colonial government interpreter, and then for many years in the service of Messrs. Jardine, Matheson & Co.; and throughout his life his honour and integrity have been spotless. For two years he travelled in the West with the late Mr. George A. Butler; and the Kaiping colonies, the China Merchants' Steam Navigation Co., and the Tientsin Railway, remain to testify to his wide knowledge, his energy, and his powers of organisation and administration. He was a consistent friend to foreigners, many of whom he attached to himself warmly, and his death is an enduring loss to Chinese and foreigners alike.

IRISH AFFAIRS.

REUTER telegraphs that the Parnellites have decided not to accept any scheme of Home Rule which does not give them complete control of the Police, the Judiciary and the Land. It is well that this demand should be clearly formulated before Parliament has been committed to any legislative measure. For though the control of the Police and the Judiciary may be conceded, it is most improbable that England will agree to surrender to the tender mercies of agrarian agitators the loyal land-owners, of whom almost the whole are of English lineage. These unfortunate owners have already suffered sufficiently. In many cases they have been reduced from affluence, which belonged to them without demanding any undue sacrifices from their tenants, to comparative penury. Security of property, the most valued result of civilized government, has been destroyed, and sufferings as undeserved as they were unexpected have been inflicted on some of the best subjects of the realm. The English people do not regard these things without sympathy and even indignation; but there has always ex-

isted a firm conviction that, whatever party may be in power, the Parliament at Westminster will never consent to any form of Home Rule which is not accompanied, or rather preceded, by a final settlement of the land question. We are not told, however, that the Parnellites decline to have any settlement imposed on them. They insist on being given a free hand. Well, we do not believe for one moment that they will get it. On the contrary, the unreason of the demand and the consequences involved in granting it, may very likely disgust a great many Englishmen who are now disposed to concede Home Rule out of utter weariness of spirit, if not from a sense of supposed justice. It may stagger even Mr. Gladstone. For the Grand Old Man is a conservative at heart. His liberal associations often carry him to great lengths, but it is an old saying in the Tory Camp that if he be scratched deeply enough, the Conservative kernel will surely be reached. The insatiableness of the Parnellites ought to penetrate to the old statesman's solid substratum. We trust that it will. Certainly we cannot conceive him introducing a Bill by which the agrarian rapacity and unscrupulousness of the Irish agitators would be granted free exercise. And if Mr. Gladstone casts off the child of his old age, who can be found to adopt it with any hope of securing its reception by English society?

MEETING OF THE CODES COMMITTEE.

THE *Jiyu* and some other papers state that the Codes Committee assembled on the 8th instant; that Count Ito, Count Yamagata, and Mr. Mutsu were present at the first conference, and that the Minister President of State delivered a speech, which has already been translated in these columns. The *Jiyu* reports that at the conclusion of the Minister President's speech, Mr. Murata Tamotsu, of the House of Peers, a member of the Committee, attacked the Count vehemently. Mr. Murata declared that the Bill for postponing the operating of Codes had passed both Houses of the Diet by a large majority, and that the people are anxiously waiting for its promulgation. If, therefore, a Committee were now organized, not only would the fact be regarded as a slight to the Diet, but also the credit of the Government must be impaired. He was followed by Messrs. Tomii, Hozumi, Kinoshita and Matsuno, members in favour of postponement, who propounded all sorts of questions. One asked whether the Committee had been appointed to determine whether the resolution of the Houses should be sanctioned by the Emperor or not. To this Count Ito replied that the giving or withholding sanction from the Bill was a matter of Imperial Prerogative. Another inquired whether they were commissioned to determine the propriety of enforcing the Codes immediately or postponing their operation. The Count answered that this question had been already determined by the Diet, and consequently no occasion existed to investigate it now. Thereupon several members demanded what was the nature of the business entrusted to them. Count Ito explained that the Codes, as they stand, are single bodies of laws, but he desired them to investigate whether it is possible to divide the Codes into parts, and enforce certain portions of them at once. The other side urged that such a duty could only be undertaken after the Imperial sanction had been given to the Bill for postponement. The discussion at this stage became somewhat warm, whereupon the Minister President smilingly said:—"Pray let us desist from cavilling, and confer harmoniously." The members then ceased to argue, and some proposed to compile rules of debate, but they rose without having accomplished anything.

The above account is furnished by the *Jiyu*. The same paper reports that the Cabinet, regarding the publication of the proceedings in newspaper columns as disadvantageous, the Minister President requested the members to observe secrecy as to their second meeting which was held on the 10th instant. Nevertheless, some of the vernacular journals are in a position to report that at the second meeting the Com-

mittee decided to investigate the question, whether or no the Codes could be divided into parts. The *Jiyu* thinks that if division be declared feasible, Count Ito will seek Imperial sanction for the Bill, on the basis of putting the most urgent portions into immediate operation.

The *Nichi Nichi Shimbum* and some other papers report that the *Rokujikkai*, an association organized by those who are in favour of postponing the operation of the Codes, held a meeting in the Yanagiya, at Nihonbashi, on the 10th instant. Over a hundred persons assembled. The idea of those present was that the Government, instead of obtaining Imperial sanction for the Bill passed by the Diet, had convened a nondescript committee to re-investigate the question, thus openly flouting the Imperial Diet. Hence public opinion must be invoked to bring about the granting of the Imperial sanction. The methods to be pursued are, first that every member of the association shall visit such members of the Diet as they know, and request their assistance. Secondly, that newspapers shall be utilized for attacking the Government and rousing public indignation. It was decided to hold a general meeting on the 14th instant. Messrs. Suzuki Manjiro, Takahashi Banzo, Nakamura Yaro and a few others are the principal figures in the association. They contend that the Diet is insulted, and that redress must be demanded in the next session.

It is alleged by the opposition press that the appointment of the committee was proposed by Count Yamagata, Minister for Justice. The Codes were promulgated while Count Yamada was Minister for Justice, and Count Yamagata Minister President. The latter now holds the portfolio of Justice, and he naturally favours the immediate enforcement of the Codes. Hence he proposed to elect a committee, by the decision of which the question might be settled.

A reporter of the *Kokkai* went to see some influential member of the Cabinet, and asked him why the Government had adopted a measure calculated to arouse public indignation and suspicion. The Minister replied that the Cabinet considered the question so very important that all possible deliberation ought to be adopted in deciding it, and for this reason the Committee was appointed. Such being the sole desire of the Government, there is not the slightest ground for alleging that the Cabinet is cowardly attempting to shift its responsibilities to the shoulders of the committee.

RESIGNATIONS AMONG THE JUDICIARY.

THE Tokyo News Agency reports that several members of the Judiciary who were closely concerned in the gambling scandal, have either sent, or are about to send, in their resignations. Public Procurator Imai Konichi, of the Supreme Court, submitted his resignation on 11th instant, and Chief Public Procurator Takagi Hideomi of the Tokyo Court of Appeal, absented himself from the recent meeting of Chief Judges and Chief Public Procurators, and is expected to resign. These two officials were prominent among the men who pushed forward the case against their colleagues on a charge of gambling. On the other side, Public Procurators Kato and Naka, who figured among those accused of gambling, are said to be equally bent on leaving the Judiciary, the verdict of the Administrative Court having given them cause for umbrage.

RECONSTRUCTION OF ADMINISTRATIVE ORGANIZATIONS.

It is rumoured that the first work Count Ito intends to undertake is the reconstruction of Administrative Organizations. The object of the reconstruction is to lessen the number of officials, and extend the functions of those remaining. When the new system is promulgated, it will probably be found that a large quota of semi-officials are dismissed, and that the number of *Sonin* officials is more or less increased, according to the work devolving on them. In some Departments, however, the services of

many *Sonin* officials will be dispensed with. For instance, the Department of Education, the chief function of which is to superintend the educational affairs of the country, has nevertheless a total personnel, in the shape of Secretaries, Councillors, and so forth, greater than the personnel of the Department of Home Affairs. Evidently that cannot be right. A very careful investigation is to be made as a basis for elaborating the new organizations, which will probably be promulgated before long. These facts are given by the *Nippon* and other vernacular journals.

CONFERENCE OF THE UNITED CHAMBERS OF COMMERCE.

THE United Chambers of Commerce held a second meeting on the 29th ultimo in Kyoto. Mr. Hamaoka Kotetsu, President, being absent, Mr. Tamura Takei, Vice-President, took the chair at 10 a.m., and the business was commenced at once. The third reading of a proposal containing various amendments of the Regulations relating to Chambers of Commerce was passed. Then a report of the Committee on the establishment of a Central Commercial Conference was read as follows:—

1. The Committee recommend the establishment of a Central Commercial Conference.
2. The Central Commercial Conference shall be superintended by the Minister of State for Agriculture and Commerce, and its functions are to discuss the following matters at the request of the Ministers of State:—
 - (a) Laws and Regulations relating to commerce, and the manner of their enforcement.
 - (b) Important matters relating to commerce, concerning which any Chamber of Commerce has already expressed its opinion.

The recommendation was discussed, and after a few questions had been asked, the Committee's scheme was passed without opposition, the second and third readings being carried forthwith. The meeting was closed at noon. We take these particulars from the *Shogyo Shimpō*.

THE HOUSE OF PEERS AND THE CABINET.

THE Opposition in the House of Peers is represented as being in the embarrassing position of having nothing to oppose. Absolute ignorance prevails among the public as to the policy which the Government intends to pursue towards the Diet. Resolute and persistent attempts were made by the organs of the *Jiyu-to* and *Kaishin-to* to "draw" the present Ministers of State when they assumed the reins of Administration, but the Ministers appear to have thought that no special reason existed for adopting in Japan a form of procedure unknown in any other constitutionally governed country. Cabinets when they come into power in Western States do not publish a bill of fare setting forth the viands which they intend to serve up for the nation's delectation. They unbosom themselves by means of Bills submitted to parliament, and of measures taken in connection with foreign policy. The Ito Cabinet doubtless intends to follow the same system, instead of furnishing to its enemies material wherewith to undertake a crusade at once. But this, though prudent and proper from the Government's point of view, does not suit the other side at all. The various sections in the House of Peers opposed to the Cabinet—the *Sanyo-kai*, the *Konwa-kai*, and the *Yamato Club*—and their leaders, Princes Konoye and Shimazu, Viscounts Tani and Suga, General Ozawa and so forth, are casting about for some solid planks to construct a platform, but their search appears to be poorly rewarded. At present rumour, interpreted by the Tokyo News Agency, alleges that they have been able to fix upon no line of action more promising than to revert to the old question of official interference in elections, and to pick holes in the new Game Law. They are also credited with a resolve to oppose the Radicals' pet measure, re-assessment of the taxable value of land.

COUNT ITO'S ILLNESS.

COUNT Ito's indisposition seems to have assumed quite a troublesome character, chiefly owing to his Excellency's refusal to abstain from discharging his public duties. On Tuesday last he appeared much better, whereupon he immediately resumed his active business habits,

the result being a rise of temperature in the evening, and a still further increase of fever the following morning. Dr. Hashimoto prescribed complete quiet, but the Minister President gave audience to a number of visitors, and gastric fever ensuing, the physicians declared that unless all work were abstained from for a week or ten days, the consequences might be serious. Count Inouye called on Thursday morning, and impressed on Countess Ito and Mr. Ito Miyoji the absolute necessity of denying the Minister President to all visitors. Since then, Viscount Hijikata, Minister of the Imperial Household, who came upon specially important business, appears to have been the only person admitted.

MINING INVESTIGATION COUNCIL.

THE conferences of the above Council were commenced on the 20th ultimo; and its proceedings have been reported from time to time. It was closed on the 1st instant. From the 23rd ultimo onwards, the amendment of the Mining Regulations was discussed. When the conferences finally closed, the members of the Council had their photographs taken together, after which Count Goto, Minister of State for Agriculture and Commerce, entertained them at luncheon, and expressed his sincere thanks for the trouble they had taken. After luncheon the Count delivered a short speech, in which he declared that the Government would carefully consider the resolutions passed by the Council.

VISITORS TO THE CHICAGO "WORLD'S FAIR."

THE following letter appears in the *Christian Chronicle and Missionary Tidings* for September:—

DEAR SIR,—By the last American Mail I received a private letter, containing some items which may be of interest to our missionaries and their friends.

In view of the great rush expected at Chicago next year, nearly all the accommodations in the hotels and private boarding houses have been already engaged by the prospective visitors to the Columbian Exposition. Latest advices state that the public school buildings have even been leased for next July and August as sleeping apartments. It is becoming a serious question, where will the multitudes who contemplate visiting the Exposition, find accommodation, as 200,000 visitors per day are expected.

Chicago's present capacity was tested by the recent political convention, when thirty-five to forty thousand guests crowded every available space. Consequently, new companies have formed and new hotels are in process of erection.

A few months ago some benevolent gentlemen—well known and public spirited men in that city—being encouraged by the clergy, conceived the idea of a large hotel for Christian people, missionaries, and their friends. While a small profit will of course accrue to these Christian citizens, as stockholders, the main desideratum is the accommodation of Christian visitors in one pleasant place, amid congenial surroundings, at the least expense possible. This hotel now being erected on the Lake Shore within ten minutes walk of the Exposition grounds, will have over one thousand rooms, and accommodate 2,500 guests.

From the secretary, a philanthropic gentleman so well known in Chicago, I received last week an answer to a private letter of inquiry written two months ago. The special favours he offers to my family he permits me, if I wish, to extend to any of the missionaries and their Christian friends who think of attending the Fair. I am only too happy to offer these rare privileges to my fellow-workers and their friends in Japan, if they wish to secure pleasant quarters, at minimum expense, in Christian company. Applications for membership in their Columbian Visitors' Association, to obtain rooms in this "South shore" hotel, must be made at the earliest date possible. From thirty-five States and territories hundreds of applications from the clergy and the churches have already been received at the office. While those living in the United States must pay, on making the application, two dollars for membership ticket and ten dollars in advance at same time for the room, yet we in Japan have the special privilege granted us of not paying anything, even for our membership ticket, until our arrival next year in the U.S.A. This is a matter of honour with us who may contemplate going, as we shall be expected to occupy the rooms engaged; or by our substitute, as the membership ticket is transferable.

The conditions are:

- (1) The applications must be made through me, because of this private arrangement and special privileges to the missionaries and their Christian friends in Japan.
 - (2) The Application to be made now, or by December 15th, at farthest, stating about the time, within the six months (May to November) the rooms will be required.
- It may be necessary, from the numerous applications already received, for this association to erect a second building; and if so, the management desire to know at the earliest possible moment.

The hotel will have all the modern conveniences, and appliances. Large rooms, lighted by electricity, preparations for safety in case of fire, located on a quiet residence street, in prohibition district, and no saloon or near the hotel. An excellent restaurant, on the European plan, will be conducted on the grounds by the same association, where meals will be provided at the moderate rate of twenty to sixty cents each, according to the tastes of the individual. An auditorium, seating fifteen hundred people, is being erected, as part of the hotel, for religious services and

Christian social gatherings. The rates for rooms will be only one dollar to a dollar and half per day, according to location of the room, which is one half to one fifth the rate now charged at the hotels, and possibly one tenth of what will be charged next year.

Membership in the association, by application now or very soon, will secure these low rates. If any rooms are not engaged, parties going to the hotel next year will at that time be compelled to pay two to five dollars per diem.

This being purely a gratuitous matter on my part, without fee or reward, I shall be glad to receive applications, but must frankly say that my numerous duties will not allow me time to answer multitudinous letters containing inquiries. Knowing from experience some of the serious difficulties in securing rooms in Philadelphia while attending the Centennial in 1876, where only nine millions of visitors were present during the six months, I cheerfully make known this great boon to be conferred on missionaries and their friends, who may attend the Columbian Exposition, where thirty millions at least are expected.

Your cordially,

FREDERICK J. STANLEY.

Tokyo, Sept., 28th., 1892.

UBIQUITOUS REBELS.

WE take the following from the *North China Daily News*:—

We are in receipt of a communication from a foreign friend residing at Wuchang, stating that a friend just arrived from the Tchan district has given him the following piece of news. One morning in the middle part of the last moon the people of Suchow, a place 100 miles distant from the confines of the Honan province, woke up and saw a state of things that was calculated to greatly disturb their peace of mind. They found that some unknown parties had, during the night, planted little white flags on all the streets and important highways. All the way from Suchow to the border of Kiangsi the highways were strewn with these ominous little white flags, covering a distance of about 300 li. When the authorities learned of this, they were greatly alarmed, and not without reason, as this is evidently the work of some secret faction inimical to the government. That on a single night the secret enemies of the Throne should have been able to plant these flags over such a distance, serves to show the strength and number of their order. There has been no further development from this strange movement on the part of the secret foes, consequently the authorities have done nothing beyond reporting the incident to the high authorities, at the same time taking measures to secretly investigate the affair. A certain Hunanese has been arrested, and in his house was discovered a book containing a long list of names of the people belonging to some seditious faction. The man, Yang, is being tried, but the officials are afraid to bring about the arrest of the others whose names are recorded in the book. It was reported that this man Yang was to be punished by decapitation on the 15th of the moon (last Wednesday) in order to ease of minds of the citizens.

TELEGRAMS.

SEPTEMBER, 1892, shows a better telegraphic record by 25 per cent. than September, 1891. The *Kokkai* gives figures. For September of the present year, the domestic messages sent over the wires were 461,000, and the foreign messages, 4,900; making a total of 465,900. For October of 1891, the home messages were 364,000 and the foreign 3,500; aggregating 367,500. The sums collected were as follow:—September 1892: domestic telegrams, 97,900 yen; foreign telegrams, 10,500, making 107,500 yen in all; September 1891: domestic messages 79,900 yen; foreign telegrams, 8,980 yen, aggregating 88,880 yen.

ATTEMPTED BURGLARY.

THE godown on No. 49-A, was broken into on Saturday night. The marauders effected an entrance by cutting through the roof, after removing a quantity of tiles. An aperture of half a yard square was made, but it is presumed that the contents of the place, consisting of only a few bales of cotton yarn with their iron bands still on, did not tempt the thieves, as nothing was abstracted. The police are enquiring into the affair, but probably the matter will end in the thieves' resultless trouble and their consequent disappointment.

MR. ISHII'S ORPHANAGE.

WE have received a donation of \$20 from G. S. on behalf of this excellent charity, whose sore financial straits were brought to our notice by a recent letter from Mr. Pettie. We shall be pleased to receive and acknowledge any further sums on its behalf.

THE EMPEROR AND THE AUTUMN MANŒUVRES.

THE *Official Gazette* announces that His Majesty the Emperor will leave Ueno Station at

11 a.m. on the 21st instant, and will travel as far as Tochigi, where accommodation will be provided in the Prefectural buildings at Utsunomiya. The return of the Imperial party will take place on the 27th instant, by the train leaving Utsunomiya at 9.30 a.m. We believe that it is the intention of the Government to invite certain foreign guests to witness the manœuvres, but no information is yet forthcoming as to the arrangements for that purpose.

THE CHINESE CONSULAR SERVICE.

A NUMBER of changes in the Chinese Consular Service is announced in the *London Gazette* of the 30th August. The notification reads as follows:—Foreign Office August 20th.—The Queen has been graciously pleased to appoint Thomas Watters, Esq., to be Her Majesty's Consul at Foo-chow-foo; Alexander Frater, Esq., to be Her Majesty's Consul at Swatow; Thomas Lowndes Bullock, Esq., to be Her Majesty's Consul at New-chwang; George Brown, Esq., to be Her Majesty's Consul at Kiukiang; and James Scott, Esq., to be Her Majesty's Vice-Consul at Shanghai.

MR. KONO HIROMAKA IN HIROSHIMA.

A TELEGRAM from Hiroshima reports that while Mr. Kono Hironaka, a distinguished member of the *Jiyu-to*, was delivering a political speech in Hiroshima, a *soshi* invaded the platform and pushed him down from the rostrum. About an hour later Mr. Kono re-commenced his speech, but a number of *soshi* demolished the rostrum. Fortunately no one was hurt, but the meeting had to be closed. We take this from the *Jiji Shimpō*.

SUICIDE.

M. F. PILLON, architect of No. 162, was found shot dead on the Bluff about seven o'clock on Saturday last. The unfortunate man had evidently taken his own life with a pistol.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

That the *Kaishin-to* (Progressionist party) is in an embarrassing situation becomes every day clearer. It was reported that, at a recent meeting of the party at Count Okuma's residence, Mr. Takata, editor of the *Yomiuri Shimbun*, proposed that the policy of indiscriminate opposition to the Government be abandoned in favour of a more reasonable and moderate line, and that the suggestion led to an animated discussion, creating much ill feeling between the supporters of the motion and its opponents. We are not enlightened as to the ultimate result of the discussion, but it would seem that the proposal was rejected by the majority of those present at the meeting. Moreover, attempts were subsequently made to deny the whole incident, but the public seems to be persuaded that something of the kind actually did occur. That such an idea should have been ventilated in the *Kaishin-to* camp—if indeed it was ventilated—proves that the politicians hitherto conspicuous as the most implacable antagonists of the Government, have come to perceive the unreason and suicidal effects of their uncompromising policy. An apprehension that this discussion may possibly lead to an incurable dissension among the Progressionists, and evidences of daily growing coldness between the *Kaishin-to* and their allies, the Radicals, are regarded by some well-informed persons, as the causes of the great zeal which the *Kokumin-no-Tomo* displays in advocating the immediate dissolution of both the Progressionist and the Radical parties, and the formation of a genuine and united Popular Party. Be this as it may, there seems to be little question that the *Kaishin-to* keenly feel their isolation. This is shown by a significant article in the *Hochi Shimbun*. Ostensibly the writer prides himself upon the strength of the Popular party, but his real aim evidently is to rouse the sympathy of the Radicals and re-awaken the zeal of Progressionists who appear disposed to slacken their antagonism to the Cabinet. The *Kaishin-to* organ acknowledges that the Popular Party

Original from

cannot surpass the Official Party in point of knowledge and ability, and even admits that in worldly experience, in tact, and in honorable distinction, the former is decidedly inferior to the latter—a rare admission from a party organ. What, then, asks our contemporary, is the source of the immense influence wielded by the Popular party? An answer is found in the incorruptible consistency with which the Popular party has espoused the cause of the nation at large. Let this consistency be once shaken and the fate of the Party is sealed. Those who doubt the truth of this observation are referred to the situation of the Eastern Radicals. Their sudden loss of influence is to be ascribed to their unworthy and inconsistent action. "If, therefore," states the *Hochi*, "the Popular Party wishes to maintain its influence and its hold on men's affections, it ought not to make the slightest change in the policy it has hitherto pursued." The *Hochi* goes so far as to condemn every attempt to follow what is commonly called a negative policy, for it says that "so long as the old programme of the Popular party remains to be carried out, no new question, howsoever important it may be in itself, should be brought up for discussion."

The *Kokumin Shimbun*, which, though not an avowed organ of the *Kaishin-to*, is strongly in sympathy with that party, writes in a similar strain. It fears that some of the Opposition politicians may be disposed to change their opinion; and in order to prevent anything so untoward, it recommends the inhabitants in every locality to hold political meetings and exact some distinct pledges from their Representatives before the latter repair to the capital for the next session of the Diet. The articles of faith which every genuine Opposition politician ought to subscribe are seven, we read; viz., first, that public expenditure be economized so as to secure the development of the national resources; secondly, that the reduction of expenditure be effected on the basis proposed by the Popular party in the first session of the Diet; thirdly, that the control of local police be vested in local autonomic communities; fourthly, that *Gun-cho* (District Headmen) be made elective; fifthly, that the franchise be extended; sixthly, that the local Government be thoroughly purged of officials who interfered in the last general elections; and seventhly, that the Diet maintain the same firm and strong attitude which it adopted in the first session.

A very noteworthy circumstance is that, while the *Hochi Shimbun* has distinctly given it to be understood that Count Okuma's followers will not agree to the so-called positive policy of the Radicals, the latter's organ is apparently reluctant to say anything on the subject. Evidently, however, the *Fuyu* does not wish to give offence to the Progressionists. For while keeping silence on the real point at issue, it seeks to propitiate them by recommending "the Radicals, the Progressionists, and the Independent Popular party (a new political body) to make common cause and attack the Ito Cabinet on the two questions of the Codes and the Game Regulations." The *Fuyu* does not say anything as to the necessity of combination on any other point.

The question of the Codes is in everybody's mouth. Probably the truth is that the public has been taken by surprise. It had been confidently assumed that the new Cabinet would advise the Emperor to sanction the Bill postponing the operation of these bodies of law. There was of course no positive ground for this belief, except a general supposition that the majority of the new Ministers of State were in favour of postponement. The recent appointment of a Committee to see if certain portions of the Codes can be carried out independently, has, therefore, caused great excitement among the advocates of postponement, while the *Kaishin-to* organs and others are delighted at obtaining a new handle to attack the Cabinet. The agitation against the Government no doubt derives much of its apparent force from an

erroneous supposition that the Ministers of State are still undecided what course to pursue with regard to the Bill for the postponement of the Codes. Politicians will probably calm down in some degree when it becomes clearly known that no uncertainty has ever existed on this point.

Never has the vernacular press been more unanimous than with reference to the present question of the Codes. Every paper in the capital, not even excepting those usually regarded as expressing the opinions of one or other section of the Cabinet, has strongly condemned the step just taken by the Government; and it is feared in certain quarters that the trouble may culminate, not only in a grave conflict between the Executive and the Legislature, but even in a serious dissension among the younger sections of the official world. The journals are greatly puzzled to find out the true object of the Cabinet in nominating a Committee to discuss the Codes. Some writers conjecture that the step is nothing more than a device to prevent serious dissension among the Ministers of State, of whom several—including Count Yamagata—are believed to actively advocate the immediate enforcement of the Codes. The Ministers, according to this hypothesis, decided to make a compromise rather than to precipitate a collision among themselves, the compromise consisting in the enforcement of certain portions of the Codes from January next. The *Nichi Nichi Shimbun*, whose strong disapproval of the Government's step is held to dispel any suspicion previously existing of that journal's connection with the Minister President or any other member of the Cabinet, observes that some persons fear that, if sanction be once given to the Bill for the postponement of the Codes, there will be no chance of ever putting these bodies of law into force at all. In order to avoid such a calamity, they seem to think it necessary to carry out at least some parts of the Codes without delay. Our contemporary assures these persons that their apprehension is entirely unfounded, for scarcely a man in Japan objects to codification, and there surely cannot be any insuperable difficulty in effecting whatever changes may be desirable in the new Codes. The *Nichi Nichi* holds that the Cabinet has no justification for its hesitation in dealing with the question, and recommends that the Emperor be advised to sanction the Bill for postponement, and that a fresh Bill be then submitted to the Diet proposing the carrying out of portions of the Codes from a certain date. This is the method approved by the *Kokkai* also, and by most of the other papers. The Constitutional aspects of the question, we have already discussed in full.

Next to the Codes, the new Game Regulations have been most keenly discussed during the present week. The Opposition papers, especially those belonging to the *Kaishin-to*, claim that the Game Regulations are really a law and ought to have been submitted for the consent of the Diet. Various points are raised to sustain this contention. Our limited space forbids us to do more than reproduce the more important of these points, together with their refutation by the *Nichi Nichi Shimbun*. First, it is claimed that fees for shooting licenses belong to a class of revenue which, whatever may be its name, ought to be considered as tax. To this the *Nichi Nichi* replies that it is an incontestible principle that whatever portions of the revenue are levied for the purpose of defraying the general expenses of the State, belong to the category of "taxes," while those portions which are collected by way of compensation for expenses specially incurred by the State, fall under the heading of fees. The payments collected for shooting licenses belong to the latter class. Secondly, it is stated by the *Kaishin-to* papers that the Government itself has hitherto looked upon the fees for shooting licenses in the light of a tax, these fees having always been classed in the Budget as taxes. The *Nichi Nichi* replies that such a circumstance cannot alter the fundamental nature of a fee, and further avers that the inclusion of license fees in the category of

"taxes" in the Budget has been an error on the part of the Minister of State for Finance. Thirdly, the critics claim that since the Game Regulations concern a right of property, they ought to be regarded as a "law," this claim being based on the assertion that every owner of land possesses, not indeed a right of property in the game found on his land, but certainly the exclusive right of pursuing such game. In support of this contention, the *Kaishin-to* papers point to an article in the new Civil Code, which provides that "the usufructuary has the right to hunt, shoot, and fish over the usufruct property." From this provision, it is inferred that the intention of the law is to recognize the principle that the right of pursuing game is included in the right of ownership of land. The *Nichi Nichi* retorts that it is futile to quote legal provisions not yet in operation, for the purpose of interpreting a disputed point in regulations actually in force. The fact that the Government has issued the Game Regulations as an Imperial Ordinance must be taken as a proof that it does not admit the principles of the right of pursuing game, claimed by the *Kaishin-to* papers. It is an acknowledged principle of the science of administration that all open spaces, even though belonging to private individuals, must be free of access to all persons. In countries where game cannot be obtained except by giving special care to its propagation and preservation by private individuals, the right of pursuing it may justly belong to the owner of the land where it is found. But in a country like Japan, where game is a natural product as much as minerals are, the right of pursuing it is theoretically free to all. The provision in the Civil Code referred to by the *Kaishin-to* organs is derived from French law, and is, according to the *Nichi Nichi*, contrary to the natural custom of Japan. Such, in brief, are the points discussed by the vernacular press. Apart from the constitutional aspect of the question, it is conceded on all hands that the new Game Regulations are very much superior to the old.

It is rumoured that the Minister of Home Affairs has under contemplation the introduction of further changes in the personnel of local officials, and that his deliberation in carrying out his intentions is owing to the difficulty of finding suitable persons to take the places of the officials to be dismissed. The *Kokumin Shimbun* is a ready believer in this report, and urges the Minister of Home Affairs to effect as thorough changes as possible, reminding him that there ought to be no scarcity of proper candidates for local Governorships.

The *Kokkai* seems to think that the Cabinet is inclined to carry out the Civil and Commercial Codes because it is desirous of opening negotiations for the revision of the Treaties. It is natural, says our contemporary, that the members of the present Cabinet should desire to crown their political career with the honour of bringing to a satisfactory issue the difficult question of Treaty Revision; and the *Kokkai* will be the last to throw any obstacle in their path without grave reasons for so doing. But it will oppose the Ministers with all its might, if they venture to disregard the united opinion of both Houses of the Diet on the question of the Codes, and if they seek to sacrifice the interests of the nation to the uncertain benefits of Treaty Revision.

The *Fiji Shimpō* also writes on the question of Treaty Revision, but makes no reference to that of the Codes. It thinks that, if properly approached, the foreign Powers will be found well disposed to the claims of Japan. But before taking up this question of Treaty Revision, our contemporary earnestly advises the Cabinet to provide against all danger of dissension within itself, a curse which has always befallen the Government every time it undertook the task. If there be any Ministers inclined to differ from the general opinion of the Cabinet on this subject, they must, says the *Fiji*, be at once told to leave the Government.

Original from

NYOHO-ZAN AND NANTAI-ZAN
FROM NIKKO.

THE invaluable Guide Book of Messrs. CHAMBERLAIN and MASON is unsatisfactory in its descriptions of the ascent of Nyoho-zan and Nantai-zan from Nikko. These trips are perhaps the most beautiful and interesting that can be made from Nikko, but comparatively few people attempt them, probably because the Guide Book's references are so incomplete. The book contains no suggestion as to the existence of a second route to Nyoho-zan. It speaks only of the path by the Futa-ara Shrine, whereas no one with practical experience of the two routes would think of choosing the latter. Very probably the compiler of the Guide Book's account trusted himself entirely to the guidance of *Kago*-bearers or baggage-carriers. These will always select the Futa-ara path, for the simple, but in their eyes amply sufficient, reason that neither pack horses nor *Kagos* can follow it to any great distance. When one hires a saddle-horse or a *Kago* in Nikko for an excursion occupying the whole day, the price charged is the same whether the place where these means of conveyance are abandoned be several miles nearer or several miles farther from the bourne of the journey. Proceeding on horse-back by the Futa-ara route, one finds, it is true, a tolerably easy path up to the extreme point where riding is possible, but on the other hand, the ascent of the mountain from that point occupies fully four hours at a moderate pace, and if ladies are of the party five hours must be allowed. The work of the horses and their attendants, however, is only three hours, and the route is comparatively free from deep ruts or inconvenient rocks. These facts sufficiently explain the selection made by horse-boys and *Kago*-carriers, for the other path is traversable on horseback or by *Kago* throughout a much longer distance, and one stretch of it is decidedly rough and difficult. This second route is reached by proceeding, in the first place, as far as the little hamlet at the foot of the hill below the Urami water-fall, and then turning sharp to the right. As far as the Urami hamlet, of course, the road is capital; good enough to be cantered over. But through a distance of about four miles after leaving this road, obstacles of various kinds have to be encountered; none of them in any respect serious either for *Kago*-bearers or horses during daylight, but many of them sufficiently formidable to render walking difficult after sunset. Hence the coolies, if left to themselves, avoid this latter path. Between the two routes, however, there is no room for an instant's doubt so far as concerns beauty of scenery and general facility. Entering the hill from the Futa-ara Shrine, one does indeed enjoy some charming prospects, and has further the satisfaction of viewing the Nana-taki, or

seven water-falls, which enjoy a wholly undeserved reputation, being simply little runlets trickling down a steep scarp of scoriae, viewed from the edge of a precipice. But the Urami route winds along the brink of the gorge leading to the Jikan waterfall—a stretch of scenery hardly to be surpassed in the vicinity of Nikko—and thence, through a distance of many miles, becomes a miniature avenue, creeping over grassy slopes and soft knolls, dotted with clumps of graceful trees precisely after the manner of an English park, and commanding everywhere views of entrancing loveliness. About a mile and a half from the foot of Nyoho-zan, this path enters a forest of remarkable beauty, the timber fine and varied, and the undergrowth consisting of that most picturesque of forest carpets, the broad-bladed *Sasa*. Up to the very point where, from a glade in this forest formed by the wide bed of a torrent almost dry in summer, a *torii* marks the entrance to the precincts of the mountain itself—up to this very point one can easily ride on horseback or in a *Kago*, the only rough part of the road—that in the immediate vicinity of the Urami hamlet—being more than atoned for by the smoothness and regularity of the remainder. Thenceforth the climb, itself much less trying than that by the Futa-ara path, takes one over beds of mosses, azalea, and rhododendrons, and under the shade of fine trees to the very summit; a distance traversable by good pedestrians in two hours, and by ladies or very leisurely walkers in three. It will thus be seen that the time on foot by the Urami route is only 3 hours at most, against 5 by the Futa-ara, the total time of the former, by conveyance and on foot, being 7 hours, and that by the latter 8. These, it should be again observed, are times computed for slow walkers: good pedestrians may shorten the former by an hour and the latter by an hour and a half. The Guide Book speaks of 4½ hours for the ascent by Futa-ara from Nikko, and 2½ hours for the descent, but the prodigy upon whose feat this calculation is based must have been a prize sprinter. Nothing of the kind is within the compass of an ordinary mortal. If ladies are in the party, the proper estimate is 7 hours for the ascent, 4½ for the descent, and 1½ on the top, making 13 hours in all from the moment of leaving to the moment of returning to Nikko—by the Urami route. The one thing to be avoided is nightfall before the bad section of the path has been negotiated. Any one overtaken by this misfortune must count on several stumbles and falls, and a delay of some two hours, for it is out of the question to progress at any reasonable pace when the track steps steeply downward by mud-holes of greatly varying depths, hidden by tufts of grass and bushes. A start should therefore be made at 5 a.m., so as to get back to Nikko at 6 p.m. Anyone who has

sufficient energy to follow these directions, and sufficient confidence in the experience here recorded to defy the representations of interested guides and coolies, may count—a fine day of course being assumed—on one of the most delightful trips procurable in Japan.

With regard to the ascent of Nantai-zan from Nikko, the Guide Book contains only a very meagre description, and its language as to the time occupied is not less perplexing than in the case of Nyoho-zan. The great majority of tourists never think of ascending Nantai-zan except from Chiussen-ji, and in this choice they are wise in some respects, for Chiussen-ji lake and the Kegon waterfall are objects that should not be missed. But the climb from Chiussen-ji—which, by the way, another dreadfully zealous pedestrian achieved on the Guide Book's account in two hours, whereas everyday folks require fully three—is abominably steep, and its exceptional character—steps of stairs varying in height from three or four feet to as many inches and formed by roots of trees—is pretty sure to produce an impression of some days duration on the muscles of dwellers in plains and cities. In fact to climb Nantai-zan from Chiussen-ji is more trying than to make the ascent of Fuji-yama from Gotemba, assuming that all the orthodox rests are availed of in achieving the latter feat. Everyone not pledged to that most futile of all youthful ambitions, the construction of pedestrian records to the destruction of cardiac valves and the waste of tissue, ought to avoid the ascent of Nantai from Chiussen-ji, and adopt the far wiser and pleasanter programme of attacking the mountain from the Nikko side and descending by Chiussen-ji lake. In this way strain and struggle are altogether avoided, and a large addition is made to one's acquaintance with the beauties of Japanese scenery. For the ascent from Nikko is pleasant beyond description. The path turns to the left from the Urami hamlet, and passing thence along the grassy slopes that overlook the Jikan water-fall, finally enters a noble forest, presenting every variety of wood-land loveliness. At a wonderful spring, the ice-cold water of which is stored in crystal-clear cisterns for the use of pilgrims, the tourist finds two spacious but weather-beaten and dilapidated huts, with rude facilities for boiling rice and a store of straw-sandals to re-shoe wandering religionists. This hamlet is called Shizu. It is 5,600 feet above the sea-level, and since it can be reached on horseback, there remains a height of only 2,600 feet to be negotiated on foot, as against nearly 4,000 feet from Chiussen-ji. The ascent, moreover, is incomparably easier than that from Chiussen-ji. It conducts one through a forest of weird beauty, the very trunks of the trees being green and their branches festooned with mist-nourished mosses entangling sun-light of silvery softness—precisely such a forest as one might expect

to find peopled by the elves and fairies of nursery tales. At intervals views of wonderful grandeur and compass are disclosed, and the last mile below the summit and beyond the edge of the forest is a vast carpet of azaleas, rhododendrons, *satsuki*, cranberries, bilberries, and heather. Finally, it is to be noted of this route that it preserves all the exquisite freshness and purity of Nature hiding herself in mountain solitudes, whereas the Chiusen-ji path is not only disfigured throughout by the litter of generations of pilgrims, but is also redolent with the painful odour that accompanies these single-suited ascetics throughout the final stages of their perspiring journey. From Nikko to Shizu on horseback is a matter of 4 hours—the Guide Book says 3, but that is "record" time—and from Shizu to the summit is 2½ hours at most, while the whole return journey by the same route is an easy 5 hours, making eleven and a half hours in all, exclusive of a rest on the summit. For persons intending to return to Nikko instead of descending to Chiusen-ji, it is imperative that a very early start—say 5 a.m.—should be made, for to be benighted in the forest below Shizu is a perilous experience, so broken and rocky is the path. We have not the least doubt that when the vicinity of Nikko is made more familiar to tourists, the regular track to Nantai-zan from Nikko will be *via* Shizu, the descent only being made on the Chiusen-ji side.

THE ALLEGED ANTI-CHRISTIAN ACTION OF THE GOVERNOR OF KUMAMOTO.

THE Minister of State for Education has been interviewed by two prominent Christians of Tokyo, Messrs. YOKOI and HARA, with reference to the alleged unconstitutional attitude of the Governor of Kumamoto towards the Christians in his Prefecture. In reply to a direct question from his visitors, the Minister stated that the affair had already received attention from him, and that queries addressed to Governor MATSUDAIRA in person had elicited from the latter an avowal that he had never given any prohibitory injunction whatever to school teachers with regard to their own Christian sympathies or antipathies, and that the much talked of dismissal of pupils from a Primary School had not been in any way suggested or approved by him. In fact, Governor MATSUDAIRA seems to have convinced the Minister that, so far as concerned the letter of the law, no censurable step had been taken.

It appears very probable that all this talk has its origin in indiscreet application of the general principle laid down for Government schools throughout the empire, namely, that the instruction there shall be purely secular, no religious element of any kind being imported into the curriculum. It is easy to conceive that a little excess of zeal on the part of school-masters ap-

plying this rule might assume the appearance, if not the reality, of unconstitutional interference with liberty of conscience. We can scarcely suppose that prominent Christians like Messrs. YOKOI, HARA and others would have publicly moved as they have done were they not fully assured that ample justification existed for their remonstrances. Yet the persons incriminated may have been inspired, not by any anti-Christian bigotry, but simply by an ill-judged estimate of their duty towards the Educational Regulations. After every excuse has been offered, however, there remains this to be said, that Regulations ought not to be officially applied in such a manner as to create umbrage and discontent. One of the main purposes of the rule which excludes religion from the curriculum of Government Schools is to ensure for every subject of the Emperor the liberty of conscience guaranteed by the express provisions of the Constitution. But if the rule be so enforced as to constitute an actual or apparent barrier to that liberty, there can be no question that the intention of the Government is wholly defeated. Who is to be held responsible for these untoward incidents? If the inhabitants of Kumamoto Prefecture be so constituted that they are prone to put an exaggerated and mischievous interpretation on official instructions, then evidently special care ought to be exercised by the Local Officials in framing and issuing instructions. On the occasion of the general elections last spring, Governor MATSUDAIRA doubtless acted strictly within his own conception of impartial duty, but somehow the Headmen and people of the Prefecture resorted to methods which constituted a public scandal. Now, again, we have the same Governor MATSUDAIRA taking steps which he considers warranted by law, yet somehow his subordinates are betrayed into apparent breaches of the Constitution. All this is very unfortunate, to say the least of it. Kumamoto Prefecture has become an Administrative disgrace, and the reputation of the Central Government is concerned in restoring order there.

One fact brought into prominence by this incident is the liberal attitude of the vernacular press towards Christianity and religious beliefs in general. No Japanese journal has been found to approve, on religious grounds, the action attributed to Governor MATSUDAIRA and the masters of Primary Schools in Kumamoto. We deem this very remarkable. Let us reverse the case, and suppose that there was question of an English Magistrate setting his countenance against the spread of Buddhism in an English parish, and of the Principal of a National School in England expelling a pupil for persisting in the study of the *Sutras* contrary to instructions. How many British journals would be found to condemn the conduct of the Magistrate and the Principal as subversive of the right of freedom of conscience? We are bound to applaud the liberality and justice, no less than the Constitutional insight, shown by the Japanese press in this instance.

THE NEW GAME LAW.

THE long talked of Game Law has been promulgated. It consists of 34 articles which are translated elsewhere in our columns. The first point to which one turns with interest is the classification of protected birds and animals. We find that a close season is established for all kinds of game from the 15th of March to the 14th of October. These dates are sufficiently comprehensive, but inasmuch as there are no grouse or partridge south of Yezo, the prohibition of shooting prior to October the 15th seems proper. It has been, or used to be, the habit with sportsmen in this country to attack the pheasant covers from October 1st, but there can be no doubt that the proceeding is premature, for the young birds have scarcely passed the chicken stage at that date. In Yezo, however, the hazel-grouse of Siberia—locally known as *Yama-dori*—is very common, and becomes strong on the wing in September, so that the prohibition of its pursuit before October 15th seems unnecessary. The question is, however, does the new Law protect this hazel-grouse at all? Among the game birds enumerated in the 25th Article, the *Yama-dori* is mentioned. *Yama-dori* in Kanagawa Prefecture, Musashi province and their vicinity, signifies copper pheasant, but in Yezo the term is applied to the hazel-grouse. In which sense the Law employs it, we cannot be sure; but inasmuch as all kinds of pheasant would be included in the term *Kiji*, which stands first on the list of game birds, it seems not improbable that *Yama-dori* is intended to designate the hazel-grouse. If so, the limits of the close season are too extensive from the sportsman's point of view, and the same may be said with respect to quails and pigeon, both of which are certainly shootable before October 15th. But the Law errs on the right side. Hitherto the unfortunate game birds of Japan have enjoyed virtually no protection, and it is well that some breathing space should now be secured to them. Englishmen reading the list of game-birds will probably be surprised to find that it includes the Bulbul, the Shrike and the Jay, but ideas differ as to the suitable billet of a charge of sportsman's shot. Most welcome is the list given in Art. 24, where fourteen kinds of birds are taken permanently under the protection of the law. Some of the birds enumerated in this list are difficult to identify. The *shijugara* (literally, the forty-sparrow), or tomtit, is familiar enough to every one. In Japanese thickets he is just the same perky, brisk little rascal that enlivens the hedge-rows of the old country. Besides, has he not been immortalized by IKKIU's answer to the old lady who mournfully brought to the great scholar the body of her pet tomtit, seeking an epitaph? "The span of human life," said IKKIU, in whose days longevity seems to have been the

exception, "is fifty years. But you, wee bird, advance a perpetual claim to forty. You have not died too soon." But what is the *gojūgara*, or "fifty sparrow?" He passes the limits of our ornithological knowledge. The *Yoshi-kiri* is another puzzle. In Japanese encyclopedias we find him variously designated as the *Yoshi-wari*, or reed-divider; the *Yoshi-kiri*, or reed-cutter, and the *Yoshiwara-suzume*, or reed-sparrow. He is not an unfamiliar acquaintance, indeed, for we have often seen him flash across a brake of white *Yoshi*, filling the air with hurried chirping. But like Betsy Prig at the crisis of the immortal duel, we cannot "put a name to it." At all events he is a species of sparrow, and even that mercy to the "blithe wanderer of the wintry air" must be gratefully received. For the poor sparrow is ostracized from all the lists. The bird whose fall GOD marks, the bird whose "bright blue eggs together laid" break upon the sight of so many a child like a blessed revelation, must continue to be the prey of every setter of trap or disposer of gyn; must continue to be stalked in his saucily selected perch by murderers with shiny bamboos, deluding whistles and hooded heads. Well, the sparrow, a born marauder, has brought this fate upon himself. The Kingfisher, too, is not exempt. Whatever supply of his gorgeous plumage is furnished by Japan for ladies' hats, will not be interrupted. For the rest, however, the little denizens of the grove and copse are henceforth happily taken under the protecting wing of the law, and we sincerely hope that these prohibitions will be strictly enforced. There is however, one striking *lacuna* in the new Law: no provision is inserted prohibiting the sale of game birds during the close season. This seems to us a fatal omission. A close season is virtually useless if no attempt is made to control the sale of game birds in the market. The surest and easiest way to prevent violations of the law is to see that no means are available for disposing of game out of season.

It will be observed that the law recognises every land-owner's right of property in game. The terms of Article (4) bearing upon this part of the subject leave something to be desired in point of clearness. Clause 2 forbids the pursuit of game in places where prohibitory notifications are posted; the notifications referred to being official. But in the 5th Article it is provided that a local Governor shall be competent to issue such a notification for the protection of any private estate, on application from the owner. A discretionary power is thus given to the Governor, but of course his discretion will never be exercised to the detriment of a land-owner, and it consequently follows that every land-owner will be able to procure the issue of a notification protecting his land, should he be so inclined. Moreover, apart from this special measure of protection,

the 7th clause of the 4th Article provides that all fenced or enclosed land, or land where any agricultural product is cultivated, must not be trespassed upon in the pursuit of game without the consent of the owner. The sportsman is thus altogether precluded from snipe-shooting, unless he obtains permission from every farmer owning rice-fields in the district visited, a condition difficult to fulfil. He is further precluded from the pursuit of pheasants except in covers which can be beaten without entering cultivated land, also a difficult condition. Indeed the effect of this Law must be virtually prohibitive of sport, so far as foreigners are concerned, for the stock of game within treaty limits is so small that these new obstacles will probably prove deterrent. Of course such a result was inevitable so soon as property in game received legal recognition, but it will nevertheless provoke some dissatisfaction.

An interesting question is the method that will be adopted in classifying foreign applicants for licenses. The tests prescribed for Japanese are evidently inapplicable to foreigners, and unless some special regulations be issued bearing on the subject, we see nothing to prevent an unscrupulous foreigner—if any should think it worth while—from taking out a professional license of Class B, and thus escaping with a fee of one *yen* instead of ten. It was rumoured at one time that an intention existed of discriminating against foreigners in the provisions of the Law, but happily that idea, if it ever existed, was abandoned. The foreign sportsman has inflicted very little injury on the game of Japan. It is the Japanese professional who, aided by the absence of any prohibitory law, has wrought serious havoc by paying no attention to seasons or to the necessity of leaving a head of birds for breeding purposes.

In speaking of foreigners, we assume that some means will be taken by their Representatives to obtain for them the privileges, subject of course to the prohibitions, of the new Law. There is nothing in the text that would enable foreigners to obtain a license, but the Japanese Government, we do not doubt, will be willing that foreigners should enjoy whatever sport may be procurable, on an equal footing with the people of the country.

MISSIONARIES IN CHINA.

THE *Hongkong Daily Press*, alluding to the recent news of further anti-Christian demonstrations at Hangkow, says:—

The circumstance raises the query whether, under present conditions—the Chinese Government being professedly unable and in fact unwilling to afford the missionaries adequate protection from outrage and murder—the missionaries of any denomination should be allowed to reside more than fifty miles from a treaty port. Of course if this were conceded, it would be a great triumph to the Chinese, one for which they have been scheming for some years, and to secure which doubtless these murders and outbreaks have been specially got up. But if, in order to effectually protect their missionaries, the Treaty Powers were to require

them to withdraw from the interior and such remote districts as they at present penetrate, it would be necessary and equitable for the Powers to demand the opening of a large number of additional ports within a fifty mile radius of which the missionaries would find a much larger field of labour than they are ever likely to successfully cover. The truth is China is so vast, and its population so numerous and so impregnated with hostility to the foreigner, that it is a mistaken policy to attempt too much at once. The outworks of this pagan stronghold should first be stormed and carried, and the work in the interior entrusted to native converts until such time as a civilised Government can be established that will execute law and justice, preserve order, and protect the stranger. The Peking Government is obviously growing more disinclined to enforce fulfilment of treaty stipulations by its officials or to make reparation for injuries or loss sustained through their action. This has been proved repeatedly of late; in fact, ever since Sir John Walsham assumed the post of British Minister. In the House of Commons, on the 11th ult., Mr. T. W. Russell elicited from the Under Secretary of State the fact that Sir John Walsham has demanded compensation for the outrage on Dr. Greig, and is pressing the claim on the attention of the Chinese Government. This outrage occurred in August, 1891, more than a year ago; it was a brutal attack on a medical missionary by Chinese soldiers without the shadow of excuse or justification, by which the worthy doctor was seriously injured, and the case admitted of neither argument nor discussion. The claim could and should have been settled in a day. But with characteristic shamelessness and procrastination the Chinese Government have contested or deferred it, and the British Minister, with equally characteristic feebleness, has allowed it to be shelved. And so it is with scores of other claims equally just and indisputable. All of them are disputed, inch by inch, and postponed from year to year in the despicable hope that they may ultimately be abandoned in very disgust and despair. This mean policy is sometimes only too successful, but it will eventually recoil on the heads of the unprincipled mandarins. The patience of the Treaty Powers will some day become exhausted, and they will come to a mutual agreement to sweep the antiquated, corrupt, and obstructive machine which passes for Government at Peking out of existence, and take upon themselves the task of civilising and administering the Chinese Empire, even as Morocco will have to be administered, in the interests of the world at large and for the general good of the human race.

There is another alternative which our southern contemporary fails to formulate, namely, that the home Government may grow weary of complications owing their origin entirely to missionary effort. Even those who have the warmest appreciation of missionary labours may well rebel against the notion that international relations should be imperilled in order to create a field for Christian propagandism. The proposition advanced by the *Hongkong* journal amounts to nothing less than this—that China must be forced, against the wishes of her people, to open a sphere for the spread of an alien faith. Just conceive for a moment, if imagination be capable of the flight, what sort of reception would be accorded by a Western State to such a demand were it preferred on behalf of an Oriental Power. China is described by the *Hongkong* newspaper as "a pagan stronghold." "Pagan" signifies a worshipper of false gods. But China does not believe herself to be a worshipper of false gods. And which of us will undertake to say that the Buddhist deity is anything else than another manifestation of the GOD whom Christians pray to? At any rate, we have no manner of right to deny to the Chinese or to any other people the same freedom of conscience that we claim for ourselves. We have no manner of right

to demand that sections of Chinese territory shall be specially set apart as spheres for the preaching of a creed which in Chinese eyes is just as much "pagan" as Buddhism is in ours. It is a mockery of the avowed spirit of Christianity that its propagandism should be taken under official tutelage and should be made the subject of international negotiation. The opening of new ports in Chinese territory is doubtless to be desired, not less in the interests of China herself than in those of foreign trade. But to stipulate for their opening as a field for missionary labour in exchange for the withdrawal of missionaries from the remote interior, would be a basis of agreement against which the missionaries themselves could scarcely fail to protest. In truth, the troubles caused by Christian propagandism are one of the ugliest features of the age. The patience of the British Government must be sorely tried by them, and one of their inevitable consequences is gradually to throw discredit on missionary labours altogether. Diplomats naturally ask themselves whether any well regulated sense of the dictates of duty requires that the missionary shall penetrate into the remote interior of the Chinese Empire in search of converts, while the vast native populations of the treaty ports and the neighbouring cities remain unconverted in his rear. No one, indeed, has ever satisfactorily explained this anomaly, so far as we know. No one has intelligibly accounted for the necessity which drives missionaries into the interior when almost limitless fields for their ministrations offer themselves within easy reach of the treaty ports. At times of public distress, when famine or flood afflicts the country, the missionary, on his long journeys of hardship and charity, would carry with him the approval and well wishes of every one. But it seems strange and abnormal that he should divert from the port populations labours which are at least as much needed there as anywhere else. Explanations may extenuate but cannot obliterate the fact that the great majority of anti-foreign outbreaks in China have been directed against the foreign propagandists of Christianity, their native converts and the institutions they establish. Christianity loses much of its beauty in the context of such unchristian responsibilities. Gradually the "Christian propagandist" comes to be regarded with dislike and distrust, as the *fons et origo* of disturbance and friction. Dr. GREIG, for example, a man said to be of blameless life and devoted zeal, is now taken as the text of a very severe homily read by our Hongkong contemporary to the Chinese Government and to Great Britain's Representative in Peking. Nothing is publicly known of the communications that have passed between Sir JOHN WALSHAM and the Tsung-li-Yamen on this subject, yet the leading Hongkong journal does not hesitate to declare that "the claim could have been settled in

a day," and that the delay which has occurred is due to "the characteristic shamelessness and procrastination of the Chinese Government, and the equally characteristic feebleness of the British Minister." Dr. GREIG's reputation does not gain by association with such intemperance and precipitancy. With his lawless assailants rests, of course, the original blame of thrusting him before the public in this unwelcome role. But the question for missionaries to ask themselves seriously is whether they are fulfilling the true dictates of their calling when they needlessly brave perils the sequel of which is to bring their own propagandism into unwholesome notoriety, and to foster international enmities which they should take the lead in averting and allaying. The missionary's best friends are too often compelled to confess with pain that tact and judgment are conspicuously wanting in his moral furniture. Does no obligation rest on him to shape his course so that national animosity and bloodshed shall be avoided? That he should brave personal peril and suffering for the sake of his cause is one thing; that he should involve whole communities and peoples in disputes and animosities is altogether another. The QUEEN'S Government must inevitably consider the problem in this light from time to time. Underlying the harsh and impatient criticisms so frequently uttered by the local foreign press against British officials, those gentlemen doubtless recognise a spirit to which England owes much of her empire, and with which, even in its most unsightly manifestations, Englishmen are disposed to sympathise. But it may very well happen that the high policy of State which HER MAJESTY'S Ministers are seeking to pursue in the best interests of the empire, encounters a hampering, if not altogether marring, obstacle in ebullitions of that spirit evoked by troubles for which tactless and over-zealous missionary labours are responsible. We do not believe that it is the true mission of the press to be the gauntlet-bearer of every foreigner who comes into collision with Chinese in the interior, neither do we believe that the vision of HER MAJESTY'S Ministers is always arrested by the veneer of blundering patriotism and indiscreet ecstasy which so often satisfies local criticism in the East.

THE CODES.

WE reproduce elsewhere the comments of the Opposition press and of the *Nichi Nichi Shimbun* on the appointment of a Committee to consider the new Civil and Commercial Codes. All the journals quoted condemn the Government strongly. Condemnation was to have been expected from the *Kaishin-to* organs under any circumstances, so far as regards their general attitude towards the Cabinet. But when we consider that the *Kaishin-to*

leader, Mr. SHIMADA SABURO, opposed the Bill for postponing the operation of the Codes until 1896, and introduced an amendment in the sense of enforcing certain portions of them immediately, we are not prepared to find the organs of his Party so strongly advocating total postponement now. However, it has to be remembered that strong feelings were evoked by the discussion of the Bill, and that its passage through both Houses of the Diet was hailed by the Opposition as a signal defeat of the Government. Hence there is natural anxiety about its fate, and the prospect of its becoming a dead letter rouses an acute sense of umbrage. But what astonishes us is that the criticisms of these journals are apparently based on a total misconception. Each and every one of them, from the *Nichi Nichi Shimbun* downwards, attacks the Cabinet on the ground of want of courage and decision. They all write under the impression that the appointment of a Committee is a mere device by which the Ministers of State hope to evade the embarrassment of dealing conclusively with the Bill, and seek to shift their own troublesome responsibilities to other shoulders. Now if this were a warrantable hypothesis, we should certainly concur most heartily in the censure showered on the Cabinet by the Opposition press. If it were really the case that the Government was manœuvring to shirk its duties, and that the appointment of a Committee was a mere subterfuge to delude or wheedle the public, there could be no second opinion as to the Cabinet's culpability. But even to us, looking at the matter as pure outsiders, the case presents an entirely different aspect. In the first place, it is impossible to believe that the ITO Cabinet would descend to any such unworthy and suicidal paltering. In the second, the critics appear to have paid no attention to the significance of indications furnished by the prescribed procedure in respect of Bills that have passed the Diet. Were it provided that such Bills should be submitted to the EMPEROR for His Majesty's sanction or disapproval; in other words, were there any provision for a positive veto, then the silence of the Government might be reasonably construed as evidence of vacillation or evasion. But there is no such provision. The process of vetoing a Bill in Japan is purely negative. A measure which receives the Imperial Sanction must be promulgated before the next session of the Diet. That is all that the law says on the subject. By construction it follows that unless a Bill is promulgated before the next session, it must be considered as having failed to obtain the Imperial Sanction. Now what has happened with regard to the Bill for the postponement of the Codes? It passed both Houses of the Diet last June, and we are already in the second week of October, yet

the Bill has not been promulgated. Surely the lapse of such an interval is in itself sufficient proof that the Bill has not received, and will not receive, Imperial Sanction. The Opposition journals appear to think that the Government's resolve not to recommend the Bill for HIS MAJESTY'S approval can be established only by a public announcement that the EMPEROR has vetoed it. But the Government is not competent to make such an announcement; the law does not permit it. If the public cannot draw a confident inference from the lapse of 3½ months without any sign of promulgation, there must be extraordinary reluctance on the public's part to draw any inference at all. Moreover, in addition to this negative testimony, we have the positive evidence that the Government has appointed a Committee of experts to express an opinion as to the probable effects of enforcing certain portions of the Codes at once. Can anyone honestly pretend to imagine that the Ministers of the Crown have convened this Committee in order to solicit from it guidance as to whether they should advise the Emperor to sanction the Bill, or whether they should recommend him to withhold his sanction? The notion is altogether ridiculous. Beyond all reasonable doubt the fate of the Bill, so far as concerns the Imperial Sanction, has already been irrevocably determined. Were not such the case, no Committee would ever have been appointed. It is laughable to think of Count ITO and his Cabinet interposing between themselves and the Throne a Committee of thirteen irresponsible outsiders. No, the Bill is dead. A committee has been invited to express. Certain opinions because the Government seeing that the Imperial Sanction has been withheld, and being nevertheless persuaded that some satisfactory manner of dealing with the question should be sought, is framing a measure for submission to the Diet next session, and desires to obtain an expression of outside views on one phase of the matter. This hypothesis tallies exactly with the final attitude of the Diet itself towards the Bill. Just before passing the measure, the Diet introduced a provision which amounted to a virtual declaration that certain portions of the Codes might be put into immediate operation, while others required revision. But the Diet made no attempt to distinguish these portions. Its evident intention was to entrust the duty to a revising Committee. That is precisely what the Government seems to be doing. Doubtless the Ministers of the Crown have very distinct ideas of their own as to the parts of the new laws which are immediately needed by the nation. But they desire to consult the opinion of the prominent opponents and prominent supporters of the Codes, before elaborating a project for the consent of the Diet. It is easy to see how much more expeditious will be the process

of determining at once that certain portions may be enforced and that certain other portions must be amended, instead of laying the whole before a revising committee, and awaiting the issue of the latter's labours before putting any part into operation. The problem is of immense importance to the empire, alike from a domestic and a foreign point of view. We altogether applaud the Government's caution and deliberation. But as to the phantasy that the Cabinet, in the second week of October, is still plunged in uncertainty and perturbed by timidity about the manner of dealing with a Bill which passed the Diet in June, it may be dismissed with a smile. The Bill is dead, and the question now is, what shall replace it?

THE CODES AND THE CONSTITUTION.

THE Vernacular press continues to discuss with considerable excitement the question of the Codes. It is certainly a subject worthy to occupy a large share of public attention, but as is too frequently the case, the path to wholesome controversy seems to be blocked by misapprehension. Anxiety to find a pretext for attacking the Government appears to betray Opposition journals into an unreasoning mood. They evidently think that the Ministers of the Crown are managing this matter entirely by their own authority and in defiance of the course prescribed by the Constitution. There is room for such suspicions under the system which governs the management of Bills in Japan after their passage through both Houses. But there ought not to be any room for them in the minds of men disposed to credit the Ministers of State with even a moderate sense of administrative obligations. The Constitutional duty of the Cabinet Ministers with respect to a Bill which has passed the Diet is perfectly plain. They must submit the Bill within a reasonable limit of time for the EMPEROR'S consideration. That is beyond all question. Were the Cabinet competent to withhold from the SOVEREIGN'S consideration a measure which has received the sanction of the two Houses, the practical result would be to elevate the Cabinet into a supreme tribunal, with power to over-rule the decisions of the Diet and to dispose finally of all legislative projects. Such a system would not only render the Constitution a dead letter, but would also exclude the EMPEROR altogether from an important part of the administration of his realm. The Ministers, therefore, have no manner of right to abstain from laying before the Throne any Bill which has passed the Diet. If the EMPEROR sanctions the Bill, then, according to the Constitution, he orders its promulgation, and the duty of promulgating it devolves upon the Ministers. But if the EMPEROR withholds his sanction, then, of course, promulgation is

not ordered, and there the matter ends so far as concerns that particular Bill. It is in this latter case that material is furnished for public uncertainty. The fact that the SOVEREIGN has declined to sanction the Bill is not announced. No machinery for announcing it is provided by the Constitution or the appended laws. Promulgation of a law being the sole method of letting the nation know that it has obtained the SOVEREIGN'S approval, the negative fact of non-promulgation is the only circumstance from which the nation can infer that the Imperial sanction has not been accorded. But assuredly the enemies of the Government have no right to infer that because a Bill is not promulgated, it has never been, and never will be, submitted to the SOVEREIGN at all. In such a suspicion there is involved a charge of plainly unconstitutional autocracy against the Ministers of the Crown. There is involved something more also. There is involved the hypothesis that the SOVEREIGN himself takes no intelligent interest in, and has no earnest knowledge of, legislative and political problems that concern the most vital interests of his empire. If the Ministers of the Crown were sufficiently contemptuous towards the Throne and careless of the Constitution to deliberately exclude the SOVEREIGN from his due share in the Government, is it likely that the EMPEROR himself would submit quietly to such effacement? The notion appears to us quite extravagant. That the EMPEROR is thoroughly posted from day to day not only in every debate of the Diet and in every measure passed or rejected by it, but also in all the doings of the Cabinet and in the political and social problems of the time, is a well known fact; a fact that has been often proclaimed with applause and delight by the very journals which now, by implication, represent HIS MAJESTY as content to play the part of a mere puppet. It is most unlikely that the EMPEROR, in dealing with a Bill, would refuse to be guided by the advice of His Ministers, but that he should agree not to be consulted at all, and above all, that he should suffer His Ministers to dispense with distinct Constitutional provisions affecting one of his most important prerogatives, is beyond belief. We mention these things because, strange as it may seem, some of the Opposition journals manifestly ignore them, and do not hesitate to accuse the Government of having withheld the Codes Bill from the EMPEROR'S consideration, and appointed a Committee of experts merely for the purpose of obtaining a pretext for further delay. Were the Government guilty of such procedure, it would not deserve to retain the nation's confidence for a day. But since the Diet's first meeting, no Cabinet has ventured to behave in a fashion so arbitrary and unconstitutional. Bills opposed by the Government while under debate in the Houses have always, after their passage

through the Diet, been speedily submitted for Imperial sanction, and promulgated, on receipt of that sanction, without loss of time. There should be no doubt that the Codes Bill also was duly submitted to HIS MAJESTY, and that, having failed to obtain sanction and thus become a dead letter, the Cabinet is now engaged collecting materials for the construction of another measure or the modification of the present one. It must be inferred, of course, that the Ministers of the Crown advised HIS MAJESTY to withhold sanction from the Bill, but in doing so they were acting as strictly within their Constitutional functions as they would be exceeding those functions did they adopt any means of publishing the fact that sanction has been refused.

THE PORTUGUESE AFFAIR AGAIN.

QUITE a hubbub is being raised, we perceive, about a rumour, emanating from some mysterious quarter, to the effect that certain documents are found to be missing from the archives of the Portuguese Legation as handed over to the keeping of the French Chargé Affaires. "One Aggrieved," that old assailant of his former Consul-General, returns again to the charge, mounted on this new hobby, and is exultingly truculent because the *Japan Mail* has taken no notice of his questions, and because it preserves silence in the face of this alleged new discovery. Violent and wrathful as are the attacks of "One Aggrieved," and perseveringly as he endeavours to conceal his previous discomfiture under present bluster, it is impossible not to be amused by his writing. We freely forgive all the hard things he has said about us in consideration of the diversion his assaults have afforded. As to this matter of missing despatches, however, might it not be well to ascertain first whether any despatches are really missing, and secondly what their contents are supposed to have been, before raising such a commotion about them? For our own part, we do not propose to busy ourselves with any such idle rumours. And what is more, we beg once and for all to inform "One Aggrieved" and any others of his compatriots who think that the interests of their country are promoted by conducting a scandalous campaign in the public press against an absent gentlemen who until quite recently represented their Sovereign at the Court of Japan—we beg to inform these persons that it is not our intention to have the rôle of conducting Mr. LOUREIRO'S defence thrust upon us. We undertook to show that the charge originally preferred against him—namely, the charge of having wilfully kept his Government in ignorance of Japan's intentions—was entirely false, and we demonstrated its falsity beyond all room for reply. That we assumed this task was primarily because the general question as

between Japan and Portugal could not but be affected by such an untruth, if left unrefuted, and secondly because, where charges which we know to be unjust are publicly advanced against an absent official, we deem it a duty to repel them. But with regard to Mr. LOUREIRO'S manner of discharging his duties in general, the care taken by him of archives in his keeping, his competence or zeal in a Consular or Diplomatic capacity, and, in short, all other matters that concern him, we refuse to be counted his advocates. His nationals may settle their own disputes with him in their own way. If they think it manly or dignified to advance against him in his absence journalistic accusations fabricated out of every rumour that circulates and elaborated by suspicious more ingenious than generous, that is their affair. We are happy to think that such methods find no toleration among Englishmen.

One phase of this new departure is worth notice, however, in consideration of its bearing on the attitude of the Portuguese Government. A suggestion is made that the documents now said to be missing were, in fact, the very communications which would have enlightened the Government in Lisbon as to Japan's intentions, and that, failing to receive these despatches, the Portuguese Foreign Office cannot be said to have treated Japan's remonstrances with discourtesy or indifference. We observe that this contingency troubles the *Hyogo News*, and for the information of that journal we proceed to submit some simple facts. In January of the present year, Japan entered her first protest in Lisbon against the abolition of the Portuguese Consulate-General in Tokyo. Portugal replied in terms which did not dispel Japan's uneasiness, and a telegram was sent from Tokyo asking that definite action should be deferred pending the receipt of detailed explanations which should be submitted from this side forthwith. These detailed remonstrances having reached Lisbon and been, we presume, duly examined, the Portuguese Government replied that Japan's views should receive consideration, and that the resolution adopted in connection with them should be communicated in due season. Now observe what followed. On the very day after penning the above promise to Japan, the Portuguese Government addressed another despatch to its Consul-General in Tokyo, confirming the abolition of his office and ordering him to make arrangements for leaving Japan as soon as possible. Could indifference and discourtesy be carried further? Within twenty-four hours of an official engagement to consider Japan's remonstrance and reply to it in due time, Portugal took the very step against which Japan had protested, and never conveyed one syllable of intimation, either then or subsequently, to the Japanese Government. The Portuguese Consul-General, on re-

ceipt of the above instructions, notified the fact to the Japanese Foreign Office, and thereupon (towards the end of May) an urgent telegram was addressed by Japan to Lisbon, intimating that the removal of the Consul-General and the abolition of his office would impose upon this empire the duty of resuming the jurisdictional functions which had been delegated to Portugal by treaty, but for the proper discharge of which no Portuguese machinery existed any longer. No notice whatever was taken of this telegram by the Lisbon Foreign Office. On June 10th the Consul-General took his departure. Once more Japan telegraphed to Lisbon that, inasmuch as the jurisdictional arrangements which had been instituted in the sequel of special negotiations in 1883 and 1886, were now entirely dislocated by Portugal's act, and inasmuch as no other arrangements had been substituted, the Japanese Government would be warranted in at once assuming judicial charge of Portuguese subjects in Japan. Desiring, however, to proceed with all friendliness and consideration, this act of resumption should be deferred until July 1st, any cases that occurred in the interim being held over. In addition to this message, which some writers are disposed to call an ultimatum, a more detailed communication, in the same sense, was addressed to the Governor of Macao. Portugal now broke her curious silence. She would reply, she curtly said, in due time. The first of July came, however, without another word from Lisbon. Apparently the statesmen in that capital considered that Japan's intimations might be treated as mere persiflage, and that the duty of providing for the preservation of law or order within his dominions need not give the Sovereign of Japan any concern. Still the Japanese Government postponed final action, and it was not until the 14th of July that the Imperial Ordinance was issued abrogating Portugal's extra-territorial privileges. These are plain facts. It is impossible that any reasonable person, with such a story before him, should justify the treatment which Japan received at Portugal's hands. Further, as to the suggestion that some despatches were suppressed by the Portuguese Consul-General in Tokyo—a suggestion which seems to lack any rational basis—it is evident from what we have said that the knowledge which Lisbon possessed of Japan's views and intentions could not have been affected by anything of the kind.

THE NEXT SESSION OF THE DIET.

AN Imperial Rescript, countersigned by all the Ministers of State, was issued on the evening of the 12th instant, convening the Diet to meet for its third regular session on the 25th of November. The Constitution directs that an interval of forty days must separate the issue of this Res-

cript from the meeting of the Houses, and the interval allowed on the present occasion is forty-three days. Until quite recently no indications were discernible as to the course likely to be pursued by the Opposition, in the next session, but judging from present appearances, the Government's enemies are disposed to base their attacks upon the treatment that has been accorded to the Bill for the postponement of the Codes, and upon the fact that the new Game Law fixes the fees to be charged for shooting-licenses, and thus, according to the views of hostile critics, infringes the terms of the Constitution, where it is provided that no new tax shall be imposed without the consent of the Diet. Of course the validity of this last ground of assault depends entirely upon the question whether a fee charged for a hunting license is, or is not, a tax. The Government, fortified by the opinions of Japanese and foreign juriconsults, and by the definition of the term "tax" which this empire adopts, in common with Germany and some other European States, declares that such a fee is not a tax. The Opposition, with equal confidence but with much less authority, contend that it is. Turning to the Constitution for guidance, we find it laid down in the 62nd article that "the imposition of a new tax or the modification of the rates (of an existing one) shall be determined by law;" but that "all administrative fees or other revenue having the nature of compensation shall not fall within the category of the above clause." From this it appears that the only kind of payment which can be demanded from Japanese subjects without the consent of the Diet, is an administrative fee having the nature of compensation. What is meant by such a fee? Count Ito's Commentary contains a definition. "Administrative fees," we there read, "as mentioned above, are such as are collected from private individuals for undertakings engaged in, or for transactions conducted, by the Government for them at their request or for their benefit. They are in their nature different from taxes, which are imposed as a common duty to be discharged by all. For instance, railway fares, warehouse charges, school fees and the like, may be fixed by administrative Ordinance, and need not be settled by law." Now it is plain that a fee charged for a license to pursue game fails to satisfy one of the essential characteristics of a tax. "A tax"—we quote again from the Commentary—"is the contributive share of each subject in the public expenditures of the State. It is neither benevolence paid in response to exaction, nor a remuneration for certain favours which have been received upon a mutual understanding." The fee paid for a license to pursue game assuredly cannot be regarded in any sense as a share which each subject is under obligation to contribute towards

the expenditure of the State. But although this distinction suffices to exclude such a fee from the category of "taxes," properly so called, it does not suffice to include it in the category of "administrative fees" having the nature of compensation" which the Government is Constitutionally entitled to levy without reference to parliamentary authority. We must go a step farther, and enquire whether the principle of compensatory benefit is involved in the imposition of the charge. To us it appears quite plain that such a principle is involved. Until the promulgations of the recent Ordinance the right of private property in game was never recognised. No individual was competent to preserve game. In feudal days this privilege was exercised by the Shogun and by many Daimyo, but under the Centralized Government its exercise has been confined to the SOVEREIGN. Now, however, private right of property in game is for the first time legally recognised, and the Government undertakes to secure to every landholder in the country the ownership of the game on his land, provided that he, on his side, pays a fee for the privilege of preserving, and provided also that every pursuer of game pays a fee for a license to pursue it. In a word, all game will be protected by the Authorities on condition that people who desire to kill it shall pay for permission to do so. The sums thus levied will go to defray the administrative expenses incurred by the Authorities in preventing violations of the newly established right. Any surplus will naturally be added to the revenue of the State, but the prime purpose of the fees is to meet expenditure connected with securing this new benefit to the people. From this point of view the definition of "an administrative fee having the nature of compensation" seems to be distinctly satisfied, and the payments prescribed by the Hunting Regulations appear to be excluded from the category of taxes requiring the consent of the Diet. Different schools of juriconsults may entertain different views on this question, but for our own part we see little reason to doubt that the spirit of the Constitution is in accord with the practice of the Government. At all events, as a chief plank in the Opposition's platform, the matter does not look particularly promising. It ought to occur—one cannot help thinking—to the agitators in the camp of the "outs," that the men who framed the Constitution are more likely to interpret it correctly, and to be supported by the Throne in their interpretation, than outsiders who have no special qualifications for the task.

COTTON-SPINNING IN JAPAN.

THE successful era which has dawned for the cotton-spinning industry in Japan is beginning to inspire ambition too large to be satisfied with supplying the home markets only. An article in the *Kokkai* illustrates the growth of this feeling. The writer sets out by enumerating the various factories. According to his statement, the total number of spindles in factories owned by organized companies is 325,940, at which there are employed 5,623 men and 16,588 women. In addition to the above, the prosperity of the business has encouraged further enterprise, so that, in the prefectures of Okayama and Yehime, about five thousand additional spindles, and in the Kwansei districts some fifty or sixty thousand, will soon be at work. Speaking broadly, the *Kokkai* believes that much of the prosperity indicated by these figures is due to an exceptionally plentiful crop of cotton and to the steady decline in the gold price of silver. The latter factor represents, in effect, a constantly increasing duty imposed upon imported yarns and cotton manufactures, and thus creates powerful discrimination in favour of the home-made goods. The *Kokkai* believes that anything like a failure of the cotton crop in Japan, or appreciation of the gold-price of silver, would throw the Japanese industry back to the comparatively enfeebled condition of two or three years ago. Up to 1890, the quantity of Bombay yarn imported monthly into Yokohama and Kobe averaged 150,000 bales approximately, but it subsequently declined, until the average at present is only four or five thousand bales. These are the *Kokkai's* figures. We take from the Customs Returns the following items by way of supplement:—

Imports of Cotton Yarn during the past 7 years.		
	Quantity. CATTIES.	Value. Yen.
1885.....	21,397,380	5,190,094
1886.....	24,630,386	5,905,457
1887.....	33,296,530	1,235,203
1888.....	47,439,639	13,611,898
1889.....	42,810,912	12,522,039
1890.....	31,908,302	9,928,061
1891.....	17,337,600	5,589,289

It will be seen that the trade in this staple reached a maximum in 1888, and that thenceforth it rapidly declined until, in 1891, the quantity imported was nearly 25 per cent. less than in 1885. As to the fact that, despite this reduced quantity, the value of the import for 1891 is put at a higher figure than the value for 1885, it is to be remarked that the method employed by the Customs in converting sterling into *yen* differed considerably in the two years, the *yen* being taken in 1885 at a uniform value of 4/2, whereas in 1891 it was reckoned at its true market price from month to month, namely, about 3/3. The natural gold price of the *yen* was 3/6, approximately, in 1885. Hence the true value of the imported yarns for the two years stand thus in Japanese currency:—

Original from..... 6,176,211 Yen.
1891..... 5,589,289 Yen.

It is interesting to note that, according to these figures, the price of foreign yarns, expressed in Japanese currency, was 10 per cent. higher in 1891 than in 1885. This difference must be chiefly attributed to the appreciation of gold. The fact is that, in effect, a duty of over 9 per cent. *ad valorem* was imposed by exchange upon imported yarns in the interval between 1885 and 1891, and that they were consequently handicapped to that extent in competition with yarns spun in Japan. In the present year the discrimination in favour of Japanese manufactures is still more marked, for a further appreciation of some eight per cent. has taken place during the past twelve months in the silver price of gold. Assuming the cost of production and other charges to be equal, the foreign merchant must now obtain fully 34 *sen* for every shilling's worth of his yarns, whereas he could be content with 29 *sen* in 1885. Exchange has taxed his business to the extent of 17 per cent. in 7 years. No trade could prosper under such circumstances.

A most striking feature of this record is the steady increase in the import of raw cotton during the interval under review. The figures stand thus:—

Imports of Raw Cotton since 1885.	
	CATTIES.
1885 ... Quantity imported ...	9,638,418
1886	6,635,782
1887	10,052,726
1888	24,076,476
1889	64,463,365
1890	52,141,752
1891	80,084,113

From this table it appears that the import of raw cotton was nearly nine times as great in 1891 as in 1885.

Turning finally to the general question of cotton fabrics, yarns &c., we find that the record for the past 7 years stands as follows, after the Customs Returns are corrected in accordance with the actual rates of exchange for each year:—

Value of Imports of Cotton Fabrics, Yarns &c.	
	Yen.
1885	9,943,562
1886	10,534,645
1887	15,372,148
1888	18,353,990
1889	17,261,759
1890	14,116,766
1891	9,091,417

These figures speak for themselves. It should be noted, however, that although the value of imported cotton fabrics and yarns fell in 1891 to a figure less than that for 1885, the value of the raw cotton imported in the former year was over 8 million *yen*, against less than one million *yen* in 1885.

The *Kokkai* assigns four reasons for the success now attending the cotton-spinning enterprise in Japan. They are, first, the low price of labour; second, the length of the working hours; third, the fact that the expense of fire-insurance is not incurred on the factories; and fourth, the comparatively trifling outlay on account of carriage to market. These reasons are apart from the questions of crop and exchange. It seems a singular notion that to save the cost of insurance should be regarded as an econo-

mical advantage, but with that phantasy we need not concern ourselves. What interests us more is to read that Japanese cotton-spinners are beginning to look for markets abroad, and that they hope soon to find customers in China, Korea, Australia and Siberia. If they learn to correct their defects of organization, a bright future probably lies before them, not in cotton-spinning alone, but in other lines of manufacture also.

THE BERLIN LIBEL CASE.

OUR correspondent from Germany reported, in his last letter, the beginning of a monster law suit in Berlin. The defendants are Mr. KARL PAASCH, a well-known German merchant, who resided in China a few years ago, and seven other parties, mostly printers and book-sellers, involved as accessories. They are accused of having insulted and libelled the German Foreign Office, the Imperial Ambassador Herr VON BRANDT, the Secretary of Legation VON KETTLER, Consul FEINDEL, the Councillors of Legation VON ECKARDSTEIN, LINDAU, and COHN, as well as the Interpreter and Vice-Consul Dr. LENZ. Two brochures, confiscated some time ago and bearing the sensational titles, "A Jewish-German Embassy and its coadjutors; Secret Hebraizing; a Government within a Government, and the World-Dominion of the Jews;" and "An Open Letter to His Excellency the Imperial Chancellor Count VON CAPRIVI," form the main *corpora delicti* before the Court. Another anti-Semitic pamphlet and an appeal to German electors of all parties and both confessions, figure less prominently in the trial. The entire material submitted to the court embraces no less than 2,000 printed pages, the reading of which consumed a great deal of time. The facts in the case as gathered from various utterances of the Berlin press seem to be briefly these: Some time in 1887 or 1888, Mr. PAASCH submitted to the Chinese Government a series of projects on the building of railways and the starting of coal and iron mines in China, without having received the consent of the authorities concerned. In the documents before the court PAASCH describes his experiences at the Peking Embassy: how the Viceroy received him kindly and highly honoured him; how, with the consent of the Ambassador, he worked out his projects behind the closed door of the Legation; how all the details were discussed with his Excellency; and how he desired to induce some of the German princes to invest in the proposed enterprise. But at this point he claims that the Ambassador opposed him and was of opinion that without Jews and bribing nothing could be accomplished, Herr VON BRANDT even going so far as to say: "However good your prospects, the Jews will do the business,

depend on it." The pamphlets then go on to speak of double dealing carried on through many months; of strange excitement caused by the 600 million marks involved in the matter, and of persistent efforts made to gain possession of the plans in order to dispense with the projector. The attack upon the Legation culminates in an assertion that an attempt was made to remove PAASCH by means of poison. The defendant speaks of how he was hunted through Peking; how his arms were taken away; how under the Ambassador's personal leadership his house was searched and valuable papers seized, while he himself was declared insane in order to find a pretext for his arrest. He was seized, he goes on to say; put into the large anti-chamber of the Embassy; forced into bed and given medicine; in fact, while quite well, treated as if he were ill. Owing to all this he avers that he became so excited that he twice attempted his own life. After these allegations had been read, Counsel for the Crown remarked: "If the defendant desires to prove all this, the plaintiffs point to the Vice-Consul Dr. LENZ, present in the Court, as an eye-witness of the events said to have then transpired. He will show that Mr. PAASCH was at the time down with fever and delirium and that in the latter's own interest it was necessary to put him into irons." This witness when called, stated in effect that Mr. PAASCH had been most kindly received by the members of the Embassy; that in the spring of 1888, suspicions as to his sanity arose in the mind of Mr. VON BRANDT; that these were confirmed by the defendant's action and letters; that he left Peking in dread of being poisoned; that sixty men searched for him everywhere; that three revolvers were taken from his trunk to prevent his doing mischief; that in his house papers were found in which the members of the Embassy were represented as confessing that they had treated him in a rascally manner; that Mr. PAASCH, covered with dirt and in an indescribable condition, suddenly reappeared; that he called for a half-bottle of poisoned champagne; could be quieted only with opium; made vicious assaults upon those near him, and was forced into bed and bound. Mr. VON BRANDT, the witness said, spoke to him with the utmost kindness, and the members of the embassy, in the interest of Mr. PAASCH, made known that he suffered from the effects of a sunstroke to guard against malicious tongues speaking of *delirium tremens*. Letters written and remarks made by the defendant were related by witness in proof of the assertion that Mr. PAASCH was insane at the time. In the course of the proceedings and in compliance with a request made by the defence, the Court decided to take depositions by commissioners to be specially appointed. The following inter-

rogatories are to be addressed to parties now in the East: (A). To the former Professor and present Custom-house officer EUGENE PANDER at Hangkow, whether the Ambassador, Herr VON BRANDT, had threatened the defendant with removal by executive order and with confinement to a lunatic asylum. (B). To his Excellency the Ambassador VON BRANDT:—(1) Is it to be ascribed to any public or private activity of Herr VON BRANDT that the railway projects of the defendant PAASCH failed to receive the approval of the Chinese Government? (2) What truth is there in the assertion of Mr. PAASCH of attempts against his life by poison or otherwise? (3) What about the claim that Herr VON BRANDT endeavoured to serve private ends by causing these projects to fail? (4) Were the ancestors of Herr VON BRANDT Jews; are relatives of his still Jews; and what is the nature of the relations existing between Herr VON BRANDT and the former President of the Imperial Supreme Court, Dr. VON SIMSON? To the Court it is quite immaterial, in itself, whether Herr VON BRANDT derives his descent from Jews or not; but the whole tendency of the writings before the Court shows that the defendant thinks it disgraceful to be a Jew, and thus intended to lower Herr VON BRANDT in public estimation. Hence not only § 185 but also § 186 (Libel) would apply here. (5) Has Herr VON BRANDT said that in the whole Foreign Office there was not a single decent individual, and that not BISMARCK, but Herr VON BLEICHROEDER, was the real master there? (6) Has Herr VON BRANDT abused his official position for purposes of gain by way of commercial transactions, and is he in debt? (7) Has he endeavoured to do violence to the lady named in the brochure? (8) What is the reason of the donation of two stags made to the Zoological Garden at Berlin? Two of the defendants, Mr. PAASCH and Dr. H. F. WESENDONK, claimed the right to be present when these depositions are to be taken and requested the Court to give them notice of time and place. At the next term two other witnesses, one a clergyman and the other a member of the nobility, are to be called by the Court to give evidence on the extraction and the circumstances of Herr VON ECKARDSTEIN and his family. This law-suit has aroused the greatest interest, not only in Berlin but also throughout Germany. Everything considered, a prompt decision of the case would seem to be in the interest of all the parties to the trial; but owing to the necessarily slow processes of the law in a suit like this, present indications point to long continued and frequently delayed judicial proceedings.

GAME LAW.

We, with the advice of Our Privy Council, hereby sanction the Game Law, and order the same to be duly promulgated.

[Imperial Sign manual]
(Great Seal.)

(Dated) the 5th day of the 10th month of 24th year of Meiji.

(Countersigned) GOTO SHOJIRO Count,
Minister of State for Agriculture
and Commerce.

IMPERIAL ORDINANCE No. 84.

GAME LAW.—CHAPTER I.

Hunting Implements and Method of Hunting.

Art. I.—The term "hunting" used in the present law, means to capture birds or animals by the agency of fire-arms, nets of any kind, falcons, or rope or poles armed with bird-line.

The exact nature of the implements mentioned in the foregoing clause shall be determined by the Minister of State for Agriculture and Commerce.

Art. II.—Hunting by the agency of explosives, gun-traps, or dangerous gins or pit-falls, shall not be lawful.

With respect to any hunting implement or method of hunting not enumerated in the foregoing clauses, local Governors (or the Superintendent General of the Metropolitan Police in Tokyo) may enact regulations for control and superintendence, by permission of the Minister of State for Agriculture and Commerce.

Art. III.—Before sunrise, after sunset, in a street, or within range of any thickly populated locality, or place where a crowd is assembled, or of any building, ship, or train, hunting is interdicted.

Art. IV.—In the following places no hunting shall be allowed:—

1. Imperial Preserves.
2. Places where notifications prohibiting hunting are posted.
3. Public roads.
4. Public parks.
5. Grounds reserved for Shrines and temples.
6. Cemeteries.
7. Private grounds, fenced, or enclosed, or in which any agricultural product is cultivated. Provided that this prohibition shall not apply if permission of the owner or superintendent of such land shall have been obtained.

Art. V.—Local Governors may, in accordance with an application of a landowner, or for any other reasons which they deem sufficient, issue a notification prohibiting the pursuit of game.

CHAPTER II.—HUNTING LICENSES.

Art. VI.—Any person desiring to pursue game must obtain a hunting license by applying to the Local Governor. Provided that the pursuit of game within fenced or enclosed grounds without the use of fire-arms shall be exempted from this provision.

Any person against whom the penal provisions of Art. XXX. have been enforced, shall not be competent to apply for a license before a period of one year has elapsed.

Art. VII.—Hunting licenses shall be divided into two kinds; namely, licenses for professional, and licenses for amateur, pursuers of game. Each of these kinds shall be subdivided into classes A. and B.

A license for professional pursuers of game shall be granted to any person who makes hunting an occupation; and a license for an amateur pursuer of game, to any person who hunts for pleasure.

Licenses of class A. shall be granted to any person who pursues game without fire-arms, and those of class B. to any person who employs fire-arms.

Art. VIII.—The following shall not be competent to receive a license for the professional pursuit of game:—

1. Any official of or above the rank of *hannin*, or any persons entitled to receive the treatment of such an official.
2. Any person who pays income tax.
3. Any person who pays more than 15 *yen* of land-tax.
4. Any member of a family the head of which pays more than 15 *yen* of income tax.

Art. IX.—The following fees shall be paid for licenses according to the kind:—

Professional license	Class A. <i>yen</i> 0.50
	Class B. <i>yen</i> 1.00
Amateur license	Class A. <i>yen</i> 5.00
	Class B. <i>yen</i> 10.00

Art. X.—The period covered by a license of class A. shall be one full year, from the 15th day of the 10th month (October 15th); and that for a license of class B. shall be from the 15th day of

the 10th month to the 15th day of the 4th month of the following year.

Art. XI.—A license can be used only by the person to whom it is granted. Provided that any person who has obtained a professional license of class A. may be accompanied by not more than three persons without licenses, as his assistants.

Art. XII.—A pursuer of game must carry his license with him when he goes out in pursuit of game.

Police, gendarmes, forestry officials, or Headmen of *shi, cho*, and *son* are competent to call for the production of a license. Keepers in preserved districts may also do so within their own districts.

In the above cases, no pursuer of game can refuse to produce his license for inspection.

Art. XIII.—If a license is lost, the fact must be notified to the Police Station of the district, and to the office where the license was originally obtained.

When a license is lost or destroyed, its holder may apply for a new license. In such case a fee of 25 *sen* shall be paid.

Art. XIV.—No person under 15 years of age shall receive a license of class B.

Art. XV.—Within 30 days after the expiration of the period covered by a license it shall be returned to the office where it was originally received.

CHAPTER III.—ESTABLISHMENT OF HUNTING PRESERVES.

Art. XVI.—Any subject of Japan who desires to establish a hunting preserve, must limit the period of preservation to 10 years, and apply for permission of the Minister of State for Agriculture and Commerce through the Local Governor.

Limitations relating to the establishment of Preserves shall be determined by the Minister of State for Agriculture and Commerce.

Art. XVII.—Any person desiring to rent a forest, field or sheet of water belonging to the Government for the purpose of establishing a hunting preserve, must apply for permission through the Governor who administers the district.

If the proposed hunting preserve belongs to another person, the permission of the owner or controller must first be obtained.

Art. XVIII.—The maximum area of one hunting preserve shall be 1,500 *cho* (3,750 acres), and the annual fee shall be at the rate of 10 *yen* for that area. Provided that, in the case of lands extending beyond the above limit, preservation shall be permitted on condition of a payment of 1 *yen* for every 100 *cho* above the limit.

The Minister of State for Agriculture and Commerce may, according to the nature of the ground, reduce the fee mentioned in the foregoing clause.

Art. XIX.—Within a hunting preserve no one except a person carrying a license and having obtained permission, may pursue game.

Art. XX.—Even within a hunting preserve no one who has not obtained a hunting license may pursue game.

Art. XXI.—When a hunting preserve is abolished, or its area decreased, the fact must be notified to the Department of Agriculture and Commerce, through the local authorities.

Art. XXII.—If the person in whom a permit is granted for preserving game, violates the present Laws, or disobeys the Rules referred to in Clause 2 of Art. XVI., or if it be considered that the maintenance of hunting preserves is injurious to the public interests, the Minister of State for Agriculture and Commerce may annul the permit for the whole area, or for a portion, of such hunting preserve.

Art. XXIII.—In the cases provided in Arts. XXI. and XXII., the fees already paid for a permit shall not be returned.

CHAPTER IV.—PROTECTION OF BIRDS AND ANIMALS.

Art. XXIV.—The capture of the following birds and animals is prohibited:—

1. Cranes of all kinds.
2. Swallows of all kinds.
3. Skylark.
4. Wagtail.
5. Titmouse (*Parus minor*).
6. Tomtit (*Parus ater*).
7. *Gajugara* (kind of *parus*).
8. *Yoshikiri* (kind of sparrow.)
9. Wren.
10. Cuckoo.
11. Wood-pecker.
12. *Hitaki*.
13. Starling.
14. Pipit (*anthus japonicus*).
15. Deer under 1 year of age.

Art. XXV.—The following birds and beasts are protected during the period commencing from the 15th day of the 3rd month to the 14th day of the 10th month, during which period their capture is prohibited.

1. Pheasant.
2. Copper pheasant (*Yama-dori*), or Hazel-grouse (?).
3. Quail.
4. Wild-goose.
5. Wild-ducks of various kinds.
6. Snipe of various kinds.
7. Moor-hen (*Gallinula Chloropus*).
8. Swan.
9. Brown-eared Bulbul.
10. *Tsugumi*.
11. Herons of various kinds.
12. Pigeons of various kinds.
13. Shrike or Butcher bird.
14. Jay (*genus garrulus*).
15. Water-rail.
16. Deer.
17. Wild stag or antelope.
18. Hare.

According to the nature of the ground and by permission of the Minister of State for Agriculture and Commerce, Local Governors may extend or shorten the period mentioned in the foregoing provision, provided that such extension or curtailment shall not exceed 30 days.

Art. XXVI.—Even in the case of birds and beasts enumerated in Arts. XXIV. and XXV., should it be considered that their removal or capture is conducive to the protection of wild cocoons, or to the pursuit of scientific research, or to other purposes, the local Governor shall have competence to sanction such removal or capture.

If it be considered necessary to remove or capture noxious birds or beasts, the Local Governor may grant a permit for the purpose.

Art. XXVII.—Even in the case of birds and animals which are allowed to be captured, it shall be competent for the Minister of State for Agriculture and Commerce to forbid their capture, irrespective of these Laws, should a measure of special protection seem necessary.

Art. XXVIII.—It is prohibited to take or sell the eggs or young of the birds enumerated in Arts. XXIV. and XXV.

CHAPTER V.—PUNISHMENT.

Art. XXIX.—Any person who pursues game without a license, or who obtains a license or a permit for establishing a hunting preserve by false representations, shall be subject to a fine of not less than 10 yen and not more than 100 yen.

Art. XXX.—Any person who violates the provisions of Arts. II., clause 1 of Art. III.; or of Art. IV., clauses 1 to 6; shall be subject to a fine of not less than 5 yen and not more than 50 yen.

The license of a person fined under the foregoing Articles, shall be suspended.

Art. XXXI.—Any person who violates the provisions of Art. IV. clause 7; Art. XII, clause 1 and 3; Art. XXIV; Art. XXV, clause 1; or Art. XXVIII, shall be subject to a fine of not less than 2 yen and not more than 20 yen. Provided that, with respect to violations of Art. IV. clause 7, the penalty shall not be imposed unless the land owner or the person who has charge of the land takes legal proceedings.

Art. XXXII.—Any person who violates Arts. XIII clause 1; Art. XV; or Art. XXI, shall be subject to a fine of not less than 1 yen and not more than 1.95 yen.

ADDITIONAL RULES.

Art. XXXIII.—The present Law shall go into force from the 15th day of the 10th month of the 25th year of Meiji (Oct. 15th, 1892). Provided that licenses for pursuing game without fire-arms shall become operative from the 15th day of the 10th month of 26th year of Meiji (Oct. 15th, 1893).

Any person who has obtained a license for pursuing game prior to the operation of the present Law, shall not be required to take out a new license. Provided that, if the possessor of such a license falls under the category set forth in Art. VIII, he must apply for a new license in accordance with the provisions of Art. IX.

Art. XXXIV.—The Shooting Regulations promulgated in the 1st month of the 10th year of Meiji (January, 1877) by Notification No. 11, shall cease to be operative on the day the present Law goes into force.

SPECIAL PROVISION FOR THE PRESENT PERIOD.

We hereby sanction a change of period for pursuing game, and order the same to be duly promulgated.

(Imperial Sign-Manual)
(Great Seal.)

Dated the 5th day of the 10th month of 25th year of Meiji.

Minister of State for Agriculture
and Commerce.

IMPERIAL ORDINANCE No. 85.
Game Licenses of Class B granted under the

provisions of the Game Law promulgated by Imperial Ordinance No. 84, in the 25th year of Meiji, shall, for the present period only, be valid from the 15th day of the 11th month of the 25th year to the 15th day of the 4th month of the 26th year of Meiji (Nov. 15th, 1892 to April 15th 1893).

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

TAXATION IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have perused with much interest Professor Droppers' elaborate letter on this topic and your leading article in reply to it, in the *Japan Daily Mail* of the 7th instant. I do not mean any disrespect to Professor Droppers, when I say without hesitation that his ideas on the subject of the land tax in Japan seem to me not a little confused and in some respects antiquated. I confess that I have not had the opportunity of seeing his article in the *Quarterly Journal of Economics*, out of which the present discussion has arisen; but from the short extract which you published in one of your editorial notes on the 6th ultimo, he appears to labour under the delusion that the farmer's burden continues still to press upon him as heavily as it used to do some years ago. Professor Droppers' proposition would have passed had it been made in the days when the abnormal depreciation of the price of rice and a few other circumstances combined to reduce the tillers of the soil to a pitiable state. It was then, or about then, that the distinguished German scholars quoted by your correspondent carried on their investigations, and it is no wonder that their labours should have revealed a painful state of affairs among the farming class. But it must be observed that in the past few years things have rapidly mended, until the farmers are now in a position to make no small profits out of their lands. Their burden to-day is practically about one half as heavy as it was in former years. Several causes have been in operation to bring about such a state of things, but I may mention (1) the steady rise of the price of rice; (2) the equalization of prices throughout the country by the rapid extension of railways; (3) increase in yield by the introduction of chemical manures and by improvements in the mode of cultivation and the selection of seed; and (4) the gradual decrease of the rate of interest.

Let me now prove my assertion by means of a few plain figures. According to the "Tenth Annual Statistical Report," which is the latest, the average yield of rice *per tan* (= $\frac{1}{10}$ of an acre) for the five years ending 1890 was as follows:—

Year.	Average yield Per Tan. koku.
1886	1.42
1887	1.52
1888	1.44
1889	1.21
1890	1.57

From these figures we obtain an average of 1.40 koku for the above mentioned five years, taken together. Professor Droppers will agree that this is an extremely moderate datum to start with. Let us suppose that rice sells now at only 5 yen per koku, though in point of fact the price ranges between 7 and 8 yen in the larger centres of commerce, and even in remote rural districts farmers can get at least 5.30 yen. Taking, then, the moderate sum of 5 yen per koku for the price of rice and 1.41 koku per tan for the yield of the cereal, we find that the farmer's gross receipt from a tan of his rice field is 7.05 yen of which the net income will be 5.99 yen. Let us next see how much of this goes to the Treasury as land tax. According to the same Statistical Report, the average assessed value of land (used for rice cultivation) was 40.25 yen per tan in 1890. Two and a half per cent. of this sum represents the amount paid as land tax. Thus it will be found that the farmer pays 1 yen and some odd *rin* (mills) in the shape of national land tax.

We have thus obtained the two necessary data for our present purpose. The farmer gets, at the lowest possible estimate, 5 yen 99 sen per tan after deducting 15 per cent. on account of cost of production; and against this amount of net receipt he pays 1 yen by way of national tax. Hence his land tax represents 16 $\frac{2}{3}$ per cent. of his net crop of rice. Even if we put it at 17 per cent. this figure still differs widely from the percentage calculated by Professor Droppers. The difference becomes greater still when it is remembered that his "25 per cent." and my "17 per cent." repre-

sent respectively the minimum and maximum limits of the farmer's burden. Practically it will be found that at present the farmer is paying as land tax very much less than 17 per cent. of his net crop of rice. From my own personal experience, I can safely state that the returns of farm products as given in the Statistical Report I have quoted above never err on the side of exaggeration.

Professor Droppers' observations, as I have already remarked, apply only to a state of things that existed several years ago. Taking the average assessed value of land for 1885, namely 45 yen 97 $\frac{2}{3}$ sen,* as the basis of calculation, it is found that the farmer had to pay in that year 1 yen 14 $\frac{2}{3}$ sen as land tax per tan. The average yield of rice for five years ending 1885 was 1.17 koku per tan; at the rate of 4 yen per koku, we get 4 yen 68 sen for the gross receipt or 3 yen 98 sen for the net receipt of the farmer from a tan of his rice field. On the basis of these figures, it will be seen that the land tax in that year represented 28 $\frac{1}{3}$ per cent. of the net produce of the rice field.

I entirely agree with Professor Droppers, and the authorities he quotes in his letters, in the belief that there certainly was a time when the farmer had to pay nearly as much as three-tenths of his crop in the form of land tax. But that state of affairs, fortunately, has already passed away; and, as I have pointed out, the farmer is now in comparatively easy circumstances. In the above calculations I have taken the rice crop alone into account, but, as you Mr. Editor point out in your editorial, we must, in order to form a fair estimate of the farmer's burdens, take into consideration various other things which he raises on his rice field after harvesting that cereal. Barley, wheat and rye are the principal products in this category. The average yield of barley, wheat, and rye for the 11 years from 1880 to 1890 inclusive was 8 to 4 shō per tan. The Statistical Report now before me does not give prices for rye; but from those for wheat and barley, I observe that the average price for these two products for the 6 years from 1885 to 1890 inclusive was 3.45 yen per koku. Taking 2.50 yen as the average price for barley, wheat and rye, it will be found that the farmer receives an additional net income 1 yen 78 sen. Besides, he always plants beans on the margins of his rice fields and also he knows how to turn the rice and barley straw to various profitable uses. When these things are taken into consideration, it will be conceded that the farmer obtains enough from his by-products to increase his total net receipt, ("net" is used here in the sense in which it is used by Professor Droppers) to 8 yen at least. Thus we see that the farmer pays 1 yen as the land tax against a net receipt of 8 yen, or a gross receipt of 9 yen 40 sen. The land tax is thus 12 $\frac{1}{2}$ per cent of his net receipt, or 10 $\frac{1}{2}$ per cent of his gross receipts.

The same results may be obtained by another process of calculation. The average rice crop for the 10 years from 1881 to 1890, was 34,372,283 koku, which, at the rate of 5 yen per koku, yields 171,861,415 yen. Now, out of the so called land tax for 1891, amounting to 38,771,339 yen, the share actually borne by rice fields was represented by 27,894,300 yen. Assuming that the above mentioned average of 171,861,415 yen represented the net proceeds of the rice crop for 1891,—as we may certainly do in view of the low figures taken—we find that the ratio of land tax paid for rice fields in that year was 16 per cent. of the net crop. Estimating all other things produced on land at 100 million yen net—a moderate estimate considering what varieties of important products are included in this category, such as silk, tea, sugar, barley, wheat, potatoes, etc.—estimating these products at 100 million yen, we have 270 million yen in round numbers representing the whole net income of the farming class. The tax which the farmers paid on account of this aggregate sum of their net income was, in 1891, 27,894,500 yen on rice fields (ta 田) and 6,436,470 yen on upland farms (hata 畑), amounting in all to 34,330,970 yen. Thus the tax actually levied on land devoted to agricultural purposes in 1891 was 12 $\frac{2}{3}$ per cent. of the net proceeds of the products of all kinds.

Professor Droppers states that "he is quite ready to acknowledge that in Gumma Ken, Nagano-Ken, and Tokyo-Fu, where I myself have particularly studied farming conditions, the tax is, as a rule, higher than in the southern part of Japan." I wonder if Professor Droppers is "ready" to prove his singular assertion or rather concession. Nagano and Gumma are the very localities, which, being the centres of sericulture, are better capable of bearing their agrarian burdens than most of the southern provinces; while the propinquity of good markets and the high value

* The difference between this and the average for 1890 (40 yen 57 $\frac{1}{3}$ sen) is chiefly accounted for by large reductions in the assessed value of land effected by Law No. 22 of August 1889.

Original from

of the land place the farmers of Tokyo-fu in a similarly advantageous position.

Another misleading statement occurs in his letter. Quoting from the *Yfi Shimpō*, he remarks that "there are inequalities in the rate of the land tax not only in different prefectures, but in different *kōri* and villages, and, strange to say, even in adjacent lands of the same village." There can be no inequality in the rate of the land tax, that being fixed at 2½ per cent. of the assessed value of land throughout the whole Empire. What differs is not the rate of the tax but the assessed value of land. Practically the result is the same, but in discussions of this kind it is well to observe accuracy in the use of technical terms.

I presume I have shown sufficiently clearly that the farming class is not so badly off as some writers are fond of representing it to be, so far at least as the land tax is concerned. In my own Province, Hōki, where the assessed value of land is unduly high, it is generally admitted that the capital invested in rice fields yields an interest of 7 to 8 per cent. per annum. I believe that such is the case in many other localities.

The agitation for the reduction of the land tax originated in times when there really were grounds for it, but it is now maintained for the most part by politicians for reasons they know best. It is a pity that, in spite of the protest of the independent educated classes, the popular fallacies on this question continue to delude not only the bulk of the people but also several otherwise judicious students of current affairs.

I remain, Yours respectfully,

M. ZUMOTO.

October 9th, 1892.

MR. ISHII'S ORPHANAGE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I feel impelled to acquaint your readers with the present condition of Mr. Ishii's widely known Orphanage. It is nearly a year since I wrote you on the subject, and then only casually in connection with Earthquake Relief work.

I write entirely on my own responsibility, without even telling Mr. Ishii of my intention.

After the terrible floods of last July, Okayama's severest experience for 238 years, the noble hearted head of the Orphanage and his 200 children jumped into relief work, and forgetful of self, did all they could for the sufferers. This special calamity, added to that of the great earthquake and its resultant institutions of various kinds, all good and worthy, have so diverted the funds of charity-lovers, as to make the strain of existence on older organizations a very severe one.

By the help of special gifts just before and during the summer, a much needed dormitory for girls has been erected, but cannot be used because lacking \$57 worth of *shoji* and furnishings. There have been eight deaths among the weakest of the children since August.

This and other causes seem to necessitate a little better food and sanitary precautions. However, the match-making industry is paralyzed for lack of funds with which to buy materials, and worst of all, there is nothing in sight for food itself beyond this week. Moreover, it is contrary to the fixed principles of the institution to borrow money under any circumstances whatever.

The Asylum ought to have \$10, a day of outside assistance. Its more than 200 inmates cannot be fed, even in the simplest fashion, on less than \$5 or \$6. All reserve funds, so far as Okayama is concerned, are used up, though there is plenty for the present at the Nagoya Branch, where 60 more children are cared for.

The situation is desperate, and a faith less than Mr. Ishii's would quail before it.

Aside from the financial problem, the condition of the Asylum is excellent. Its general spirit and *esprit du corps* leave little to be desired. More attention is being paid than hitherto to the educational part, and the general training of heart, head, and hand goes on apace. The youngsters are studying shaving, printing, match-making and praying, in about the right proportions, and with a zeal and courage that make them an example to their elders, and show them to be worthy of the fullest sympathy and most generous assistance.

Yours sincerely, JAMES H. PETTEE.

Okayama, September 30th, 1892.

CRICKET.

YOKOHAMA V. NEW-COMERS.

The New-comers proved too much for the older residents on Saturday afternoon, compiling a score of 156 to the latter's 81. Certainly the light was bad and the wicket anything but easy towards the end of the game, but Yokohama gave themselves away rather too easily—Dodds was caught by Burn off Watson before he had scored, and Layard was similarly cut short in his career by White, when three only had been notched to his credit, while four others, displaying too great a preference for "skying," were caught out before they had contributed many runs. The highest scores on this side were made by E. R. Morris 20, not out, and K. F. Crawford 18. Mair was the best man among the New-comers, his total reaching 48 before the sticks were scattered by a neat ball from Phillip. G. W. B. Watson came next with 33; he was caught by Layard off Crawford. Scores:—

SEQUAH AT THE PUBLIC HALL.

Sequah has undoubtedly proved the most popular prestidigitateur that has ever appeared at the Public Hall. Throughout the long entertainment of Wednesday evening he succeeded in holding the enthusiastic attention of his large audience with the greatest ease. For the moment, his successes as a "medicine man" were eclipsed in the showman. The thickly packed gathering in the hall was a splendid testimonial to his abilities in both lines, and should prove one of the most gratifying ovations that he has received on his Eastern tour. For the greater part of the evening he was entirely unsupported, unless the presence of a gentleman from the audience, who mounted the platform in response to his request for an unsophisticated assistant of thirteen or fifteen years of age—but whose appearance and behaviour sadly belied those charmingly youthful stages of boyhood—can be taken seriously into account. Later on he was joined by his talented wife, and then the climax of the entertainment was reached. There was a refreshing air of candour by which he manipulated the obedient cards, and he even deprived the travelling smoke trick of its air of mystery by naming the chemical agents employed. His untrammelled open-mindedness of the merits of particular Yokohama trading establishments was amusingly exemplified by his advertising of one store while receiving material aid from the assistant of another—but that by the way; his apparent disregard of the sacred rights of property, especially in the matter of watches, hats, and handkerchiefs was another prolific source of merriment. In regard to the hat the owner was perhaps slightly to blame—he was leaving Japan by the night mail boat and evidently had been pressed for time, hence the incongruous and seemingly unending accumulation of pretty trifles inside. The flags of all nations exhibition was far more successful than on the previous occasion, the appropriate music to each display being forthcoming this time. Altogether, these drawing room tricks were most successful, each and all displaying the perfection of a professional hand, demonstrating most forcibly the varied gifts of patience, perseverance, and dexterity of mind, hand, and wrist which Sequah possesses.

Space will not permit of a detailed description of the seance of thought transmission given by Mr. and Mrs. Sequah; suffice it to observe that the display of physical phenomena eclipsed all that we have previously had the pleasure of witnessing in Yokohama. Both artistes,—for artistes they are in

every sense of the professional synonym—have thoroughly trained their faculties in this direction to a marvellous degree of perfection, and they richly deserved the appreciative plaudits which the delighted house liberally showered down. The Indian club swinging, given by special request, again delighted everybody present, and a repetition would have been welcomed, had not the great strain already put upon the performer been sympathetically recognised. Ten minutes in Wonderland, as performed by the Davenport Brothers, brought the function to a close.

A word must be said about the stage arrangements. It is seldom that such a complete and tasteful interior is displayed on the other side of the footlights, at least east of Suez. The whole proscenium was fitted up as a drawing-room; the silken and heavy gold embroidered hangings are, we understand some of the purchases which the entertainer has made during his sojourn in Dai Nippon. He had packed them up, ready for shipping home, when the deputation from Yokohama residents waited upon him to ask for another exhibition of his skill upon the Public Hall platform, and he there and then unpacked them. In so doing he was enabled to give a unique, if perhaps gorgeous setting to his entertainment, which proved, however, most artistically pleasing to the eye, and a welcome relief from the plain, almost studiously bare, adornments of our chief place of public amusement.

MARRIAGE OF MR. B. H. PEARSON AND MISS GRIFFITH.

The nuptials of Mr. Brook Hyde Pearson, and Miss Kate Campbell Griffith, of Toronto, Canada, were duly solemnised on Thursday afternoon at Christ Church, Yokohama, in the presence of a large number of friends and near connections. The sun, which had been fitfully hiding from view all the morning, behind a thick canopy of driving rain clouds, burst through in all its glory just before the service commenced, bringing vividly to mind the old adage—happy is the bride whom the sun shines on. The position of the windows in the English church forbade the entrance of any floods of mellow light to add warmth of colouring and effect to the picture presented by the presence of a bevy of fair bridesmaids gathered around a graceful bride, but the interior of the church looked very pleasing with the palm and evergreen decorations around and about the rood screen. By the hour appointed every invited guest had taken the place assigned to him or her among the congregation, the task of conducting to seats falling upon Messrs. Barton, Hoyt, G. W. B. Watson, Archer, P. Morris and T. Morris. The bridegroom and his best-man, Mr. Stedman, then took up positions near the altar rails, and after a short interval the organist, Miss Leech, announced the arrival of the bride. She was attended by Mr. Tilden, Mr. Blad, Mr. Henson, and Mr. Layard, as groomsmen, who escorted Miss Eldridge, maid of honour, Miss Gibbins, Miss Wilcox, Miss Grigor, and Miss Fanny Eldridge, the bridesmaids. Miss Eldridge was attired in a costume of yellow crêpe, of a shade of deep chrome, with Leghorn hat and yellow trimmings to match. The bridesmaids wore dresses of heliotrope crêpe, with Leghorn hats and yellow trimmings to match; they carried bouquets of marguerites tied with long yellow ribbons, the gifts of the bridegroom. Miss Beryl Dodds, in white silk, and carrying a basket of marguerites, which she afterwards strewed in the path of the returning bridal party, and Master Allen Fraser, in a sailor suit, acted as attendants. The bride, who entered leaning on the arm of Dr. Stuart Eldridge, wore a dress of pale cream Bengaline silk, trimmed with satin to match, and caught up with love-knots of point lace. It was made with a long train, Princess back, and leg-of-mutton sleeves. Over the whole dainty confection was draped a snowy tulle veil, surmounted by a chaplet of natural flowers. In her hand she carried an ivory prayer-book. Mrs. Stuart Eldridge wore a handsome dress of rich silver gray silk trimmed with steel passementerie, and a garnet bonnet with trimmings to match. The Rev. E. Champneys Irwine officiated, and the service was most impressively rendered. Upon the return into Church, after the signing of the registers, the procession reformed and left the sacred edifice to the strains of Mendelssohn's Wedding March. A reception was afterwards given at the residence of Dr. and Mrs. Stuart Eldridge, and was largely attended, most of the four hundred invites accepting. The bride's going-away costume consisted of a brown cheviot, tailor made gown, trimmed with brown silk, and hat to match. The honeymoon will be spent

THE WORK OF MISSIONARIES.

By Y. ISOGAI.

(Translated from *Kirisuto Kyō Shimbun* of Aug. 19th and 26th.)

Since the coming of foreigners to our lonely island some forty years have elapsed, during which period not only have our people made great progress, but a land that for two thousand years had been devoted to idol-worship is now a land where the western religion is being widely propagated. At present there are many of our people engaged in extending this religion, and so it can by no means be said that the Christians and the various forms of Christian work are all the direct results of the labours of missionaries. Indeed, the part done by our own workers is probably the larger.

But let us look back some twenty years and see how many Christians there were and what other results were apparent. The first missionaries, few in number, were accustomed to go around explaining Christianity, or were carrying on school-work with a few pupils. They did not know well the condition of our country, and were very awkward in their use of our language. For these reasons their pupils were but a handful, and their preaching was listened to by but a few. These meagre results may perhaps be accounted for in part by the fear of persecution, or perhaps by the wide difference between their ways of living and ours. Indeed, the opportunities for missionaries then to do either evangelical or educational work were so vastly inferior to the doors that are open now, that we can only congratulate them and ourselves too.

The work of missionaries from the first has been very varied, but their most helpful endeavours have been in the two lines of education and evangelization. Let us inquire which of these two has hitherto been of greater benefit, and which promises hereafter to be the more helpful to Japan.

So far as the past is concerned, we cannot say very much about the direct great results of the first generation of missionaries. For in educational work the men of talent they raised up were very few, while in evangelical lines there were no conspicuous results. But, by the aid of God, the patient labours of the first generation of missionaries resulted in a certain number of Christians and of pupils. Who is not grateful to the missionaries every time he calls to mind this early period of their struggles! What trials, what difficulties they endured for Japan!

But the reasons why Christianity is being widely accepted now, and why the work of the Christian Church is becoming more and more conspicuous, are because of the devoted zeal and love of the Japanese leaders, who, some ten or fifteen years ago, were uncombed and poorly dressed students, learning on week days from the early missionaries how to read English and listening to their Bible explanations on Sundays. They hardly looked then as though they would become the well-dressed pastors and teachers of to-day. To put it in a word—these pastors and teachers were the pupils of missionaries, who thus, by means of education, indirectly effected a very great work. For what they harvested was planted again, and springing up has yielded many hundred fold.

If now we look at the work of the missionaries in evangelical lines, we shall reach about the same conclusion. Formerly, when our people everywhere were still looking on Western affairs with great dislike, and were counting Christianity as a corrupt and baneful religion, those who were ready to break from past associations and take the unusual course of listening to missionaries were few. Those who went from curiosity to see the foreigner or to hear his preaching were mainly bores and hirelings, only "weeds in the grain," who when curiosity was satisfied failed to go any more. Very few of these curiosity-people ever became Christians. The thing, however, about which there can be no question is this, that the far-sighted and thoughtful ones felt that the religion of the civilized world must be well worth studying, and so with unbiased mind and heart they sought the truth and finally became believers for life, with a real love for this new religion. It is this class of persons who to-day are the pillars and foundations of the Churches. These are the influential pastors whom everybody knows and whose names need no mention.

Thus in the first period of Christianity in Japan, both evangelical and educational works were alike essential—both effecting about the same results. But how is it in the next generation? As the months and years have gone by, our country has at one step entered upon the Era of the Restoration. Both the number of Christians and also that

of pupils in mission schools have greatly increased. Churches have sprung up in all directions. Pastors and teachers have gone forth in goodly numbers. There will henceforth be an Era of the Restoration in Japanese Christianity. Let us examine this change closely.

The whole condition of Christianity here has already changed. By the aid of Japanese pastors and teachers the two main lines of evangelical and educational work are almost able to hold their own. We must still borrow financial help from the missionaries, but in what else do we need their aid? Or, how can missionaries henceforth effect the most good for our country? Let us study this question.

"Do not make a precedent of the past." It is useless to say: "If missionaries in the past had only done thus and thus." Such talk is of no more account than reckoning the years of a dead child. I desire to drop all that and speak about the work of to-day and of the future.

I thank you, missionaries, for having come to our lonely island, and for having planned with one mind and purpose to show forth the glory of God. But yet, if you plan to spend your lives for the sake of Christianity, I have some suggestions to make, not only that we may be the gainers, but that you may have the very best results from your labours. This is by no means any expression of dissatisfaction with you. Whether men of your ability will listen to what I can say is a matter of doubt. What I want to say is not to all missionaries. Of course some—but I will offer my suggestions to the large majority.

There is no need of my going into details here as to how much Japan has advanced within a generation. I think you all know. Well then, your work of to-day is still virtually the same as it was in former times—mainly limited to education and evangelization. Besides these two, there is more or less of indirect work in philanthropic lines, but that is, comparatively, insignificant.

In practically considering evangelization and education, the question arises as to which you regard the more important. It seems to me it is evangelization. Those who give themselves wholly up to educational work are very few. The most of those who are connected with teaching have their hearts in evangelistic work, and are not in earnest in their teaching. If you leave the Concessions you must have a teacher's resident passport, and so for the sake of living in the interior you evade the law by wrongly accepting a teacher's responsibility, while really you are zealous only for evangelistic work. You have the name of teaching, while spending very little time in school and giving almost exclusive attention to the work of evangelization. In some extreme cases, where the schools have not succeeded, they have been closed, and some Japanese have personally employed the missionaries for the ostensible purpose of teaching theology, while their real purpose is to do merely evangelistic work, thus giving a colour of deception to their actions. So that it is perfectly clear that you regard this form of work as the more important.

Now do not reply that I regard evangelistic work as useless. As though I could fail to recognize its necessity! But if, instead of aiding us by direct evangelical work, there should be some other way of your effecting a wider good, what then? Would you still be so devoted to evangelistic work that you couldn't possibly change? (In this article I mean by evangelistic work, direct, not indirect work. It hardly needs to be said that I regard every believer, without reference to surroundings, whether learned or ignorant, male or female, as under obligation to work indirectly for Christ.)

Now among the obstacles foreigners encounter in doing evangelistic work are:—

1. Their lack of ability in the use of the language. This, to be sure, is no fault of missionaries. Being in a foreign land and among a foreign people you cannot fail to feel the difficulties of the language. As you well know, Japanese who speak English are well nigh countless, yet those who speak like an Englishman or American can easily be counted on one's finger. And do not even these exceptionally able linguists occasionally use Japanese English? The fact is you cannot become skillful in our language. If a comparison be made between even those who have been here twenty or thirty years and one of our own people, the foreigner must be called very deficient. And because of this general lack of ability to use Japanese, you cannot reveal your real thoughts, nor set forth minutely your rich stores of learning. Though you have earnest faith, you fail to affect your hearers. Even those of you who in your own tongue can inspire a throng of people with torrents of eloquence, show such a lack of mental vigor when using Japanese, that our people quickly get weary in listening.

2. The difference in ways of thinking, or in na-

tional character. No one denies this difference between the East and the West. This is one reason why a foreigner finds it so difficult to become intimate with our people and to get at their real hearts. So whenever any of our people who are not used to foreigners venture to make inquiries of a missionary concerning religion, it is seldom indeed that a fitting reply is given. All our people can do is to sit and listen to a sermon, or when calling upon the foreigner they can only speak with him on commonplace matters. Just contrast with foreigners one of our ministers, or an understanding friend or relative, who, in a familiar way easily explains what the inquirer doesn't understand; and which is the superior? Thus again are not the difficulties of foreigners doing direct evangelistic work in the interior amply evident? Will you still persist in direct evangelization?

As to out-of-the-way places where the old customs are yet the rule, and where foreigners are rarely seen, many are yet to be seen gathering out of curiosity to hear foreigners preach. These hearers are "birds of a feather flocking together," and to regard them as sincere seekers after truth is a gross mistake. Yet there are many missionaries who entertain this erroneous opinion. Now what work should you missionaries undertake? I say, *Education*. This, henceforth, will bring the greatest benefit to Japan. Just look at modern Japanese society. There are schools and teachers to be sure, but look at the middle and upper classes in the interior and see the young men and women who need education. They are mainly children of poor and ignorant parents. Some of them are not worth educating. Nay, the most of them are so stupid that you could not educate them. But they are not all so. There are some who are naturally bright and who would, if educated, become great scholars or would achieve great deeds. Even though they should not become exceedingly celebrated, it is important that they should gain an education for the sake of their future influence. It is a matter of deep regret to leave such treasures in the mud where educating influences do not now reach them. Who does not sigh at the thought of them! If you missionaries can control the time and money you spend in direct work, why should you not use some of it in training up their precious souls? It is by no means easy work to gain these pearls and treasures. Even though you wring out sweat and blood for years in this work, the common people's opinion is likely to be that its value is very small. Yet one pearl is worth mountains of broken tiles and pebbles. To train up one man of ability is vastly better for the whole country than to preach to a thousand rustics. And it is far easier to teach the one of ability than to influence the thousand poor. If you would only patiently take up this work, many men and women of large ability will surely be the result of your work. Why go on wasting your strength in direct evangelistic work!

Now I would not suggest that you independently go into western education. Rather I would advise you to select some Japanese who will assist you to understand the condition of Japan, to know the needs of society, and to work in the way that will be of greatest benefit to our country. Let those of you who have already gained a name as teachers go on in this line, while those who have not yet engaged in this work should arouse themselves and open more schools.

But some will object thus:—"Results are seen at once in evangelistic work, while in educational work direct results are almost impossible. Considering merely the number of adherents, there are advantages in direct work, for there is no difference in the worth of men's souls. If we can gain ten by preaching where we should gain but one by teaching, is not the worth of direct work apparent at a glance?"

I say, no, not as it seems to me. For I have already shown how comparatively fruitless your direct work must be. And, even supposing you cannot gain many by educational work, if your bright and intelligent students become believers, their leavening influence will be felt widely in the middle and upper strata of society. But the fact is, in working for dull and ignorant and stupid men and women you effect nothing more than securing nominal Christians. There is no need of our troubling you to evangelize such people, for all that can be left for us to do. But in educating those young men and women we beg your earnest assistance. This is the business of which Christ spoke—raising up "fishers of men." Do not, we entreat you, use aimlessly your gifts of wisdom and faith, which we highly value.

Your labours then are essential, as I have shown in educational lines. If you would take part of the money you use in evangelistic work and put it in education, or if you would use your own means and the aid you get from intelligent friends, to extend and more this kind of work, in a few

decades you would gain conspicuous results. My desire is that you will not be short-sighted workers seeking for instant and visible results, but that you will make far-reaching and responsible plans. Education for has its aim not the graduating of large numbers, but the training of useful talents. The value of a school cannot be divined from the number of students, but from the quality of its graduates. And therefore, schools with splendid buildings and thousands of pupils might as well be closed, unless their graduates are of value to society. On the other hand, a small private school in a mean looking house, and in a narrow-minded community, provided it turns out men who lead the people aright, or who perchance influence the whole nation, must be called a true success.

Now bear with me for my final words; if missionaries will go into the interior, open schools and work with such a full heart that the years shall seem only days, pupils may be few, and your results may be only one or two men of talent in even twenty or thirty years, but that is no reason for lamentation and regret, the world may think your success small, but God will accept your labors as indeed great.

THE CAPTAIN OF THE "MARY ROSE."

A TALE OF TO-MORROW.

BY W. LAIRD CLOWES.

GOLD MEDALLIST, UNITED STATES NAVAL INSTITUTE.
(FROM "THE ENGINEER.")

IV.—A LETTER OF MARQUE.

It has already been said that the account of the battle of Toulon had been sent to *The Times* by Lieutenant Thomas Bowling, R.N., a half-pay officer who had been a guest in the *Nife*. In this corresponding with a newspaper this officer had, of course, broken the regulations; and it must be admitted that the peculiar circumstances of the case did not tend to diminish his fault in the eyes of his superiors. All that he had to say should have been said to their Lordships, and not to the public; and when the natural excitement consequent upon participation in the stirring events concerning which he telegraphed had subsided, Mr. Bowling was as willing as any one to admit this. Unfortunately, he had acted upon the impulse of the moment, and under the conviction that a whole country was waiting in awful suspense to hear what he happened to be able to relate; and this rashness cost him dearly. On Wednesday the moribund Admiralty summarily removed Mr. Bowling's name from the Navy List, and ordered that the delinquent should be informed that his services were no longer required by her Majesty.

The next step taken by their Lordships was more important, and possibly more necessary. They convened by telegraph a meeting of certain naval officers of high rank and great experience at the Admiralty. They also obtained the presence of the sorely-worried Prime Minister, and of several of his colleagues; and by three o'clock in the afternoon of Friday the Admiralty, as such, had ceased to exist. Its place had been taken by, and its powers transferred to, a Supreme Board of War, and the nominations to the Board had all been duly confirmed by her Majesty. This Board was constituted under the presidency of one of the Royal princes, a personage of great tact and experience in the conduct of affairs, and devoid, of course, of political bias; and it consisted of two branches, the Naval and the Military. Of the Military it is unnecessary here to say more than that it was not, as the Naval branch was, a new formation. The Naval branch was placed under the control of a Chief Director of Fleets; and for that high and responsible office Sir Humphrey Thornbeigh, an Admiral of the widest knowledge, remarkable decision of character, and unrivalled administrative ability, was chosen by acclamation. Immediately under him were the chiefs of the various departments, viz., the Staff and Intelligence Department, the Construction Department, the Engineering Department, the Ordnance Department, the Hydrographic Department, the Stores Department, the Sanitary Department and the Secretariat Department. Many of the old permanent officials were retained, but many also were discharged; and for these retired officers and a few civilians, who were chosen because they possessed special technical knowledge, were substituted. The chiefs of departments were, in all cases, officers of flag or post rank; several being men who, although they were on the retired list, were still full of work and energy, and, in spite of the fact that the new arrangements could obviously be not expected to work with direct smoothness at first, the knowledge that such officers as Sir Humphrey Thornbeigh, Sir George Lyon, Sir William Howl, Sir Mewstone Hewart, and their likes, had undertaken the management of affairs, exerted from the very

first, a salutary influence on the rather depressed spirits of the Royal Navy.

The Channel Fleet had sailed from Vigo before the advent of the Board to office: but several fast cruisers were despatched to intercept it, and new orders were sent to the coastguard vessels and the various dock-yards; with the result, that by Saturday, May 2nd, without the occurrence in the interim of any further mishap, the following ships, with steam up and everything ready for sea, were assembled within proper defences at Spithead. Battleships: *Hercules*, *Neptune*, *Audacious*, *Iron Duke*, *Hotspur*, *Belleisle*, *Royal Sovereign*, *Anson*, *Camperdown*, *Benbow*, *Howe*, *Rodney*, *Triumph*, *Superb*, *Conqueror*, *Achilles* and *Black Prince*. At Plymouth were the coast defence ironclads *Hecate*, *Hydra*, *Gorgon*, *Cyclops*, and *Prince Albert*, and the armoured cruisers, *Northampton*, *Shannon*, *Aurora*, *Immortalité*, and *Narcissus*. And in the Channel were the lighter cruisers *Forth*, *Thames*, *Mersey*, *Indefatigable*, *Latona*, *Melampus*, *Inconstant*, *Intrepid*, *Naiad*, *Arethusa*, *Medea*, *Medusa*, *Barham*, *Bellona*, *Barrosa*, *Seagull*, *Rattlesnake*, *Spanker*, *Sharpshooter*, *Barracouta*, *Grasshopper*, *Salamander*, *Skidjack*, *Curlew*, *Speedwell*, and *Sheldrake*. These ships were largely manned by Naval Reserve men, who had by this time become available in considerable numbers, and by members of the recently-disbanded Royal Naval Artillery Volunteers, a corps which at last began to be appreciated. The reinforced French Channel Fleet, consisting of the ironclads *Tonnerre*, *Requin*, *Victorieuse*, *Furieux*, *Suffren*, *Vengeur*, *Fulminant*, *La Galissonnière*, and *Tempête*, with the cruisers and gun vessels *Surcouf*, *Aréthuse*, *Coëtlogon*, *Duguay-Trouin*, *Epeuvier*, *Lance*, and *Salon*, beside torpedo vessels, had gone out with the intention of meeting our Fleet on its way from Vigo, but had been evaded, and was still at sea. For the moment the country was almost re-assured, although reports that were in themselves sufficiently bad reached England almost every hour, of merchant vessels captured or burnt, both in the Channel and in the Mediterranean as well as elsewhere.

In the meantime Mr. Thomas Bowling, after having travelled with all haste by way of Italy, Switzerland, Germany, and Holland, had reached England on Friday, May 1st, and had found, to his intense chagrin, that his occupation had deserted him. An officer who loved his profession as he did could have received no heavier blow. No one doubted his bravery, his capacity, or his single-heartedness. He owed the loss of his commission to no fault that reflected on his honour, but solely to the very impulsiveness which, in other circumstances, might have shown him the way to professional distinction. His position was not enviable, so far as his professional prospects were concerned.

Thomas Bowling, or, as he was invariably called in the service, Tom Bowling, was a lieutenant of a little more than eight years' seniority, and had worn his extra half stripe for scarcely three months when it was taken from him. Rich and well connected, a favourite in society, and a man of great ability, he was, according to the opinion of nearly all his unprofessional friends, wasted in the service. They would have preferred to see him in Parliament, or in the army, or even living the life of an English country gentleman. But Tom Bowling did not adopt that view. He was not fond of unnecessary talk, therefore he had no Parliamentary aspirations. He did not think that the army opened a more suitable career than the Royal Navy to an Englishman. And as for country life, he liked it only as a temporary relaxation. It must be admitted that he was not particularly well fitted for military life as we know it in England. His small, wiry figure would have looked wholly insignificant in the uniform of any regiment; and he had for what may be called the superior niceties of dress an unaffected contempt, which would scarcely have harmonised with the pipe-clay conventionalities of the parade ground or the fashions of a garrison ball-room. The sea was the only place where he felt completely at home. He could shoot or hunt on every day of a fortnight's leave, but at the end of that time he had always had enough of it, and invariably longed to be on board ship again. He was completely wrapt up in his profession; and although he had an income of nearly twenty thousand a year, he would, when he returned to England on the 1st of May, have gladly surrendered the whole of it rather than lose his commission.

He heard the news as soon as he arrived in town, and for a moment it overwhelmed him. But he was not a man to be for long cast down. He had been foolish, but he had done nothing to be ashamed of. His naval friends still had confidence in him: he was rich, young, and strong, and he had an equable buoyancy of spirits that no misfortune could permanently depress.

"They have kicked me out of the service," he said to an officer whom he met in that cheerless

waiting-room in which the Admiralty has for generations permitted its professional visitors to cool their heels, "and I suppose that they are right. But if I live I am going to find my way in again, so I'm not going to sell my uniform yet, though I hope that when I put it on once more, I shall find another half stripe at least on it."

"I'm devilish sorry, Bowling," said his friend, "and I wish you all the luck in the world, but you'll find it an uphill game, I'm afraid. After all, you know, they've let you down pretty easily. They might have court-martialled you."

"And shot me, perhaps," continued Bowling, laughing; "for heaven only knows what they can do in war-time. One of the things that I must certainly do is to take a course of Queen's Regulations before I get back into the service."

"And what else are you thinking of doing in the meantime?" asked his friend.

"Well, I've come here to take Uncle Humphrey's advice, if I can get it, and whether I can get it depends upon whether, in his new billet, he has leisure to see me; I was his flag-lieutenant years ago. You see, France has decided not to observe the stipulations of the Treaty of Paris, and both she and we are issuing letters of marque. My own idea is to get a ship and make a privateer of myself. Do you know of any one who will stand in with me?"

The officer smiled. "I shouldn't mind something of the sort myself," he said, "but I'm going to commission the *Gossamer* to-morrow morning. I wish you were going with me, old chap; and I'll take you on board as a passenger if you like to come; but as for helping you in the privateer business, why, I haven't any money to put into it. I wish I had."

"I can get the money, I suppose said Bowling" awkwardly. "The most serious difficulty is to get men. It is a pity that I can't serve under you as my skipper. That's what I should like."

"Thanks for the compliment," returned Lieutenant St. John warmly; "but I am booked. If you take my advice, you will command your own craft. You won't find a better qualified man. They are digging up all the retired commanders and lieutenants for the new men-of-war, the coast defence business, or the merchant cruisers. There is a terrible dearth of officers, as well as of gunners and stokers; and I really am almost astonished that they plucked up courage to get rid of you. You may take it as settled that you won't be able to get any retired naval officer, who is fit for duty, to join you."

"That's encouraging. Then I must get the best men I can. Do you know any yachtsmen who are worth their grub and who know something of navigation?"

"I know Day. He would, I am sure, go with you if I were to advise him to do so. I will give you a line to him. He is a barrister, who, instead of practising, likes to wander about the world in a twenty-ton yawl, or to hunt for treasures on desert islands, or to do anything of that kind. You may trust him as a sailorman as you would trust yourself, and I happen to know that he is in town. I daresay, too, that he can introduce you to some more men of the same sort. How are you going to get a ship?"

"I haven't the ghost of an idea yet. I only got home this morning, and I haven't had time to look about."

"And what sort of a sum are you prepared to pay for her? Don't think me inquisitive. I may be able to help you."

"As much as I can raise," answered Bowling. "I'm ready to put all I am worth into the business, and I fancy that I know others who will take a share. Do you really know of a vessel?"

"Yes, I do, but the figure is high. Of course when war broke out, no man-of-war that happened to be lying in the contractor's yards was allowed to leave. Now, there's a very fine armoured cruiser in the Tyne. She has been built for one of the South American Governments, and she is practically ready for sea. Indeed, she was to have been handed over yesterday. I happen to know that the builders are going to offer her to the Admiralty for £300,000. That's a big sum, but the craft is a very smart and likely one, and she can do her 17 knots without using forced draught. Why not try to get her? The Admiralty—I mean the Board of War—is scarcely likely to buy her; for we can hardly man the ships we have."

Bowling knitted his brows and gazed reflectively at the bare floor. "Humph!" he exclaimed after a pause, "it is a big sum; but I'll think about it. Who are the builders?"

"The Elswick Company; and the ship's name is the *Valdivia*."

"Then give me that line to your friend Day. I'm staying at the Grand Hotel."

St. John scribbled a hasty note and gave it to Bowling. "Good-bye," he said, "and good luck

to you, and don't forget to drink the saucy *Gosamer's* health." And, having been at length summoned to the presence of one of the chiefs, he hurried away upstairs.

Bowling himself saw Sir Humphrey Thornbeigh or, Uncle Humphrey as he was affectionately called in the service; but when, after giving him as many details as possible of the Toulon affair, he sounded him upon the subject of restoration to the Navy, the Admiral assumed a rather horny-eyed expression, and gave him no encouragement. "You have contravened the Queen's Regulations; you must take the consequences as they have been dealt to you by the late Board." That was Uncle Humphrey's verdict, and the brief interview was ended.

But Bowling, who knew the Admiral well, was not very astonished when, later in the day, a messenger brought him a note which ran: "My dear Bowling, make it convenient to take an unofficial breakfast with me to-morrow morning at the Admiralty at eight o'clock, and in the meantime believe me, yours faithfully, Humphrey Thornbeigh."

It was barely noon when Bowling left the Admiralty—noon on Friday, the 1st of May. He walked thoughtfully to his hotel, sat for five minutes with a pipe between his lips in the smoking-room, and then rose suddenly, left a message as to where he might be found and hurried across the road to Craig's-court. His solicitor had an office there. The solicitor was a little Jew, shrewd, but honest as the day.

"Look here, Lawson," Bowling began, as soon as he was in the presence of the lawyer. "I've not come to spin you a yarn about the battle, and I don't want sympathy, and I don't want advice; I just want your help. Can you give me the rest of the day, luncheon time and all?"

"I suppose I can, if it is a matter of business," said Mr. Lawson.

"Very good. First of all, tell me how much money have you in the house? I want a deuce of a lot at once. In the meantime be good enough to send this note to Mr. Day, of Gray's Inn, and let the messenger ask Mr. Day, with my compliments, whether he can make it convenient to call and see me here as soon as possible."

The solicitor called a clerk, and despatched him with the note. "I could let you have a thousand in an hour, Mr. Bowling," he said.

"A thousand! Why, man, that's of no use to me. I want heaps more. What am I good for? How much can you raise on me? How much can you borrow on me?"

"What do you want?"

"I want three hundred thousand pounds by this time to-morrow."

Mr. Lawson fell back gasping. "Three hundred thousand pounds!" he ejaculated. "What?"

"Three hundred thousand pounds," repeated Bowling. "Can you raise it, or can you not?"

"I dare say I can raise it, if only I have time enough; but by this time to-morrow—"

"If you can't do it, or the greater part of it, someone else must. But you can do it; you have interest with bankers, and people of that sort. Now, be a good fellow and spare no pains, and no expense; and, above all, waste no time over the business. Sell me up entirely if necessary, body and soul. Get rid of everything."

"But, Mr. Bowling," said the solicitor, who suspected his client of sudden madness, "in justice to yourself, let me know what you are going to do?"

"You know that what have deprived me of my commission?"

"Yes."

"Well, I'm going to buy it back again. I'm going to endeavour to render them anxious to have my services once more. To be brief: I'm going to buy a ship, and take out letters of marque, and get to sea as soon as I can manage it. Now you know all you want."

"But surely you are not going thus hastily to embark your whole fortune in such a precarious venture?"

"Well, don't let us argue, that is my intention. Now, will you take the needful steps at once: you must be mine for the next day or two. You must give me a room in which I can see people, and a clerk to write letters, and a boy to run messages; and I must be able to carry on here, if necessary, night and day."

Lawson made no audible reply, but rang a bell, in answer to which a second gentleman of Hebrew physiognomy entered.

"Lazarus," said the solicitor, "Mr. Bowling wants to raise three hundred thousand at once—mind you, at once. Please see what can be done, and don't lose a moment. You have the papers, and Mr. Bowling will be close at hand. I wish him to have a table here. Put another also for Mr. Brownlow, who is to hold himself at Mr. Bowling's entire disposal until further notice. I

can undertake no further business to-day. If anyone calls, say that I am engaged."

Mr. Lazarus disappeared. "He'll do his best," said Lawson, "and I'll do mine."

Mr. Brownlow was a most capable clerk and shorthand writer, and he saved Bowling no end of trouble. He took down from Bowling's dictation a long telegram to Messrs. Armstrong, Mitchell, and Co., asking that firm to send immediately to London an agent fully competent to negotiate for the disposal of the *Valdivia*. He also took down telegrams to several people who, Bowling imagined, might be willing to assist or join him. Finally the clerk took down a telegram addressed to the proprietors of the *Times*. "In consequence of my dispatch to you from San Remo," it ran, "the Admiralty has removed my name from the Navy List. I intend to take out letters of marque, and I shall be glad to learn what assistance or co-operation you may be inclined to render me in fitting out a vessel. Time presses."

In the course of the afternoon Mr. Day called in reply to Bowling's note. He was a tall, unlitid, slim, slightly bowed man, with black hair and moustache, spectacles, and a somewhat hesitating and nervous manner of speech. He looked very little like a barrister, and still less like a sailor; and at first, Bowling was very far from being favourably impressed. But it soon appeared from his conversation that Mr. Day knew a good deal about the sea, and what was perhaps as important, he proved to be an intimate friend of the Duke of Norland, a nobleman who, besides being of immense wealth, possessed an adventurous spirit, and had much influence.

"It is very curious," said Day, after Bowling's plans had been partially explained to him, "that only last night, when I was dining with the Duke, he suggested that I should buy a steam yacht and fit her out as a privateer. He offered to supply some money—he didn't say how much—and I told him that I was quite ready to put down what I could afford, though that, I am sorry to say, is only a matter of a few hundreds. The worst of it is, however—and I told him so—that I know nothing about steamships. I'm quite willing to join you in any capacity; indeed, I shall be only too pleased if I can be useful. I'll go and see the Duke at once, and try whether I can't persuade him to take a hand in your venture. Of course, he won't go himself; but I don't doubt that he'll take a share, possibly a big one." And Mr. Day departed, promising to lose no time and return later.

This was satisfactory, as far as it went. Not less so was the reply of the proprietors of the *Times*, who, in the course of the afternoon, sent a representative to Craig's-court. This gentleman, after thanking Bowling for his account of the Toulon affair, listened to the outlines of the scheme, and then said he was empowered by his principals to take on their behalf a twentieth share in the first cost of the vessel, on condition that a twenty-fourth share in the net profits—if any—of the venture should be guaranteed to them, and that Bowling should contrive to act as their correspondent. Lawson at once drew up a form of agreement to this effect, and the representative of the *Times* took it away with him, he also promising to return later.

The next visitor of importance was an emissary from Elswick. He had, upon receipt of Bowling's telegram, been dispatched by special train to town, and brought with him full particulars of the *Valdivia*. These were briefly as follows:—

The *Valdivia* is a steel twin-screw armoured cruiser of 6900 tons displacement, with engines capable of developing 8000 indicated horse-power with natural draught, and of giving a speed of seventeen knots, and capable of developing 12,000 indicated horse-power with forced draught, and of giving a speed to nineteen knots. The vessel's dimensions are: Length, 328ft.; beam, 60ft. 8in.; depth to upper deck beams, 35ft.; mean draught, 21ft. 10in. She has a complete water line belt of compound armour, over 6ft. 5in. wide, with a maximum thickness of 12in., a complete protective deck of 2in. steel, and above the deck a light central redoubt 134ft. 6in. long, armoured with 4in. steel. The armament consists of four 9.2in. 23-ton breech-loaders thus disposed, viz., one on the fore-castle, having an arc of training over 135 deg. on each bow; one on the poop, with a similar arc of training on each quarter; and one in a sponson on each broadside amidships, with an arc of training over 180 deg. on the beam. Each of these guns fires on barbettes over an armoured breastwork, and is covered by a steel screen. The secondary armament consists of eight 4.7in. quick firing guns disposed in pairs in lightly armoured steel turrets, one on each bow somewhat abaft the barbettes, and one on each quarter somewhat before the barbettes. These guns all train over arcs of 135 deg. The twelve guns above named are on the upper deck, where also are mounted four 6-pounder

quick-firing guns, and six 5-barrelled Nordenfelt machine-guns. In each of the two tops there is a Maxim gun of rifle calibre; and on the main deck there are ten 6-pounder quick-firing guns, three being on each broadside within the redoubt, two forward and two aft. There are six ejectors for Whitehead torpedoes, one in the bow and one in the stern, being under water. There are also three powerful electric search-lights, a steam-cutter, and steam-pinnace, and the usual boats and fittings. The ship has two funnels, and has fore-and-aft sail on two light masts, each of which is provided with a military top. The coal capacity of the bunkers is 400 tons, an amount sufficient for 7,000 knots, steaming at a speed of ten knots.

The Elswick agent laid before Bowling these, together with more detailed particulars, as well as plans, diagrams and inventories; and Bowling very speedily decided that, if he could raise the necessary money, the vessel would exactly suit his views. She was of a type, fast and well armed and fairly well protected, especially at the water-line, that was absolutely unrepresented in the Royal Navy, although the Chilean ship *Arturo Prat* was on very similar lines. He felt that, while she promised to be an excellent cruiser, she was powerful enough to tackle, in case of need, any but the most formidable battleship. Having, therefore, engaged the agent to remain for twenty-four hours in London, and to keep open Messrs. Armstrong's offer for that length of time, Bowling set to work with renewed energy to solve the financial problem.

In this he was greatly assisted by the Duke of Norland, who in the course of the evening drove to Craig's-court with Day. The Duke was an eminently practical man. He was too old, he said, to go to sea in the *Valdivia*, and he could, he knew, be more useful on shore. What he would do was this. He would undertake, in conjunction with his friends, to form a syndicate which should take a half share in the cost and a two-fifths share in the proceeds of the venture, provided that Bowling and his friends would bear the remaining half of the cost and accept the remaining three-fifths of the proceeds. In the meantime, Bowling might draw on him personally to the amount of a hundred thousand pounds.

During the interview, in the course of which this unexpectedly satisfactory arrangement was arrived at, several of Bowling's friends, who had been summoned by telegraph, called; and as Day had mentioned the business to some of his acquaintances who were yachting men, several of them also dropped in. Moreover, the representative of the *Times* returned; the Duke sent round to the clubs for certain of his friends, naval and otherwise, in whom he placed confidence; and the emissary from Elswick was summoned from his hotel. By midnight, therefore, a committee of ways and means, with full powers, was in session in the largest room of Mr. Lawson's office, and when it broke up at daylight, nearly everything was settled. The Duke drove home; Day and two of his friends departed to visit the various ports and to engage men; and Bowling, finding that it was nearly five o'clock and remembering that he was due at Sir Humphrey Thornbeigh's breakfast table at the Admiralty at eight, relinquished every idea of turning in, and instead, wrote some letters, had a cold tub in the kitchen by favour of Lawson's housekeeper, and then walked over to Whitehall.

Sir Humphrey was waiting for him. "Well, Bowling," he said, "yesterday you came to see the Admiral, who, I hope, made you feel that you had behaved most improperly. To-day you have come to breakfast with an old friend and shipmate, who is very sorry that you are out of the service, and who will do all that is in his power to help you. I don't mind saying that I look upon you as too good an officer to lie rusting on shore in such times as these. What are you going to do? Have you any plans?"

Bowling related not only what he proposed to do, but what he had already done; and Uncle Humphrey's grey eyes sparkled. "You haven't let the grass grow under your feet," he said: "but you don't suppose that I'm going to let you take such a fine fighting craft as the *Valdivia* out of the country, and man her with a lot of 'long-shore ullage' that will render her anything but a credit to anyone concerned. Not I! yet since you have been so prompt, so energetic, and I may add, so disinterested, I don't feel that I should be altogether consulting her Majesty's interests by thwarting you. Perhaps, even, it is my duty to help you a bit. Oblige me by ringing the bell, Bowling."

A servant appeared, and Sir Humphrey ordered him to bring in certain volumes and lists which he mentioned. When they were before him he said, "Now Bowling, you know how hard pressed we are for men. I'm afraid we can't spare you much that is worth having. But here are the names of

some retired officers, commissioned and otherwise, whom we intend to call out. Some have not been long out of employment, as you may see. If you like to choose half a dozen of them, and can let me know that they are willing to go with you, I'll undertake that the Royal Navy shall want them just at present. Do you understand? I believe that they may be as useful with you as with us, for the *Valdivia* is a fine craft, and you ought to be able to make something of her. But, mind you, I reserve the right to take these officers when I want them, and I expect you to submit yourself in a general way to my orders. You know me well enough to understand exactly what I mean. You have your chance, Bowling, and it seems to me a bright one. May God bless you."

Bowling was much moved by Sir Humphrey's kindness to and confidence in him. He selected two warrant officers and three lieutenants, substituting for his first choice one or two names which Sir Humphrey suggested as being more suitable. Then, with a feeling that some of his most formidable initial difficulties had been removed, he bade good-bye to his patron, walked to his hotel, packed up his gear, and, in pursuance of an understanding which had been come to at the meeting in Craig's-court, took the earliest possible train to Newcastle, where, alone, he could attend to the immediate fitting for sea of his first command. In the train he enjoyed the most refreshing sleep that had come to him since the catastrophe off Toulon, for new hopes and enthusiasms had taken the place of old anxieties and despondencies.

V.—THE ATTACK ON THE ROCK.

The Naval policy of France in almost all her wars with Great Britain has been to gain, if possible, some material advantage without deliberately risking a fleet action. The naval policy of Great Britain has simply been to seek the enemy's fleet, and to endeavour to sink, burn, or take it. On numerous occasions France has missed the opportunity of gaining a great victory because she has preferred the prospect of securing ultimate advantages. On occasions still more numerous Great Britain has won a great victory because she had no eye for anything more distant than the foe. The methods of action have been contrasted over and over again, and most ably by Captain A. T. Mahan, U.S.N., in his volume on "The Influence of Sea Power upon History." This valuable work appeared some time before the sudden outbreak of hostilities off Toulon; and so convincing is it, at least to the Anglo-Saxon mind, on the subject of the relative values of the traditional naval policies of the two Powers, that it is difficult for an Englishman to believe that, after the publication of that book, France could ever again have been capable of playing her old part. But service traditions are not easily destroyed, and after having, in a moment of unreflecting rage, fallen upon the British in the Mediterranean and practically annihilated them there, France settled down into her usual modes of war. It is true that she reinforced her own *division cuirassée du nord*, and sent it, as has been shown, in search of the home-coming British Channel Squadron; but that was on the impulse of the first heat of hostilities. She soon sent word to it to proceed to Gibraltar, whither she also dispatched a strong squadron from Toulon, leaving in that port only sufficient vessels to watch the very small and enfeebled British force which, after the Toulon disaster, had assembled at Malta. The captains of the partially disabled British ships would, no doubt, have all proceeded to Gibraltar after the battle, especially as Gibraltar had been named by the commander-in-chief as his rendezvous; but several of the vessels were so mauled and leaky that they needed immediate docking, and, as everyone knows, there is unfortunately no dock at Gibraltar, while at Malta there are good facilities for ships of all sizes. The consequence was, that after the Toulon affair, the *Colossus*, *Thunderer*, *Victoria*, *Polyphemus*, and *Surprise* went to Malta, and only the *Trafalgar*, *Dreadnought*, and *Australia* to the Rock.

Thither also went the French *division cuirassée du nord*. The *Australia*, which, having received but little damage in the action, was kept on scouting duty in the Strait, sighted it early on the morning of May 2nd, and at once steamed in to report. Of course, a British force of two battleships, a belted cruiser, and the three first-class torpedo boats, Nos. 7, 18, and 70, which, apart from stationary and harbour craft, constituted the entire floating strength at Gibraltar, could hope to do very little against a French fleet of eight ironclads and six cruisers, besides torpedo boats. The Malta cable informed the Admiral that he must, for the present, harbour no hope of succour from the eastward. He depended, therefore, for help upon the fleet which he knew was gathering at Spithead, and, in the meantime, he made up his mind to confine himself mainly to the defensive.

But his prospects looked blacker than ever when, on Sunday, May 3rd, a second hostile fleet coming from Toulon was sighted. This included the ironclads *Formidable*, *Devastation*, *Hoche*, *Amiral Baudin*, *Terrible*, and *Indomptable*, which, with the *Victorieuse*, *Requin*, *Furieux*, *Suffren*, *Fulminant*, *Vengeur*, *Tempête*, and *Tonnerre*, made a fleet of fourteen ironclads, besides smaller vessels, designed for the attack on Gibraltar. The idea of the directing brains in Paris was, no doubt, that, if Gibraltar fell, Malta would fall too; and that, after the capture of these strongholds, the Mediterranean might be reduced to the condition of a French lake.

Gibraltar had been held, even by many French writers, to be impregnable. A very great number of heavy ordnance, including two 100-ton, and a battery of 38-ton guns, of tolerably modern construction, had been mounted in it, and in the matter of water and of provisions it was better prepared against a siege than it had been at any previous period of its history. But it lacked armoured defences of the most recent kind, as, for example, Grison cupolas; and it also lacked a proper supply of quick-firing and machine guns. Yet it was very strong. So, too, was the French fleet.

The two French fleets, having effected a junction, kept under easy steam off the Barbary coast between Ceuta and Tangier during the whole of Sunday, and never approached within about ten miles of the Rock; but after sunset, having crossed to the European side opposite Tarifa, they steamed eastward under cover of the land, and barely outside the limit of Spanish territorial waters. Thus they reached the mouth of Gibraltar Bay, where, formed into two divisions, they opened a furious fire at a range of about 9,000 yards on that face of the fortress which extends from Europa Point to the new Mole. Each division moved independently and slowly in a circle, and the wind coming briskly from the north-west, the smoke was borne away in such a manner as to inconvenience neither side; but, as the night was dark, the practice was at first very indifferent. The garrison and the warships lying off the old Mole replied promptly and spiritedly, but used search lights, and so, after a time, assisted the aim of the enemy, who, throughout, showed no lights at all. Discovering their mistake, the defenders turned off their lights, and used instead rockets, which were fired well to seaward, and burst, if not over, at least in the direction of the foe, and, for brief intervals, showed them clearly under the bright blaze of the magnesium stars. But the range of the rockets was not sufficient to render their light thoroughly effective, and they seemed to help the attack fully as much as the defence. The French further improved their situation by occasionally throwing on to the Rock a species of carcass, which burnt very brilliantly, and could not be extinguished. Whenever one of these fell near a battery, the enemy seemed to find no difficulty in getting the range immediately, and poured in so hot a fire that for a time that particular position became almost untenable. Even the solid rock failed to resist the enormous force of the heavy mellite shells which were hurled against it in bouquet as light and opportunity served, and which, bursting, brought down hundreds of tons of debris, choking up the casemates, and sometimes burying guns and gunners in common ruin. These shells also, when they burst, as they once or twice did, in a gallery or any comparatively confined space, evolved suffocating fumes that all near were obliged to crawl away, or to remain and be stifled. All night, from sunset to dawn, the bombardment continued without intermission, for not until day-break was the fleet out of sight behind Cabareta Point, and it continued its fire as it was within range. It withdrew apparently intact, and a few hours later it was seen cruising as before on the south side of the Strait, still fourteen ironclads strong. Some ships, no doubt, had suffered; but the Rock, it was tolerably clear, had suffered more. The loss of life, it is true, had been small in comparison with the huge number of projectiles that had been thrown into the place, but the damage to the material had been enormous; and both inhabitants and garrison looked forward with considerable uneasiness to the prospect of a long succession of nights similar to the sleepless night of the 3rd of May. The ships at anchor off the old Mole had not been struck, and they were therefore able, upon the withdrawal of the French, to proceed to the mouth of the Bay, so as to be ready, in case

* Picric Acid is supposed to form the main constituent of mellite. "Picric acid is very deficient in oxygen, as its formula shows. The products of its explosion will, therefore, largely consist of the actively poisonous carbonic oxide, and hence, as a blasting agent in mines, it would be objectionable. In digging out some shells which had been charged with some picric acid explosive and fired into earth, some French soldiers were poisoned by the noxious fumes some time after the shells had been fired and burst." Major Cundill's "Dictionary of Explosives," 1890, Page 87.

of need, to afford some protection to any British vessel that might seek shelter beneath the fortress; but they could attempt nothing more, and, indeed, the whole attitude of the defence, during the days of anxiety and nights of horror that followed, was, so far as the men-of-war were concerned, perforce a very passive one.

But there was an opportunity for the torpedo boats; and nobly did they avail themselves of it. The following account of the exploits of boat No. 70 on the second night of the attack is taken from the *Daily News*. No. 70, it should be explained, was a 125ft. boat, 13ft. broad, with a displacement of about 75 tons, engines of 670 indicated horse-power, and a smooth water speed of 19.5 knots. She was built at Poplar by Messrs. Yarrow and Co., in 1886, and carried, in addition to her torpedo armament, three machine guns, and a crew of sixteen officers and men. The *Daily News* correspondent, who was, by profession, a medical man, was permitted to accompany the boat as volunteer surgeon. There were thus seventeen all told on board the little craft when she went out on as perilous a mission as was ever undertaken.

"Gibraltar, Tuesday, May 5th.—Last night at ten o'clock, the French fleet having about an hour earlier renewed the bombardment, the Admiral, after consultation with the Governor, sent for the three lieutenants commanding the torpedo boats in harbour here, and explained to them that he was desirous of trying whether or not it might be possible to do damage to the enemy, but that he could not afford to risk the sacrifice of the only three boats at his disposal. He therefore asked one of the lieutenants to volunteer. All three volunteered at once. The Admiral pointed out the great danger of the mission, and offered to allow the officers to reconsider their decision. All volunteered again. He then thanked them handsomely, but said that he could not avail himself of the services of more than one; upon which the officers, retiring for a few minutes to consider the matter, ultimately settled it by throwing poker dice. Lieutenant Penherne, of torpedo-boat No. 70, won, throwing five sixes. The losers then begged to be allowed to accompany Penherne in any subordinate capacity, but this was not permitted by the Admiral, who nevertheless complimented the other lieutenants on their zeal. Penherne was ordered to wait his opportunity for going out, and, acting in accordance with his own judgment, to run into the enemy's fleet, and do his best to torpedo one or more of the ships. With some difficulty I obtained permission to go with him.

"By a quarter to eleven we were all on board, with steam up for full speed. The enemy was at the time throwing in a very heavy fire on our batteries, which were replying steadily; and there seemed to be a good opportunity for us to get away without exciting much attention; but it was a little too light to suit Lieutenant Penherne. There was very little moon. The stars, however, were bright between the masses of scudding cloud, and he decided to wait until some heavier masses of vapour which were coming up from the westward should give him a greater degree of concealment. Knowing, as I did know, how anxious this gallant young officer was to get at the enemy, I could not help admiring the coolness which prompted this decision. There was a brisk westerly breeze, with a short lumpy sea not altogether most suitable for torpedo-boat work; but the unsuitableness of the weather would, we hoped, give us the better chances of success, by putting the enemy to some extent off his guard.

"By half-past twelve, the bombardment still continuing with full fury, Lieutenant Penherne found the sky to be much more obscured, and determined to cast off. We had lain during the previous hour and a-half inside the old Mole, watched with curiosity by a small crowd of people who, though they did not know on what mission we were bound, had discovered for themselves that we were about to leave harbour. Our first movements could not greatly have enlightened them, for as soon as we were clear of the Mole head, we steered straight to the westward across the Bay, as if we were making for the mouth of the Palmones. Our immediate object was to get out of the way of shells, and we succeeded, but not until we had had a very narrow escape. Scarcely had we started ere a big projectile came screeching over the Mole, sent the people flying, panic-stricken, and pitched quite close to us in the water, where it burst. We were not more than twenty feet away, and part of the column of mud and water that shot up fell on us, while the waves caused by the explosion made us heel over until our port side was altogether under. But we were not damaged. Penherne had ordered all of us to put on cork belts, had seen that the machine guns were well supplied with ammunition, had loaded all five of our torpedo tubes—after having carefully examined the torpedoes—and had had

the dingy's cover removed. By this time we were under the Spanish side of the bay—very much, I am afraid, within Spanish waters. We altered our course to port therefore and steamed slowly down the coast, and so near to it that as we passed Algeiras Island we could see the Algeiras people backed by the lights of their town, watching the bombardment. We could even hear—for we were sheltered by the shore, and such wind as reached us was from the right quarter—the exclamations of the crowds whenever any exceptionally loud or brilliant explosion attracted their attention. I could not resist being reminded of a firework night on the terrace of the Crystal Palace, though the circumstances were so terribly different. So occupied were the Spaniards that they did not seem to notice us, in spite of the fact that we passed within a couple of cables of three of their gunboats; and we went quietly on, confidently expecting to find a French cruiser, or at least a torpedo boat, waiting somewhere off Cabareta Point to upset all our plans. Surely enough we did sight a craft of some kind there, but keeping inside Pigeon Island, we avoided being noticed by her, and thus reached the open Strait. Here we altered course again, this time to starboard, and still stole along under the coast. From our new position the scene behind us was fearfully grand. The wild puffing rattle of heavy projectiles in the air was continuous. Ever and anon, high in the darkness, there came out a red blotch of flame and silver smoke, and a minute later we heard the report of an exploded shell. More than once several of these blotches of red flashed out almost simultaneously. Below them on each side tongues of flame leapt out at the rate, I should suppose, of from forty to fifty a minute. Those from the grim old rock came from all sorts of elevations. Those from the enemy came, of course, all from the water, but were directed upwards. And against the dense bank of smoke that rolled to leeward the dark hulls of the French ships stood out clearly and plainly at every flash.

"We went westward until we were abreast of Tarifa, and until the flashes from the French ship seemed to spring up, not from dark hulls, but from the horizon. 'You must go below now,' said Lieutenant Penherne, coming slowly to me aft where I was sitting on the after conning tower. 'I will only have the fighting hands on deck. But you can get inside this conning tower if you can find room alongside the lookout there. If we get into the thick of it, I may go into the forward conning tower; but I don't yet know whether, when we are steaming at full speed, I shall be able to see anything from it; and, if I can't, I shall stay on deck, and not use the director, or anything else, but discharge the torpedoes with my own hands. Now—with a smile—down you tumble. England, you know, expects every man to do his duty. You have to write a dispatch, and patch us up if we get hit; so, down you tumble, and out with your stylographic pen and your saw and bandages. You must cut us up on the cabin table. Let us have a look at it.'

"He led me below, and stood by, cutting up some tobacco in his palm, while I opened my instrument case and loosened my bundles of lint rolls. I recollected that between me and the enemy's shot there would be no better protection than is afforded by a steel plate about as thick as a piece of cardboard, and I admit that I felt very nervous; but Penherne was absolutely cool. When he had cut his tobacco he said: 'Those beggars will see the spark of my pipe if I'm not careful. Can't you lend me something to cover it up?' I offered him the top of a small metal box. This he fitted to his pipe, after he had bored a few holes through the tin with the point of his knife. Then hastily cramming in the tobacco, lighting it, giving a couple of vigorous puffs, and clapping on his impromptu cover, he climbed on deck again, and as he went up the ladder, cried, 'I hope this pipe will last me till the business is over. So long!'

"No sooner was the lieutenant on deck than he altered the boat's course again, and headed his craft right across the Strait for Al Kazar Point. It was already nearly a quarter-past-two, and seeing that the sun would rise at half-past four, we had less than a couple of hours darkness before us. But we were now steaming fast, and gradually swerving more to the eastward; and as, in the middle of the Strait, there is a constant current in that direction, we were making good progress. From my place in the after conning tower, I could only see the points of Penherne's elbows as he held his night glass to his eyes, for he stood just forward of the funnel; but heard him, from time to time, giving the order to alter course one point more to port, and I knew that we were getting up behind the French fleet. Soon, indeed, I could see it on our port bow, still circling slowly in two divisions, with a bank of smoke to leeward, and the vivid flashes of guns and bursting shells all around

it. The spray was now flying over us and the boat was throbbed from stem to stern with the vibration of her machinery, for Penherne had clapped on full speed. Right ahead loomed a long low black mass, without lights. It must have been a French torpedo boat on the look out. Another point to port enabled us to clear it easily. The enemy must have either not seen us, or mistaken us for one of his own boats; for there was no hail and no symptoms of alarm; and now, not two miles before us, was the leeward division of the foe's ironclads.

"Penherne laid down his glass, and stepped to the foremost broadside torpedo tubes, which were trained upon the beam. Taking the lanyard in his hands, he stood upright between them. The enemy must, by this time, have seen us, for the flames glowed above the top of our funnel, and shone on the spray that came swishing over our nose. Nearer and nearer we drew, but still there was no sign that the enemy believed anything to be wrong. His ships were circling in column of line ahead, with about three cables between the vessels; and the leader of the line—apparently a flagship—was just coming round to port, after having delivered her fire, when we came within range of her. Confident that he was mistaken for a friend, Penherne altered course yet another point or two port, as if to pass under the ironclad's stern. There was at once some indistinct shouting from the ship's bridge and poop; but Penherne did not heed it, and when he was on the enemy's quarter, and not a hundred yards from it, he pulled his right hand lanyard, and I saw the starboard torpedo glisten for an instant as it leapt with a splash into the waves. The French, too, must have seen this, and I can only attribute the fact that they did not immediately open a heavy fire on us to the probable circumstances that the starboard guns, having just been engaged, were cooling, and so, of course, were unloaded. The second ship of the line was by this time coming up slowly on our starboard bow. Penherne shouted 'Hard-a-port!' and even as he did so, I heard the muffled explosion of our first torpedo. We swung round quickly, crossing close under the second ship's forefoot; and, while she towered over us, Penherne pulled his left lanyard and sent his second torpedo into her broad bows. The weapon had barely fifty yards to travel, and the almost instantaneous shock of its explosion jolted us up as if we had ridden over a submarine volcano, and, smashing the glass in the little scuttles of the conning tower, covered me with the fragments. But there was so much smoke, spray, and darkness that I could not see the results. 'Helm amidship!' shouted Penherne, running aft to the other two torpedo tubes. 'Keep her steady now; and once more steaming with wind and current, we tore across to where the rearmost ship of the French line was still firing deliberately at the Rock. She, however, ceased that fire as we approached, and devoted her whole attention to us. Her consorts also began blazing at us from almost every side; for we had placed ourselves, as it were, within the horseshoe formed by the encircling squadron. Nor was this all; the shells from Gibraltar were dropping all around us. Yet Penherne, who, at the after tubes, was quite close to me, was calm and cool. Red rents began to open in our funnel as the Hotchkiss projectiles struck it. Machine gun bullets, fired at too acute an angle to penetrate, rattled upon our deck. 'Come in, Penherne, I cried involuntarily. 'You have done enough, in all conscience.' But he took no heed, for he was carefully training the port after tube upon the last ship. We neared her rapidly. A perfect storm of bullets swept over us, and some penetrated my tower. Penherne stumbled backwards, and knowing that he was hit, I rushed to the companion. But as soon as my head appeared at the top of it, he sang out, 'Don't be a fool! Keep below!' and I saw that, though he lay low at full length on deck, he was watching the foe and had the lanyard ready in his hand. I could not obey him; indeed, for a moment I could not move. We were passing the last ship's port quarter. Her side was crowded with men, who were firing at us with rifles. Penherne struggled and cried out as if with pain, and then the spell passed away from me, and I clambered on deck and ran to him. He had the lanyard in his teeth, and, as I reached him, he raised himself with an effort, threw himself violently backward and discharged the torpedo. 'I have done it!' he cried. And then came a roar behind us, and a blast of wind, as our third torpedo struck its mark.

"That explosion relieved us, for the last ship of the line fired no more, and we left her in the darkness.

"Penherne, as gallant an officer as ever ornamented the Navy, was dead. No fewer than five bullets had struck him, and two at least had inflicted wounds, either of which would have been mortal. It was with the last ebbing remnants of

his strength and consciousness that he pulled the lanyard.

"Sub-lieutenant Smith, who had been all night in the fore conning tower, and who had been wounded in the shoulder, took command of the boat, and brought her into the bay just before sunrise. Although Lieutenant Penherne was the only person on deck while we were under fire, we have lost two bluejackets killed and five wounded, by shots which pierced the vessel's deck or sides. The boat herself has been struck by over a hundred Hotchkiss and machine gun projectiles, and has a good deal of water in her; but her engines and boilers are untouched, and she can easily be made ready for work again in a few days.

The French temporarily drew off almost immediately after we left them. As I write they are in sight on the other side of the Strait; but there are only eleven instead of fourteen of their ironclads, and we have therefore the best grounds for hoping that we have disabled—if not actually sunk—three vessels. This looking to our comparatively small loss, is very satisfactory. Yet the fall of so marvelously brave and cool an officer as Lieutenant Penherne is a heavy price to pay for success. His body has been brought ashore in the admiral's barge, which was expressly sent for it, and it is to be buried this afternoon with all honours."

It afterwards appeared that No. 70 had actually sunk the *Victorieuse*, and had so seriously disabled the *Suffren* and *Tonnerre* as to oblige those vessels to proceed, under convoy of the *Troude* and *Lalande*, to Toulon to be docked and repaired. This misfortune, though it did not relieve the British force at the Rock from the presence of any considerable part of the enemy, had the effect of rendering the French very shy and careful. Each night they renewed the bombardment; but not until they had first surrounded their fleet with such a crowd of torpedo boats that undetected approach from any quarter was rendered almost hopeless. On the night of May 6th, torpedo boat No. 18 tried to steal out and repeat the exploit of No. 70, but was at once driven back by a heavy fire from some French craft which were lying in wait in the shadows on the Spanish side of the bay, where, apparently the Spaniards were quite willing to shut their eyes to their presence. This may be explained by the fact, since discovered, that the French ambassador at Madrid, without asking for any pledges in return, secretly informed the Spanish Government that, if Gibraltar fell into French hands, it should upon the conclusion of hostilities be delivered over to Spain.

Two nights later, on the night, that is, of Friday, May 8th, the French made a counter attack upon the *Trafalgar* and *Dreadnought*, which lay with their nets out, as far up the Bay as was considered safe. The *Dreadnought* was the southernmost of the two; the *Trafalgar* was two cables astern of her, and both vessels headed to the southward. Around them and outside their nets was a strong boom composed of spars and wire hawsers. It was jumpable by torpedo boats, but it was very securely moored, and was, moreover, so thoroughly fitted with ugly spikes and hooks that no boat could hope to jump it without receiving severe damage. The attack was made at about midnight by two divisions, each of six torpedo boats of the 14ft. class. They crept in under the Spanish shore, and were unseen until they were nearly opposite Algeiras. A chance beam from one of the searchlights of the *Australia*, which lay inside the ironclads, then showed them up for an instant. The officer on the *Australia's* bridge promptly extinguished the light, and flashed to the *Trafalgar*: "Torpedo boats about to attack from direction of Algeiras." The senior officer had already directed what was to be done in the event of such an attack, and, as the night was not so dark but that the enemy, when once his position was known, could be pretty easily seen, the French were under observation some minutes before fire was opened upon them. One division attacked the *Trafalgar*, and the other the *Dreadnought*. Some of the boats fired their torpedoes from outside the boom; others jumped the boom and fired afterwards. Two torpedoes exploded in rapid succession against the *Trafalgar's* nets, and three against the *Dreadnought's*; but no harm worth mentioning was done, and, in the meantime, the boats themselves were suffering awfully. Two were "hung up" on the boom; five got over it, but were almost blown to pieces when inside by the concentrated quick-firing gun fire from the ships; and all these five were sunk. The two on the boom struck their flags and called for quarter, and the remaining five either got away to the French fleet or were run ashore on the neutral ground to save them from foundering. The loss on the side of the attack was, in addition to the loss of boats, at least sixty men killed or wounded; while the defence escaped with only two men

This ill-judged but pluckily executed onslaught had been covered by an unusually hot fire from the French fleet, which, on perceiving that the attack had wholly failed, drew off for the rest of the night, and was not anywhere visible in the morning. The garrison's hopes that it had gone elsewhere, were, however, disappointed, for on the evening of the 9th the bombardment was resumed with greater fury than ever; and for several nights afterwards it was continued. It was only temporarily interrupted by an incident, an account of which will be found in the next chapters.

(TO BE CONTINUED.)

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Hotel.

SOLUTION OF PROBLEM No. 38.

WHITE. BLACK.
1—R to K R 5 1—Anything.
2—Q, B, or Kt mates accordingly.

Correct solutions received from W.H.S., J.D., Omega, Scacchi, Digamma, and Omicron.

Correspondents who sent in a solution beginning with Q to K R 2 will find that if Black plays Q x P (ch.), there is no mate next move. This defence is somewhat cleverly obscured.

Additional correct solution of No. 37 received from J.W.E.

PROBLEM No. 40.
BY G. E. BARBIER.

White to play and mate in three moves.

The Yokohama Chess Club is settling down to hard work at its meetings for practice. It is proposed to start a Tournament among the members at once; and the contest for the Championship will be held later on, when all the combatants have knocked off the summer rust in a series of preliminary encounters. There is some talk of the Club moving its head-quarters from the Club Hotel to a fine suite of rooms in Main Street, but no decisive action has yet been taken.

Looking over the records of half a century back we cannot help remarking the bright radiance of John Cochrane, who used to electrify the English chess world, from time to time, during his meteoric visits to the old country. He lived and worked for a great part of his life in Calcutta; and was influential in spreading a knowledge of our noble game in the Bengal presidency. Staunton speaks of him as a "celebrated master, at once the most original and brilliant player of the day." Staunton and Cochrane played much together in 1842 and it is estimated that over 600 games were contested by them in that year! Cochrane was indeed a very Rupert in the fray, brilliant and venturesome even to the verge of rashness, a refreshing contrast to the modern school of ultra-cautious calculation. We append two short games which will illustrate at once Cochrane's weakness and strength.

GIUOCO PIANO.

BLACK. WHITE.
Mr. Staunton. Mr. Cochrane.
1—P to K's 4th 1—P to K's 4th
2—K Kt to B's 3rd 2—Q Kt to B's 3rd
3—K B to Q B's 4th 3—K Kt to Q B's 4th
4—P to Q B's 3rd 4—Q to K B's 3rd

This is an exceptionally able move. The proper play is Kt to K B's 3rd.

5—P to Q Kt's 4th
(P to Q's 4th is also a good move, and in that case the following variations are probable:—
5—P to Q's 4th 5—P takes P
6—P to K's 5th 6—K takes P or (A)
7—Q to K's 5th 7—Q to K's 5th

Winning a piece.

(A.)

7—P takes P 6—Q to K Kt's 3rd
And the opening player has a fine game).

6—P to Q Kt's 5th 5—B to Q Kt's 3rd
7—B to K's 2nd 6—Kt to Q R's 4th
8—Castles 7—Q to K Kt's 3rd
9—P to Q's 4th 8—P to Q's 3rd
10—K Kt to his 5th 9—Q B to K R's 6th
10—K Kt to his 5th 10—B takes K Kt P

In making this sacrifice, White evidently overlooked the move of B to K R's 5th, which Black had in reserve.

11—K takes B 11—P to K R's 3rd
12—K B to K R's 5th 12—Q to B's 3rd
13—K takes K B P 13—P to K's Kt's 3rd
14—Kt takes R 14—Q takes Kt
15—B takes P (ch.) 15—K to his 2nd
16—B to his 5th

And White Resigned.

SCOTCH GAMBIT.

WHITE—MR. C. BLACK—MR. S.
1—P to K's 4th 1—P to K's 4th
2—K Kt to B's 3rd 2—Q Kt to B's 3rd
3—P to Q's 4th 3—Q Kt takes P
4—K Kt takes P 4—Q Kt to K's 3rd
5—K B to Q B's 4th 5—P to Q B's 3rd
6—K Kt takes K B P

This sacrifice is one of Mr. Cochrane's many brilliant conceptions. It certainly merits consideration, since the first player obtains a fine attack, and forces the adverse King into a very exposed and dangerous situation.

7—B takes Kt (ch.) 6—K takes Kt
8—Castles. 7—K takes B
9—Q B to K's 3rd 8—K to his B's 2nd
10—P to K B's 4th 9—K Kt to K's 2nd
11—P to K B's 5th 10—P to Q's 4th
11—K to his Kt's sq.

He should have retreated the King to his own square again. By playing him to the Kt's he loses the game.

12—P to Q B's 4th 12—P to Q Kt 4th
13—Q B P takes Q P 13—P takes P
14—Q Kt to B's 3rd 14—Q B to Q Kt's 2nd
15—P to K's 5th 15—P to Q Kt's 5th
P to K R's 3rd would, at any rate, have prolonged the game.
16—P to K B's 6th 16—P takes P
17—K P takes P 17—Kt to K Kt's 3rd
18—P to K B's 7th (ch.) 18—K to Kt's 2nd
19—Q to her 4th (ch.)

And Black surrendered.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Mr. and Mrs. Wong and child, Miss Wong, Mr. Wm. Bean, Mr. and Mrs. Ichinose and child, Mr. J. J. Quin, Dr. Y. M. Kin, Dr. and Mrs. McCarter, Mr. H. Orih, Captain T. H. James, Messrs. Chan, Wong Wlu Jeong, A. L. Robinson, C. W. Mathews, H. Rumsay, and Lieut.-Commander F. H. Gilmore in cabin; Mr. Wong's suite (9), Messrs. Chas. King, H. S. Sniffer, Alex. Fredrickson, J. McNumara, and J. H. Agnew in second class, and 32 passengers in steerage.

Per British steamer *Ancona*, from Hongkong via ports:—Mr. H. M. Johnson, Miss Viney and maid, Mrs. D. Woodd, Mr. Chung Seng, Mrs. Drewell, and Miss Drewell in cabin; 1 Japanese boy in steerage.

Per British steamer *Zambesi*, from Hongkong via ports:—Mr. and Mrs. Voemans and child in second class. For Victoria, B.C.: 88 Chinese in steerage.

Per French steamer *Calédonien*, from Marseilles via ports:—Mr. Walter, infant, and nurse, Messrs. Fukushima, Katano, Tsuboi, Boëlle, Maurier, Herconel, Arai, Takahashi, Toyoshima, Odou Vinal, and Mrs. Swain in cabin.

DEPARTED.

Per American steamer *City of Rio de Janeiro*, for San Francisco:—Lieut.-Commander F. P. Gilmour, Messrs. V. H. Besterscheff, W. G. Hockridge, Kunihiko Iwadare, Wm. Klein, John Mace, C. Douglas Pennant, John Winters, and Domi Zervas in cabin.

Per French steamer *Saghalien*, for Shanghai via Kobe:—Mr. and Mrs. T. W. Hellyer and amah, Mrs. Blish, Mr. O. Vindis, Mr. and Mrs. Greyraud, 4 infants, and 2 amahs, Mr. Minault and servant, Mr. and Mrs. Alvares and infant, Mrs. Alvares and the Misses Alvares, Mr. and Mrs. W. W. Fish, Messrs. W. P. Fish, E. E. Fish, H. R. Loving, Abdulkadar, Ng. Yut Rum and infant, J. Littlefield, E. Russell Jones, S. Wurin, Daniel Ward, and Wood Fosdick in cabin.

Per Japanese steamer *Kobe Maru*, for Shanghai and ports:—Mr. and Mrs. W. A. Noble, Mrs. Ye Cha Yun, Miss Davis, Miss Waters, Miss Pyles, Miss Gaither, Miss Blake, Miss Gary, Miss Reynolds, Miss L. Hughes, Miss M. B. Bonar, Mrs. Gorham, Mr. and Mrs. Awoki, Mr. and Mrs. Percival, Mr., Mrs., Miss, and Master Dickerson, Mrs. and Miss Wilcockson, Mr. and Miss Cooper, Admiral K. Tsuboi, Admiral Yamazaki, Lieut. M. Tsuchiya, Lieut. Sento, Captain Walter, Messrs. G. W. Vanderbilt, M. Rosenthal, Shinagawa, Bean, Rev. J. Newton, Messrs. Takino, M. Reid, C. Fox, C. Barker, and J. Miyabara in cabin; Mrs. S. Shinjo, Mrs. J. Shioda, Lieut. Kamimura, Messrs. Shi Chun, Ng Yei Hoy, S. Kuroda, and Mr. Vanderbilt's two servants in second class, and 53 passengers in steerage.

Per British steamer *Ancona*, for Hongkong via ports:—Mr. L. Williams, Mr. A. E. Bloomfield, Rev. D. P. Seaton, Mr. and Mrs. Greenough, Mr. J. C. Edwards, Mr. Geo. Turner, Mrs. and Miss Senator Stewart, Messrs. C. T. Roundell, A. Fairbanks, W. Fairbanks, Connolly, Calthorpe, and P. K. Thomson in cabin.

CARGOES.

Per French steamer *Saghalien*, for Shanghai via Kobe:—Raw Silk for France, 453 bales; for Italy, 20 bales. Waste Silk for France, 254 bales.

Per Japanese steamer *Kobe Maru*, for Shanghai and ports:—Treasure, \$2,262.49.

Per British steamer *Ancona*, for Hongkong via ports:—Silk, 89 bales; Waste Silk, 199 bales.

REPORTS.

The Japanese steamer *Kobe Maru*, Captain

Haswell, reports:—Left Woosung the 2nd October at 9 p.m.; had fine clear weather with the wind, gentle to fresh N.E. breeze. Arrived at Nagasaki the 4th at 2 p.m. and left the same day at 9 p.m. and arrived at Shimonoseki the 5th at 10.25 a.m.; had fine weather. Left at 2 p.m.; passed Island Sea had fine clear weather with wind from light to gentle breeze. Arrived at Kobe the 6th at 10 a.m. and left the 7th at 2.30 a.m. Arrived at Yokohama the 8th October at 6 a.m.; had fine weather with wind moderate to strong breeze. Leave Shanghai the 1st October at 11 a.m. and off Woosung wanting tide.

LATEST COMMERCIAL.

IMPORTS.

Market quiet, owing in part to lack of descriptions desired at present. The gradual rise in Exchange, with the firmness at the close, has also acted as a check on trade, buyers now asking some reduction in prices, and where their demands are not acceded, they are content to sit down and wait developments. Importers have not given way as yet, and will no doubt try hard to maintain the firmness which characterized the market during the previous fortnight.

COTTON PIECE GOODS.

Tin Plates, per box	5.00 to 5.20
Pig Iron, No. 3	1.25 to 1.30

KEROSENE.

Market remains firm at quotations, with an increased demand both from Tokyo and the interior, buyers seeming anxious to stock up now to some extent for the Winter needs, rather than take chance against a further possible rise.

QUOTATIONS.

Chester	\$1.75 to 1.77½
Comet	1.72½ to 1.75
Devoe	1.67½ to 1.70
Russian Anchor	1.67½ to 1.70
Russian Moon	1.65 to 1.67½

SUGAR.

We raise quotations to-day on Brown's 20 cents. Stocks are very light and buyers have rushed in,

taking delivery from the hataba on arrival, and for "futures" paying a still further advance. Market closes firm with a rising tendency.

	PER PICUL.
Brown Takao	\$4.20 to 4.25
Brown Daitong	4.35 to 4.40
Brown Canton	6.20 to 6.25
White Java and Penang	5.50 to 7.75
White Refined	5.50 to 7.75

EXPORTS.

RAW SILK.

Our last was dated October 7th. Since that date settlements by foreigners amount to 2,178 piculs, divided thus:—Hanks, 103 piculs; *Filatures*, 1,746 piculs; *Re-reels*, 381 piculs; while *Kakeda* sorts give a minus quantity of 52 piculs. A few direct shipments bring the total business up to 2,200 piculs for the week.

From the above figures it will be seen that we have again experienced a local boom, similar to those which have been so frequent during the present season, and in which one or two buyers operated very heavily, carrying all before them and clearing the market of certain grades of silk, for which there would seem to be a strong demand by American consumers. These outbreaks are naturally followed by a period of calm, and while writing, the market is steady and firm at quotations, holders looking quietly on and waiting for another large operation similar to that which has enlivened our market a few days ago.

The general conditions of trade remain the same. Exchange is gradually working up and quotations for silk are slightly lower in proportion.

Supplies come in freely from the interior, but summer feelings are very scarce, producers having sold off their stock readily during the last three months, the moment it was off the swifts; consequently, there is no accumulation of prime quality summer feelings such as we have seen in previous years, and the present arrivals begin to show some falling off in color, quality and general preparation.

There have been four shipping opportunities. The German mail *Nuernberg*, on the 8th instant, took 84 bales for Europe; the *City of Rio*, same date, 1,654 bales for New York; the French mail *Saghalien*, on the 9th instant, 473 bales for Lyons and the English mail *Ancona*, 13th instant, 89 bales for the same destination. These departures make the present export figures 19,919 piculs against 14,425 piculs last year and 4,731 piculs at the same date in the previous season. It will be noted that our "present export" figures are more than equal to the last two seasons' put together at same date.

Hanks.—A fair amount of buying at well maintained prices, stock being reduced to 400 piculs. The principal sales show *Tonioka* at \$655; *Chichibu*, \$650; one parcel *Toshu*, fine size, bringing \$670 and another parcel \$660.

Filatures.—There has been a huge business in this class, American orders predominating. Quotations are unchanged, although a few lots were at one time bought at some slight concession. The market closes strong, especially for fine silks, holders feeling sure that they only have to sit still and buyers will come on again.

Re-reels.—These have brought high prices for good silks, the best *Toshu* marks realizing \$860 in several places. Second grade silks can be had at \$100 less, but for well known marks of recognized quality, full prices must be paid.

Kakeda.—There is some little pause after the heavy buying of a fortnight ago. There are some good silks left in this department, and they seem to be good value at present quotations.

In other sorts no business, holders asking extreme prices.

WASTE SILK.

Again a large business in this department, purchases being confined to two or three operators who have competed with each other, paying high prices for good fibre. Settlements for the week are 2,341 piculs: Cocoons, 142 piculs; Noshi, 1,577 piculs; Kibiso, 622 piculs.

The general conditions of the market remain as last advised, and the last three days the market has been much more quiet. Cables from consumers are not very encouraging. Stock here is heavy and there seems no reason why we should not see a lower market in the near future, especially with a hardening exchange.

There have been three shipping opportunities, the German, French and English mails taking nearly 2,500 piculs among them. The present export figures show a total of 6,674 piculs, against 4,495 piculs last year and 3,828 piculs to the same date in 1890.

Pierced Cocoons.—One or two small transactions on the basis of our quotations, a few parcels light yield being also done at \$90.

Noshi.—Strong competition among buyers for good fibre, best *Oshu* being freely taken at \$150 with other sorts at proportionate prices.

Kibiso.—Filatures are wanted, but buyers generally cannot pay what sellers now ask. They are willing to go on at last rates, but holders require more.

In other kinds no business. Holders of *Mawata* are not yet inclined for serious business; the producers of *Neri* are so busy in other transactions that they neglect this cheap produce, which they think hardly worth attention in view of the more important things which claim their notice just now.

QUOTATIONS (NEW WASTE).

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAER, in his work entitled "The Nile Tribunes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out I quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

Contractors — the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers. Illustrated Catalogue in English, French, or Spanish. Send for Copy to

Perfect blendings of the Choicest Brands of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely unimpaired with.

MATURED IN SHERRY CASKS.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters BOS are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

BOS

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them *unique and unrivalled*.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in square white bottles, labelled and capped, the quality being attested by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

YOKOHAMA: SATURDAY, OCT. 22ND, 1892.

MARRIAGE.

At St. Andrew's Church, Shiba, Tokyo, on Tuesday, the 18th October, by the Venerable Archdeacon Shaw, HERBERT WILLIAM, son of George Sale of Yokohama, to ALICE HANNAH, daughter of the late William Mawe of Chislehurst, Kent.

SUMMARY OF NEWS.

COUNT ITO has recovered from his indisposition. The Emperor left Tokyo to-day to attend the Autumn Manœuvres.

THE Japan Mail Steamship Co.'s steamer *Shinagawa, Maru*, which ran ashore at Kabuto Island, has been floated off.

THE P. & O. Co.'s steamer *Bokhara* has been wrecked on the Pescadores with terrible loss of life.

A TELEGRAPHIC message from Saga received by the Home Department, reports that the Admonition Law was enforced in the town on the 17th inst. against 101 persons.

A GREAT reduction in passenger's fares on the vessels of the Nippon Yusen Kaisha running between Kobe and Otaru will be effected on and after the 16th inst. The reductions will be as follows:—First-class, 25 per cent.; second-class, from 16.6 to 25 per cent.; and third-class, from 11.1 to 33.3 per cent.

THE 17th inst. being the day fixed for the *Shinjosai* (the thanksgiving service to the gods of harvest) the usual service was held by the Emperor in the Palace. Members of the Imperial Family, Ministers of State, attendants in the *Fakonoma* and the *Kinkeinoma*, officials of *Chokunin* and *Sonin* ranks in various Depart-

ments, Superintendents of Shinto and Buddhist sects, peers, and persons holding rank above sixth class second grade and decorations above sixth class, were admitted to worship at the cenotaphs.

Our of 1,115 applications presented to the Patents' Bureau last month, 1,035 were granted, for which fees to the amount of 1,313,968 yen were paid. Compared with the previous month the figures show a decrease of 17 applications and 44,534 yen in fees, but an increase of 661 patents granted.

THE total receipts of the Kansai Railway Company during the past half year were yen 98,663,097; the expenditures amounted to yen 46,346,250, leaving a profit of yen 52,316,847; yen 2,379,694, brought over from last account being added, makes a total sum of yen 54,696,541 for distribution.

THE new Regulations for the organization of Prefectures were put into operation in Aichi Prefecture on the 1st inst., and the general election of the members of the Prefectural Assembly, the formation of which has in consequence been altered, took place on the 15th inst. Out of 38 representatives for the rural divisions only 10 were returned from the *Min-to* partisans, no *Min-to* candidates being successful in the urban divisions.

MESSRS. WADATE FUKA, Secretary of Yamagata Ken; FUJIO GOROKU, Secretary of Gifu Ken; WATANABE KAISUKE, Chief Police Inspector of Chiba; IKENAGA TAN, Chief Police Inspector of Ehime; HAOI SHIJIKU, Councillor of Akita Ken; SAWA ROKU, Councillor of Ibaraki Ken; UMEWAKA SEITARO, Councillor of Miyagi Ken; TAJIMA HIKOSHIO, Councillor of Aomori Ken; HARAKAWA GOMPEI, Councillor of Aichi Ken; and ISHII YOKU, Governor of Prisons in Hiroshima, were placed on the Retired List on the 13th inst.

THE Directors of the Sanyo Railway Company met on the 13th inst., and resolved to declare yen 117,000 as dividend for the past half-year, at the rate of 3.3 per cent. per annum, and to carry forward yen 1,770 to the new account. The Company lost over yen 11,600 during the last six months in consequence of the damage to the track caused by inundations. It has been decided to extend the Company's line as far as Mibara, and to raise a loan of yen 2,000,000 in order to complete the work. Material to the value of £40,980 is to be purchased from England.

THE foreign trade of Japan during last month amounted to 16,616,847.030 yen in value, of which 6,073,117.180 yen represented imports, and 10,543,729.850 yen exports, showing an excess of 4,470,612.670 yen in sales. The following is the amount of Customs Duties collected at various ports during the month:—365,806.591 yen at Yokohama; 133,404.674 yen at Kobe; 9,040.778 yen at Osaka; 10,816.411 yen at Nagasaki; 3,411.988 yen at Hakodate; and 2,131.588 yen at other ports; total 524,512.030 yen.

THE epidemic of dysentery continues to spread, notwithstanding the efforts made to check its progress. In Tottori Prefecture, the week ended the 9th inst. gave 45 patients and 16 deaths, totalling 680 and 164 respectively from the commencement. Some 316 fresh cases and 67 deaths were officially reported in Fukuoka Prefecture during the week ended the 7th inst., bringing the aggregate from the beginning up to 9,421 patients and 1,916 deaths. Hyogo Prefecture, from the 3rd inst. up to the 9th inst., reported 295 new patients and 90 deaths. These figures make a total of respec-

tively 2,494 and 576. The number of persons who were attacked by the epidemic in Wakayama Prefecture during the 7 days ended the 8th inst. was 91, of whom 6 have died, aggregating 1,710 patients and 123 deaths from the commencement. In Aichi Prefecture 136 fresh cases and 40 deaths occurred during the week ended the 28th ult., totalling 1,436 and 265 respectively.

A MAN named Takahashi Gengoro, who resides in Bambacho, Honjo, Tokyo, was sentenced some time ago by the Tokyo Local Court to 12 years' hard labour on a charge of having suffocated his infant child and buried the remains under the floor of his house, poverty leading him to commit the crime. The convict appealed against the decision, and the Tokyo Appeal Court reversed the first judgment on the 14th inst., finding the man not guilty on the ground of insufficient evidence. He was, however, sentenced to 7 days' detention for having interfered the body outside a cemetery.

DURING August last, the import and export trade of Jinsen, Korea, amounted to yen 243,475 in value, of which yen 164,786 represented imports, and yen 78,689 exports. Imports and exports by Japanese merchants were respectively in value yen 63,261 and yen 70,481; by Chinese merchants yen 98,307 and yen 7,176; and by foreign merchants yen 3,248 and yen 1,032. The values of articles over yen 3,000 imported and exported by Japanese merchants were as follows:—Imports: yen 6,604 bar copper; yen 11,606 other copper goods; yen 7,789 lead; yen 11,680 muslin; and yen 14,818 miscellaneous goods. Exports: yen 24,332 refined rice; yen 11,271 uncleaned rice; yen 27,406 large beans; and yen 4,397 small beans.

TRADE prospects continue bright, and the week closes with more business done. Yarns have advanced 50 cents per picul, and are eagerly bought at that; glb. Shirtings have especially been enquired for but Reds are quieter. With the approach of the cold weather a steady demand has set in for Woollens, and the market closes firm. Metals find a steady sale at late quotations. The stocks of Kerosene have been increased by a further arrival of 65,500 cases of "Comet," but prices have not altered. The total supply of oils in the Nakamura godowns is reported at 700,000 cases of all descriptions, a quantity amply sufficient for present demands. The sugar "boom" continues, and the eagerness of buyers, more especially of Tokyo, has pushed up the figures all round; the quotations close firm. The sales of Tea were chiefly confined to higher grades, but the season is practically over. Raw Silk is coming in from the interior freely, but prices have fallen, holders being surprised by a sharp rise in Exchange. American buyers seem to think that little business will be done for the States until the Presidential Election is over, and are consequently hanging off. The quality is declining, the silk sent in within the last few days showing signs of cold weather reeling. Export figures now stand: 1892, 20,758 piculs; 1891, 16,520 piculs; 1890, 5,084 piculs. The Waste Silk men have been quiet this week, but prices are maintained by holders, who still expect high prices and buyers who will accommodate themselves to their demands. Consumers claim that the present high prices must decline, as owing to the dearthness of raw material the spinning trade is proving unprofitable. The export figures are: 6,955 piculs, against 5,358 piculs last year and 4,564 picul sat the same date in 1890. Exchange, after many fluctuations, closes at a slight advance.

EDITORIAL NOTES.

THE PERIOD OF GAMING LICENSES.

There appears to be some perplexity as to the reason that a special Ordinance has been issued, enacting that, for the present period only, gaming licenses issued under the provisions of the new Game Law shall not be valid before November 15th, instead of October 15th as has hitherto been the case, and as will hereafter be the case according to the new Law. The explanation, we believe, is simple. The Law having been promulgated on the 5th of October, came into the hands of the Foreign Representatives on that day, or the day following. Now the Japanese Government is understood to be willing that the privileges conferred by the new Law shall be extended to foreigners, provided, of course, that its prohibitions also are applicable to them. As to the manner of enforcing the prohibitions, however, the Foreign Representatives must exercise the competence vested in them by their Governments, since the penalties prescribed by Japanese laws cannot be applied by Consular tribunals under the present jurisdictional system. The course hitherto followed in such cases has been that each Representative re-enacts the particular Japanese law in question, supplementing it with penalties of his own. It was obviously necessary that a reasonable interval should be left for this process of re-enactment. Hence the postponing Ordinance above alluded to. Her Majesty's Minister and the majority, we imagine, of the Foreign Representatives will have no difficulty in legislating so that the privileges of the new Law may be enjoyable by, and its prohibitions binding on, their nationals before November the 15th. But should it happen that any Representative is not endowed with competence to take such a step of his own authority, and that previous reference has to be made to his Government, the result will naturally be that his nationals cannot obtain licenses until these legislative proceedings are completed. The Japanese Government doubtless holds that if Foreign Powers insist on exempting their nationals from the prohibitions of any Japanese law unless it has been re-enacted by their Representatives in Japan, it is their duty to provide machinery on the spot for such enactment, and that, failing such provision, their nationals must be temporarily excluded from any privileges conferred by Japanese laws.

APPLICATION OF THE LAW OF THE ORGANIZATION OF THE COURTS.

By the express provisions of Art. 74 of the Law of the Organization of the Courts, Mr. Komatsu, Chief Judge of the Yokohama Local Court, and Messrs. Sugiyama and Hashimoto, Judges of the Tokyo Court of Appeal, have been placed on the Retired List. Concerning the reasons of this measure, we find some interesting comments in the *Kokkai*. Our contemporary says:—"According to the Constitution, no Judge can be dismissed unless by way of criminal sentence or disciplinary punishment, and the same principle is embodied in Art. 73 of the Law of the Organization of the Courts. Such being the case, the position of a Judge is virtually immovable, and the existing abuses of constant friction in judicial circles seem beyond redress. When Count Yamagata assumed the portfolio of Justice, he was determined to correct these abuses, and to adopt such measures as would put a final period to disgraceful events like the recent gambling scandal. Hence he applied the provisions of Art. 74 against the above three Judges. But there is considerable criticism as to the justice of the proceeding. For the provisions in question are applicable only to the case of Judges who, by reason of old age, have become enfeebled either physically or morally, and can no longer discharge their functions. Judges who are not weak either in health or in intellect cannot properly be brought within the operation of the article. Mr. Komatsu was appointed to his last position in 1891, and since then he has been actively engaged performing judicial functions. He is still under 50 years of age, and his

physical and moral strength is no way enfeebled. Further, though it is rumoured that Mr. Sugiyama is neither well versed in law, nor zealous in discharging his duties, he is physically strong, as all his fellow-judges can certify. These officials, therefore, could not properly be placed on the retired list under the provisions of Art. 74. But as Mr. Komatsu sat in very few cases since he was appointed to his last position, there are grounds for suspecting that he neglected his duty, and from that point of view, he ought to have been dismissed or fined in accordance with the decision of a Disciplinary Court. Further, if Mr. Sugiyama was considered unfit to discharge his duty, he ought to have been advised to present his resignation, and in the event of his refusal, some other means of contriving his retirement could have been found. Since the Constitution expressly guarantees life tenure of office to all Judges, it is somewhat difficult to correct abuses in the Judiciary, and Count Yamagata's speech to Presidents and Chief Procurators of Law Courts indicated that he appreciates the difficulty. Whether the Presidents and Procurators gave him the useful counsels which he sought, there is at present no way of knowing, but rumour confidently asserts that a large number of Judges will be removed from the Bench before the end of this month. Such a measure is absolutely necessary, yet if all these Judges be placed on the Retired List under Art. 74, a new abuse will be created. For, in the face of such contingencies, Judges, apprehending sudden dismissal, might adopt a servile attitude towards officialdom. Hereafter, therefore, steps should, if possible, be taken to make the removal of Judges depend upon the verdict of a Disciplinary Court so as to avoid all danger of misapplying the provisions of Art. 74 of the Law of the Organization of the Courts."

THE JAPANESE REPRESENTATIVE IN KOREA.

For some time past there has been talk of the removal of Colonel Kajiyama, Minister Resident in Seoul, and the appointment of an able Plenipotentiary in his room. It is now reported by the *Nippon* that the rumour is well founded, and that, according to the assertion of a certain member of the Diet, reputed to possess a thorough knowledge of the doings of the Government, the appointment will be made in a short time. The same authority is credited with saying that, as the present Minister is an officer, he ought to be suited for the position, but unfortunately Colonel Kajiyama is not at all like an officer. He obtained the post through the influence of Count Yamagata, when the latter was Minister President of State, and it is alleged that some members of the Cabinet have expressed a fear of offending the Count should his nominee be removed. The *Nippon* of course declares that no such consideration ought to be taken into account in filling so important a position as that of Japanese Representative in Korea. Who will succeed Colonel Kajiyama is still undecided, but probably one of the Directors of Bureaux in the Foreign Office or some Councillor in the Home Office. The post is said to have been offered to Mr. Hayashi, Vice-Minister for Foreign Affairs, but he is too wise and has too much experience to accept it. We imagine that all this requires to be largely discounted, but it probably represents a certain section of public opinion.

THE GAMBLING SCANDAL.

The Government now in power evidently regards the Judicial gambling scandal in much the same light as it was regarded by ourselves at the time, namely, as a national disgrace in which all the high officials concerned showed themselves more or less unworthy of their positions. We do not for a moment mean to say that the playing of a game, which may be called Japanese whist, by magistrates and Public Procurators at a restaurant in a private room, is a crime, or that persons engaging in such a pastime deserve punishment. There is certainly a great deal to be said against the practice in a country like Japan where official example counts for so much, and where the very men who adopted this method of amusing

themselves, might be required, the following day, to apply the stringent laws of the land against gambling. But we do say that the case was essentially one to be settled quietly. If the practice had become in any degree notorious, and if due pressure failed to correct it, then the Minister of State for Justice had a remedy under the "Loi Organique des Tribunaux," where it is provided that a Judge must not commit any act forbidden by administrative orders, and that the commission of such an act shall expose him to be transferred, suspended or retired. But to construct out of the affair material for a public trial, the evidence against these high judicial officials—one of them the President of the Supreme Court—being collected by a preliminary and apparently illegal process in which restaurant-keepers, dancing girls *et hoc genus omne* were the principal witnesses—such a disproportionate and imprudent procedure reflected much discredit on the men who contrived it. Viscount Tanaka, who held the portfolio of Justice during the early stages of the complication, seems to have fully appreciated its disgraceful character, but failing to adjust matters satisfactorily, he left the Cabinet. The Ito Ministry is plainly resolved to show its intolerance of such doings in the most emphatic manner. Already a number of resignations of Judicial officials have taken place. Among those who are supposed to have pressed the case or countenanced it, Mr. Miyoshi Taizo, Vice-Minister of State for Justice, Mr. Matsuoka Koki, Public Procurator General, Mr. Nozaki Keizo, Chief Public Procurator of the Tokyo Local Court, and Mr. Takaki Hideomi, Chief Public Procurator of the Tokyo Court of Appeal, have already resigned; and among those charged with gambling, Judge Kojima Iken, President of the Supreme Court, and Mr. Isobe Shiro, Chief Public Procurator of the Supreme Court, have also left the service. The vernacular press further states that Mr. Imai Kenichi, Public Procurator of the Supreme Court, who is reported to have been one of the chief instigators of the prosecution, and Messrs. Takaki Toyozo, Koto Soichi, and Naka Sadataka, Judges of the Supreme Court, have now tendered their resignations, an example which will probably be followed by Judges Kurizuka, Kishimoto and Kameyama of the same Court. The three last were among the defendants. At first they were naturally unwilling to resign, their position being that so long as the instigators of the scandalous prosecution remained in office, the victims ought not to suffer. But the former having now left the service, the latter are about to follow suit, and it is expected that all friction in the Judiciary will thus be terminated.

In connection with changes in the Judiciary, the *Nichi Nichi Shimbun* says that the new Chief Judge of the Yokohama Local Court will be appointed in a day or two, and that, when all the Chief Public Procurators now assembled in the capital have returned to their posts, there will follow a considerable weeding out of antiquated Judges of the old school. Indeed, the *Nichi Nichi* regards these changes as of sufficient importance to be called a virtual remodelling of the Judicial personnel throughout the empire.

MAJOR FUKUSHIMA'S RIDE.

Berlin papers give additional details of Major Fukushima's ride. According to the *National Gazette*, a telegram received by the Japanese Legation at Berlin reports him as having reached Omsk, a populous town of Western Siberia, situated at the confluence of the Irtysh and Om. Owing to the terrible heat, he was compelled to ride at night only. As is well known, he left Berlin on the 10th of February and reached St. Petersburg by way of Posen, Warsaw, and Vilna. Supplied by the Czar with a special ukase, or imperial order, he continued his ride by way of Tver, Moscow, Nishni-Novgorod, and Kazan in the direction of the Ural Mountains, which he crossed by the old pass at Ekaterinburg. Entering the vast steppes of Western Siberia, he followed the old highway till Tiumen, turned

then towards the south-east and reached Omsk on the 13th of August. Major Fukushima's further plans are to ride on to Semipalatinsk, up the Irtysh valley; then along the mountains that mark the southern boundary of Siberia to Irkutsk; and thence to Vladivostok on the Pacific. From that point the Major intend to cross the Korean peninsula and ride along the coast of China down to Shanghai, the end of his journey. The greater and more difficult part of the way lies still before him, but so far no untoward accident has marked the progress of the bold rider.

JUDGMENT IN A SUIT AGAINST THE "KOKUMIN-NO-TOMO."

THE *Kokumin-no-Tomo*, a leading Tokyo periodical, was defendant in an action for libel brought on behalf of Mr. Kono, Minister of State for Education, the trial of which took place in the Tokyo Local Court on Friday last, the defendants obtaining a verdict on the ground of insufficient evidence for the prosecution. The judgment ran as follows:—

JUDGMENT.

KAKITA JUNRO, Defendant,
Publisher and Printer of the
Kokumin-no-Tomo.

NAKAMURA SHUICHI, Defendant,
Editor of the *Kokumin-no-Tomo*.

The facts of the suit for libel instituted against the above defendants, as proved in the Court, are these:—The *Kokumin-no-Tomo*, in its issue, No. 160, published, on the 13th July, 1892, an article entitled "The Department of Education," in which the following sentences occurred:—"Who has prevented the intellectual development of the nation? It is the Department of Education! The Department of Education which has revived the doctrine of Confucius, when the people were considering which standard of morality they should adopt, science or religion. Signs had made themselves apparent of the union of the individual principle and the national principle, and the people desired to effect the union harmoniously. But at this stage the officials of the Department of Education disseminated literature of nationalistic tendencies, and encouraged the growth of conservatism, thereby leading the people to advocate a false national principle. When large numbers of students from various lower schools were about to enter the higher schools, the Department of Education made rules prohibiting any student, educated otherwise than in the Government Middle Schools, from entering the High Middle Schools. It was this same Department of Education that attempted to suppress private scholastic institutions in general by protecting a few schools. May it not be truly said that the Department of Education has been a thorn in the side of the Meiji Government? All these things were done simply for the benefit of a party in the Department, and in the interests of that party enemies were created in the educational society of the empire." The Public Procurator considered the above to be a libel on the Minister of State for Education, and therefore instituted a lawsuit against the defendants. But the Court finds that the impugned paragraphs are nothing more than attacks on the administration of the Department of Education, and that they do not contain any insult to the Minister of State for Education individually. Therefore, in accordance with Arts. 224 and 236 of Code of Criminal Procedure, the case is dismissed.

The above judgment was delivered in the Tokyo Local Court on the 14th October, 1892, in the presence of Matsuyama Haku, Public Procurator.

(Signed) { NAGAI JIRO, Chief Judge
MOCHIZUKI GENJIRO, Assistant Judge
HIDASHIMA KOICHI, Assistant Judge.

THE JAPAN SOCIETY.

THE Japan Society has issued its Review of the First Session. Remarkable success has attended the work of the Society up to the present. The session lasted from April to July, 1892, during which time four ordinary meetings were held, at which the following papers were read:—

"Ju-jitsu—the Ancient Art of Self Defence by Slight of Body," by Mr. T. Shidachi, LL.B., (Tokio), M.J.S., illustrated by practical demonstrations by the Lecturer, assisted by Mr. D. Goh, Hon. Sec.

"The Uses of Bamboo in Japan," by Mr. Chas. Holme, F.L.S., Member of Council. Illustrated by the Collection presented by him to the Museum of Economic Botany at Kew Gardens.

"Some Japanese Industrial Art Workers (Cépe

Printers, &c.)," by Mrs. Ernest Hart, M.J.S., &c. Illustrated by specimens from her Collection.

"The Naturalistic Art of Japan," by Mr. W. Gowland, F.C.S., F.L.C., M.A.I., M.J.S., (late of the Imperial Mint, Osaka).

The average attendance at these meetings was no less than 170, an extraordinary number, testifying not only the influential character of the Society but also the interest felt by the people of London in Japanese matters. If the Asiatic Society of Japan could record an average attendance of even a fourth of the above, it would count itself fortunate. The second session is to last from October 1892 to July 1893, and arrangements have already been made for the reading of the following papers:—

"Japanese Proverbs and some Figurative Expressions in the Japanese Language," by Mr. N. Okoshi, Acting Consul-General in London, Member of Council.

"Certain instances of the Adaptation of European Designs to the Decoration of Japanese Swords," by Mr. M. B. Huish, LL.B., Member of Council.

"Wood and its Application to Japanese Artistic and Industrial Designs," by Mr. George Cawley, M.I.M.E., M.J.S., &c. (late Imperial Engineering College, Tokio).

"The Family Relations in Japan," by Mr. D. Goh, Hon. Secretary.

"Ancient Japanese Lacquer Work and Artists in Lac," by Mr. Ernest Hart, Member of Council.

"Japanese Shipping, Ancient and Modern," by Dr. F. Elgar, LL.D., F.R.S.E., &c. (late Director of Dockyards at the Admiralty) Member of Council.

"Some Difficulties encountered by beginners in the Study of the Japanese Spoken Language," by Mr. A. Diósy, Hon. Secretary.

"The Popular School of Japanese Pictorial Art," by Professor Wm. Andersoo, F.R.C.S., Chairman of Council.

"Japanes Fans," by Mrs. Salway, M.J.S., &c.

Mr. Gowland's essay on the Naturalistic Art of Japan must have been very interesting, for, apart from the exceptional knowledge which the writer has of his subject, the paper was illustrated by an exhibition of a hundred and twenty-four pictures by Japanese old masters, selected from his fine collection. About one half of these pictures, we read, represented the *Shijo-riu*, or Naturalistic School, founded by the immortal Okyo during the close of the eighteenth century, and the remainder illustrated the three great earlier schools from the fourteenth century onwards. We reproduce below a few notes from Mr. Gowland's paper, as epitomized in the reports of the Society's meetings. The essay will appear *in extenso* in the First Volume of "Transactions," to be issued in the last quarter of 1892:—

The chief schools or styles by which the advance and development of Japanese pictorial art have been effected are four in number, viz., The Chinese, including the Buddhist School, dating from the 5th or 6th century; The Yamato Tosa, dating from the beginning of the 11th century; The Kano, dating from the middle of the 15th century; The Shijo, dating from the middle of the 18th century.

There are no traces existing in Japan of indigenous pictorial art. The earliest paintings in the country are either Korean or Chinese. According to traditional records, Korean and Chinese painters came to Japan from time to time during the 5th and 6th centuries, but up to the 9th century, the time of Kanakoka, the first great artist of native birth of whose work any specimens exist, we are surrounded by haze and uncertainty. Even for some time later we still are often on the ground of tradition rather than of history.

In the fourteenth century we have the advent of a famous painter of the Chinese and Buddhist school, Cho Densu, and from this period dates and names are more certain.

The Chinese and Buddhist School.—The paintings of the artists of this School represent the divinities of Buddhism and scenes of its history and faith, personages of old myths and legends, also landscapes and groupings of birds and flowers, either in brilliant colours, or in monochrome.

The Yamato-Tosa School.—After the death of Kanakoka (10th century), the Japanese began to aspire to establish a school which should more fully represent than the Chinese school their national feelings and spirit, and be a truly Japanese school of painting; but it was not until the beginning of the 11th century that these aspirations were fulfilled by the foundation of the Yamato-Tosa School by the court noble and painter, Kasuga Motomitsu.

The Kano, the third great School, was originated by Kano Masanobu (b. 1424, d. 1520) and established by Motonobu (b. 1479, d. 1559). The paintings of this School are in two styles; the first in black and white characterized by few bold sweeping strokes, the action of living objects and the features of a landscape being thus indicated without much detail. The second style was one of brilliant colouring and more careful drawing, and was more often followed for the de-

coration of panels, walls and screens, than for hanging-pictures.

The Shijo or Naturalistic School.—In the preceding Schools, there had been much talk and pretence of making direct copies from nature, but Okyo (b. 1733, d. 1795), founder of this School, was the first artist to make a really honest attempt to copy natural objects.

The name Shijo, given to the Naturalistic School, was taken from the name of the street in which the studio of Okyo, the founder of the school, was situated. It differed from the other schools in its first principles, its motives, and its technique. Its pupils copied natural objects and not conventional drawings of them.

Its painters, rarely inspired by the myths and legends which formed the chief motives of the older schools, were deeply animated by an intense love of simple natural beauties. A twig of cherry or plum blossom, a carp in a wayside pool, a few flying geese, were sufficient for their paintings, which are often as much poems as pictures.

In landscapes they preferred to paint the scenery of their own country rather than the idealized and artificial landscapes of China.

In its technique use of the old, heavy body colours was discontinued, and delicate tones and washes adopted. In black and white pictures deep black was avoided, and harmonious effects in light shades of grey combined with washes of brown, were most successfully produced. All pigments were in fact delicately used.

NEW PEERS.

THE *Mainichi Shinbun* alleges that some new Peers are about to be created. They are all of the lowest grade, namely, Baron. The first is Mr. Matsui Toshiyuki, who was formerly *Karo* (Factor) of the House of Hosokawa (feudal chief of Higo) and territorial lord of Kumamoto. The second is Mr. Date Kuninari. He too held the position of *Karo*, in the noble House of Sendai, before the Restoration, but at the commencement of the Meiji era, he moved to Hokkaido, and has there conducted extensive enterprises of reclamation and settlement. Third on the list stands the name of Mr. Yoneda Torao, who receives his patent of Baron in declared consideration of the eminent services of his father, the celebrated Nagaoka Kenmotsu, chief Factor of the House of Hosokawa, who was one of the first to give practical expression to the principle of administrative centralization in the closing days of the Tokugawa Regency. Mr. Yoneda Torao himself possesses no small claims to the distinction now conferred on him, for, in the year 1867, he was one of the captains in the van of the Imperial Force directed against Oshu, and in 1874, on the occasion of the Yeto Shimpel *émeutes*, 1876, when the trouble occurred in Choshu, and 1877, when the Kumamoto Seige took place, he distinguished himself signally. Since that time he has served in the capacity of an Imperial Chamberlain. A fourth name is mentioned, that of Mr. Date Masato. He also becomes a Baron, but we have no information at present as to his antecedents. These creations of course make no addition to the members of the House of Peers, since the number of representative Barons is a fixed fraction of the whole Order, and all Peers below the rank of Marquis are sent to the Diet by election.

THE WEBSTER CASE.

THE trial of Webster, a British subject, who was arraigned at Niigata on a charge of murder, came off on the 10th instant before Mr. J. C. Hall, H.B.M.'s Consul at Hakodate, who proceeded to Niigata for the purpose of conducting the trial *in loco*. The facts of the case were obscure, so far as public knowledge was concerned, until evidence was heard in open Court. We now learn from the reports published in the vernacular press, that Mr. Takatsu Yusuke, Public Procurator, appeared to watch the case on behalf of the Japanese Government, and that Mr. Kenny, Acting Registrar of H.B.M. Court at Kanagawa, discharged the duty of Prosecutor. The charge against Webster was that, on the evening of August 5th 1892, while walking in Hama-cho, Niigata, he threw a stick at one Kazama Yoichiro, who was passing, and striking him on the right temple, inflicted an injury which subsequently proved fatal. The father of the deceased was the first witness called. He stated simply that on the evening in question, his son had proceeded on an errand, carrying a lantern to a certain shop, and that

while returning, he had received a fatal blow from a stick thrown at him by the prisoner. Dr. Harada Motosada described the results of a post-mortem made by him, and stated that death had undoubtedly been caused by a blow received on the head. Oda Shikajiro, who is not identified in the printed reports, also related what had occurred and a constable corroborated this testimony. For the defence, it was claimed that a stone had been thrown at Webster, and that he replied by hurling his stick which unfortunately had struck a passer-by. A foreigner, the original of whose transliterated name appears to be Sinclair, testified that he was in Webster's company in a drinking shop on the 5th of August when a crowd collected outside. The saloon-keeper ordered them to disperse and they complied after a time, but as they were going away, some one threw a stone which struck Webster. Thereupon the latter sent his stick at the crowd, but the witness did not believe that it had hit anyone, for he had seen it ricochet from the eaves of a house, and rebound to the feet of the prisoner. After some further testimony, the Acting Judge decided that Webster had been guilty of manslaughter and sentenced him to six months' imprisonment with hard labour. So far as we can discover from this evidence, the man was innocent of anything like murderous intent. More or less baited and even assaulted by a mob, he gave way to passion and threw his stick blindly with most unhappy results. The ends of justice are doubtless fully served by the sentence.

THE CROWN PRINCE AND THE SOLDIER'S BREAD.

SOME days ago the vernacular press published an anecdote about the Emperor and a soldier's shoe, which we reproduced. The *Nippon* now reports that, a short time ago, His Imperial Highness the Crown Prince went to inspect the Artillery Barracks at Ichigaya. While the Prince was visiting the men's rooms, the twelve-o'clock gun was heard. Shortly afterwards, the Prince asked one of his attendants to procure some luncheon, whereupon the latter addressed himself to an officer, who, however, replied that nothing was immediately available except some brownish bread for the soldiers, and that he should therefore order some viands at once. The Prince, overhearing this, said that any food good enough for the soldiers was good enough for him, and that he asked for nothing better than the brown loaf. When it was brought to him, he declared that he too was a soldier and that soldier's food suited him excellently, whereupon he lunched off the dry, coarse bread. The following day the Prince again asked for the same kind of loaf for lunch, but as there was no such bread in the Palace, a messenger had to be sent to the barracks, to obtain some. The Prince was much pleased, and said that he found the bread to his taste. The *Nippon* eulogises him and predicts that he will become one of the most popular Emperors of Japan.

THE INDEPENDENT POPULAR PARTY.

THOSE who have had patience, and who are sufficiently interested in the subject, to follow the labyrinthine actions and interactions of Japanese political parties during the past two years, probably remember that a section of the Radicals separated themselves, last autumn, from the main body of the *Yiyu-to*, and organized the Independent Popular Party (*Dokuritsu Min-to*). The cause of the split was not nominally attributable to any deep political considerations, but had connection rather with some question of regulations. These divisions, however, do not occur among men whose hearts are sincerely set upon working in unison, and the public was probably prepared to find that no practical talk made itself subsequently heard of reconciliation between the *Yiyu-to* and the seceders. At the head of the latter were Messrs. Kusumoto Masataka, Kawashima Jun, and Nakamura Yaro, all very distinguished members of the Lower House. The *Pomuri Shimbun* now reports that the Independent Popular Party, under the direction of these gentlemen, has recently received considerable accessions of strength, and that it has held a meeting for the purpose of

determining the policy to be pursued by it in the next session of the Diet. The resolutions said to have been adopted are these:—

(1.) The Government not having yet declared its policy, it is impossible for us to lay down any definite programme. Judging, however, from the consultations held by the present members of the Cabinet before they assumed office, they are not likely to follow the same lines as their predecessors but will, to some extent, adopt the dictates of popular opinion. In that event, we need not attack them uncompromisingly, nor need we hesitate to support any Bill presented by them, should it meet with public approval. It is therefore our resolve, as Independent Members, to discharge the duties and obligations of the people's representatives, taking care only that the Government does not violate the provisions of the great Constitution.

(2.) Any enterprise which the Government thinks it necessary to inaugurate must be submitted by it for the Diet's approval. In such a case the Diet ought to avoid hasty and ill-considered discussion, so as to establish the precedent of harmonious co-operation between the Executive and the Legislature.

(3.) We, on our side, will present Bills relating to freedom of speech, to the preservation of personal rights, to the promotion of the nation's interests, and to the general good of the country.

The above is the first declaration of policy made by any party since the present Cabinet came into power. It is, of course, well understood that the *Kaishin-to* will continue their implacable hostility to the Government, but the announcement now made by the leaders of the Independent Popular Section possesses much importance as an indication of the attitude not unlikely to be adopted by the bulk of the *Yiyu-to* in the next session.

INTERNATIONAL CONGRESSES OF ORIENTALISTS.

THE Japan Society publishes the following for the information of its members:—

International Congresses of Orientalists will be held in London, at Burlington House, Piccadilly, W., under the Presidency of Professor F. Max Müller, K.M., &c., from 5th to 12th September, 1892; and at Lisbon under the Presidency of His Majesty the King of Portugal, from the 23rd September to the 1st October, 1892.

The following Papers, amongst others, will be read in Section V. (the Far East) of the London Congress, of which Section Sir Thomas Wade is President, and Professor B. H. Chamberlain, Hon. M.J.S., Secretary for Japan:—"Modern Japanese Literature," by Mr. Walter Deening;—"On the Lotus, as used in Ornament," by Mr. A. H. Goodyear, M.A.;—"On Buddhism in Japan," by Mr. C. J. W. Pfundner.

At the Lisbon Congress there will be a Section (I.) specially devoted to Japanese Studies.

Mr. T. B. Clarke-Thornhill, M.J.S., &c., Secretary H.B.M. Legation, Lisbon, has been appointed, by the Council, Delegate of the Society to the Lisbon Congress.

The invitation from the London Congress reached the Council too late to allow of the appointment of an Official Delegate of the Society. The Society has, by resolution of the Council, contributed to the funds of both Congresses.

The Subscription, entitling to privileges of Membership, of the Lisbon Congress is £1; of the London Congress: Gentlemen, £1, Ladies, 10s.

Members of the Japan Society wishing to join either Congress, or both, are requested to apply, as soon as possible, to

ARTHUR DIOBY } Hon. Secs.
DAIGORO GOH }

HARBOUR REGULATIONS COMMITTEE.

THE first meeting of the above committee is to be held in the buildings of the Department of Communications at 10 a.m. on the 18th instant. The *Nichi Nichi Shimbun* reports that the draft of the Regulations was compiled some years ago, and that whenever any question occurred relating to the harbour, the draft was referred to, and amended, so that it will probably require little alteration now. One question, however, must be discussed and settled by the committee, namely, whether the Harbour Regulations should be promulgated as an Imperial Ordinance or as a Law. This point is of great importance, inasmuch as it has a close connection with the existing Treaties. For instance, there is an article in the Regulations to the effect that "any person who violates their provisions shall be punished by a fine of not less than 5 yen and not more than 100 yen." On the other hand, in Art. 15 of the Hakodate Harbour Regulations, which went into operation on the 18th of September, 1865, it is expressly provided that any person violating the provisions of the Regulations shall, under Consular jurisdiction, be liable to a fine of not more than 500 Mexican dollars or to imprisonment of not more than 3 months. These two articles are in obvious conflict. Some persons propose to amend the terms of the draft, altering the fine to \$500, while others are in favour of making no

change, but rather adding a clause to the effect that Art. 15 of the Hakodate Harbour Regulations shall cease to be operative on the day when the new Regulations go into force. Bearing directly on the general problem is the language of Art. 4 of the Stirling Convention between Japan and Great Britain, which provides, that "British ships in Japanese ports shall conform to the laws of Japan. If high officers or commanders of ships shall break any such laws, it will lead to the ports being closed. Should inferior persons break them, they are to be delivered over to the Commanders of their ships for punishment." This provision leaves Japan great latitude. In accordance with its terms, she is obviously at liberty to enact strict regulations without consulting anybody, and without laying herself open to any interference on the part of foreign Powers. But has not the above provision been invalidated by subsequent Treaties, asks the *Nichi Nichi*. These two questions will be the principal points of discussion by the committee. Under any circumstances, however, the Regulations cannot fail to be of public benefit.

The *Nichi Nichi Shimbun* appears to overlook the 3rd clause in the 3rd article of the Austro-Hungarian Treaty, which runs, thus:—"The place where Austro-Hungarian citizens shall reside, and where they shall erect their buildings, shall be determined on by the Imperial and Royal Consular Officers in conjunction with the competent Local Authorities; the harbour regulations shall be arranged in a similar manner." This is the clause virtually responsible for all the delay that has occurred in putting harbour regulations into force in Yokohama. It involves the necessity of obtaining the consent of all the Consuls of all the Powers before promulgating any system of harbour control, and that consent was found so impossible to obtain, that the draft regulations were finally pigeon-holed in disgust and despair. Doubtless the attempt would result differently if made now, and might have resulted differently if made at any time during the past five years, but the experiences connected with it in former times were sufficiently strange to deter further effort.

As this committee, says the *Nichi Nichi*, is composed of officials already drawing salary, they require no extra allowance. Judging, however, from the plan pursued in the case of the members of both Houses of the Diet who were lately appointed members of the Railway Council, Mr. Denison of the Foreign Office and Captain J. M. James of the Marine Bureau ought to receive appropriate remuneration. Count Kuroda, however, has arranged with them that an allowance shall be dispensed with. With regard to sundry expenses, such as paper, ink, charcoal &c., a grant ought to be sought from the Treasury. But the Count has contrived to economise the necessary amount in the expenditures of the Marine Bureau and other offices of the Communications Department, so as to avoid the necessity of asking for any extra disbursement by the Treasury.

This committee held its first conference in the Department of Communications on the 18th instant. All the members except Mr. Denison, who is indisposed, and Messrs. Mekada and Ichinose, assembled, and the proceedings were opened at 11 a.m. by the following speech from Count Kuroda:—

GENTLEMEN,—The object of harbour regulations, as I need scarcely remind you, is to maintain order within a port, and, by a proper system of superintendence, to secure increased safety for vessels lying there. Under these circumstances, there is no country where regulations do not exist for the control of all the important harbours. From the time when Japan was opened to foreign intercourse, the need of such a system was appreciated, and we find in the Treaties a clause which says:—"The harbour regulations shall be arranged by the Consul and the Japanese Authorities of each place, and if they cannot agree, the matter shall be referred to and settled by the Diplomatic Agent and the Japanese Government. In accordance with this clause, harbour regulations for Hakodate were determined by officials of

the Bakufu Government in consultation with the Consuls in 1867. Further, after the Restoration, similar conferences were frequently opened for a like purpose in respect of Yokohama and Kobe, but unfortunately no decision could be reached and the matter was dropped. The new works in Yokohama Harbour being now on the point of completion, it becomes essential that a system of regulations should be enacted without delay. The matter touches foreigners as well as Japanese subjects, and must therefore be treated with the greatest accuracy and the fullest consideration. For these reasons I have asked you to come together, after due reference to the Minister of State for Foreign Affairs. I trust, gentlemen, that you will appreciate my purpose, and give the matter your mature reflection. Detailed information as to any points in the draft will be supplied by the officials concerned.

Mr. Taukahara, Director of the Marine Bureau, then entered into a minute explanation of the points to be considered, and the Committee proceeded to examine and discuss the draft regulations. It was decided that the meetings are to be held on Wednesdays and Fridays, and that the next shall take place on the 21st instant. The *Nichi Nichi Shimbun* notes that although there are foreigners on the Committee, no interpreter is required as Captain J. M. James can discuss everything in the Japanese language.

THE "IZUMO MARU" CALAMITY.

On the occasion of the wreck of the Japan Mail Steamship Company's steamer *Izumo Maru*, which perished in a typhoon off the Korean coast last April, fifty-six lives were lost. The Company, says the Tokyo News Agency, adopted most energetic means to find the bodies, expending considerable sums for the purpose, but the strength of the current in the locality of the catastrophe baffled these efforts except in a few cases. The Company then set about raising a subscription among its own people and charitable outsiders for the relief of the relatives of the dead. The sums contributed, together with a donation from the Emperor and Empress, reached a total of over 5,500 yen. In distributing this money among those for whom it was destined, a covering letter was sent by the persons who started the subscription to each of the recipients. From the letter we learn that the exact amount raised was 5,582.468 yen, of which 300 yen came from the Emperor and Empress. The letter is signed by Messrs. T. H. James, A. Macmillan, M. Kato, A. Kondo, M. Asada and K. Uchida.

THE PARCELS POST.

The Parcels Post Regulations, says the *Yomiuri Shimbun*, have been enforced in the capital since the 1st instant. The system ought to confer great convenience on the public, but the result thus far has been very unsatisfactory. The alleged reasons of this failure are stated by our contemporary. A Parcels Post system necessarily brings official and private carriers into competition. Hence in Europe the Government always concludes a contract with private carriers, and entrusts them with the transmission of parcels at a minimum rate. As the number of parcels increases, the carriers are always found ready to lower their charges. But in enforcing the new system in Japan the Government made no such contract, and the consequence is that all the Railway and Steamship Companies begin to fear that the authorities will impose on them the obligation of carrying parcels free of charge in consideration of some small subsidies. They have already been compelled to discharge such functions in connection with their service, so they are far from pleased with the present prospect. The six private railway companies held a meeting in Osaka some days ago, and passed a resolution that when the Parcels Post system came to be enforced throughout the empire, they should not agree to carry any parcel unless the Government undertook to pay the fare of one third-class passenger for the goods. On the other hand the Japan Railway Company, the Nippon Unyu-Kaisha, the Tsuun-Kaisha, the Chugiu-Kaisha and some other carrying companies, have already remodelled their organizations with the idea of reducing charges so as to compete with the Government institution. Mean-

while, the people in remote districts of the empire where communications are very imperfect, have been anxiously awaiting the operation of the new Regulations. They are disappointed, however, since the Parcels Post System has been enforced in Tokyo alone for the present. Moreover, even in the capital there are many private carrying companies, and as their method of transmission is expeditious and no complicated process like that prescribed by the Post Office is required, very few parcels have been entrusted to the Post Office. On the first day of putting the new regulations into force, there were only three applicants, and on the following day, two. Should the system become operative throughout the empire, the Government will incur heavy loss, as all the towns have private companies which carry very cheaply, and the Post Office will be employed for the transmission of only such parcels as are destined for remote regions whither no private company finds it remunerative to extend its operations. Under these circumstances the Department of Communications will have to ask for a large appropriation from the Treasury every year, without conferring any marked benefit on the people.

PNEUMAGRAMS.

We alluded some time ago to the pneumatic despatch system in Paris. The *Pall Mall Budget* gives the following interesting account of it, and at the same time discloses the fact that a similar system is employed by the General Post Office in London in lieu of the telegraph:—

Englishmen familiar with Paris have probably often received or sent a *carte télégraphique*, or, if they have been lordly in their expenditure, they may have invested an extra twopenny on a closed telegraphic letter. In either case they have been able to send a message, unlimited in the number of words, at a speed that competes with the electric telegraph. The secret is simple. Traversing Paris is a system of pneumatic tubes connected with the different telegraph offices, and the message, instead of being "wired," is blown to its destination. Of course the actual journey takes longer, but no time is lost in operating and transcribing the message. The identical piece of card or paper on which the sender wrote, is handed to his correspondent at the other side of Paris. Consequently, although the air current is to the electric in speed as the tortoise to the hare, yet, like the tortoise, the air message wins the race.

This then is the system in Paris with which not a few Englishmen are familiar. But very few of us know that an almost identical system prevails in London, for the benefit, not of the public, but of the Post Office. Suppose, for example, that the manager of the Grand Hotel or the editor of the *Pall Mall Gazette* wishes to send a telegram to the City. He will go to the West Strand telegraph office, write his message on an official form, and hand it over the counter. He then imagines—good innocent man—that a busy operator at once converts his twelve words into telegraphic dots and dashes; that these are reconverted at the other end, and the message neatly written out for delivery. As a matter of fact, what happens is this: the actual form on which the message was written is put into a little cloth box, called a carrier, and blown through a tube to the central telegraph office at St. Martin's-le-Grand; it is then placed in another tube and blown onward to its destination—say, Leadenhall-street. So far no operator or transcriber has touched it, and no electric needle has oscillated to convey its meaning. The actual piece of paper that was handed in at West Strand is now, after the lapse of four or five minutes, at Leadenhall-street. But it would never do to let this same piece of paper fall into the hands of the person to whom it is addressed. The secret of its transmission would then be out, and the public would clamour against being charged telegraphic rates for a message that is not telegraphic. So the twelve words are carefully copied on to a pink telegram form, and thus, blushing at the official deception, are delivered to the addressee.

The method of working the tube system is easily described. In the basement of the central telegraph office at St. Martin's-le-Grand are four powerful engines which work the same number of air pumps. The pumps are so arranged that they exhaust the air from a large cylinder called the vacuum cylinder, and press the same air into another cylinder called the pressure cylinder. To these two cylinders all the tubes that radiate underground from the G.P.O. are connected. The tubes are in most cases three inches in diameter, and the "carrier" is a little cylinder of stiff cloth, about six inches long, that fits easily inside the tube. Into this carrier are placed the messages, in bundles of perhaps fifty or a hundred at a time. If the messages have to travel inwards to the G.P.O. (say from the West Strand), the little carrier would be put into the up-tube, which is connected with the vacuum cylinder in the basement of the central building. Directly it is slipped into the tube at West Strand, and the valve opened to let it pass, the little carrier finds in front of it almost a complete vacuum, and

behind it the pressure of the atmosphere. By this pressure it is driven along at the rate of about half a mile a minute, and delivered into the central hall at the General Post Office (West). A boy takes the carrier out of the tube, and the bundle of messages out of the carrier. These are rapidly sorted by girls seated in the same room, and made up into other bundles to go out to different offices. As soon as a bundle of fifty or more is ready for, say, West Strand again, an outgoing carrier is filled, and placed in the down-tube connected with the pressure cylinder, and pushed outwards by the compressed air at about the same speed that the other carrier had been sucked inwards.

LIABILITY FOR LOSS.

A CURIOUS case is reported by the *Nichi Nichi Shimbun*. The facts as given are these, omitting the name of the Yokohama firm which is said to be concerned:—At the close of August, Mr. Tsukui Heiyemon sent to a certain Firm in Yokohama a quantity of *habutaye* which he had contracted to furnish. The value of the *habutaye* was about 500 yen, and its transport was entrusted to the Domestic Carrying Company (*Naikoku Tsuun aisha*). The Yokohama Firm received the goods and gave an acknowledgment, promising to inspect them in the course of two days and pay the money after inspection. When, however, the day for payment arrived, the Firm announced that the *habutaye* had been lost, and gave information of the fact to the Yokohama police as well as to the owner of the goods. The latter claimed that, as the goods had passed into the keeping of the Firm prior to the alleged loss, the Firm must be held responsible for the amount, but it was replied on behalf of the Firm that, inasmuch as inspection had not taken place, nothing could be known about the real contents of the bale: it might have been packed with stones or tiles. Therefore no liability could be admitted. Mr. Tsukui put the matter into the hands of Messrs. Okamura and Kokura, and there is a possibility of its coming into a Consular Court. We find the story almost incredible, but give it for what it may be worth.

TREATY REVISION AND THE CODES.

UNDER the above caption the *Kokkai* discusses the question of the Codes. It says that the Statesmen of this empire have always declared that unless the existing Treaties with foreign Powers be revised, the work of the Restoration is incomplete; and ever since the civil war of 1877 ended, and the reconstruction of the national government commenced, every measure adopted was in the interests of Treaty Revision. After Count Ito had reorganized the Government, and become Minister President of State, the Codes were compiled; the organization of the Law Courts was established; the method of appointing Judges by examination was enforced; the system of local administration was framed, and many other improvements were introduced, simply on account of Treaty Revision. In other words, the importation of foreign institutions was solely to accomplish Revision. Further, the latest act of Count Ito in appointing a Codes Committee is a direct proof of the Government's intention of disregarding the resolution of the Diet in order to re-commence the negotiations for Revision. Such an intention may be good, but to sacrifice the national interests on the shrine of an uncertain success does not seem a wise course. On the other hand, if the Cabinet seeks to attain a reputation for itself at the expense of the people, the *Kokkai* promises to attack it with the utmost vehemence. Then follows the usual advice, namely, that Imperial sanction be sought for the Postponement Bill, and that a Codes Amendment Bureau (*Hoten-shusei-kyoku*), be established at once, so that ultimately, with the concurrence of the Diet, suitable Codes, may be enforced. Thereafter the Treaties may be revised, and the work of the Meiji era achieved with the concurrence of the people, not in defiance of them.

Certainly it is strange to find the *Kokkai* alleging that the compilation of the Codes took place after Count Ito became Minister President, namely, after the close of 1885. Such a historical blunder was not to have been expected from the *Kokkai*. Has our contemporary forgotten that the first Committee to revise the

Codes was appointed in 1886 under the presidency of Count Inouye? In other words, has it forgotten that the Codes were altogether compiled by 1886, and only awaited revision before being promulgated? The matter is not of very great consequence so far as concerns our contemporary's general argument, though we may remark, *en passant*, that inasmuch as the compilation of the Civil Code and the Code of Civil Procedure was begun long before 1877—the date fixed by the *Kokkai* itself as the inauguration of pro-revision progress—the allegation that they were compiled for the sake of Treaty Revision is obviously absurd. But no error of fact bears comparison with the wonderful declaration that everything done by Japan during the past fifteen years has been in the interests of Treaty Revision. The country, then, has cared nothing for progress and everything for Revision. How grateful should she be to the unsympathetic attitude maintained by foreign Powers during the early years of her aspiration! And how keenly the people must desire Revision! And how little for its own sake does reform commend itself to this nominally reform-loving nation!

FIRST HIGHER MIDDLE SCHOOL.

For the first time in its history, the Calendar of the First Higher Middle School has been published in English. In it we have a terse and succinct account of the institution, from its inception in 1875 as the *Tokyo English Language School*, down to last year, when all the instructors became Professors. Possibly the most interesting thing in the brochure is the account of the *Kōyūkwaï*, a society formed by the joint efforts of the instructors, officers, and students of the School. This society consists of several sections. The Literary Section publishes a monthly magazine, which is distributed among the members. The Boating Section possesses many boats, and holds a regatta every year on the River Sumida. The Sections of Fencing, Archery, and Athletic Sports hold two meetings each, annually. The Baseball Section meets once a term. The Judo and Lawn-Tennis Sections have trials of skill from time to time. The Pedestrian Section has a walking tour to the environs of the city once a month or every other month. Each section of the society has its own rules and is managed by a manager and committee. The Literary Section has as its mouth-piece the *Kōyūkwaï Zasshi*, a publication that this month reached its 19th issue. Its contents are of no mean order. They include a contribution from Mr. Konakamura, well known for his researches into the feudal sociology of Japan, and from Mr. Nakamura on the Penal Law of the Samurai, and several Japanese poems by various authors. But perhaps the most interesting contribution is that which occupies the place of honour in the number—we mean Professor Arrive's address at the last Graduation Ceremony of the School. We subjoin a translation of it, from the Japanese:—

I ought to have some apprehensions at having on this occasion to discharge the duty of representing my learned colleagues before you; notwithstanding, while fully recognising my imperfections in the tricks of speech, I assure you that I am happy to be able to congratulate you on your success, because I know full well what it has cost you to obtain it. You have, at last, after five long years of application, finished your studies in this school, where you have had not only to learn mathematics, history, logic, and other sciences which lie in the domain of the Higher Middle instruction; but where you have also received lessons of wisdom, of virtue, and of patriotism. You are content to see that your efforts have brought you to the first halting-place in your student life, and your satisfaction is very justifiable, since it comes from duty accomplished. We enter into it with all our hearts, and all the more so since that which causes you joy is not the perspective of reposing on your laurels, but the opening before you of a new career, more considerable still, in the Imperial University, which from to-day lies open to you. These sentiments do you honour, gentlemen; you aimed far and high without entertaining any illusion about the difficulty of attaining your noble end. You must be aware then, that the rational culture of the Mind, the intellectual and moral development of each man, is the indispensable condition of advancement in society in modern times.

Formerly, birth and fortune, as well in Japan, I believe, as in other countries of the world, were sufficient for the attainment of high office, of whose duties the holder often acquitted himself without too much difficulty, but you know that to-day such is no longer the case. Industry, commerce, medicine, economic administration, war even, have become complicated sciences. It is not enough to possess *savoir faire*, courage, style, or honesty to discharge the functions which they involve; one must be the master of many branches of knowledge, and at the same time capable of applying them all in an instant, and this can only be acquired by methodical and unceasing work. You have often heard it said that might tends to become the sole sovereign of the world, but you know well that this is a mistake, if one speaks of merely material might. The great force of our days is that which has begotten and maintained the liberties of peoples as well as of individuals, and which will be, I truly hope, your chief weapon, that which permits one to say to others without the possibility of a reply: "I am your equal; I have the right to the same treatment and the same independence." This idea is knowledge, is mental culture in all its extent. Misfortune to him who believes himself sufficiently enlightened and remains in relative ignorance: he is destined to be one day overwhelmed. A nation in short defends its interests, struggles on the field of battle, or in economic strife, through the individuals that compose it, and that which makes the individual, that which renders him of some utility in this struggle, is his knowledge of science; of this science always progressing and whose limit will never be reached. Doubtless there are talents and natural gifts that are of great value and that cannot be replaced. I am delighted to confess that in this respect you are happily endowed; but even if you were gifted to the extent of the most illustrious men, your innate gift would remain sterile, unproductive, like the richest gold mine itself, if left unworked. Then, gentlemen, prepare to carry into the battle of life the virile part of your understanding, cultivated by study, and of your courage ripened by a sound philosophy. Regard as precious and decide the age you have attained, and put the years to profit by work. I mean the modest and persevering work that makes discoveries and still goes on to make fresh ones, and not that whose be-all and end-all is to repeat presumptuously "Eureka," while the world continues its evolution, and which spend itself for naught in sounding declamation. Above all, under present circumstances your country has need of an *élite* of young men to make her appreciated and loved; she needs *savants*, and artists, and valiant men and true patriots, and it is upon you that her hopes repose; it is upon you, with a prevision of the future, that the solicitude of your august and venerated sovereign is fixed. I wish it were possible for me to give you to-day at least a glimpse of all the responsibility that devolves upon your title of graduates of this school, and of all the importance of the years which are to follow. You are young, scarcely yet beyond your twentieth year; in a manner of speaking you are keeping 'your vigil of arms' for entrance upon the knighthood of life; you are preparing to enter the lists at the moment when everything around you is undergoing a transformation. The future is big with extraordinary events; perhaps you will be witnesses of considerable changes in the world, and you ought to be ready to meet them, each one in the part that has fallen to him, one as a lawyer, another as an engineer, this one as an economist, that one as a statesman; but whatever be the situation in which you may find yourselves, remember, my dear friends, that you have always the truth to seek after, good to do, and a country to serve and to love.

LAND IN KORE.

WHEN Osaka became an open port, its citizens were full of great expectations, and went about singing a song the refrain of which was *wa nai ka, don don!* Their great hopes were not realized. The Settlement at Kawaguchi was destined to serve merely as the home of a little community of missionaries, and it has never been recorded that the bright and enterprising town profited appreciably by becoming accessible to the *ke-tojin*. Indeed, writing now at a distance of a quarter of a century, the only tangible result we can recall of that festive inauguration was the discomfort of a pseudo-sinologue. A one-eyed smattering of the language had made him king among his blind associates, but when it was discovered that he had neither the knowledge nor the audacity to interpret the refrain of the Osaka psalm, he fell from his perch of pretension and never succeeded in climbing up again.

It has fared better with Hyogo, however, which had recently the pleasure of being associated with its neighbour Kobe as an emporium of foreign trade. Land there, says the *Kokkai*, has suddenly sprung upwards. In Fukudaikumachi, where a Customs office has been established, a *tsudo* (36 square feet) used to be purchasable for from 5 to 11 *yen*, but after the opening of the port it went up quickly to 16 *yen*, and now buyers are found at 20 *yen*. There has been some singing of *ifa nai ka*, in Hyogo, we suspect.

* * *

A portion of Tokyo, also, has been brightened by a similar sun of prosperity. Odemma-cho in the Nihonbashi ward used to be the favourite resort of all country-folks who came to the city to lay in stores, but facilities of communication have now been developed in favour of Tadokoro-cho, Shinosaka-cho, and Tachibana-cho, so that not only are the wholesale dealers there driving a roaring trade, but the price of land also has gone up to 35 *yen* per *tsudo*, or forty-two thousand *yen* an acre. But after all, that is still a paltry figure. Here in the Japanese part of Yokohama, we can more than double it with ease, and Kobe proper would regard it as very small potatoes.

DINNER AT THE IMPERIAL HOTEL.

ON Friday the 14th instant, Mr. A. B. de Guerville, Honorary Commissioner for the Chicago World's Fair to Foreign Countries, entertained a large party at dinner in the Imperial Hotel Tokyo, to meet Mr. Winston, Director of the World's Columbian Exposition. The guests were:—

H. E. Viscount Hijikata, H. E. Count Goto, H. E. H. L. Coombs, M. Collin de Plancy, Mr. T. Winston, H. E. K. Kuki, Mr. Sanomiya, Marquis Kuki, Mr. Edwin Dun, U.S. Legation, Vicomte de Bondy, Captain Brinkley, M. Casonave, Marquis di Rudini, Vicomte de Labry, Mr. Bartlett, Mr. Lincoln, Mr. Parsons, Mr. Deering, Mr. Chandler, Mr. Green, Mr. Shibusawa, Mr. Okakura, Mr. Okura, Mr. Yokoyama, Mr. Wollheim, Prof. Milne, General Legendre, and Mr. Charles Smith.

The health of H.I.M. the Emperor of Japan having been proposed in a few well chosen words by Mr. A. B. de Guerville, who very briefly alluded to the zealous efforts Japan was making in connection with the World's Fair, H.E. Viscount Hijikata, Minister of State for the Imperial Household, proposed the health of the President of the United States, to which Mr. Coombs, United States Representative, replied.

After thanking the Minister for the Household Department for proposing the health of the President, Mr. Coombs said:—In speaking of the President of the United States of America I can say that in ours, like other countries, all men do not agree upon the same ideas of policy, yet they recognize in our President a man of firmness, character and ability eminently fitting him to fill that high station, and in his person to magnificently represent the strength, dignity and grandeur of our Republic. I am requested to refer to the World's Columbian Exposition. In this connection the President has given his untiring energies towards this great work. It might appear that the Exposition is local in its character, and therefore based upon motives of national selfishness. Such is not the case; on the contrary, it is of interest common alike to us all. While in a great measure its success must depend upon the enterprise of the nations within whose domains it is held; yet it is international in its display and seeks the universal enlightenment of mankind. It is in commemoration of the discovery by Columbus of that great Western world; and its people desire to make it characteristic and in keeping with the grandeur of that event. So the President has invited the Nations to participate in carrying out these purposes, by adding the splendour of their achievements to this one occasion. It will be a scene calculated to arouse the enthusiasm and excite the best endeavours of all nations. While on one hand may be seen all that is modern in arms and "the circumstance of war," on the other hand the still more progressive arts of peace will display before a wondering world the varied features of their handiwork. It will be a lesson for all races. There will be a communion of the spirits of science brought together from the different points of the earth. Preliminary to the opening of the "Exposition" will be seen in New York harbour the warlike armaments of Nations,

each representing the dignity of its flag, the proved examples of the progress the ages have made in naval architecture. At the same time may be seen reproduced the caravels of Columbus, of four hundred years ago, which partook of the spirit of that age and were constructed by the munificence of the Queen of Spain. This will be an opportunity, rarely afforded, for Japan to exhibit before the eyes of the world those things which best attest the genius of her people. From the sword of the Daimyo, bespeaking the warlike spirit of a time forever famous in the history of Japan, to the products of the soil, bronzes, carvings, paintings, as well as beautiful specimens of cloisonné. In conclusion, I am privileged to call upon Mr. Winston, the guest of the evening, and Director of the Exposition, who will emphasize the invitation already extended to Japan to meet with us under the skies of that great Western City where in arts and nature's resources, empires, kingdoms and republics will vie to bear away the palm of enlightened prosperity.

Mr. WINSTON, in reply said, that if he should undertake to cover the minutæ of the Exposition he would require at least 3½ hours and he feared that the patience of the company might possibly be exhausted. He desired to correct any misapprehension which might arise from the statement of Mr. Coombs, that a prominent feature of the Exposition would be a modern man-of-war of the United States, by assuring the gentlemen present that they should not be deterred from visiting Chicago on account of this gun boat, as it was built on a brick foundation and could neither move a foot nor fire a gun. He would not enter upon a description of the various features of the Exposition, as they had been fully covered by the gentlemen who had been sent out to exploit the enterprise, and he felt that, in particular, Mr. de Guerville was deserving of great credit for the successful manner in which he had laid the matter before the people of Japan. He would, however, quote the words of a New York gentleman present, who had visited the grounds and buildings at a recent date. He referred to the fact that there was some feeling between New York and Chicago, and in quoting from Mr. Elias Smith, the President of the Chamber of Commerce of New York City, one of the greatest institutions of its kind in the world, he felt he was quoting from the enemy but from competent authority. Mr. Smith's statement was that the Columbian Exposition was certain to be the grandest that the world has ever seen, and that Chicago was the only city in America which could have carried it through to success. The speaker then briefly referred to the business features of the Exposition; that it was felt by his Directors that any International Exposition which did not surpass all previous ones is necessarily a failure; that they were under the burden of excelling the superb Exposition of 1889, held at Paris—the home of Art—and that the task seemed insurmountable. That the cost of opening the gates at the Paris Exposition was about \$8,000,000, while it would cost Chicago \$18,500,000; that while they could not hope to excel Paris in an artistic way, he believed the Columbian Exposition would be grander than any ever before held. Mr. Winston referred to the large appropriations made by the various States and Nations, which would make the gross amount expended something like \$35,000,000. He had been asked by a Japanese gentleman to say something about Chicago, but as the gentlemen present from New York and Boston well knew, a Chicago man was noted for his reticent disposition and reluctance to praise his city, and he must therefore decline to discuss the subject. He stated that his directors were greatly surprised, as well as pleased, to learn that Japan ranked so high among the Nations in the amount appropriated for Exhibits at the World's Fair, being third in the list. He could not understand this until coming to Japan and reading her recent history; but a knowledge of what had been accomplished by the men of to-day in Japan, in the last 20 years, in bringing forward their country towards the front rank of nations, explained everything. From these men might well be expected a full appreciation of the manifold advantages to their country in making the fullest exhibition of their arts and industries at the great International Exposition so soon to be held by their near and friendly neighbour. He thanked the gentlemen of Japan who were present for all that they had done and were doing for the Exposition, and particularly for their graceful gift to Chicago of a reproduction of the Temple of the Phoenix. Chicago was often called the Phoenix City, in having risen from its own ashes, and when the great Exposition ended on November 1st, 1893, all of the great and costly buildings would be levelled to the ground save alone the temple from Japan, which would be maintained and preserved as a reminder of the

Columbian Exposition and of the kindly relations existing between Japan and the United States. In conclusion, Mr. Winston expressed the thanks of his Directors for the help rendered the Exposition by the United States Legation, and for the friendly spirit shown by the other Legations, and closed by saying that he had two requests to make; that the authorities of the Exposition now knew that Japan would be well represented by her exhibits but they wanted more—that she should also be represented by her men, who had accomplished such wonders and whom all desired to meet. He had had the honour of meeting the ladies who were interested in the exhibit of the women of Japan, and he urged that every encouragement should be given the ladies in the work. Mr. Winston then proposed the health of the Japanese Commission, represented by the Minister of Agriculture and Commerce, Count Goto.

H.E. Count GOTO, Minister of State for Agriculture and Commerce, briefly expressed thanks, on behalf of the country, for the kind terms in which Japan's action had been referred to, and on his own account for the pleasant opportunity which had been afforded him that evening to meet the representatives of the great World's Fair, and to learn about its progress.

Mr. C. SMITH said that though he had not intended to speak, he could not choose but answer the challenge addressed to him by his friend Mr. Winston. He had visited all the international exhibitions ever held, from the London Exhibition of 1857 onwards, with the solitary exception of the Vienna Exhibition, and, speaking with full remembrance of everything he had seen, he could say confidently that nothing approaching the magnitude of the display now in course of preparation at Chicago had ever been witnessed. Of course there was a drawback in the site. New York ought to have had the show.—(Laughter.) But Chicago had got it by a fluke, and he did not grudge her the honour, for she had saved New York a great deal of worry and trouble, and she was doing the thing on a really superb scale. Mr. Winston had spoken of 18½ millions. He thought that the account was defective. The good people of that enterprising and retiring city would find that a few more millions must be added. They had recently asked Congress for an additional appropriation of five millions and Congress had given them two and a half. They ought to have had their five. He himself had been summoned before a Committee of the House and had expressed a strong opinion in favour of five. But Chicago would want more before this colossal affair was off her hands, and the country would help her, for she deserved to be helped. They must not mind all the talk they had heard about men-of-war and fleets. He wanted to tell them that Chicago had nothing whatever to do with that. It was entirely New York's business. New York expected to welcome the fleets of the world and have a small display on her own account that might prove a not unworthy prelude to the little show which Chicago was preparing. But he did not wish to confine himself entirely to the World's Fair. He was a great lover of art, and it afforded him much pleasure to hear of the attention which artistic affairs were receiving at the hands of the managers of the Exhibition. But before everything to was a merchant, and as President of a Chamber of Commerce numbering over a thousand members, he had to think of the interests of the cause of which his life had been devoted. They had heard some very pretty things said that evening about the comity of countries and about international reciprocity. Well, reciprocity was just what he wanted—radical reciprocity. Looking at statistics, he found that considerable commerce took place between Japan and the States. But it was not reciprocal. On the contrary, it was a very one-sided affair. America sold Japan light—he hoped that it was something more than a mere flare of kerosene—and a bagatelle of machinery. Japan sold America pretty well all the tea she had to sell, a good portion of her silk, a quantity of bric-a-brac, and some not insignificant sundries. It was a decidedly lop-sided reciprocity, and he should like to know how the balance might be redressed. That was one of the objects he had in coming here. What steps could be taken to place the trade of the two countries on a more equal footing? He was an earnest seeker after information bearing upon that problem, and should be grateful to anyone that afforded it. The World's Columbian Exposition would assuredly prove of great advantage to Japan by affording her an opportunity to discover new markets for her productions. He trusted that it would also afford America an opportunity of discovering some Japanese wants which she might minister to.

Mr. KUKI, Director of the Imperial Museum and Chief Commissioner for Japan to the Colum-

bian World's Fair, said that he had listened with great interest to the friendly and practical remarks made by the previous speakers, and that he desired to express his thanks for the courtesies extended to himself and his nationals that evening. For many years, in fact ever since Japan entered upon her modern route of international intercourse, she had found a staunch friend in the United States of America. She owed much, from a moral point of view, to a country where her youths received kindly welcome and invaluable education that opened out to them a new career of national usefulness, and she owed much from a material point of view to a country which had contributed so largely to her commercial development. But over and above this she lay under obligations to America which needed no enumeration at his hands, and which were certainly not likely to be forgotten by his countrymen. Appreciative and kindly allusion had been made to the sum appropriated by Japan for the purposes of the World's Fair. Japan herself, however, understood well that it was an insignificant amount, but her resources were small and she had done what was possible within her limits. To one point he might allude with satisfaction in connection with the appropriation. It had been voted unanimously by the Diet. Consensus of opinion had not been exactly characteristic of the proceedings of the Diet in its early stages, but no dissentient voice had been raised on the subject of the appropriation, and he trusted that this unanimity of good will might atone in some degree for insignificance of amount. He himself felt a special interest in the wonderful display now preparing at Chicago, for it had been his honour and his pleasure to represent his country during some years at Washington, and he had learned to heartily respect and esteem the nation to which he was accredited. Hence he was particularly pleased to find himself associated with the preparations which his country was now making to contribute to the Exposition, and he did not doubt that the results would be of great benefit to Japan. All the nations of the world would derive advantage from an undertaking offering them such a unique opportunity to become acquainted with one another's resources and capabilities, but Japan, as one of the least known, would be, perhaps, the largest gainer, and, appreciating this fact, she was devoting her best energies to make a worthy display. He trusted that the results would be to cement still more closely the relations happily existing between his country and the Great Republic, and that the Exposition would prove a means of achieving in the fullest sense the reciprocity of commercial transactions which he joined with the last speaker in desiring.

THE FOURTH NATIONAL EXHIBITION.

THE place to be chosen for the Fourth Industrial Exhibition has for some time been regarded by commercial folks as a matter of no little moment. Rumour says that the locality has now been fixed, and that Kyoto, is to be favoured, the year indicated being 1895. If this be the case, an appropriation for the purpose will doubtless be sought from the Diet next session. The year 1894 is the eleven hundredth from the transfer of the Court to Kyoto by the Emperor Kwammu, and the people of the city intended to organize some form of celebration. But as the Exhibition is to open the following year, they will doubtless postpone the celebration until then. We take these facts from the *Shogyo Shimpō*.

YOKOHAMA SILK MERCHANTS.

WITH reference to the organization of a new Guild the Yokohama silk merchants disagreed, and broke up into two parties, the friction between which was very great. Particulars were published in these columns at the time, and we explained that the dispute had been settled by Messrs. Otani Kahei and Hara Rokuro, who, acting as arbitrators, compiled a draft of regulations for the new Guild, which was accepted by both parties, and presented to the Governor of Kanagawa Ken for his consent. The Governor also expressed his approval some ten days ago, but since then neither the officers of the Guild have been elected nor its by-laws drafted. The reasons of the delay, according to the vernacular press, are that when the difference of opinion had been adjusted by the arbitrators, the Ono and Mogi party agreed to sign the memorial on condition that an amended draft should afterwards be presented to the Governor, as many provisions in the Regulations

Original from

were not suitable. On the other hand, the Kimura and Hara party declared that the word "Traders," used in the Regulations, was intended to designate merchants doing business with foreigners, and that if brokers, whose functions lay among Japanese only, were allowed to join the Guild, the spirit of its organization would be violated. Hence the brokers must be excluded afterwards, a memorial to that effect being presented in the name of the Guild. But after the original draft had been approved by the Governor, Messrs. Ono and Mogi had an interview with that official, when they protested against the proposal of excluding brokers from the Guild, and the Governor at once communicated this protest to Messrs. Kimura and Hara, and advised them to abandon their proposition. Thereupon the latter party, becoming very angry at the former's failure to keep their promise, announced their intention of not being present at the general meeting, and the result is that the election of officers cannot yet be carried out. On the 10th instant, Messrs. Otani Kahei, and Hara Rokuro, the arbitrators, once more requested both parties to assemble, but so few obeyed the summons that no question could be discussed. How the dispute will end no one ventures to predict.

THE "NIPPON" AND THE GAME LAW.

THE new Game Law had evoked much hostile criticism from the Opposition press, on the ground that its promulgation by the Government without previous reference to the Diet is *ultra vires*. The *Nippon* now attacks it from another standpoint, namely, that of game preserves. The argument advanced by our contemporary is attributed to a certain scholar said to be well versed in legal lore. It is the old and familiar contention that regulations providing for the preservation of game are framed, not for the public benefit, but in the interests of a limited number of the community. By paying a sum of 10 yen, 1,500 *cho* (3,750 acres) of land can be preserved, and an additional fee of 1 yen extends the right to every 100 *cho* above the limit. Hence by disbursing 50 or 60 yen, an owner or sportsman can preserve some sixteen or seventeen thousand acres of land for his own use. No common hunter can afford to pay such a sum, but well-to-do people will find no difficulty in doing so. Such a law will have the effect of driving poor hunters into remote districts, and they will ultimately lose their source of livelihood altogether, while the rich will enjoy the whole privilege of preserving and killing game. Hitherto no such distinctions between rich and poor had been made in this country as those existing in Europe, but now the unhappy system is introduced suddenly. Will the country be contented?

It might have been confidently predicted that this objection would be raised. There is no denying its force, but on the whole we believe that a law of the kind now promulgated has the balance of advantage on its side. The plain fact is that under the old system game was fast disappearing from the country, and its total extermination was only a question of time. Universal experience shows that if game birds and animals are left to the mercy of everybody who desires to capture them, their continued existence is out of the question. It is true that, in proportion as the work of preservation progresses, the field of the professional hunter becomes narrowed, and ultimately he can continue his trade only in the character of a poacher. But it is not less true that if the professional hunter be free to pursue his present programme, his occupation must finally become fruitless altogether, whether in the form of poaching or in that of the legitimate pursuit of game. The result of game laws recognising private property in game and providing for its preservation, is that the existence of the game is assured though the professional hunter's prospects are marred. The result of the absence of such laws is that the game is exterminated, and that the professional hunter is equally deprived of his occupation, though by a different

process. There should not be much difficulty in choosing between the two courses. Professional hunters are a very small element of the population in Japan. As a rule they do not obtain a livelihood from the pursuit of game, but only an addition to their means of subsistence, the rest being derived from farming or manual labour. The new game law recognises the right of property of every land-owner, however small, in the game on his land. It follows that the game on their farms will henceforth become a source of revenue to petty agriculturists, instead of being, as it is now, at the mercy of every prowler with a gun or a fowling-piece. Hence, if the professional hunter suffers, his misfortune is balanced by the gain of another class of men little higher than himself in the social scale and equally in need of every pecuniary privilege they can obtain. These things are worth the *Nippon's* consideration. Another point too, which we should have expected to see raised, is the question of a tenant's right to kill game. We cannot discover that the new law recognises the tenant at all: its provisions seem to apply to owners only. Possibly this will be a matter for subsequent legislation.

THE "MARY ROSE."

THE interest aroused by the story of modern naval warfare, "The Captain of the *Mary Rose*," will doubtless expose the details to considerable criticism. The successful attack of the French torpedo squadron from Cherbourg *vid* the Needles has already been pronounced by naval men an almost impossible feat. For, in the first place, it is inconceivable that the commanders of the Portsmouth Squadron would have been content with such inefficient precautions to ward off attack; in the second, the helplessness of the batteries and torpedo station in the Needles can scarcely be credited; and in the third, the precision with which the French attack is supposed to have been delivered, two hours after midnight, against a fleet lying in two lines, the ships being in positions concerning which the attacking force cannot have had any previous information, seems little short of miraculous. Another point which has attracted attention is of minor importance. It will be remembered that one of the Spithead fleet, the *Minotaur*, is represented as having been blown up, owing to her electro-contact mines being fired by the explosion of a torpedo. Concerning this, a correspondent writes to *The Engineer* as follows:—

SIR,—In your issue of August 12th, in the story of "The Captain of the *Mary Rose*," the author states that H.M.S. *Minotaur* was blown up by the explosion of a torpedo having fired one of her E. C. mines. I do not think this possible, as mines will not go off unless a current has been passed through them; also, mines have been picked up after counter mining, with the case all smashed and the mine not exploded.

SUBMARINE.

But, after all, the moral which the story is intended to point will not lose its value because some of the events described are open to criticism. The author of "the Captain of the *Mary Rose*" shows England a heavy loser in these early engagements. We suspect that, although the events he describes may never occur, his story will cost the country a few millions.

"A FOREIGN MEMBER."

THE following letter appears in *Nature*.

SIR,—It may perhaps interest you and your readers to hear that by the Imperial Ordinance of June 25 a committee has been established for the investigation of the earthquake phenomena, with the view of finding methods of predicting earthquakes, if possible, and of ascertaining the nature of construction, building, and otherwise, best calculated to resist the effect of the shocks. President Kato, of the Imperial University, has been nominated the president, and myself the secretary. Other members of the Committee are Furuichi (Director and Professor of Civil Engineering, Engineering College, and Head of the Engineering Bureau of the Department of the Interior), Tatonno (Professor of Architecture, Engineering College), Tanabe (Professor of Civil Engineering, Engineering College), Tanakadate (F.R.S.E., and Professor of Physics, Science College), and Nagaoka (Assistant Professor of Physics, Science College). Koto (Professor of Geology, Science College), and Kochi (of the Geological Survey), Sekiya and Omori (Seismologists), Nakamura (of the Meteorological Bureau), and a foreign member, Prof. J. Milne. Other members will be nominated by and by. The Parliament has granted

42,000 yen for this year, chiefly for the purchase of various instruments. The committee will be glad to receive any communication or suggestion on the subject. Address: Earthquake Investigation Committee, care of the Department of Education, Japan.

D. KIKUCHI.

Imperial University, Tokyo, July 21st.

"A foreign member, Professor J. Milne!" Professor Kikuchi is one of those thoroughly loyal lovers of science and liberal thinkers who recognise no distinction of nationality where philosophy is in question. We wish that he had constructed his catalogue of members a little differently. Perhaps he thinks that *Nature's* readers need no information from him when he introduces Professor Milne as a member of the new Committee. The idea is doubtless correct. But *Nature* does need some information as to the sense in which Japan regards the foreigners who have aided her early essays in the path of science, and this was certainly an opportunity for saying a graceful word on that subject. However, we must not quarrel too much with the act where the intention cannot reasonably be doubted.

MR. LABOUCHERE'S IDEA OF A CONFIDENTIAL COMMUNICATION.

MR. LABOUCHERE was charged by *The Times* with "disregard of the most salutary conventions of political intercourse," because he revealed certain matters which were supposed to be confidential. His answer was:—"I have been accused of many things, but this charge has never before been brought against me, for no one has ever more strictly drawn the line of demarcation between confidential and non-confidential communications. This particular communication was not stated to be confidential; indeed, had this been suggested, I should have asked that no communication should have been made. If it is precisely because I do know the difference between what is said in confidence and what is not that I assert that I know that the Queen did interfere, and that I have not the remotest intention of saying how I know." This is delightful. Mr. Labouchere's creed about a confidential communication is that it may be at once published on the market cross provided only that its source be concealed.

THE LOSS OF THE "BOKHARA."

WE publish to-day a terrible piece of news, the total loss of the Peninsular and Oriental Company's steamer *Bokhara*, which was wrecked in the recent typhoon on a voyage from Shanghai to Hongkong. The *Bokhara* left Shanghai on the 8th instant, carrying the following passengers:—

For London—Mrs. Cuniffy and child. For Ismailia—Mr. and Mrs. Chain. For Bombay—Messrs. Bishop and Lalma. For Hongkong—Major Turner, Capt. Dunn, Lieut. Boyle, Capt. Dawson, Lieut. Burnett. Q.M. Sergt. Jeffkins, Sergts. Donegan and Mumford, Messrs. C. Wallace, Tavener, Purvis, Ralf and Dr. Lowson.

She had thus nineteen in the cabin, and there can be little hope that all of these are among the twenty-three survivors. It is sad indeed to think that the men who travelled from Hongkong to engage in a cricket match with Shanghai, should have met with such a catastrophe on their return journey. Major Turner is a very old friend, known doubtless to several people in this Settlement. He served with the 73rd Highlanders in Hongkong in 1867, and played in the match between that colony and Shanghai in that year.

Sand Island where the *Bokhara* was cast away, is one of the outlying portions of the Pescadores. It is not marked on any map with which we are familiar, though the charts show it. The *Bokhara* was a nineteen year old ship, having been launched in 1873. Her builders and engineers were Messrs. Caird and Co. of Greenock, and her tonnage was 1,637 registered and 2,940 gross. She had a straight flush deck and was counted a first-class sea boat, though it is conceivable that she may have been a trifle too old for the China service at the change of monsoon. Only a few years ago she was a station ship between Yokohama and Hongkong. Commanded by

Original from

Captain Sams, of the R.N.R., an old and tried officer, such a vessel would have been capable of riding out any storm if only she had a clear offing. But it is very conceivable that Captain Sams was running for anchorage when the steamer struck, and that she at once became a total wreck in the boiling sea. The ship left Shanghai on the 8th instant, and must have encountered the full fury of the typhoon which blew on the 10th and 11th. She was found by H.M.S. *Porpoise*, which went in search of her from Hongkong, so soon as grave fears for her safety began to be entertained. Telegrams received at the Yokohama Office of the P. & O. Company from both Hongkong and Nagasaki are to the same effect, namely, that the total number of persons saved was only twenty-three, including two passengers. A private telegram received in Nagasaki from Shanghai gives the names of the passengers saved — Dr. Lowson and Lieutenant Markham, and adds that 170 were lost, including 20 passengers. These figures are difficult to understand. The list of first-class passengers extracted, as above, from the columns of the *North China Daily News*, shows 19 passengers and among them the name of Lieutenant Markham is not mentioned. But if two passengers were saved and twenty lost, three names must have been omitted from the Shanghai journal's list. Moreover, the steamer's crew numbered only 120, and consisted chiefly, we believe, of Lascars and Seaside Boys. Hence, even on the hypothesis that three names were omitted from the newspaper copy of the passenger list, it would seem that the total loss of life ought not to have exceeded 119. Possibly the vessel carried a number of Chinese passengers of whom no special mention was made. It is many years since anything so terrible has happened upon these coasts.

According to the August list, issued by the P. & O. Company, the officers of the ill-fated *Bokhara* were as follows, although there may have been one or two changes: Commander C. D. Sams, R.N.R.; Chief Officer, G. H. Prickett, R.N.R.; Second Officer, G. F. S. Ingles, R.N.R.; Third Officer, H. M. Perfect, R.N.R.; Fourth Officer, W. H. Sweny, R.N.R.; Surgeon, E. D. Y. Pole; Head Steward, H. Baigent; Chief Engineer, P. O'Bryan; Second, A. B. Cockburn; Third, W. Muir; Fourth, G. W. Hills; Boilermaker, J. Simpson; Electric Winchman, L. Bartoluzzi; Carpenter, C. Gianaglici; Boatwain, E. Bonivento. The *Ancona* has been dispatched to rescue the survivors who, however, may have been taken off by either the *Porpoise* or the *Bombay*.

No further news is yet to hand concerning the terrible disaster on the *Pescadores*, and we will probably have to wait the arrival of the mail for further details. We learn that Mr. and Mrs. Chain, who are among the lost, only recently passed through Kobe, and made the acquaintance of several people here. They were on a voyage round the world. Several others of those so sadly lost are well known in Kobe. Captain Renny of the *Sorachi Maru*, who must have been within a few miles of the ill-fated *Bokhara* on the night she was lost, has kindly supplied us with his experiences as follows:—Left Hongkong the 6th inst. at 7 a.m.; had moderate N.E. monsoon and fine weather to Chapel Island, which was passed next day at 7 p.m. From thence to Okuse fresh and cloudy, passing there at 7 p.m. the 8th. On the morning of the 9th, the wind still increasing from N.E., and sea rising fast, at daylight decided to put back and run for anchorage—mountainous seas. At noon anchored with port bower and 70 fathoms under Lamyit Island, wind still increasing from same direction and barometer falling. At midnight strong S.E. gale. Bar. 29.59, thick weather. On the 10th it was blowing a whole gale. Bar. 29.39, wind S.E. by S., engines going ahead to keep strain off anchors. At 8 p.m. perfect gale from N.N.E.; could not see twice the length of ship. Bar. at 29.33. At midnight still blowing as hard with terrific squalls, en-

gines half speed. Bar. 29.31. On the 11th at 2 a.m. Bar. inclined to rise; wind N.N.E. At 4 a.m. Bar. 29.33, moderating a little; wind North. At 8 weather commenced to improve, Bar. 29.44. At noon barometer stood at 29.50. wind still moderating. At 2 p.m. wind N.N.W., heavy rain; up anchor and proceeded. High mountainous sea outside. On 12th at 4 a.m. reached Turnabout. Found a very strong set to the E.S.E.; all that day and the 13th moderate N.E. monsoon, big sea. On 14th at midnight passed Yokosima; on 16th at 10 p.m. Muroto-saki, and on 17th at 10 a.m. arrived at Kobe. —*Kobe Chronicle*.

THE FOREIGN REPRESENTATIVES AND THE SHOOTING REGULATIONS.

SOME of the Japanese journals, in reporting a meeting of the Foreign Representatives, or, to speak more correctly, of a majority of them, which took place recently at the Italian Legation, conjectured that Treaty Revision was the subject of discussion. This hypothesis could not have been entertained had proper attention been paid to the methods of negotiation pursued of recent years in the matter of Treaty Revision. The meeting in question, as the *Nichi Nichi Shimbun* points out, was held for the purpose of considering some points connected with the newly issued Gaming Regulations. Of course no public information is obtainable as to the details of the conference, but the result is known, namely, that the Representatives present resolved to take the necessary steps for securing the privileges of the new Regulations for their nationals, by subjecting the latter to their prohibitions, that being the condition stipulated by the Japanese Government. It may be well to explain, for the information of people who do not follow these questions very closely, that when we speak of "prohibitions" we do not refer to "penalties." The penalties prescribed by the Gaming Regulations are not applicable, of course, to foreigners. It is for the Foreign Representatives to determine what penalties shall be employed to punish violations of the Regulations by their nationals, and the penalties thus fixed will be inflicted by judgment of Consular tribunals. Such has been the practice hitherto with regard to all similar enactments.

THE CEMENT AFFAIR.

THE *Shogyo Shimpo* publishes particulars of the cement affair to which we recently alluded, and explains why the Governor of Kanagawa restricted the competition to the Asano, Aichi, and Onoda Cement Companies, excluding all other applicants. In August last, we read, when some cement was required for the harbour works, the Asano, Aichi, Osaka, and Nippon Cement Companies were considered to be qualified, but the cement sent by some of them was of such inferior quality that it could not be used. Taught by this experience, the Bureau decided to limit the tenders to firms that could be trusted, and out of the three that competed, Mr. Asano Soichiro's tender was finally accepted, a contract being concluded with him at *yen* 20.404 per ton. The cement thus purchased is of exceptional quality, and the total amount contracted for is 6,000 tons, to be supplied in 10 months from October. To ascertain the quality of cement, chemical tests have to be applied, and for such a purpose as use in harbour works, the cement must have at least a certain strength. The system adopted in appraising a cement is to express its quality in the form of a fraction, of which the price is numerator and the strength denominator. Thus, though the Aichi Company's tender was only 18 *yen*, and the Onoda Company's 19, Asano's figures were really the most favourable owing to the greater strength of the cement, which means that smaller quantities of it suffice for a given work. Finally, no provision of the Financial Law was violated, for Art. 24 expressly sanctions precisely the method of limited contract that was employed.

SILK HANDKERCHIEFS.

ORDERS for silk handkerchiefs, says the *Kokkai*, are received twice a year, in the spring and in

the autumn. The goods ordered in spring are generally sent to Yokohama or Kobe in May or June for exportation, and the autumn goods at Christmas. There have been very few orders this autumn, however. The consequence is that places like Nagoya having already completed their work of this nature, the price of labour has fallen 30 to 40 per cent. It is stated that the total number of handkerchiefs manufactured in Gifu Prefecture from January to June this year was 8,300 dozens; in Miye Prefecture 8,840 dozens; and in Aichi Prefecture 67,300 dozens. Moreover, the last Prefecture exported 22,500 chair-covers. Out of the above total, 72,000 dozens of handkerchiefs were exported to America, and 12,240 dozens to France, England and Hawaii; and all the chair-covers went to America. The labour of sewing these handkerchiefs was from 23 to 30 *sen* per dozen. Some 60 dozens of handkerchiefs, made for exhibition to the Chicago World's Fair by Messrs. Shoda Co., are to cost, it is said, 70 *yen* per dozen, and Mr. Hashimoto will send 35 dozens at 3 *yen* per dozen. The reason assigned for the decrease of orders this autumn is that the manufacturers took to using inferior materials, thinking solely of cheapness, with the result that their goods fell into bad repute. There are over 3,000 females engaged in manufacturing handkerchiefs, and some of them can earn only 8 to 9 *sen* per day. If the manufacturers do not take care to employ good material, there will soon be no demand for Japanese silk handkerchiefs, which recently promised to become such an important article of export.

THE AUTUMN MANŒUVRES AND THE NIPPON RAILWAY.

A CORRESPONDENT who recently travelled over the Railway from Tokyo to Aomori writes:—The carrying capacity of the Tokyo-Aomori railway is about to undergo a test as severe as that through which the Tokaido Railway so successfully passed in the spring of 1890, when the manœuvres of the combined land and sea forces were held within and off the coast of the provinces of Mikawa and Owari. The sham fight of two years ago exceeded in scale anything of the kind till then undertaken in Japan, and the share which fell to the Railway Department in the transport of troops, &c. was carried out in most creditable style. It is reported that over thirty-five thousand troops are to be collected by the end of the week in the plains beyond Utsunomiya, and the task of conveying almost the whole of them, with horses, artillery, baggage and other accessories, will fall on the Nippon Railway Company. Temporary extensions to platforms are being erected at several stations, while the double line from Ueno to Omiya Junction, a distance of 17 miles, which has been in the course of construction for some time past, is being rapidly pushed forward, and as there apparently remains only a short distance to be ballasted, it will no doubt be available in the course of a day or two. The long and continuous heavy gradient (1 in 40) in the Hakone district was the greatest obstacle which had to be overcome in the transport of troops from Tokyo toward Nagoya on the last occasion, but the Nippon Railway will not be thus handicapped, as their line from Tokyo to Utsunomiya and several miles beyond is almost of one level.

TOKYO MERCHANTS ASSOCIATION.

SO soon as it was announced that the Fourth National Exhibition is to be opened in Kyoto, the merchants of Tokyo determined to present a petition to the Government, praying that the Exhibition be opened in Tokyo as usual. For the above purpose they met at the Teikoku Hotel on Friday last. The sense of the meeting is summarized thus:—The merchants do not oppose the idea of opening the Fourth National Exhibition in Kyoto on the selfish ground that local interests would suffer. Their contention is that from the points of view of population, extent of the city, number of houses, amount of products, prosperity of industries, volume of foreign trade, state of banking enterprise and so forth, no comparison holds for a moment between Tokyo and Kyoto. Moreover, Tokyo is

the seat of Government, the centre of Commerce, and the great site of national industry. Hence the only really suitable place to open a national exhibition is Tokyo. They further allege, that although the prime purpose of the national exhibition is to encourage domestic industry, it is also necessary to afford an opportunity to foreigners to inspect the various products of the country, with a view to developing exports. This end will evidently be better served by an exhibition in Tokyo than by one in Kyoto. Even as regards the Japanese people, it is desirable to open the Exhibition in the capital, for the country will hereafter be managed by the students now studying in various schools and colleges in Tokyo, and an opportunity ought to be granted to them to profit by the instruction which such a display affords. Financially speaking, too, Tokyo is preferable to Kyoto, for more articles can be exhibited and a larger number of visitors will assemble in the former city than in the latter. If the Exhibition be held in Kyoto, commissioners will have to be despatched from Tokyo, which mean extra expense. The advocates of these views intend to assemble all the business men in the capital, and, after obtaining their concurrence, to present a petition to the Government on the one hand, and enlist the assistance of the Diet on the other, when the Bill seeking an appropriation on account of the Exhibition comes up for discussion. At the meeting much discontent was expressed about Viscount Sano's decision to open the Exhibition in Kyoto, in order to celebrate the 1,100th anniversary of the city's having been chosen by the Emperor Kwammu as the capital of the country. Viscount Sano made this ruling when he was in the Government as Minister of State for Agriculture and Commerce.

THE AUTUMN MANŒUVRES.

Nothing further has been publicly announced as to the rumoured intention of the Authorities to invite a certain number of foreigners to be present at the approaching autumnal manœuvres. But in view of the fact that less than a week now remains before the manœuvres commence, it does not seem likely that any steps will be officially taken to enable foreigners to witness the affair. There is no apparent reason, however, why anyone who takes an interest in such things should not travel to the ground and see the parade independently. The Imperial party, as we have already stated, sets out on the morning of the 21st instant, and, proceeding to Tochigi Prefecture, takes up its quarters in the Prefectural buildings in Utsunomiya. It may safely be inferred, therefore, that Utsunomiya is within easy reach of the place chosen for the campaign. Doubtless there will be a large influx of Japanese visitors into the town, but Utsunomiya is a big place, and there should be no great trouble in obtaining accommodation in some of its many inns. The beautiful weather that has now set in after our recent long and unseasonable spell of rain, will probably last for some time, and if it favours the manœuvres, an exceptionally pleasant and interesting trip might be made to Utsunomiya after the 20th instant.

Of course the precise scheme of the approaching manœuvres is not published, nor is the exact place of their occurrence known. But what is certain is that the Emperor will leave Tokyo on the 21st instant, and that the general body of officials and persons invited will follow on the next day. To the north-east of Utsunomiya is a hill called Karasu-yama, in the neighbourhood of which the Armies of the East and West, as the two bodies of assembled troops are called, will come into conflict on the 23rd. The engagement will be renewed near Mibu, between the towns of Tochigi and Utsunomiya, on the 24th, and the two Armies, aggregating 35,000 men, will be massed at Utsunomiya on the 25th. The following day a grand review of the whole force will be held on the Hirado Moor, which is about a rd (2½ miles) from Utsunomiya. That evening there will be a big entertainment in a wooden building specially erected for the purpose, and

the Imperial party will return to Tokyo on the 27th instant. With the exceptions of two or three persons occupying high positions in the Government service, we cannot learn that any foreigners have been invited.

MR. ITO KENKICHI M.P. V. THE KAISHIN SHIMBUN.

In previous issues we reported the hearing of a libel suit instituted by Mr. Ito Kenkichi M.P. against the *Kaishin Shimbun*. Judgment was delivered on Wednesday last in favour of the defendants, both the civil and the criminal case being dismissed with costs. Following is a translation of the Judgment:—

JUDGMENT.

Defendants { Takanami Teikichi, Printer and Publisher of the *Kaishin Shimbun*.
Iwai Masunosuke, Editor of the *Kaishin Shimbun*.

The facts of the suit for libel instituted against the above defendants, as proved in the Court, are these:—The *Kaishin Shimbun*, in its issue No. 2,810, of the 22nd June, 1892, published a paragraph entitled, "The Origin of the Scheme for Purchasing Members," in which the following sentence occurred:—"At all events, Mr. Ito Kenkichi has recently been engaged in purchasing members of the Diet at prices varying from 200 to 500 or 600 yen." The Court finds that the above paragraph contains no personal insult to Mr. Ito Kenkichi, the plaintiff. Therefore, in accordance with Art. 224 of the Code of Criminal Procedure, the case is dismissed.

The above judgment was delivered in the Tokyo Local Court on the 9th October, 1892, in the presence of Yamamoto Tatsuroku, Public Prosecutor.

Signed { MATSUNAGA MITSUKICHI, Chief Judge.
KIDO KOJIRO, Assistant Judge.
NAKAJIMA SEISUKE, Assistant Judge.

Not being yet informed as to whether an appeal will be taken from the above judgment, we are restrained from discussing it. But we may go so far as to say that we find the Judges' dictum incomprehensible, for assuredly no greater slander could well be uttered against a member of Parliament than to say that he has been engaged bribing his fellow members.

A STEEL FACTORY IN JAPAN.

We desire to direct the attention of persons interested in the question of establishing a Steel Factory in Japan, to a letter published in our correspondence columns to-day from Messrs. J. Birch and Company. It contains information some of which may be new, and hints that can scarcely fail to be valuable. There is no talk just now of reviving the project of a Steel Factory. The hostile vote of the House of Representatives last session seems to be accepted as conclusive by the present Cabinet, for the present at all events. But the subject is not dead, and any Japanese who may happen to be investigating it, will do well to read Messrs. J. Birch and Company's letter.

THE BARRISTERS' EXAMINATION.

The Barristers' Examinations commenced on Wednesday last in the buildings of the Ueno Park Museum. They were to have been continued on the following day, but owing to an extraordinary and disgraceful incident the proceeding had to be suddenly suspended. The incident is reported as follows:—On Wednesday, over a thousand candidates assembled in the examination hall, and were examined on the Criminal Code and the Code of Criminal Procedure. During the day a rumour went abroad that there were "cribbers" in the hall, and that the inspector of the examination had taken the papers from them. At the conclusion of the day's work, one of the candidates made a statement to the above effect, but no notice was taken of it. On Thursday morning, about 8 o'clock, the candidates again assembled in front of the hall, and one of them delivered a speech in which he referred to the rumour, saying that such scandalous conduct reflected disgrace on all the candidates. For his part, he was resolved not to be examined

until the culprits had been ascertained, and he asked the rest to support him in this resolution. Loud cries of approval were raised almost unanimously, but when the door was opened to admit the candidates, they all crowded into the hall and took their seats, regardless of the high resolve expressed a moment previously. The first question having been set, every one was busily engaged writing out his answer, when suddenly one of the candidates, in a corner of the hall, snatched a sheet of writing from his neighbour, and rose to take it to the examiners, crying out that he had found a cribber. The whole body of candidates stood up at the signal, and several rushing at the alleged culprit, beat him to the ground. Cries of "shame!" "Disgrace!" resounded through the hall, and the man fought resolutely for a time, vociferating that he had not been cribbing at all. But his protests were of no avail. The examiners as well as the police officials present, shouted "order" "order," with all their might, but no one obeyed. At last one of the examiners declared that the examination must be suspended till further notice, and the candidates were ordered to clear out of the hall. A large number of students of various law schools subsequently assembled outside the building, and held a conference, when it was resolved that, as the examination had not been properly conducted, a petition should be presented to be Authorities, praying them to appoint new examiners and cause the questions to be recompiled. A Committee consisting of representatives from various schools was elected to give effect to this resolution.

AN ELECTION PETITION SUSTAINED.

In the last general election Mr. Uyeda Nofu was returned for the First Election District of Iwate Prefecture. Mr. Tanikawa Masatada the other candidate, dissatisfied with the decision of the President of Elections, took legal proceedings. The case was heard in the Miyagi Court of Appeal, when it was decided in favour of the plaintiff. Mr. Uyeda then appealed to the Supreme Court, but the Court confirmed the judgment. The Governor of Iwate Prefecture has now issued the following notification:—

NOTIFICATION NO. 57.

The Miyagi Court of Appeal having decided that the return of Uyeda Nofu, as member of the House of Representatives, for the First Election District of Iwate Prefecture, is invalid, and the judgment having been confirmed, the President of Election has announced that the following candidate stands elected by a majority:—

TANIKAWA MASATADA.

(Dated) 15th October, 1892.

HATTORI ICHIZO,
Governor of Iwate Prefecture.

THE END OF A HERO.

A PARAGRAPH appears in the advertisement columns of the *Kobe Yushin Shimpō* announcing the sad end of an able and renowned man. The notice is inserted by the magistrate of the locality where the event occurred. The bare facts recorded are, that a Mr. Muranashi Hisanari (aged 48 years) was found in a dying condition on the road side in the neighbourhood of Fukiawase Village in Hyogo Prefecture on the 25th ultimo; that he was carried to the magistrate's office to receive medical treatment, but that he expired on the 28th. The *Yushin Shimpō* says that the wretched vagrant who fell thus on the road with starvation and illness, was no other than the formerly renowned Mr. Muranashi of Satsuma. One of ten young men chosen by the *Daimyo* of Satsuma to be educated in Europe, he went to London in company with the late Viscount Mori, the late Viscount Yoshida, the late Mr. Samejima and others. After some years' study he returned just as the War of the Restoration commenced, and was at once appointed Commander of a troop under Count Kuroda. In that capacity he proceeded to Hakodate with the force despatched against the insurgents there. After the Restoration he held a high position in the Government, and when Count Kuroda became Colonial Governor of Hokkaido, he served there at the same time with Messrs. Hori, Komaki, Saisho, Yasuda and

others. Suddenly he resigned his office, contrary to the advice of his relations and friends, and from that day forth he was totally lost to everybody, his very name being forgotten by the public. But now at last his death as a vagrant is reported from Kobe. What he did during all those long years is unknown, but assuredly the news of his miserable end will be received with pity not only by his friends but by the nation.

THE CODES.

It is now an undoubted fact that the Government appointed the Codes Committee for the purpose of obtaining an expression of expert opinion as to whether the Codes can be divided into sections, so that the portions urgently needed may be enforced at once. The Committee have held several meetings, and have discussed the question earnestly, their final decision being, that certain sections of the Commercial Code, such as the Law of Companies, and the Law of Bankruptcy, can be separated from the main body, but that the other portions, as well as the whole of the Civil Code, require considerable alteration, before putting them into operation whether piecemeal or collectively. Such being the decision of the Committee, their conferences will be closed in a day or two. It is now rumoured that the Emperor may probably agree, after all, to sanction the Bill for postponement, and that the Government will submit to the Diet next session a Bill providing for the immediate enforcement of certain sections of the Codes. The above news is published by the *Choya Shimbun*, not, however, with any expression of certainty. The *Nippon* also contains the same version, and adopts a more confident tone in announcing it.

A CHINESE NEWSPAPER.

HERE is the account which a Sheffield journal gives of the *Official Gazette* of Peking and its "paragraphists"—heaven save the mark!—"It is not unusual in this country for a tri-weekly paper to become a weekly, or a fortnightly magazine a monthly, but the converse method is unknown. In China, on the other hand, where so many things are topsy turvey, the oldest weekly newspaper in the world—really the oldest, A.D. 911—is now issued three times daily. What a nice time its compositors must have of it! It is not merely three editions, but three issues, all presumably full of news. Under these circumstances China must be the Paradise of paragraphists. This publication is under the immediate superintendence of the Emperor, and the staff is exceedingly active; their principal stimulant being the bastinado. There are no less than six editors (all members of the Academy of Science), so that when one of them is, so to speak, "prostrated," there are plenty to go on with the publication."

WHAT FOX-HUNTING COSTS IN ENGLAND.

"LORD YARBOROUGH, the owner of the North Lincolnshire pack of foxhounds," says the *Pail Mall Gazette*, "in furnishing some statistics relative to fox-hunting, states that there are 330 packs of hounds in England, and Ireland. Assuming the cost of fox-hounds to be £650 for one day per week for the year, staghounds to cost £550, and harriers £200, keeping up hounds in the United Kingdom causes the expenditure of £414,850; and estimating one hundred men hunting with each pack, each man having three horses, that means that 99,000 horses are engaged. Putting the cost of each horse at 15s. per week, this comes to considerably over 3½ millions. So, maintains the noble lord, the cost of keeping hounds and maintaining the hunts in the United Kingdom comes altogether to 4½ millions, independent of the expenses of carriage horses, cover hacks, travelling expenses, &c."

THE CROWN PRINCE AGAIN.

By way of rider to the anecdote reproduced above from the columns of the *Nippon*, about the Crown Prince and soldier's bread, the *Choya Shimbun* now states that His Imperial Highness is extremely intelligent, and that he studies with great diligence. The Emperor has commanded

him never to absent himself from school unless he is indisposed, and His Majesty does not fail to inspect all the marks the Crown Prince receives at school from week to week. It is now settled that until he is 15 years of age the Prince shall follow the general course of education prescribed at the Nobles School, and that he shall take up some foreign language as a special study for three years. Subsequently he will be sent to Europe for some years to complete his education. Japan has never been ruled by a monarch brought up after such a régime.

IN RE ADAMSON, BELL AND CO.

THE *London and China Express* says:—In the Bankruptcy Court on the 8th Sept. a general meeting of creditors was held under the failure of Adamson, Bell and Co., for the purpose of appointing a trustee in the place of Mr. Arthur Cooper, accountant, lately deceased. The debtors were merchants, carrying on business in London, Liverpool, China, and Japan, and the joint accounts show liabilities £563,727, of which £210,772 is unsecured, and assets £14,022. On the motion of Messrs. Crosley and Burn, solicitors for the Yokohama Specie Bank (Limited), creditors for £96,000, Mr. E. H. Fletcher, of the firm of Messrs. Cooper Brothers, accountants, was elected to the vacant office. It was stated that a dividend of about 1s. in the pound would shortly be declared, and that the estate would be wound up in the course of three or four months.

OFFICIAL CHANGES.

THE following changes were announced in the Imperial Household at 10 a.m. on the 20th inst.:—

Viscount General Tanaka Mitsuaki, Director of the Bureau of Court Auditors and Court Councillors, is appointed Principal of the Nobles' School for Boys.

Mr. Yoshikawa Akimasa, Director of the Bureau of the Imperial Treasury, and Court Councillor, is appointed Director of the Bureau of Court Auditors.

Mr. Shirane Seisichi, Court Councillor, is appointed Director of the Bureau of the Imperial Treasury.

Prince Iwakura Tomosada, Superintendent of the Peerage Bureau, Superintendent of the Board of Chamberlains, and Principal of the Nobles' School for Boys, has resigned the last mentioned office.

JAPANESE LADIES COMMITTEE OF THE WORLD'S FAIR.

THE members of the Japanese Ladies Committee of the World's Columbian Exposition were pleasantly entertained at the United States Legation on the 14th instant, when Princess Mori and the majority of the other members were present. They were invited by Mrs. Coombs to meet Mr. and Mrs. Winston of Chicago, Mr. Winston being one of the directors of the Exposition. The committee was assured by the American ladies, that should any of the ladies of Japan visit Chicago during the Exposition they would meet with a warm reception and be well entertained. The work of this committee, it is confidently expected, will result in a fine Exhibition of Japanese art.

H.M.S. "LEANDER."

It was rumoured, with truth we believe, that, H.M.S. *Leander* was under orders to proceed north for the purpose of receiving and carrying back the crews of two British schooners captured by the Russian authorities while poaching in Russian waters. The vessel was delayed, however, owing to some difficulty connected with shipping stores, which could not be put through the hands of the Customs without a delay of 24 hours, and the detention proved fortunate, for the crews reached Nagasaki in the interval and were thence sent on to Yokohama.

COUNT ITO'S ILLNESS.

COUNT ITO has been suffering from peritonitis, not gastric fever as we erroneously reported in a previous issue. The *Nichi Nichi* said that on Saturday last he was mending gradually. There was not much fever left, but his appetite was very bad, and the only nourishment

he took was a small quantity of liquid food. The consequence was that he had become very weak. He took a stroll in his garden on Sunday, but felt tired very soon, and the doctor advised him to remain quietly in bed. Since then he has improved rapidly, and was able to attend the Cabinet Meeting on Wednesday.

THE LABOUR QUESTION IN JAPAN.

THE *Kokumin-no-Tomo*, referring to the recent successful strikes by masons and bricklayers in Tokyo, observes that a new current is beginning to percolate through the hitherto quiet substrata of society in Japan. The working class is about to give an unprecedented colour to political life by putting forward novel questions, social and economical. Already one may see indications that capitalists are making determined efforts to guard their interests against the rising importance and power of the working classes. The latest and most remarkable instance of this has been the combination of cotton yarn manufacturers, to which brief reference was recently made in these columns. In our contemporary's opinion, strikes have not been introduced here in imitation of foreign custom, as some persons seem to suppose, but are natural and inevitable consequences of the progress of industries and general material civilization. An increase of skilled and special artisans—a necessary condition of social advancement—cannot fail to augment the importance of these artisans in particular and of their class in general. In short, the *Kokumin* thinks that it is high time to bestow serious attention upon the labour question, and laments the indifference with which it is regarded by politicians and scholars alike. Much thought has been given to the creation of wealth, but none has ever been bestowed upon the question of the distribution of wealth. The Tokyo periodical suggests the organization of an association for the study of social questions, the membership being open to persons of every party and class. One of the chief objects of the association should be to study the labour question and to establish means of communication between capitalists and working men; in a word, to disseminate wholesome and unbiassed knowledge about the labour problem, and to prevent or mitigate the evils of a conflict between capital and labour.

THE "SHINAGAWA MARU."

THE Japan Mail Steamship Company's steamer *Shinagawa Maru* has been successfully floated, and her safety is assured. We reported in a recent issue that she had struck a sunken rock near Kabuto Island in Shidoura Bay, while en route for Shimonoseki from Kobe. The injury was confined to her fore compartments, but her condition at one time was not such as to inspire hopes of her speedy escape. She is a ship of about twelve hundred tons burden, and her commander is Mr. S. Yoshisawa.

THE WORLD'S FAIR.

MR. A. B. DE GUERVILLE, Honorary Commissioner to the World's Fair, has consented to deliver two illustrated lectures upon the Chicago Exhibition on Friday and Saturday, October 28th and 29th; the first in the Teikoku Hotel, Tokyo, and the second at the Public Hall, Yokohama. The proceeds in both instances will be given to local charities, the Yokohama Jizenkai receiving the whole of the Yokohama benefit.

A BYE-ELECTION.

MR. NITTA JINZAYEMON, member of the House of Representatives for the Second Election District of Ishikawa Prefecture, having recently resigned his seat, a bye-election was held. There appears to have been little competition, Mr. Sugiyama Hiromasa, former member of the Diet, being returned. Both the retiring and the incoming members belong to the Popular Party.

COUNT ITO.

COUNT ITO may be now called convalescent, though he has not yet recovered his full strength. His physicians recommend further rest, but the cares of office seem to forbid this, for his Excellency attended the Cabinet Meeting

on the 19th instant, and remained there until evening. He had previously been received in audience by the Emperor.

COUNTRESS ITO'S RECEPTIONS.

We are requested to state that Countess Ito will receive every Tuesday afternoon, commencing from the 8th of November.

YOKOHAMA CHESS CLUB.

The Yokohama Chess Club changes its locale on Monday; the Members will meet henceforth at the new rooms, 86 Main Street.

THE GOTEMBA LEPER HOSPITAL.

We beg to acknowledge the receipt of \$10 from J.W., \$10 from N., and \$5 from B.B. for the Leper Hospital at Gotemba.

MR. ISHII'S ORPHANAGE.

We have pleasure in acknowledging the receipt of \$20 from P.L.J. as a donation on behalf of Mr. Ishii's Orphanage.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The *Yomiuri Shimbun* has an interesting article on the present condition of the political world. It should be remarked that this journal is now trying to be strictly independent; at least we hear that the editor, Mr. Takata, a Progressionist member of the Diet, has been requested by the proprietors of the paper to pursue such a line, a difficult task for a party politician. But Mr. Takata is understood to be a man of comparatively moderate proclivities, and his attempts at independence in editorial work have thus far been not entirely unsuccessful. The *Yomiuri* thinks it very strange that, while the Diet is to assemble only a few weeks hence, the political world is in a state of profound calm. The past three sessions of the Diet were each preceded by very different scenes. Is it because both the Government and the Opposition have already completed preparations for the coming phase of their contest; or is it because both those in power and those out of power know well how to keep their secrets? Neither of these explanations satisfies our contemporary. It is disposed to believe that the Government and the Opposition alike have not yet decided upon any line of policy, but are each trying to shape a course in accordance with the movements of the other. They are in fact, watching one another, equally afraid to take the initiative. Such an attitude, though not creditable to the Government, is much less so to the Opposition. If the Opposition is so devoid of confidence in its own strength, how can it hope to compel the Government to undertake the reforms it has been persistently advocating for the past few years? Our contemporary fears that, when the Opposition makes up its mind at the eleventh hour to organize an assault upon its enemy, it may find the latter thoroughly prepared to repel the onset.

The general impression still is that the coming session of the Diet will not be so eventful as the preceding ones. There are, however, some persons who think otherwise. The *Nippon* represents the views of this dissentient class. It believes that the coming session will be just like the preceding; or, in other words, that the country will again witness a serious conflict between the Government and the Opposition. For the primary cause of such conflicts has not yet been removed, which cause is that Government and Opposition alike are too prone to entrench themselves behind a hacknied abstraction, namely, that of the Imperial prerogatives in the one case, and that of popular freedom in the other. So long as these abstractions constitute citadels of resort, just so long will neither the Government nor the Opposition be capable of joining issue in the broad field of practical and material questions. Both sides must come out of their citadels and meet in the open. Then and then alone will there be a hope of their understanding each other sufficiently to work in peace and harmony. Although our contemporary is gene-

rally of the opinion that the coming session of the Diet will witness another serious conflict between the Executive and the Legislature, it is yet not without some hope that the members of the present Cabinet may be capable of acting upon its advice.

The changes of *personnel* in the Judiciary effected by Count Yamagata have been upon the whole very well received by the vernacular press. The Judges placed on the retired list had been declared by a decision of the Court of Cassation to be incapable of discharging their official duties on account of either bodily or mental debility. This is the only process by which Judges can be legally placed on the Retired List. Some papers, the *Kokkai*, for instance, charge the Judges of the Court of Cassation with rashness for pronouncing a decision upon the mental or bodily condition of their colleagues. But the press as a whole approves the step taken by the Minister of Justice, for it is generally admitted that the higher ranks of the Judicial service are filled in several cases by men of the old school, who block the path of promotion for younger and more capable experts. Count Yamagata is loudly praised for having done what his predecessors were unable to accomplish. Some journals hope that he will not rest until the whole Judicial Service has been thoroughly reorganized.

The question of the Codes continues to attract public attention. It is not yet definitely known what course the Government may decide to take on this subject. But an impression seems to prevail that the Emperor has not sanctioned the Bill for postponement, and that the Government will introduce a new Bill in the coming session of the Diet for the postponement of certain portions of the Codes, the rest going into force from the first of January next. The *Naichi Shimbun* protests against such a course; for the Diet will then be placed in an awkward dilemma. If it does not pass the new Government Bill, the Codes will go into force in their entirety, so that the Diet will be forced to agree to the Bill rather than countenance such an undesirable conjuncture. Our contemporary seems to think that the Government, if it carries out this line of policy, will be guilty of taking an unfair advantage of the Diet, but, after all, the Diet can assert itself if it pleases.

The *Nichi Nichi* has commenced to criticize M. Boissonade's recent memoir on the new Codes. The essay promises to be long and elaborate.

The Game Regulations continue to be discussed by the vernacular press. It would seem that the Regulations are not popular, and that this circumstance is taken advantage of by the Opposition papers, especially those belonging to the *Katshin-to*. The latter threaten that the question will be raised in the Diet next session and that a severe lesson will be given to the Cabinet for its temerity, in encroaching upon the functions of the Legislature. The arguments need not be reproduced here as they are merely repetitions of points alluded to in our last weekly summary.

The Opposition papers are still clamouring for the punishment of the local Governors who are accused of having interfered in the last general elections. The *Yomiuri Shimbun* declares itself disappointed in the hope that Count Inouye would satisfy the demands of the Popular party in this matter. The Radical organ (*Fuyu*) on the contrary, evidently believes that the Cabinet will introduce thorough changes in the *personnel* of the obnoxious Governors. It bases this faith on a report that a decisive measure has already been resolved upon, and that the names of the men who are to displace the discredited Governors have been actually submitted for the consideration of the Ministers of State. The recent sudden return of Count Saigo to Tokyo, apparently for the sole purpose of seeing the Minister of Home Affairs, is con-

strued to mean that the leader of the National Unionists, while making a tour in the North-east, was surprised by intelligence that the Government, chiefly in consequence of Viscount Shinagawa's indiscreet avowal in Kyushu, had decided to take decisive measures against the offending officials throughout the country. Whatever pressure the National Unionists may bring to bear upon the Cabinet, the Radical organ is almost confident that the Government cannot easily disregard the earnest demands of the Popular party. Should the Cabinet see its way to taking this step, the *Fuyu* will rejoice at the removal of one of the questions now threatening to precipitate a collision between the Government and the Opposition in the coming session of the Diet.

The Autumn Manœuvres, which are to commence from to-morrow, receive a considerable share of public attention. The various papers view the question from different standpoints, but are all agreed in recognizing the utility of manœuvres on a large scale, and in thinking that the Japanese Army has made wonderful progress in recent years. The *Fiji Shimpō* dwells on the strategical importance of railway extension. The manœuvres of 1881 in the vicinity of Kameyama in Ise entailed an expenditure of 160,000 yen; those of 1885 in Kyushu, 150,000 yen; and those of 1890 at Nagoya, 120,000 yen; while the present are expected to cost only 80,000 yen. The significance of this gradual decrease of expense becomes still more apparent when it is remembered that the scale of the campaigns has considerably increased each time. Various causes, doubtless have contributed to bring about this economical improvement, but the principal are better management and the extension of railways. The last mentioned factor is believed by our contemporary to have exercised the most influence, and the nation is advised to hasten the completion of the railway system. The *Kokkai* invites newspaper correspondents to take notice of the slightest incident connected with the manœuvres. The *Yomiuri* seeks to awaken public interest in the condition of the Army and Navy. The *Kokumin Shimbun*, less enthusiastic, seizes the opportunity to impress upon its countrymen the cosiness of armaments and to deprecate the idea of Japan's adopting an aggressive policy.

The *Fiji Shimpō* writes on educational subjects. It observes that there is a tendency among men of wealth to despise learning. Instances of the misuse of learning may be adduced to excuse such an attitude on the part of parents, but the *Fiji* assures these persons that their apprehension is based on abnormal facts, and that modern education is as necessary to the child of the richest aristocrat as to the youth who has to earn his bread. To men of property, our contemporary gives the advice that they should impart to their sons a thoroughly liberal education; while men unable to bequeath wealth, should procure for their children some special form of instruction. In another article, the same paper alludes to a rumour that in certain quarters a project is mooted of establishing industrial schools throughout the country. Without querying the importance of these schools, the *Fiji* reminds their projectors that suitable teachers for such institutions are not yet available. Hitherto the failure of industrial schools has been principally due to the incapacity of teachers to adopt the principles of science to the practical requirements of the country. Our contemporary seems to think it important to begin with the training of teachers themselves.

The *Nippon* devotes two articles to the question of the Government's attitude towards foreign countries. It believes that the Government, though unbending towards Japanese subjects, is very indulgent to foreigners, and it even accuses the empire's statesmen of servility towards Western Powers. The articles conclude with urgent advice that the terms of the treaties be rigorously enforced, as to compel foreigners to apply for Revision of their own accord.

THE CODES COMMITTEE.

THE members of the Codes Committee meet every day, says the *Nichi Nichi Shimbun*, but as the proceedings are kept secret it is impossible to ascertain the precise nature of the discussions or what progress they have made. Rumour, however, asserts that as Count ITO has requested the Committee to investigate merely whether the Codes can be divided into sections for purposes of enforcement, this question has been diligently considered, with the result that the Committee have decided that various chapters in the Commercial Code may be thus separated and enforced without inconvenience. They have now begun to examine the Civil Code with the same object. Those in favour of immediate operation, argue that this Code also may be divided, and that the portions of which speedy enforcement seems necessary may be put into operation without any difficulty. But the other side alleges that the connection between the various chapters is too close to admit of division, and that the Code must be enforced or postponed in its entirety. Under these circumstances, the *Nichi Nichi* thinks that there is little hope of the Committee's agreeing about the Civil Code. Judging from the stage which the debate has already reached, the conference will probably terminate in four or five days.

With reference to the labours of this Committee and the action of the Government, there is growing up an impression that the celebrated Bill may be the means of illustrating more than one interesting and important Constitutional question. Many problems cannot fail to present themselves for solution in these early days of the practical working of the Constitution. To one of these we have already alluded at some length, namely, the procedure with regard to the Imperial Sanction. It is now fully recognised that the Constitution does not provide for anything in the shape of an Imperial veto, and that if the Imperial sanction be withheld from a Bill, no method of publicly announcing the fact exists so far as concerns the Constitution. The whole interval between two sessions is constitutionally allowed for the processes of obtaining the Imperial sanction and promulgating a measure which has passed the Houses, and only in the event of a Bill not being promulgated during that interval can the nation know that it has failed to receive the sanction of the EMPEROR. All this is perfectly plain, if we are guided solely by the text of the Constitution and of the appended laws. But, on the other hand, certain Japanese publicists claim that if the letter of the law be strictly adhered to, the nation has no means of knowing whether a Bill has been actually submitted to the EMPEROR or not, and that, under any circumstances, it is inconvenient for members of the Diet to be kept without this information until the very eve of

a new session. There is undoubtedly a measure of justice in this contention. As a point of legislative convenience, it appears desirable that some machinery should exist for intimating the fact that Imperial Sanction is withheld from a Bill which has passed the Diet. But neither the Constitution nor the appended laws prescribe any such procedure, and it becomes a nice question for publicists to determine whether, and if so how, means of informing the nation by a positive process ought to be provided. Of another and much more interesting problem, too, the outlines are now beginning to shape themselves in public conception. It is the problem whether the SOVEREIGN'S Sanction in Japan may be discriminatory: in other words, whether the SOVEREIGN is competent to extend his Sanction to certain portions of a Bill which has passed the Diet and to withhold it from other portions. In the practice of Western States precedents may be found for both the differential and the integral system, and the relative merits of the two have been discussed by constitutional experts. Arguments in favour of the former may easily be conceived. Take, for example, the case of a Budget submitted by the Government to the Diet. There is nothing to prevent a hostile majority in the Legislature from appending to the Budget, at the time of passing, clauses which the Government could not consent to endorse. In such an event, it might be to the public advantage that the SOVEREIGN should extend his sanction only to the Budget itself as passed by the House. Otherwise the choice would lie only between the alternative of the Budget's not coming into existence, or of its being successfully converted into a device for forcing irksome and perhaps inexpedient conditions upon the Administration. Turning, again, to the very question now agitating the political world in Japan, we find a measure concerning which there is a tolerably genuine consensus of opinion that discriminatory procedure would be of national benefit. The great majority of experts and business men are agreed that urgent need exists for the immediate operation of certain portions of the Codes, whereas the Bill passed by the Houses contemplates the postponement of the whole until the several parts shall have undergone revision. Could Imperial discrimination be exercised between these portions, the postponement voted by the Diet being sanctioned only with regard to the sections clearly indicated as calling for revision—whether because of actual imperfections or in deference to public sentiment—an easy and satisfactory exit from the difficulty would be furnished; and in view of the questions submitted by the Cabinet for investigation by the Codes Committee, an idea begins to prevail that some such course may be in view. We do not ourselves believe that the situation

is likely to be dealt with by the Government in the above manner. Nevertheless, the fact that such a question is now on the tapis in political circles, furnishes a most interesting illustration of the practical problems that suggest themselves in connection with the working of the Constitution.

EXHIBITION OF JAPANESE PAINTINGS AT UYENO.

THE Japanese painters who contribute to the annual exhibitions of modern pictures in the Fine Arts Exhibition in Uyeno Park, seem to go steadily from bad to worse. We speak of the artists who follow the canons of the old Japanese school, and we purposely distinguish among them the men who contribute to these periodical displays, for the works of the best masters of the day are generally conspicuous by their absence. The present exhibition—which will remain open until the end of the month—ought to have been of exceptional size, inasmuch as no pictures were shown at the spring exhibition of fine art products, the directors being induced by want of space and various considerations to confine the display to other classes of objects and to arrange for a special show of pictures in the autumn. But even in respect of quantity the affair disappoints, for though the space available is filled, one can see plainly that, in order to fill it, everything sent in had to be hung. We speak from conjecture, but truly it is impossible to suppose that any attempt was made to select tolerable specimens and reject rubbish, for nothing worse than some of the daubs displayed is conceivable. How many pictures there are in all we have not counted, but probably five hundred is a fairly accurate estimate. Out of these five hundred we doubt whether ten could be indicated that deserve to rank as objects of art. The rest belong to the category of wall-paper, and of a considerable number it must be frankly said that they provoke only ridicule. Japanese paintings excel in one respect only, strength and fidelity of line. As a class they are nothing more than sketches. Pleasing effects and slight conceits that appeal to our sense of the pretty, the delicate, and the quaint, were often achieved by the old masters, but the greatest of them has not bequeathed us anything that displays reverence—enforcing genius as well as art to be admired. Doubtless some of the zealous eulogists of buried masters will rebel against this dictum, but we can only say that if proofs to convict us of a harsh verdict be forthcoming, very many years of search and experience have failed to make us acquainted with them. There is much to charm and to delight in pictures of the Japanese school, but there is scarcely anything that stirs our deeper feelings. So narrow, too, was the range of the artists' conceptions, that he repeated himself

again and again with but slight variation, and out of this failing, supplemented by an essentially Japanese tendency to revere tradition and worship fame, there grew a multitude of stereotyped conventionalities, which the skilled artist knew how to subserve to his purpose, but which became, in the hands of the common painter, mere tricks of calligraphy. These conventionalities may be seen in their crudest forms at the Ueno Exhibition to-day. Year by year they stare at us more obtrusively from the long lines of wasted silk, repeating the assurance that the artists who work for the displays of our time, have retained nothing but the artifices of their craft. Could SESHU and MOTONOBU see the landscapes that now represent their art; could OKYO and GEKKEI witness the grotesque deformities that do duty for their admirably realistic efforts; could MATAHEI and HOKUSAI get a glimpse of the miserable copies that claim modern relationship with their vigour and originality, they would indeed be astounded that such a depth of inferiority could have been reached. What inducements, too, offer for the exhibition of these disgraces? That is a specially puzzling point. Not more than a petty fraction of the crowd of pictures exhibited find purchasers, and in every case the prices are so trifling that the reward of having his effort distinguished by a red ticket must signify very little to an artist. We suspect that the periodical displays of the Fine Art Society, so far as concerns pictures, have ceased to be at all representative of the capabilities of the era. In Kyoto and in Tokyo there are artists capable of doing incomparably better than the tyros who exhibit their failures at Ueno. Are these masters ashamed to see their paintings hanging in the company of grotesque daubs; or do they lack confidence in the competence of the judges; or has experience taught them that it does not pay to contribute? Whatever be the true reason, it is beyond question that such exhibitions as that now going on only bring ridicule on Japanese pictorial art, and tend to discourage the already scant patronage which the public is disposed to bestow on it.

DR. HEPBURN.

ON Tuesday evening the foreign community bade farewell to a man whose name will be remembered with respect and affection so long as Yokohama has any annals. More than thirty years have elapsed since Dr. HEPBURN came to Japan, and during the whole of that time the public's feeling of love and reverence for him has constantly increased. No single person has done so much to bring foreigners and Japanese into close intercourse. His dictionary was the first book that gave access to the language of the country, and remains to this day the best available interpreter of that language. But even more

than his dictionary has helped to facilitate mutual acquaintance, his life has assisted to break down the old barriers of racial prejudice and distrust. For the beauty of his character, his untiring charity, his absolute self-negation, and his steady zeal in the cause of everything good, constitute a picture which could not fail to appeal to the Japanese people. His benevolence, though always large and sometimes even trespassing on the limits of his means, was so unostentatious that few have suspected its extent, and it is probably little known in Yokohama that the whole of the sum gained by the sale of the second edition of his dictionary, amounting to several thousands of dollars, was devoted to the building of a spacious addition to the Meiji Gaku-in at Shirokane. Much would have to be written to convey even a tithe of what the reverend Doctor has accomplished, and of the love that all nationalities in this Settlement bear to him. But though it would please us well to write and others to read, our pen is stayed by the knowledge that public panegyrics are essentially distasteful to one who works entirely for the good to be wrought and in no respect for the praise to be won. We confine ourselves therefore to wishing that the closing years of a well spent life may be full of peace and happiness, and that, in the country to which they return after a long career of usefulness, the home of the venerable Doctor and the kind-hearted lady who has been so faithful a helpmeet to him and so true a friend to his friends, may be full of such sunshine as their memory will always make in our hearts.

THE LEPER HOSPITAL AT GOTEMBA.

WE call our readers' attention once more to the Leper Hospital at Gotemba. FATHER VIGROUX, who, since the death of FATHER TESTEVIDE, has devoted his life and energies to this most merciful charity, again addresses an earnest appeal to all kind-hearted people on behalf of the sufferers under his care. The good FATHER, whose Christian sympathies have led him to dedicate his existence to the harrowing task of ministering to the most terribly and loathsomely afflicted among human beings, finds himself now at the limit of his resources, and is confronted by the intolerable possibility of being compelled to close the doors of his asylum and leave the patients, several of whom are incapable of helping themselves, to die by the way-side. Leprosy claims a good many victims in Japan. We have no accurate statistics relating to the whole empire, but according to figures collected and published in these columns in July of last year, one of the three Leper Hospitals of Tokyo relieved no less than 4,240 patients in the interval between 1883 and 1888. Perhaps it will be well to add a word here, by way of precaution against an impression that

may possibly be created by FATHER VIGROUX' language, the impression that lepers are altogether uncared for in Japan. The State, indeed, does nothing for them, but private charity supports three Leper Hospitals in the capital, where numerous sufferers receive gratuitous treatment. In the provinces, however, there is no help for the plague-stricken unfortunates, and it is easy to conceive that intelligence of the existence of FATHER VIGROUX' asylum at Gotemba has induced, or may induce, many lepers to undertake long and painful journeys in the hope of obtaining at last the shelter and kindly succour which they have so long lacked. The misery of finding the doors closed to them at the bourne of their travels is hard to contemplate unmoved. Such a prospect is sufficient to lend deep pathos to the appeal of FATHER VIGROUX. But when it is supplemented by the far more terrible contingency that the patients who have already been admitted may have to be left without food or medicine, very few, we are persuaded, will hesitate to render some assistance, however small. We look forward with impatience to the time when the Government will see its way to establish, at some of the admirable healing springs with which Nature has dowered Japan, one or two leper settlements, and when a system will be organized for the free transport thither of all lepers incapable of paying their own way. There are, it is true, many things to be considered before launching upon such a scheme, but the sufferings of untended and resourceless lepers constitute a fact that outweighs a mass of theory. Meantime, the question is, shall the misery which FATHER TESTEVIDE and FATHER VIGROUX have done so much to relieve, be intensified by the enforced closing of the Gotemba Hospital? We do not believe that the foreign residents of Japan, who, even in the hardest times, always find means to be charitable, will allow such a misfortune to occur. Yokohama, Kobe and Tokyo lent munificent aid to start the charitable work. It is their merciful enterprise, and they will not suffer it to fall for lack of a little help now.

LADY BOWYER AND MR. GLADSTONE.

LADY BOWYER has replied to Mr. GLADSTONE's letter on Female Suffrage, and has been kind enough to send us a copy of her reply. Five years ago the receipt of such a brochure would have chiefly served to remind us by how large an interval Japan was separated from many of the problems vexing men's minds in the West. But Japan has traversed that interval with extraordinary rapidity. The advent of Lady BOWYER's pamphlet no longer emphasises the width of the gulf dividing the Far East and the Far West, but recalls the fact that, with regard to this particular question, the same agitation disturbs

both, though happily in very different degrees. Already the fair sex in Japan begins to talk about woman's rights and female suffrage, and in some respects the ladies of this empire can urge sounder justification for the claim than their Western sisters, since, despite the generally received notion of woman's subordinate position in Japan, it is a fact that female householders, registered and duly recognised by law as such, constitute an exceptionally considerable element of the country's population. Lady BOWYER and her cause have consequently a very real interest for the Japanese. As for the arguments advanced by her ladyship, it cannot be said that they are novel, nor indeed could it have been reasonably expected that they would be. A wise preception places on the threshold of the thesis that old crux as to a possible difference of political opinion between husband and wife. Under the present dispensation a wife gives herself no independent concern about politics. She is content to reflect her husband's views. In rare cases it happens that she carries from her parents' house to the conjugal home a political creed of her own at variance with that of her husband. Then, unless she be a woman of extreme tact and he a man of rare patience, there is introduced into the domestic circle a perpetually active factor of estrangement. Every public event presents itself diversely to the pair. Conversation must avoid one of the widest spheres of daily interest or else the risk of growing friction has to be incurred. Could anything be more unhappy, except, indeed, a difference of religious conviction? Rare as the misery is now-a-days there are instances sufficiently familiar to constitute a warning. Suppose that woman possessed the franchise. Suppose that, instead of being excluded from any but a passive and receptive part in politics, she was called upon to play an active and self-asserting role, is it not inevitable that she would gradually rebel against the guidance of affection, and seek rather to demonstrate her independence of the ties which previously condemned her to political effacement? That seems to be a plain and natural forecast, but it is a forecast fraught with eventualities not to be contemplated without the gravest misgiving. Lady BOWYER has an instinctive perception that prudent legislators must shrink with alarm from inaugurating a system so dangerous to domestic peace. She has given prominence to the difficulty, but she deals with it after a fashion which we must be pardoned for calling truly womanish:—"Marriage being intended to represent oneness, if husband and wife should not be able to agree in the choice of a candidate, let the wife concede her vote; we do not need duplicates of votes, but that the interests of the gentler sex be adequately represented." Apparently Lady BOWYER would be satisfied with a law authorizing a wife to

exercise the franchise provided that she voted on the same side with her husband, and yet her ladyship avers that "duplicates of votes are not needed." Husband and wife must vote alike, and yet their votes must not be duplicates. It is disappointing that this, one of the gravest aspects of the whole question, should be obscured by such manifest confusion of ideas. If a wife is to be legally bound to vote on the same side with her husband, what is the use of giving her the franchise? The one advantage—if it be an advantage—of such legislation, would be to encourage marriages among politicians; since the camp in which there were most wives would have an obvious advantage at the polls. Yet, a little farther on, Lady BOWYER shows how inconsistent her own aspirations and claims are with the practice she suggests, for she tells us that "women have given evidence of their capacity for intellectual competition with man, proving that they possess faculties suited for enlarged development by exercise in matters of government;" and she adds:—"We appeal to woman's sense of dominion." Women then are to compete with man, to govern him and to dominate him, but, at the same time, they must follow his lead or surrender their political functions altogether. It has always seemed to us that the modern advocates of woman's rights are betrayed into a false estimate by the extravagant aspect which nineteenth-century civilization has imparted to the situation. The "sense of dominion" to which Lady BOWYER appeals has been developed to a species of delirium by the extraordinary, and even unsightly homage which the strong sex pays to the weak in the West. In the presence of woman the man becomes a species of moral and physical menial. He must anticipate her every want or caprice; he must never think of contradicting her; he must not allow her to make an exertion of any kind which he can make for her; he must give way to her everywhere; he must surrender to her the best of everything; he must permit her to squander great sums upon the silly adornment of her person; he must shape his demeanour towards her as though she were a goddess to be bowed to rather than a fellow-creature created to be his helpmeet; he must eschew all topics of conversation that may be above the range of her education or understanding; he must cultivate for use in her society a species of empty prattle or piquant gossip neither edifying nor intellectual; in a word, he must lay aside in her presence his strong natural directness of conduct and originality of thought, and must assume the manners and character of a deferential servitor. There is a logical element in this state of affairs: intuitively, though perhaps unconsciously, the strong sex seeks to atone to the weak for the objective position which the latter is nomi-

nally condemned to occupy towards all the great problems of State and administration. But so soon as woman succeeds, if she ever does succeed, in abandoning her position of tacitly conceded sway, from that moment a new character will be imparted to her intercourse with man. There will no longer be the same reason to compensate her in social and domestic spheres for the disabilities she labours under in politics and public affairs. At present she exercises dominion without the show of power. To obtain the show she would have to sacrifice the reality. Lady BOWYER and her fellow agitators seem to base their claims upon a false interpretation of the concessions already made to their sex. They infer the existence of unrecognised rights from a situation which is really the outcome of romantic chivalry and an emotional sense of justice. It is not wonderful that the mistake should be made. Far more remarkable is the happy fact that, despite the artificial and unnatural relations between the sexes in the Occident of to-day, Europe and America should possess such a multitude of women who satisfy an almost ideal standard of moral beauty and domestic devotion. We have done our best to spoil our women, but happily their better instincts have preserved them from being spoiled. Not always, however. The system is responsible for a type extravagant, affected, shallow, selfish, and unfaithful. It is also responsible for an agitation which seeks to confuse the proper functions of the sexes, and would destroy the home for the sake of humouring a false ambition.

A NEW REASON FOR PRESERVING THE "STATUS QUO."

WE revert, for a moment, to a very hacknied subject, because it seems unwise to leave entirely unnoticed certain comments elicited from the local English press by the letter of *The Times'* Tokyo correspondent and by the leading article of that journal itself on the question of Portugal's forfeiture of jurisdictional privileges in Japan. The comments we allude to appeared in the *Hyogo News*. They consisted of two parts, first, a sweeping denunciation of the correspondent of *The Times*, and secondly, a statement of objections to Treaty Revision. We are already unhappily familiar with the fierce invective invariably employed by a portion of the foreign press in the Far East to attack any man who undertakes to write of Oriental public matters on their merits. The habit of attributing base and sordid motives to such a person has become so constant that, under given circumstances, one can always count with absolute certainty on a renewed display of this exceedingly unsightly form of passion and prejudice. In the present instance *The Times'* correspondent, who had simply sent to the great journal a plain and colour-

less statement of the facts connected with an interesting episode of Portuguese and Japanese relations, is declared to be a man "past a sense of humiliation who, for the benefit of his pocket, deliberately attempts to imperil the livelihood of large numbers of his countrymen," and who "is actually trying with every means at his command, and they are not contemptible, to enable the Japanese to deal at the commercial interests of numbers of his countrymen a very serious blow." Such writing can be described by only one epithet, brutal. Journalists resorting to it would be at once branded with disgrace and marked for universal contempt in any community where wholesome public opinion exercised active sway. But, unfortunately, in Oriental emporia of foreign trade, where men's vista is generally bounded by the interests of commerce and the calls of charity, what is every one's business is no one's business. "Why should it matter to us?" is the common formula. "Let those snarl whose nature it is to do so. If folks who live on low planes of morality find it necessary to drag down to their own degraded level all the thoughts and actions of others, that is their misfortune. We have no mission to mend them. Our home is not here, but our exile, and we constantly hope to turn our backs finally on all this wretched wrangling and Gothic outcry." So the thing goes on unchecked, until at last a savage tyranny of abuse and slander has established its sway. No man is safe from it. Every great Englishman visiting the East, from the hero of Khartoum to the author of the "Light of Asia," has been pelted with the same mud. GORDON summed up his experience in the pithy statement that no man could live in the East who ventured to be fair and liberal. Yet even GORDON hoped that thirty years later things would be found to have progressed a little beyond this stage of barbaric intolerance. The hope was futile in so far as concerns outward displays of the old disgrace, though we cannot doubt that among the foreign communities, in Japan at all events, there prevails a much kinder and fairer spirit than that which GORDON denounced. The sin of *The Times'* correspondent, the sin against which these lampooners gird so furiously, is that he is not a blind partisan. He does not join with them in a campaign of rabid persecution and wholesale denunciation. He advocates the justice and necessity of prudent concessions to Japan's national aspirations and legitimate demands. He looks beyond the mass of falsehood, prejudice and misrepresentation that has been heaped up round the problem of Treaty Revision, and in common with every enlightened Englishman who has ever studied the question, he discerns and advocates the higher interests of the British empire. That is his sin. For that he is held up as an object of public execration by men whose

partisanship is so thorough that even as between Japan and Portugal, in a matter where the latter has behaved towards the former with contumely and towards her own duties with culpable neglect, they fiercely attack the Japanese Government and slander every one supporting its procedure.

We pass from this part of the subject to a more important and perplexing declaration which appears in the columns of the Kobe journal; not a solitary declaration, but one repeated so often and in such emphatic terms that we must accept it as a distinct expression of creed:—"The Japanese are anxious to mercilessly oust every foreigner out of the country."

The *Jiyu-to* and the *Kaishin-to*, and they voice the views of the majority of the business men, are anxious to make as short work of foreign merchants, as certain other Japanese are to expel Government employees. Treaty Revision to them will not mean throwing open the country, but obtaining the right to drive out all business men by enacting provisions which shall make trade and commerce conducted by foreigners impossible. . . . If the Japanese are persistent, Treaty Revision cannot long be delayed, and British citizens will then witness the collapse of business built by years of unremitting industry and toil, owing to regulations which render them powerless." These utterances have at least the merit of being perfectly unequivocal. Hitherto, the only objection urged by the opponents of Treaty Revision was that Japanese laws were too defective and that the Japanese Judiciary was too inexperienced to permit the abolition of Consular Jurisdiction. This contention found an inveterate exponent in the editor of the *Hyogo News*, who, after less than two years' residence in Japan, discovered that not only are Japanese Judges incompetent, but also Japanese laws are based on totally different principles from European, and the Japanese people are not even capable of understanding the Western signification of the term "justice." But we now find that all such contentions were mere subterfuges. The sufficiency or insufficiency of Japanese laws, the competence or incompetence of Japanese Judges—these were nothing more than pretexts. The true basis of opposition is radical distrust of the Japanese. What the foreign enemies of Revision believe is that the object of the Japanese in revising the Treaties is to enact such unfairly discriminating laws as shall "mercilessly oust every foreigner out of the country." After this avowal let nothing more be said against Mr. OI KENTARO and his petty clique who, in their turn, are disturbed by the apprehension that should foreigners be freely admitted to the interior, they will gradually buy up the soil and monopolise the trade of the

conservatives, founded as it is on a tacit acknowledgment of the Occidental's superiority, sounds quite respectable in comparison with the wretched suspicion that Japan's sole aim is to expel every foreign merchant from her shores. A pretty suspicion in truth to cast in Japan's teeth by way of reward for her twenty-five years of unflagging effort to fit herself for intercourse with Western States on equal terms. A pretty suspicion to urge against the *Jiyu-to*, whose latest action was to sever connection with the OI faction, and to declare their faith in the expediency of removing all restrictions upon foreign trade, travel and residence. A pretty suspicion to formulate against the *Kaishin-to* who staunchly supported their enlightened leader's programme of introducing British capital and encouraging the advent of British enterprise by allowing foreign ownership of real estate. A pretty reflection to cast upon the astuteness of foreign diplomatists, who have always accepted Japan's promise that every non-political privilege secured to Japanese subjects by the Constitution shall be guaranteed to foreigners after the abolition of extraterritoriality. But we need not expatiate upon a misgiving so unworthy of Englishmen and so unjust to Japan. If such a fear were really entertained by the foreign community, then all talk about Codes, Judges and so forth would be quite idle, and the plain truth would be that foreigners themselves cling to their present semi-isolation as the only chance of being suffered to remain in Japan at all. Will anybody endorse this monstrous doctrine? Does the *Hyogo News* itself believe it? Apparently not, for side by side with the assertion that "the Japanese are anxious to mercilessly oust every foreigner out of the country," the Kobe Journal says:—"If the Japanese would grant Treaty Revision on a fair basis, we should, with certain reservations with regard to the immediate transfer of judicial jurisdiction, advocate it most heartily." Who has ever suggested or advocated anything else? Does the *Hyogo News* imagine that any Englishman, least of all *The Times'* correspondent, would support a scheme of Revision leaving the Japanese free to drive every foreigner out of the country by unfairly discriminating legislation, even supposing, which is wholly untrue, that any such scheme were proposed by Japan? Nay more: the misgivings and reluctance of the bulk of the foreign residents on the subject of Treaty Revision have from the first been recognised by *The Times'* correspondent and by this journal alike as perfectly natural, and as fully entitled to sympathy and consideration. It is the constant endeavour of the noisy irreconcilables, whose violence parodies the true feeling of the British residents, to represent themselves as standing between the foreign communities and some unscrupulous programme of spoliation and

oppression plotted by the Japanese and supported by foreign renegades. But British merchants in Japan, although they realise that their country's higher interests, as well as broad considerations of international equity, must sooner or later bring about the changes from which they shrink, know and admit that no one has ever yet proposed to leave them out of the reckoning, or to deal otherwise than tenderly, fairly and gradually with local sentiments and vested interests. If the fumes of passion and prejudice that have come to envelop this unhappy subject could be cleared away, if silence could be imposed upon writers who devote themselves to misrepresenting the attitude of their countrymen and to calumniating and aspersing every one that does not think exactly as they think, it would be found that not a hair's breadth divides the views of the better classes of foreign residents from the views of men who, like the correspondent of *The Times* are habitually held up to public execration by local traducers. But nothing of the kind can be hoped. We must wade on through all this welter of scurrility and scandal, comforted only by the reflection that right has always won the day, however prejudice protested or the rabble railed.

THE SITUATION.

THE present political situation is uniquely interesting. With the exception of the commotion about the Codes and the Game Law, a profound silence, evidently of uncertainty, reigns throughout the political world of Japan. What does this calm portend? Is it real or only apparent? Does it signify that the coming session of the Diet will be comparatively peaceful and quiet? Questions like these are asked by everybody, but no one seems able to reply with any degree of confidence. And perplexity increases when we examine those minor questions which, taken together, constitute what is called the "situation" at any particular time. What will be the attitude of the Radical party? What policy will the Progressionists pursue? What colour will the National Unionists decide to display? On these points no writer has been bold enough to attempt any forecast, and, not unnaturally, this state of uncertainty seems to be engendering a strong tendency to doubt and suspicion, not only between the Government and the Opposition, but also between the different parties composing the Opposition. Such is at any rate the case in respect of the Radicals and the Progressionists. The latter, it appears, are much concerned about the reported inclination of some Radical leaders to support the Cabinet on certain conditions. Whether this rumour be true or false, events have not yet shown. But it is interesting to observe that the prospect of a ready-made

the columns of the *Kokumin-no-Tomo*, an influential weekly journal having strong sympathies with the Progressionist party. The *Kokumin* shrinks, as yet, from absolutely frank speech, but there can be no manner of doubt that it refers to the Radicals when, in a recent article, it "pities a certain party which, relying on the absurd hope that its platform may possibly be adopted by the Cabinet, hesitates and wanders." After devoting some space to exposing what it calls the "absurdity" of such hopes, and, after enlarging upon the clannish character of the present Ministry, our contemporary earnestly repeats its recent recommendation to the Radicals and the Progressionists that they should dissolve their respective parties and combine into a single association with the common object of pulling down clan Government. Various suppositions, observes the *Kokumin*, are made as to the intended policy of the Government. Some imagine that the ITO Cabinet will carry out the important reform of reassessing the taxable value of the land; others, that the three Regulations—i.e. the Public meetings, Newspaper, and Publications Regulations, will be radically revised; others, that the Ministry will try to divert the attention of the people to foreign questions. Various as these suppositions are, they all evidently agree in assuming that the Cabinet possesses a definite policy more or less satisfactory to the Popular party. Those who think thus are ridiculed for setting too high a value upon the sagacity of the present Cabinet. Individually speaking, the members of the present Ministry are all men of the first order. If the sum total of the ability of the several Ministers represented the effective ability of a Cabinet as one body, then the ITO Cabinet would, it is admitted, be the strongest and ablest ever organized during the past twenty years. But in point of fact such is not the case. Too many oarsmen, as the saying goes, drive the boat ashore. The present Cabinet—we quote from the Tokyo periodical—is in one sense, composed of Choshu and Sas-shu elements, and, in another, of the Military and Civil parties. A Cabinet thus variously constituted cannot be expected to possess much effective strength. As to its ruling principle, our contemporary is persuaded that the Cabinet is in effect a defensive alliance against political parties. Hence, the exigencies of defence may find it united, but the union will cease to be trustworthy so soon as there is question of pursuing a progressive policy. Arguing thus, the *Kokumin* finds it easy to understand and credit the report of a so-called "official news agency," which says that the attitude of the Popular party being unknown, the Government is unable to decide on any fixed policy. "Is it not then," the Opposition is asked, "the dream of a fool to imagine that the ITO Cabinet will adopt

the platform of the Popular party?" Our contemporary is convinced that the Ministry's object is simply to carry out the old practice of collecting men of mark within the fortress of officialdom, and it bases this view partly on the rumours recently circulated that offers of office have been made to Prince KONOYE, Viscount TANI, Mr. NAKAJIMA and others. While the Cabinet is thus doing all in its power to keep up the clan system, is it not fatuous, asks the *Kokumin*, to indulge the hope that the Popular party's demands will be conceded. Hence an aggressive alliance against the Government is the true programme for the parties in Opposition. "The only way," concludes our contemporary "of forming such an alliance is to organize a large national party out of the present *Jiyu-to* and the *Kaishin-to*."

We (*Japan Mail*) repeat our strong doubts of the possibility of such a feat as this union in the present stage of political progress in Japan. As to the prudence of the *Kokumin's* advice, there cannot be much question, from the point of view of effective warfare. But surely with the present Cabinet in Power—a Cabinet of which the two most prominent men are associated with the only really practical measure hitherto taken to throw official ranks open to all classes of Japanese without distinction of clan or party—with such a Cabinet in power it is a mere delusion to talk of Clan Government as the object of the Opposition's attack. Envelop the question in whatever euphemisms they may, or hide it behind whatever pretexts they please, the real object of the Opposition is to introduce Government by Party. Upon them rests the responsibility of attempting to tamper with a brand new Constitution—a performance recognised by all statesmen as fraught with the gravest peril—and upon them also rests the responsibility of agitating for the curtailment of the Prerogatives specially reserved by the Constitution to the SOVEREIGN. We sometimes wonder whether these Radical politicians have ever read, or if having read they ever recall, the words used by the EMPEROR himself in the Preamble to the Constitution:—"When, in the future, it may become necessary to amend any of the provisions of the present Constitution, *We or Our successors shall assume the initiative*, and submit a project for the same to the Imperial Diet. The Imperial Diet shall pass its vote upon it, according to the conditions imposed by the present Constitution, *and in no otherwise shall Our descendants or Our subjects be permitted to attempt any alteration thereof*. Our Ministers of State, on Our behalf, shall be held responsible for the carrying out of the present Constitution, and Our present and future subjects shall for ever assume the duty of allegiance to the present Constitution." How do the leaders of the Opposition reconcile their conduct with the Imperial declarations which we have

here italicized? The system of Party Cabinets for which they contend, represents a vital departure from the provisions of the Constitution. Have they waited for the SOVEREIGN to take the initiative in divesting himself of the prerogative of which this change would deprive him? Or do they seek by agitation and an attitude of defiance to wrest from the EMPEROR powers expressly reserved to him by the Constitution? Finally, do they remember that the "Ministers of State are held responsible for carrying out the Constitution," and are therefore bound to resist the Opposition's endeavours to violate one of its most important provisions?

KEROSENE IN BULK.

AFTER some hesitation, we believe, the Japanese Government has accepted the principle of storing Kerosene in bulk at Kanagawa. This innovation has been already adopted at many places in Europe, and we lately referred to its gradual progress eastward. In Kobe, where the storage of Kerosene is a matter of private enterprise, tanks have already been erected, but in Yokohama the Government retains control of this matter, and doubt seems to have been entertained at the outset as to the safety of the procedure. But, in point of fact, no more difficult feat can readily be imagined than to ignite a cistern full of Kerosene. Had not this been fully recognised on the strength of expert evidence, such a method of storage would never have been permitted, as it is, at numerous places in England. We believe that the old fort at Kanagawa has been chosen as the site for erecting the tanks. Apparently this selection of locality indicates the continued existence of some hesitation on the grounds of safety, but considering that tanks are erected in the very midst of important centres of population and shipping in Great Britain, and that experts have pronounced the tank system of storage to be much safer than the system of storing in tins in godowns, there should be no reason for fear. However, the ground at the old fort will probably cost nothing, and in certain respects the site is excellent. The industry of exporting oil from Batoum is now very largely in British hands, and so extensive are the preparations for carriage in bulk that a fleet of 120 steamers will soon be engaged in the work. Messrs. SAMUEL and COMPANY, the great firm which controls the enterprise, are pushing matters with the utmost energy in the East. They have offered to supply the steel tanks to the Japanese Government at a price equal to only the cost of manufacture, and as we observe that the outlay involved at Singapore in building sheds for storage and for filling, a wharf and a pier, laying a system of pipe lines and constructing three tanks, each capable of holding 15,000 gallons, was only \$60,000, the expenditure on ac-

count of the Kanagawa depot ought not to be great. What may be the nature of the foundations at the Kanagawa fort, we do not know, but doubtless this important point—important in regard alike to expense and to the limits of the tanks' size—has been duly considered. As to the effect which the new system may be expected to exercise upon the selling price of the oil, a forcible illustration is furnished by Singapore's experience, where, after the introduction of a few cargoes in drums, the market fell from \$2.10 per case to \$1.25, the latter by no means representing the lowest figure at which the Company expected to be able to furnish the oil to consumers. The innovation deserves to be welcomed from every point of view, though it will naturally encounter much opposition at the hands of importers who have hitherto monopolised the trade, following the old method of packing in cases.

THE "KOKUMIN SHIMBUN" ON PARTY CABINETS.

THE *Kokumin Shimbun*, which may be regarded in a certain sense as the daily edition of the *Kokumin-no-Tomo*, has a very violent article in reply to our statement that the introduction of Party Cabinets in Japan would be a change in the system prescribed by the Constitution, and that politicians agitating for such a change are directly contravening the terms of the Preamble to the Constitution, which Preamble is an autographic message from the EMPEROR himself to his subjects. It is not surprising that the *Kokumin Shimbun* should be startled by a distinct definition of the attitude assumed by itself and its fellow-thinkers in this matter, and perhaps we may regard the strength of its language as evidence of the disquiet into which it has been thrown by our remarks. But we must beg to be excused from replying in detail to its arguments. The extreme rudeness of its methods effectually place it beyond the pale of serious controversy. We have been accustomed to rank politeness high among the most beautiful traits of Japanese character. The true Japanese, as we have known him for twenty-five years, never forgets to be courteous. Under the most trying circumstances he generally preserves his *sang-froid*, and is guided by the wise old precept that recourse to abuse and ill-temper is an infallible proof of absence of reason. It might fairly have been hoped that this national excellence would have survived the growth even of a newspaper press, but unfortunately the style adopted by the *Kokumin Shimbun* shows that such a hope has not yet been realized. From the foreign side, indeed, no stones can be safely thrown. It would be impossible to find in any part of the world, however close to the confines of civilization, coarser Gothicism and more

intolerant rudeness than are habitually paraded by some of the English local journals at the open ports. But unless Japanese politeness be of an exceedingly superficial nature—a hypothesis which there are no grounds for entertaining—the contamination of this degraded type of journalism ought to be easily avoided. As a rule it is avoided. We can point to many Japanese journals which never debase their columns by rudeness to an opponent, always maintaining a temperate and courteous attitude even in the face of great provocation. In view of editorial ability and literary connections the *Kokumin Shimbun* ought to belong to this better and infinitely more creditable class. But it is difficult to draw any certain inference from a given set of premises in Japan. The hybrid Japanese who assumes the brusqueness of manner without assimilating the moral *bonhomie* that often underlies the foreigner's unconventionality, is a thoroughly unsightly type—a parody, not an imitation. Even in the field of art we observe the same uncertainty of instinct. Judging by precedents, what might be expected of a Japanese in every instance is sobriety and harmony of taste. Yet in the Tokyo salons we occasionally see ladies of refinement and culture displaying costumes in which shockingly incongruous elements and conflicting colours are associated, to the apparent satisfaction of the disfigured wearer. Or again, a Japanese garden, perfect in everything of indigenous origin and arrangement, is destroyed by a fence daubed with a hideously glaring foreign paint. Instinct fails, apparently, to be a trustworthy guide among circumstances altogether unfamiliar. We may, nevertheless, hope that the native politeness and moderation of the Japanese will ultimately assert themselves in the journalistic field, and that the inherent weakness of rudeness and personalities will be appreciated by newspapers of the *Kokumin Shimbun's* stamp. In the meanwhile, however, we are under no obligation to expose ourselves to uncivil assaults by entering the lists with an opponent which takes off the gloves and aims below the belt from the outset. The question at issue is Constitutional not personal. If our contemporary cannot treat it in the former sense and with some regard for the amenities of discussion, we must be pardoned for declining the contest.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

IRON AND STEEL INDUSTRIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Being engaged in kindred pursuits, and having been employed recently as Inspecting Engineers by the Imperial Chinese Government in connection with the large Iron and Steel Works now being erected at Hankow, we have noticed with considerable interest various paragraphs and remarks in your journal with reference to the

establishment of Iron and Steel Works on a large scale by the Government of Japan, and we venture to offer a few remarks thereon, which we trust may not be without interest.

Undoubtedly the manufacture of iron and steel is one of the most difficult industries to establish, a proof of which may be seen in the concentration in but a few countries of the vast bulk of production. Nevertheless, there are no doubt forcible reasons for the establishment of such a manufacture in Japan, as elsewhere; reasons which may cause it to be put aside, to some extent at all events, the economical consideration of manufacture being more costly than importation. Before, however, any settled decision is taken, and any large expenditure incurred, we think that it would be well worth while to make searching preliminary investigations, so as to avoid a repetition of the costly failure which has attached to attempts in many other countries to establish this industry.

One of the least satisfactory methods, from an economical point of view, is to undertake the smelting of ore by means of charcoal; the result undoubtedly gives a very beautiful material, but at a cost more or less prohibitive, and with the certain result of the destruction of adjacent timber on so large a scale that within a short time the country is cleared within the radius of effective transport, and the whole thing comes to a standstill.

In Sweden, where the manufacture of iron by means of charcoal has been more largely and longer carried on than elsewhere, the industry has been maintained principally through the supplies of timber being on an exceptionally large, and the output of iron on a comparatively small, scale; but even in Sweden this manufacture is now becoming less and less. An attempt was made in Italy not many years ago, at Terni, but in a few years the adjoining country was so denuded of timber that it was not possible to continue its employment, and the works came to a standstill. Something of the sort has taken place in Japan itself, we believe, and from the above facts it may be seen that it is only by means of coal—or by gaseous fuel, as in the United States—that the industry can be economically and permanently established, and even then several factors must co-exist in arriving at a satisfactory result.

Firstly, iron ore must exist in sufficient quantity, and of favourable quality.

Secondly, coal must be found in tolerable proximity, and it must be free from any large percentage of sulphur; it also must possess the quality of being capable of being transformed into coke of a density which will permit of its sustaining in the blast furnace the concentrated weight of the charge of ore, flux, etc. It is this quality of coaling, so pre-eminent in the Durham coal, which, together with the proximity of vast ore beds, has caused Middlesboro to become in a short time the greatest iron and steel producing district in England.

Thirdly, a proper flux must also be had, which does not require to be brought from any great distance.

Fourthly, a smaller but still important consideration is that of the existence of fire clay, seeing what large quantities of fire bricks are used in the construction and constant renewal of iron and steel works plant.

Fifthly, the last, but by no means the least factor, is that of labour. There is no form of work to which humanity is put which is more severe and sometimes even brutal, than in almost all stages of the manufacture of iron and steel. And in its higher forms there are perhaps few employments in which the gift of being able to tell the precise heat, or the precise moment at which vast and costly masses of metal should be removed from the furnace to the hammer or rolls, is given to so few individuals. Of a good forgerman or smith it may be said as of the poet, that he is 'born, not made', though long experience, and perhaps heredity also, enter into his composition. In the manufacture of armour plates, for instance, a first-class foreman smith has been known to enjoy the salary of a cabinet minister.

It is frequently observed that it is always a difficult matter to establish an isolated factory, not only on account of the training of labour, but also on account of the difficulty of maintaining trained labour at a high point of efficiency. It is found that when works are grouped in districts, as is usually the case, the labour is of a higher and more efficient type than when they are solitary; and this fact often determines the establishment of new factories in certain districts, rather than in others where cheaper labour or other advantages may be obtained. Where there are several works grouped together, the competition induced puts both masters, foreman and men on the *qui vive*; the later pass from one works to another, gaining experience at each, which is thus diffused among all, and there is no tendency therefore towards crystallization.

Another question of some importance which alone is determined by the nature of the ore, is whether the plant should be laid out for production on the Siemens-Martin or Bessemer systems, which were both originally acid processes. By the former, all kinds of mild steel suitable for ship-building, bridge-building, boiler work and smithy purposes, are produced from ore generally of a hematite character, free from phosphorus; and by the latter, steel of a less ductile quality suitable for rail making may be produced from ores less pure in quality. Where, however, the available ore is decidedly phosphoric, the system to be adopted must be that invented by Messrs. Thomas and Gilchrist, and known as the basic process, by which either rails or mild steel can be produced in special forms of Bessemer or Siemens-Martin furnaces in which there is a basic lining of magnesian limestone, which absorbs the phosphorus during the process of manufacture.

There are other points of minor importance, but we think we have shown how great is the necessity for the most thorough investigation before the character of the plant to be put down is determined on.

It is very desirable that specimens in sufficient quantity, fairly representing the bulk, of both ore and coal should be sent to some iron and steel making country, there to be not only thoroughly analysed, but also tested practically in manufacture, the gain in experience thereby more than compensating for the loss of time entailed.

In our own experience we have not infrequently found that deposits of coal and ore, which had led to the supposition that the industry of iron and steel making could be established, proved, on assay and trial, to be utterly unsuitable for the purpose.

We would suggest, therefore, that the most practical method of ascertaining the possibility or probability of the establishment of an iron and steel industry in Japan would be to make trial borings by means of diamond boring machinery, on a large scale, in those districts where ore and coal are known, or supposed, to exist. Even were the results not in all cases satisfactory for the establishment of iron works, yet the information gained, from a geological point of view, could not fail to be of high value, and discoveries of other minerals might take place which would more than compensate for any other disappointment.

The necessities of a nation must of course take precedence of all other considerations, yet, to those who know how beautiful above most other countries are the fair islands of Japan, there seems something almost painful in the establishment of works which, perhaps more than any others, so thoroughly disfigure large areas of country.

We are, yours faithfully,

J. BIRCH & CO.

August 31st, 1892.

ANOTHER DISTINGUISHED VISITOR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As is already known to many of your readers, Japan is about to receive a three weeks' visit from Rev. F. E. Clark D.D., familiarly known as "Father Endeavour Clark." He is expected in Kobe from Australia about Nov. 8th. Dr. Clark was the founder of the first Young People's Society of Christian Endeavour, and is now the widely known President of the United Societies.

It has been my privilege to know this man intimately for twenty-three years. I regard his coming to Japan at this juncture as a special Providence, and would like the favour of your columns to state a few facts and make a suggestion or two, that may possibly be of interest or service to some.

I write solely at my own prompting, and out of admiration for the man and his work. I have no formal connection with any one of the 22,000 societies which acknowledge him as their united head, and most loyally follow his wonderful leadership. I have never worn the familiar badge, a C encircling an E, though at heart I am a believer in the Society and its noble work.

In no partisan spirit therefore, but simply as an interested observer of the great movement of the day, I would call attention to this most unique enterprise in the church history of the present century.

Beginning twelve years ago in a single church in Portland, Me. of which Dr. Clark was then pastor, it has grown to a membership of one and a half millions, and now encircles the globe.

Nothing else in the history of Christianity parallels it. Even Methodism, down to a recent date the marvel of the modern church, must yield the palm in rapidity of growth and breadth of scope, to this organized movement among the young people of every Christian sect.

Dr. Clark is the head and front of this widely extended growth. He is its authorised expounder

and advocate. Should Gen. Booth visit this land, whatever we may have thought hitherto of the Salvation Army and some of its grotesque performances, we should be interested to see its founder and inspiring spirit; that is if we have any interest whatever in the great efforts made to uplift our race. Much more then, all of us who care for the moral training of the young are glad, I am sure, to welcome to our sunny land, this "Paradise of Childhood," a man who speaks for 1,500,000 young people, whose lives are dedicated to Christ and the church, and who have enlisted in a crusade against every form of evil.

We wish to give a fair hearing to this organized form of skilled Christian labour, which is wielding so weighty an influence in Western lands.

But aside from the great enterprise which he represents, and the fact that he brings greetings from and commands the most ardent devotion of multitudes of America's best people, as evidenced by the public farewells tendered him at Boston, New York, San Francisco and intermediate points, Dr. Clark is in himself a man of marked personality. The deep meaning term, Christian gentleman, always comes to my mind when his name is spoken. He is the embodiment of courtesy and fairness, an enthusiast without being a crank, intense in his activity, broad in his sympathies, and thoroughly unselfish in all his work and motives. He is a pleasing speaker of exceptional oratorical ability, and a winning writer. His pen runs easily, and he has already published half a score of books. He is the chief editor of *The Golden Rule*, published in Boston, Mass., one of the breeziest and most business-like Christian weeklies in all the world. He is worth seeing and hearing for his own sake, as well as for the cause he represents.

He has received large offers repeatedly to head various business and literary enterprises, but his heart is in his present work, and money could not tempt him to leave it. In ability to read men and organize them into effective companies of workers he has few superiors, and he does his leading with great geniality of temper. In short, he is one of the men of the day, one whom we cannot afford to miss knowing.

He comes to Japan on no holiday trip. His one purpose is to give and to do. He is too modest to press his subject upon unwilling listeners. He is too much wanted in Australia, India, England and America to stay a day where he is not desired. He is a busy man, and if any of us wish to catch him, we must speak in time.

Mr. A. T. Hill of Kobe will have the general superintendence of Dr. Clark's movements in Japan. He would be glad, I know, to answer inquiries or receive suggestions from any.

Might it not be well for Mr. Hill to appoint a sub-committee at each of the ports? Or a better plan yet would be for the Christian workers in each city to choose their own committee to make arrangements for welcoming Dr. Clark and holding one or more meetings with him.

One other suggestion, the Japanese cannot fail to be interested in Dr. Clark and his speeches. Let them be notified and invited to as wide an extent as possible.

On the score of old-time friendship, I secured in advance a promise of a visit to the city where I live and labour. Arrangements are being made to notify 30 outlying stations, when the exact date of his speaking in Okayama is fixed. Should a similar plan be followed in other cities, a large number of people would be favoured, and a vast amount of good could not fail of accomplishment.

Yours truly,
JAMES H. PETTEE.
Okayama, Oct. 10, 1892.

THE GOTEMBA LEPER HOSPITAL IN JAPAN.

On the 15th of August, last year, I addressed to His Grace Mgr. Osouf, at present Archbishop of Tokyo, a report concerning the Leper Hospital founded, at Gotemba, by the regretted Father Testevuide, whose charge had just been entrusted to me.

To-day, I make it my duty to bring to the knowledge of the persons that have kindly taken an interest in our endeavours, the present state of our Hospital, and, at the same time, the development it is on the eve of taking.

During the last year, our establishment did not cease to progress in every respect: the grounds have been considerably extended; new buildings for divers manual occupations have been constructed, and new patients, admitted. The number of the latter amounts, at present, to 54. Most of them are already Christians.

Of course, they are allowed complete liberty of conscience. But they cannot live long in the establishment without hearing their fellow patients,

baptized, praise the Christian religion; they are naturally induced to admire the sentiments and conduct of those that have embraced it, and desire to acquire a better knowledge thereof.

They admire, especially, the fraternal charity of these neophytes, their good humour, their gaiety, the serene happiness of their souls, beaming through their features, often disfigured, and through the very pains of their terrible disease.

Under the immediate action of such a benign influence, the light of faith quickly makes its way into their minds, while their hearts are soon inclined to cherish a religion that appears so beautiful and promises so much peace. Hence all the lepers of the hospital are Christians, or prepare themselves to become so. They form, as it were, a religious community, animated with the best spirit, passing their time in prayer and easy manual labour.

But a short time ago, cast away by their very relations, wandering on all the roads, and in all places haunted by wretchedness, inspiring horror rather than pity, our lepers were the most unfortunate of men. Admitted into our establishment, they live happy at present, and with scarcely any cares for the morrow. Once introduced by baptism into the great Christian family, then, especially, they think, nay, they are convinced, that He who feeds the birds of the air, who gives growth and beauty to the flower of the field and to the lily of the valley, will never abandon His own children.

Must I now own that he who has charge of the leper asylum is more uneasy and anxious? Alas! It is but true. He has to provide for a community of over 65 persons, including the personnel of the administration. The daily expenses are considerable, the medicaments costly: therefore, the alms received are soon absorbed.

The difficulty of covering the ordinary expenses, at present, is already a heavy burden, but the number of patients is on the eve of increasing, and that prospect is the cause of fresh uneasiness.

There are, in Japan, divers places where lepers, flocking together from the neighbouring provinces, meet near a temple, built to the memory of an ancient bonze called *Nichi-ren*, who, we told, had a particular commiseration for this kind of patients. They assemble there to implore his aid, hoping to be cured, or, at least, relieved.

Now, lately, a number of lepers, who had assembled near a temple, famous among all, built at *Minobu*, about 20 leagues from our asylum, heard of the existence of the latter. They, at first, doubted whether it would be possible to find under the sun a place where so much kindness is lavished on a misfortune like theirs. However, they wanted to see with their own eyes; they saw and they believed; they asked for admittance and then hastened to inform their companions.

Three other localities, where lepers assemble in groups, for the same purpose as at *Minobu*, have been visited, and relations have been established with our asylum.

Moreover, on the East-coast of *Chiba-ken*, one of our Christians is acquainted with over 40 lepers and wishes to send some of them to our hospital.

Finally, another Christian has found, on the mountains that form the western border of *Gumma-ken*, at *Kusatsu*, over 60 lepers, who had assembled there to try the efficacy of mineral hot springs. They were very glad to learn that there existed, elsewhere, an asylum where patients of their kind are taken care of. They took our address and asked whether they could be allowed to proceed thither. We could do nothing but give them a faint hope of admittance. But it is very probable that several of them, without awaiting for a positive authorization, will try their fortune and start for our asylum.

Thus, from different quarters, numerous patients are about to take the road to our hospital. A few are already arrived. The last one had traversed nearly a hundred leagues. He fell from exhaustion, a few feet from the threshold of our establishment. Happily he was noticed; was hastily raised up, attended to and comforted. In a few days, he was instructed enough to receive holy Baptism, and then died. He had been led by Providence from so very far, to obtain, just in time, if not the life of the body, at least the life of the soul!

The current is thus established. It cannot but continue to swell, and there is no doubt that, in a very short time, many more patients will knock at our doors.

What must we then do? Must we reject them? Their misery is awful; their disease devours them alive! Less happy than the lepers of the Sandwich-Islands, who live together in a spacious asylum, supported at the expense of the local Government, wisely directed and tended to by Catholic Missionaries and Sisters; less happy than most lepers of Tonkin, who, in the more important provinces, find, near the capital towns, an asylum

where the Royal munificence comes to their aid, the lepers of Japan are for the most part abandoned to themselves. Such as dispose of a certain fortune are able to find refuge and care in certain establishments, public and private; but the poor, with very few exceptions, and those who come and knock at our doors, are without refuge and shelter; nay, often they have no clothes, they suffer from hunger, and despair is in their soul! Shall we yet double their torture by casting them away from the only threshold where they hoped to find rest and relief? Would any of my readers decide the question against them? As for me, I will never have courage enough to do so. I will always accept every homeless patient that comes to us for aid and shelter.

Once more I make an appeal to compassionate Souls, and implore of their charity the aid necessary to relieve so many unfortunate human beings. Our dear Lord, who here below had so great a compassion for these the most wretched of men, will assuredly repay a hundred-fold the contributions of our generous Benefactors: indeed, the best reward secured for the charitable hearts that will kindly listen to my ardent appeal.

P. VIGOROUS, Mission. Apost.

THE YOKOHAMA JIZEN KAI.

Report of the Negishi Charity Hospital for August and September, 1892.

	August 2st.	September 2st.

H. HIBINO, Physician in charge.
G. AMADA, Steward.

October 22th, 1892.

Note.—The extra salary in September is due to the illness of Dr. Hibino, and the consequent need of a substitute. Dr. Hibino has now recovered. All members are invited to the regular monthly meetings, held for the present at 221 Bluff, on the first Saturday of each month, at 2 p.m.

CRICKET.

ENGLAND V. SCOTLAND AND IRELAND.

This match was not fought to a conclusion on Saturday, time being up before England had played half a dozen men, but the draw must be placed to the credit of the Scotch-Irish eleven, who, however, comprised among their number the best bowlers and bats in the Club. Crouch, who has been fielding well of late knocked up the highest score, 43, not out. White, of the English eleven, coming next with 37, also not out. It was a ladies' day, and many fair visitors graced the ground with their presence, afterwards partaking of the Club's hospitality at five o'clock tea.—Scores:—

"IS MAN NATURALLY GOOD OR BAD?"

By MR. G. BOISSONADE.

(Translated from the *Revue Française du Japon*.)

This question originated in China, I have heard: it is often discussed in Japan. It appears that three different replies have been made to it. Some say that man is naturally good: hence the wicked would be the exception, which agrees pretty well with what we see in society. Others say that he is naturally bad: then good people are only the exception; which is neither flattering for the human species, nor reassuring for the future of society: moreover, this fact would make it difficult to justify the right of punishing that society has ascribed to itself. Others say that he is neither good nor bad, naturally, and that he becomes the one or the other according to education, example and the surroundings in the midst of which he is brought up.

The question has also been sometimes put to me in conversation, and, without having then much reflected upon it, I have always answered, that "man is rather than not naturally good." Now I am invited by the founders of the Japanese Review, "The Kokkō" (the Light of the Land), to express my opinion upon this problem. What might be sufficient at the time of a few minutes conversation, no longer suffices when the question has to be treated of in writing.

Upon further reflection, I am astonished that only the three preceding solutions have been given to it. Could it not have been also said,

4. That there are good men and bad ones, through their natural propensities:

5. That there are men who are born good and whom example, bad advice, and vices have made bad:

6. Inversely, that men who are born bad have, by example and good councils, become good?

These three new solutions do not exclude the one or the other, because they do not, like the first three, claim to reply for man in general, or the whole of humanity: they make a distinction between individuals. At most, they leave for solution three other subsidiary questions, namely:—

Are the majority of men born good or bad?

Do the majority of men born good remain good?

Do the majority of men born bad remain bad?

To these three new questions, I shall reply in the affirmative.

Man is born, most frequently, with good instincts which reason and education usually confirm and develop; a man born good remains so under the ordinary circumstances of life; there must be particularly unfavourable circumstances for wickedness to succeed in dominating him. A man born bad remains bad, unless he meets with special conditions of good education, of good precepts and of good examples.

But, would there not be room for a 7th solution, to wit, that the same man is almost always alternately good and bad, according to what circumstances happen to him in life, according as events are favourable or unfavourable to him, as other men are just or unjust to him? This solution does not exclude the first two, for it could be applied as well to a man born good as to one born bad; only, as regards the first, cases of wickedness would be accidental with him, whilst as regards the second, goodness would have the character of accident. So many different possible solutions prove that the question has been propounded in too extended a form.

It goes without saying that the world admits that there are men thoroughly good without effort on their part, and that there are others who are bad, radically bad. The first are so good that they do not become corrupted, do not become bad even when surrounded by the very worst kind of examples and under circumstances wherein others only ordinarily good, would become bad. The second are so bad that, notwithstanding good examples and good education, notwithstanding circumstances that confer individual happiness upon them and which, from that very fact, ought to soften their character and keep them from sentiments of hatred or of jealousy, remain bad and pernicious to their fellow creatures. These are, in the two senses, exceptions, and, doubtless, the question is asked as concerning the generality of men only.

Nor will I dwell upon the point of showing what must be understood by "a good man," and what by "a bad man": there are many degrees of goodness as there are of badness. If we call "goodness" virtue and "badness" vice, it is clear that we must not take these two definitions as absolutely comprehensive, for no man possesses all the virtues, just as no one has all the vices.

Nor can we, according to the question asked, specify the qualities that we would require in a

man to style him "good," nor the vices that would make us declare him "bad;" there would be arbitrariness in it, and whilst, among us, some would especially require certain qualities (doubtless those they themselves possess or think they do) and would especially condemn certain vices (those they do not have or think they do not have), others would be different and severer in their exactions.

It is already seen that it is not as easy as it might be thought at first sight, to understand each other upon the position of the question.

For my part, I shall be inclined to call a *good man*, one who has the most sociable virtues, that is to say, one who is far from willingly injuring his fellow creatures and is disposed to be useful to them: in a word, I shall call *good* "a man that really loved his fellow creatures, from the fact that they are so, exclusive of relationship, of private friendship or of services received: I should call *bad*" an egotist, an envious body, one who looks after his own interest and his own gratifications everywhere, always, at any price, at the risk of injuring the most legitimate interests of others.

The first can even push his love of his fellow creatures to the sacrifice of his fortune and even of his life for others; but in that case, he is no longer good, he is very good, but superlatively generous.

The second can push egotism to the sacrifice of the fortune and lives of others to his ambition, to his interest, to his passions; such a one is very bad, he is the worst of men. Whence they have come to that, both come within the exception and as such are out of the question.

In limiting, therefore, the meaning of the words *good* and *bad* with which we are dealing, to the generality of men, the question is still very embarrassing. It is still not stated with sufficient precision.

Are we to inquire what man is (whether he is good or bad) in what is sometimes called "the state of nature," or what he is in a state of civilization more or less advanced to which most known peoples have arrived? It is not easy to form an exact conception to-day of that state called "of nature."

Certain philosophers, like Rousseau in France, have spoken at length about this state of nature; but they have, without doubt, imagined it such as it never existed. It is probable that, before the formation of human societies, when men were living grouped in families, struggling with all the difficulties of material life, surrounded with nature's dangers, exposed to cold and to heat, to hunger, to wild animals, to the attacks of their neighbours, they had for sole guide the instinct of preservation which brought them nearer to wild animals themselves than to civilized man of to-day. What would lead us to believe this is, that the savage tribes that are met with in Central Africa and perhaps in South America, are possessed of the violence and often of the ferocity of beasts.

I would prefer not to call "state of nature," such a quite exceptional situation of man, and to thus style the one in which men are already united into tribes or into bodies of families, having chiefs more or less accepted by all or by the greatest number; those chiefs are ordinarily old men or warriors, and, as all the members of the tribe always know each other more or less, social virtues are developed and anti-social vices are rare or less accentuated; the influence of the common sentiment is relatively stronger than in a larger society; the pursuit of the esteem of others and the fear of their contempt produce therein more efficacious results than in great societies where each one is as lost in an unconcerned crowd.

We have examples analogous to this situation in small communes and hamlets, where every one knows the other, where each one observes the other, where one judges one's neighbour and is judged by him. I would willingly say that in this social state, man is good rather than bad; but this goodness of man is not purely natural, instinctive and primitive; it is the effect of human society for which man is certainly created, and which alone answers for his destiny.

If we now study man in more advanced civilizations, we shall be in a position to say that whatever of good there is in him develops itself more extensively at the same time that natural bad propensities find stronger excitement and more multiplied and perhaps easier modes of gratification. It is in large cities that the greatest number of vices is found, just as there are found there, too, the greatest number of learned men and of ignoramuses, the richest and the poorest men; all the extremes, with all the intermediate degrees.

But, to get as far as to say that there are good and bad people (that one sees every day), is not yet a reply to the question: it must be also known whether there are in the world more good than bad people or the reverse; it is a statistical matter impossible to state in any country;

but I have not the least doubt, that everywhere, especially in Japan, the good are in a very great majority over the bad.

I shall be nearer to giving a satisfactory reply to the question, if I take my stand successively before meetings of men whom others are endeavouring to make share with them extremes of sentiments, good and bad ones. If I concede to those that address them in the two senses, the same amount of talent of persuasion, the same order of feeling, the same modes of action, I believe that those that strive to urge their audience towards goodness, the beautiful, justice, courage, the love of country, will prevail sooner and more completely than those that shall preach vice, hatred, violence, fear, and egotism. Man, here again, would then be good rather than bad.

I will suppose now two different gatherings of men already stirred with opposite passions: some are already inflamed with noble and generous passions, others, on the contrary, are instigated by hatred and anger, by a spirit of vengeance or by fear. I believe it will be difficult, impossible perhaps, that the first should be suddenly induced into evil by a speaker who should censure them for their good sentiments and should preach contrary ones to them; whilst experience shows that oftentimes irritated, furious crowds, ready to proceed to the greatest excesses, have been promptly stopped, subdued and brought back to calm and humane sentiments, by the power of honest speech, firm and imbued with the eloquence that love of justice and of truth inspires. Man, then, would here again be good rather than bad, since he never suddenly changes from good sentiments to bad ones, whilst on the contrary he often does so, and easily, from badness to goodness, from anger to calmness, from hatred to sympathy.

Finally, when I study individuals, I find in them, in each one of us taken separately, what I find in the aggregate of men united into a society, that is, goodness and badness at one and the same time.

Not only is no one absolutely good nor absolutely bad, not only are there men that possess more virtues than vices and others more vices than virtues, but also every man passes, in a sort of way, through periods of virtue and periods of vice. Under the influence of the surroundings in which he is placed, of the facts that he meets with, of the relations that he holds with other men, whatever naturally good there is in him either develops itself or dwindles away, and whatever is bad in him either withers or expands. These changes are sometimes slow and perceptible, sometimes rapid; they are at one time lasting, at another transient.

It was a long ago that one of our sages said that "man is a variable being of diverse nature;" this is, in a word, perhaps the truest remark to make in reply to the question in hand. I think, then, that man would be maligned if he were called naturally bad, and to say that he is naturally good, is neither to flatter nor to deceive him. At all events, if he is not always good, he can become so, and this is the sign of his superiority over all the animals that do not possess moral perception.

Man has two very powerful natural guides to lead him to goodness and to turn him aside from badness, his reason and his heart, that is to say his intelligence and his sensibility. These two guides are united in Religion, that is to say in the belief in God, a Supreme Being sovereignly powerful, who alone possesses the secret of reconciling absolute justice with goodness, and whom reason teaches us to know at the same time that our hearts stimulate us to love Him. As a means towards perfection, man has the gift of communicating with his fellow creatures as much at the present by speech and by writings, as on the past by recollection and by history.

Finally there is in him the sentiment of the duties which he fulfils in the universe: generally, he even thinks that his destiny does not end with this life, that there is another where the wicked are punished and the good are rewarded. Those are immense benefits which even the most perfected animal does not enjoy.

If man were generally bad, he would cease to advance, even slowly, in goodness and better things, he would, on the contrary, stride on with giant steps in badness and in worse doings; he would be worse than the brute creation, which, if it makes no progress, does not retrograde: man would be a monster of nature instead of being the master-piece of creation.

Plato was the first to say, and no one has said it better: The man whose natural disposition is happy and whose education has been good, is the gentlest of living creatures, a creature almost divine; but if his natural disposition is bad and if his education has been insufficient to correct it, he is the most savage of all beings.

I conclude, therefore, in the meaning of my first reply. Man, taken in general, is naturally good,

and notwithstanding the trials of life, more often remains good than he becomes bad. A naturally bad man is the exception, and it is not rare for him to approach being nearly a good man whenever he lives under favourable conditions.

In favour of the natural goodness of man, that is to say, of the greatest number of good men, I can, in concluding, invoke the testimony of the celebrated English traveller, Livingstone, who, after having traversed the most savage countries, died in the centre of Africa: he wrote: "Whatever may be the value of the discoveries that I have made, the one that I look upon as being the most precious, is to have proven the great number of excellent people there are in the world." This remark could only have been made by a man himself excellent.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, September 22nd, 1892.

The two Chinese boys, Tom Bu and Wong Lim Doe, mentioned in a previous letter as detained at Winnipeg, have been admitted by special order from the Treasury Department, and are now in this city with their fathers. They were admitted on condition that they be sent to college, and will leave next week for Ann Arbor, Michigan. During the summer they will be managers of a department in a big exhibit which some wealthy Chinese are arranging to make at the World's Fair. The Treasury agents here are troubled over the outcome, lest a bad precedent has been established.

News comes from San Francisco that the disaffection of the Chinese residents over the Exclusion Bill is increasing. A group of highlanders is reported to have issued a proclamation condemning to death Moy Jin Mun for translating registration notices into Chinese. Moreover, the Six Companies of that city have sent out a proclamation advising and warning the Chinese not to comply with the registration law, because it is "cruel," "bad," "unjust," "mean," "contemptible," etc. They have also sent a strong and urgent appeal to their Emperor to interfere in behalf of the Chinese in America.

Miss Searle, "for nine years associate principal of Kobe College," has been in this city, and gave an address before the Woman's Missionary Board of the Congregational Church. She spoke of the advanced educational and Christian work done in that Kobe institution, "Gate of God," and made an appeal for further enlargement.

Miss Duffield, a sister of Mrs. R. L. Halsey, of Shimonoseki, and Miss Jessie D. Humpstone will soon be in Japan to reinforce the Baptist workers there.

Prof. William A. Houghton, for several years professor of the English language and literature in the Imperial University, Tokyo, and for the past year assistant professor of Latin in the University of the City of New York, has just entered on his duties as professor of Latin in Bowdoin College, Brunswick, Maine. He is a graduate of Yale College.

I have been interrupted in this letter by a call from Massuo Ikuta, Ph.D., assistant in chemistry in the University of Chicago. He referred very pleasantly to the fact that he had received instruction in mathematics from the editor of the *Japan Mail*.

The faculty and students of the University of Chicago are, many of them, already on the ground, and ready to begin work October 1st. There is every prospect of a very large attendance.

All the principal institutions of the land have opened with increased attendance, and anticipate an enthusiastic and prosperous year's work.

The Stars and Stripes boast the honour of having been planted "at the two points nearest the North Pole yet reached by civilized man." The highest point on the west coast of Greenland was 83°, reached by Lockwood and Brainard of the Greely expedition. The highest point on the East coast has been made by Lieut. Peary, who sent the Navy Department the following telegram:—

"United States navy claims highest discoveries on Greenland, east coast. Independence bay, 82 degrees north latitude, 34 degrees west longitude, discovered July 4, 1892. Greenland ice cap ends south of Victoria inlet."

Luca Vescia, an Italian sculptor, who has been in this country about three years, has issued the following challenge:—

The Columbian Exposition having called together artists from all parts of the world, and desiring to ascertain who are the best marble workers in the United States, I, Luca Vescia, sculptor, do agree to deposit the sum of \$500, all contestants to deposit a like sum, as a prize for the best bust made from life, without any measure whatever, from a solid block of marble, and all work to be done by hand. The contest to last seven days, and the working hours to be from 7 a.m. to 6 p.m., daily.

Said bust, when completed, shall be placed on exhibition in Chicago.

Artists shall be selected as judges and they shall award the victor the amount deposited.

The contestants shall occupy separate rooms so as not to see each other's work.

Any person desiring to contest for the above can find or address at No. 1401 La Salle street, Chicago.

Some Canton merchants have requested 300 square feet in which to exhibit specimens of Chinese matting.

The Treasury Department has lately made a number of rulings which are of great interest to foreign exhibitors. No import duty will be charged on Foreign exhibits, that are returned or destroyed or abandoned; but the regular duty will be assessed on all articles sold. Representatives of foreign governments will be permitted to treat friends with liquor, on which no duty will be assessed; and exhibitors may give away samples of liquor, cologne and similar articles without being assessed for duty thereon.

Elaborate preparations are making for the dedicatory ceremonies. It is expected that 125,000 people, "the greatest audience ever gathered under one roof," will be assembled in the immense Manufactures Building on October 21st.

Alexander Bergman, the Russian who attempted on July 23th to assassinate H. C. Frick, of the Carnegie Steel Company, in Pittsburg, has been found guilty on five different charges, and sentenced to 21 years in the penitentiary, and one year more in the work-house for carrying concealed weapons. Nothing but drastic measures will ever suffice to crush anarchy.

The trial of Hugh O'Donnell, the leader of the Homestead strikers, is now going on in Pittsburg. It seems a novelty, but is also a relief, to have no great labour troubles to chronicle. It is also pleasant to be able to state, that the *Inter-Ocean* of this city has entered upon a vigorous warfare against the authracite coal trust, whose "combine," it claims, is contrary to an Illinois law passed by the Legislature in 1889.

The political campaign is now well underway. On September 13th McKinley delivered the address at the formal opening and dedication of the works of the America Tinplate Company at Elwood, Indiana, and, of course, claimed the event as a beneficial result of the protective policy of the Republican party. On the 16th the convention of Republican Clubs met at Buffalo, and treated that city to a grand parade and addresses by Whitelaw Reid and others. But on the same day at Winnemucca, Nevada, Senator Stewart, in a convention of the silver party, declared his intention to speak and vote for Weaver. The Democrats in New York State opened the campaign at Brooklyn, September 19th, with a speech by Senator Hill, who never mentioned Cleveland's name till the close, when he referred to their candidates, "Cleveland and Stevenson"! He pleaded for principles, not persons, measures rather than men.

The elections in Maine and Vermont resulted, of course, in Republican victories, but with greatly reduced majorities which afford the Democrats much encouragement. Ex-Speaker Reid was re-elected to Congress.

The Grand Lodge of the I.O.O.F. is in session at Portland, Oregon, and has drawn to its session thousands of Odd Fellows from all over the United States and Canada.

The National Capital is gay and festive over the twenty-ninth encampment of the Grand Army of the Republic. The veterans are there with their wives and children, and many visitors have been attracted thither by the cheap rates. September 19th was the first day, and was especially devoted to the formal dedication of the Old Soldiers' Home. The unavoidable absence of President Harrison, detained at the bedside of his sick wife, was the only draw-back. Vice-President Morton was present as a substitute, and made a pleasant address. On the 20th, came the magnificent street parade with 50,000 veterans in line and marching all day long. Ex-President Hayes and General B. F. Butler were prominent and were loudly cheered. Yesterday occurred the first business session, in which the reports of the officers were received, and Indianapolis was selected as the next meeting-place. There is an animated contest between Col. Weissert, of Milwaukee, and Col. Sexton, postmaster of Chicago, for the position of Commander-in-Chief for the next year.

Mrs. Harrison has been very seriously ill, and, though now a little better, is by no means out of danger. She had been ill for some time before her critical condition was fully realized. The President has for a long time been anxious about her; and, although he had to go to Washington to consult about precautionary measures against cholera, he hurried back to Loon Lake, N.Y., where he and his family have been spending the vacation. On September 14th a medical consultation was found necessary, and resulted in the following bulletin:—

Primary disease—pulmonary tuberculosis of the right side associated with nervous prostration. Recent complicated—acute pleurisy, with rapid effusion of water in the right chest necessitating two tapings, with some relief. Present condition critical on account of a tendency to reproduction of fluid. Removal to Washington at present impossible. Prognostication as to immediate future, uncertain.

For several days the popular anxiety was great,

especially because it was found necessary to perform a dangerous operation, which, however, resulted successfully. After that there was a marked improvement daily in her condition; and it was decided that she might safely be removed to Washington, where she longed to be. This journey began in the morning of September 20, and was finished the next morning. She was conveyed on a stretcher in a wagon from Loon Lake to the nearest railway station, three miles distant, and was carried from there to Washington by special trains. It is reported to-day that she is resting well, and feels happy to be "at home" again.

The cholera scare is subsiding. The rigid quarantine regulations are maintained as may be necessary, and are undoubtedly having a beneficial effect. The authorities are sparing no labour or expense to prevent the spread of the epidemic, and are receiving the co-operation of private citizens and companies. Several rich gentlemen of New York have rendered considerable financial assistance; and the Mutual Life Insurance Company has twice subscribed \$20,000 to an exigency fund which is being raised by subscription. It is true that there have been cases of cholera in New York City; but they were sporadic and not frequent. It really looks as if the epidemic had been at least temporarily checked, but it will not do, of course, to relax vigilance while there is any danger from immigration.

It was naturally expected that such rigid quarantine would work inconvenience to many individuals, even Americans, not merely in the delay at quarantine, but also in the refusal of steamship companies to carry either steerage or second-cabin passengers. In this way 400 or more Americans, with return tickets and clean bills of health, are detained on the other side. Likewise, a number of foreigners who were on their way to Chicago to engage in the work of arranging exhibits for the World's Fair, are held at Bremen and other places. But it is probable that relief will soon come to them.

Labour Commissioner Peck, of New York, declined to make public the original documents used in making his famous report, and is reported or suspected to have burned them. Yesterday he was indicted by the grand jury of Albany Co., for having destroyed public documents.

LETTER FROM LONDON.

(FROM OUR OWN CORRESPONDENT.)

London, September 9th.

Although there have been sundry isolated cases of cholera in England during the past fortnight, it is reassuring to note that the Local Government Board has just made the announcement, that so far as the Board is aware, the country is absolutely free from the disease. It is not to be supposed that we are not likely to have any more cases of cholera, but, as I predicted in my last letter, the possibility of an epidemic either in London or the provincial seaports is very remote. In Hamburg affairs are not quite so gloomy as was the case two weeks ago. The official statement yesterday announced 261 fresh cases and 180 deaths. In Paris also there seems to be an improvement, and, in view of the cooler weather prevailing now, the worst of the epidemic may be concluded to have passed. A good deal of friction has been caused by the stringent quarantine regulations in force at New York, where saloon passengers have to remain on the steamer with the disease infesting the steerage compartment and steerage passengers succumbing daily to its ravages. To be cooped up on a vessel where the cholera is carrying off its victims almost hourly within sight and almost under the very noses of the yet untouched passengers seems indeed a miserable state of affairs, and it is hardly surprising that bitter murmurs have been made by the unhappy beings who are thus suffering for the public good. The order: "Don't hesitate to shoot," or its equivalent, should a person attempt to leave the quarantine station, which has been issued by the New York authorities, is, moreover, not calculated to mitigate the misfortunes of those who are the unlucky victims of circumstances. However, the steamship companies are bravely struggling to meet the emergency of the hour, and have now arranged to sail vessels alternately composed of saloon and 2nd class and steerage passengers, so that the former class of passengers may disembark almost immediately after their arrival, and thorough preparation has been made for a fortnight's quarantine of the latter should the regulation continue to be in force.

The Cunard steamer *Campania*, the largest steamer now in the world, and the largest, with the exception of the *Great Eastern*, that was ever built, was launched yesterday at Govan on the Clyde. The *Campania* is 620 feet long 65

feet broad and 43 feet deep, while the *Great Eastern* measured 680 feet long, 82½ feet broad and 58 feet deep. The *Campania* exceeds in length by eighteen feet the two next largest vessels of the White Star fleet, the *Teutonic* and *Majestic*, and is forty feet longer than the famous *City of Paris*. The new steamer will travel 22 knots an hour, and will probably have no difficulty in breaking the present record across the "Herring Pond." The vessel has a straight stem and an elliptic stern, top gallant forecabin and poop, with close bulwarks all fore and aft, the erections above the upper deck consisting of two tiers of deck houses, surmounted respectively by the promenade and shade decks. When completed the vessel will appear in fore and aft rig, with two pole masts. It is only fifty-two years ago that the first Cunard mail—the *Britannia*—traversed the Atlantic, taking fifteen days on the trip against five and a half of the present time.

In the matter of gigantic enterprises the French are not to be outdone. For their Paris Exhibition in 1900 a huge telescope is being prepared—or at least its preparation is contemplated, for it seems somewhat problematical whether the accomplishment of the scheme will be found practicable. The tube of the colossal machine is to be thirty-five yards long, and its mirror is to be three metres in diameter and fifty centimetres in thickness. The cost will be about £100,000 sterling. The success of the project depends upon whether a disc of glass large enough can be made for the great mirror, which in itself will weigh nine tons. As it is estimated that with such a telescope one would be able to discern on the moon anything as small as a man, we ought to hear of some startling discoveries, and perhaps we may be enlightened in regard to the manners and customs of the man in the moon.

Mr. Ruskin's wrath was once greatly kindled at the idea of tourists shooting on Mount Sinai. But even a greater sacrilege than this would appear to have been committed by the invasion of the valley of Hinnon, or Wadi Rabalet, by a line of railway which runs up to the City of Jerusalem itself. The railroad from Jaffa, which has been in course of construction for some time, has just been completed to this point, and the first locomotive steamed through the biblical country a few days since. The line of route is on the west of the road to Bethlehem, not far from the south end of the Montefiore Almshouses. The Temple's site, with Gethsemane and the Mount of Olives, will not be molested, as they are on the other side of the town, but the name Wadi Rabalet, which means "The valley of the Lute," would be more appropriately changed to what in Arabic would signify "The valley of the Railway Whistle."

Not to be behind the times, the *Daily News* has started a correspondence in its columns on the subject: "Why Don't Young Men Marry?" which appears to cover exactly the same ground in its range as the correspondence already going on in *The Daily Telegraph* entitled: "English Wives." Among the many ambitious and disappointed contributors who pour forth their personal wrongs and grievance in the columns of the dailies, I especially note the letter of one signing himself Tartarin de Tarascon, who represents, I think, a large contingent of bachelors about town. I opine that the following extract may not be without interest to some of your readers:—"I concluded that with a better position I should find a better wife. Well, I waited, and I waited so well that my youth fled with the years. The awakening has been sad. At 40, unthinkingly and unwillingly, I fell in love with a girl of 25, who was poor, and not beautiful, or perfect. But love for her filled my heart. I saw nothing else in the world. I loved her as I had never loved before, even at 20. It was very easy to love but difficult to be loved. I had younger rivals, and a young man of 28 succeeded where I failed. The doors of heaven a moment opened to me, and then promptly shut, with the cry 'Too late, too late.' Poor me. For me the solitary room, the solitary life; no one to love, and, later on old age and infirmities, with no dear hands to help, no dear heart to solace. Alone, too late."

The result of the St. Leger, run on the 7th, was contrary to general expectation. Since the victory of Orme in the Eclipse Stakes at Sandown Park and the Sussex Stakes at Goodwood, it had been confidently predicted on all sides that the Duke of Westminster's colt would carry off the St. Leger Stakes. In fact so great a favourite was Orme, that before starting his betting was 11 to 10 on. However, as if to prove how futile are turf predictions, the favourite has been beaten and did not even succeed in getting placed. Baron de Hirsch's La Fleche, 8st. 11lb. with Watts, up, came ahead by two lengths, Lord Bradford's Sir Hugo secured the second place, Original from

and a stable companion of the winner, Watercress, was third. Sir Hugo led for half a mile, when Orme took up the running, and held the lead to the bend for home, where he was beaten, and La Fleche rushing to the front won easily, followed by Sir Hugo; Orme was fifth. Betting on the course was 7 to 2 against La Fleche.

"Die Cholera" is the title of a drama in six acts, which has just been offered to the manager of the Lessing theatre in Berlin, who, however, has declined the tempting bait. Six acts would seem rather a long winded representation; especially of anything so rapid in its progress as the cholera, but then the Germans like to be thorough in their treatment of a subject. In theatrical, as well as in commercial matters, the caterer must be well up to date with his goods, and it is hardly to be wondered at that the all absorbing topic at the present moment in Germany should be trotted out as a subject for stage representation in the Teutonic Capital.

There is no abatement of the Music Hall boom in London. Another one is just going to be built in St. Martin's Lane, where a powerful syndicate has secured a site. A company will be floated to take over the concern with a capital of £100,000. Nothing but Music Halls seem to pay just now in the amusement line, even the Gaiety Theatre, the home of the burlesque, which always has the reputation of being the most popular, is only paying 5 per cent dividend.

Kyrle Bellew had a comparatively short innings in the leading role at the Adelphi in Messrs. Sims and Buchanan's new drama "The Lights of Home." He retired not long after the opening on account of indisposition, and has not since reappeared. Those who have heard Bellew in a heavy part would doubtless have recognised a certain huskiness in his voice, more noticeable in the delivery of impassioned lines. An aggravation of this is, I believe, his chief trouble at the present time.

Mrs. Brown Potter is still "resting."

George Grossmith is starting this month for a tour through the States and Canada, and it is not unlikely that he may be induced to return home via Japan, China and India, giving his popular entertainments *en route*.

Mrs. Langtry announces an Autumn season at the Haymarket Theatre, when she will appear in a new play in four acts, by Messrs. Haddon Chambers and Outram Tristram, entitled: "The Queen of Manoa."

FAREWELL TO DR. AND MRS. HEPBURN.

An "at home" was given in the Van Schaick Hall on Tuesday evening, in order to allow residents an opportunity of bidding farewell to Dr. and Mrs. Hepburn, who are leaving Japan for home after a long and well spent sojourn here of thirty-three years. The hall was tastefully decorated with bamboos and vases of flowers, while red lanterns were suspended from the roof. Among those present, in addition to the guests of the evening, were H.B.M.'s Consuls Messrs. James Troup and J. C. Hall, Mr. A. J. Wilkin, Mr. J. A. Fraser, Dr. Meacham, Rev. J. Ballagh, Mr. and Mrs. Loomis, Mrs. Van Patten, Mr. and Mrs. S. D. Hepburn, Mr. Griffin, Miss Griffin, Mr. W. Campbell, Rev. E. S. Booth and many others. Mr. and Miss GRIFFIN opened the proceedings with a piano duet and then,

Mr. WILKIN after some prefatory remarks, said: A common feeling has brought us together this evening. We are from various lands, in diverse walks of life, of different creeds but one sentiment prevails with us all; it is that compounded of admiration, esteem, love, respect and regret. It is one of the drawbacks of life in the East, that the place of our abode is not our home. Some stay for a few years only, some for more lengthened periods, —and then move elsewhere. Few calculate on finishing their days here: the expectation is to go home some time or other. And so with our honoured guests. The greater part of the last three and thirty years they have spent on these shores; they have given to this land the best of their lives: they have kept the field till the weight of increasing years begins to press on them, and right well have they earned some relaxation from the ceaseless requirements of duty. Pain for our sakes, for the sake of the cause which owes so much to them, would we keep them here; but we recognize that to them by right belongs the reinvigorating influences of the homeland, and this we know, that while life continues they will find work to do. More than half a century of active labour in foreign lands is no small showing. Missionary service in China, and especially fifty years ago, is no bed of roses, and to

many of you it will be difficult to realize this country as it was thirty-three years ago. To land here among strangers, few, very few sympathetic ones among the knot of foreign residents; and the Japanese suspicious, even hostile, was not a light enterprise. Every obstacle placed in their way, uncomfortably lodged and fed, ignorant of the language, they had to feel that there must be years of patient labour before they could hope to make even a beginning of their real work in the discharge of the grand commission with which they came charged. But they held on, and now what is their record, what monument do they leave behind them; and when I say they, I do not separate wife from husband. She has taken part in the labours of the field among the Japanese, and besides, among the foreign young people of this Settlement; but even more than by help of such kind a good wife holds up the hands of her husband, she is as the secret supply of oil which feeds the flame. And so I say their record remains with us in that splendid achievement, the Dictionary evolved from chaos after seven or eleven years' patient work, an invaluable boon to merchants and students as well as to missionaries; in the dispensing day by day for a decade and a half of gratuitous medical and surgical help to hundreds and thousands of Japanese, and the introduction to this country, largely thereby, of a recognition of the value of Western Science; in the fragrance of blameless lives which is powerful for good as the dew of Hermon; and lastly in having been honoured by that Master whose work they came to do, by pen and voice in causing the light of the glorious gospel to shine into many dark hearts, and leaving behind them the translated written page to continue their work in years to come. I know the inscription they will grave on this monument:—Not unto us, not unto us, O Lord: But it is our privilege to realize that they have thus been honoured. And now, dear friends, Good-bye! Good-bye! God be with you—to most of us, it must be with the expectation of meeting no more on earth. May health, light, peace, attend the rest of your days; may you see your dearest wishes, your highest aspirations fulfilled;—and to us may the memory of the lives you have lived, be an inspiration that shall help us to nobler aims, less selfish cares, and a truer appreciation of the value of our own being. —(Applause.)

Mr. JAMES TROUP said he was pleased at the opportunity which was presented to him for saying a few words on that occasion, although they were gathered together for the purpose of saying farewell to old and very dear friends. His memory went back twenty-nine years, to a period when, as the youngest member of Her Majesty's Consular service in Japan, he had received a kindly welcome to these shores by their venerable friend. He still remembered the kindly advice which the Doctor had given him, a boy just out from home. Study of the Japanese language in those days was very difficult. There was no assistance to be obtained from dictionary or grammar then, but the advice which the Doctor had given him was of a part with that which he had given to all others who had ever gone to him for philological help. The same recollection brought to his mind the political troubles of that period. Mr. Wilkin had referred to the early days of Dr. Hepburn in this land. He (the speaker) recalled the differences which then arose between the Western Powers and the Japanese; when the Western Powers had even to demonstrate their strength and firmness through the cannon's mouth. During all those troubles Dr. Hepburn continued steadily along with his philological studies, at the same time dispensing the benefits of Western medical science to the suffering natives around him. The Doctor's conduct was in sharp contrast to the public policy foreigners were pursuing. In us were demonstrated the Western power. In him were to be seen the evidences of the civilizing influences which the West had to offer, and in him were exemplified those high moral ideals which are still so well manifested in him. For several years Dr. Hepburn was away from Japan, but he (Mr. Troup) still heard of him as foremost in works of philanthropy, and when he returned here, their former acquaintance was renewed. They had been more or else associated with each other ever since in various modes of social intercourse. The Doctor and his noble wife were now about to leave them. They all looked forward to leaving this country at some time or other, but still they found the parting with old friends very painful. There was this consolation, however, their works followed them. They were all sorry that Dr. and Mrs. Hepburn were going away, and to him (the speaker) it was a great grief. He hoped that peace and happiness would follow them in all their remaining days until the time arrived when they should both attain unto that peace which passeth all understanding. —(Applause.)

Mr. J. A. FRASER, as one who had passed many years here, although disclaiming the title of an old resident, bade good bye to Dr. and Mrs. Hepburn on behalf of the community at large. They had formed an integral part of the Settlement since its beginning, and their removal would leave a great blank; their departure filled them all with a great regret. He wished them many years of complete happiness and peace.

Miss C. RICE then sang, "The Holy City," and the Rev. J. BALLAGH read an original valedictory poem.

Dr. THAWING bade farewell to Dr. Hepburn, whose life had always struck him as remarkable for its heartiness, fidelity and modesty; for its completeness as scholar, physician and missionary; in every respect he had added lustre to America, medicine and scholarship.

Dr. MEACHAM, in the course of a brief speech, paid high tribute to Mrs. Hepburn—in his good wife the doctor was multiplied eleven fold. She was the model of an intelligent, generous and devoted wife. Their going away would leave an aching void in the hearts of all their Yokohama friends which would continue for many a year; but he was reminded of the words of the German princess to a departing missionary: "Christians never see one another for the last time. Adieu." —(Hear hear.)

Dr. HEPBURN, who was greatly agitated, said:—Dear friends, you have made it very hard for us, my wife and I, to leave Japan, by this evidence of the cordial affection and love that you have for us. We never knew that we had gained all this; we never knew the important place which we had made for ourselves in the hearts of the people of Yokohama; we never knew that we had gained what we have. We loved every one about us, we had a sincere regard and kindly sympathy for all around us. We were busy with our work through all the years. Every one has his work to do, and every one should do it; I do not claim to have done anything better than my fellow citizens, every one tries to do his best, and I have done nothing more. If I have ever done anything it has been through the talents with which my Creator has endowed me. If I have, or had, talents they were quite moderate. I do not claim that they were more than of a medium character. If I have ever done anything in the course of my life it has only been by persistent industry, by sticking to it, by finishing every task taken up. But now we are beginning to feel old, and our age tells upon us; we both feel the effect of years more every day, both in body and mind. We feel that it is time for us to give up work in Japan. There are others here now, who can take it up with more vigour, ability and success than ever was known to us. It is the teaching of history that we should give place to others—one sower and the other reaper. We are happy to lay down our work and leave it in the hands of others more fitted to carry it on,—like Moses of old we yield to the better fitted. Japan is now entering upon the first stage of her civil and religious life; she is only just entering upon her life as a modern nation, and she needs men of vigour, of great parts and high purpose to help her in the peculiar position in which she finds herself. We were very thankful to our God and Father that he called us to this land, to bring the seeds of truth to the dark minds of this people. We are thankful that our lives have been spared so long beyond the ordinary span. There are very few of my compatriots of fifty years ago, living now. I knew the "old men" of Japan before the Opium War. They have laid down their armour now and entered into their rest. We feel ourselves to be obsolete beside the newer lives of to-day, we who knew Morrison, Williams, Milne, Culverton and hosts of others, all now passed away. We leave Japan not because we are tired of it and wish to live elsewhere, but because we feel the stress of age, and my dear wife's health compels us to go. It is delightful to see you all around us; yes, delightful, when we come to compare this place with what it was when I landed 33 years ago. It is a change, a revelation. It was then a fishing village with five or six foreigners living in shanties or temporary huts. What makes it so sad for us to say good-bye in Yokohama is, that we in Yokohama are in a peculiar position. We come from many lands and we hope to go home to them, the Homelands, the Fatherlands, one day,—we are but strangers here, and thus we become one large family. Therefore the saying goodbye to old friends signifies the breaking away, the dropping out from the family. We are sorry to go; I grieve to go, and I know that you are grieving also. But my wife and I go together; as long as we live, and that won't be long now, at our time of life, we shall always remember Yokohama and the delightful friends we leave behind in charge of the work which has now

Original from

reached unto the first stage of its existence. What Dr. Meacham said of my wife, that dear old wife, was not a bit too much.—(Hear, hear.) Fifty years have we journeyed together through troubles and gladness, through troubles on land and sea, through the grief of lost children. We still hang together—she would fain have left me in Japan while she went to America in search of health for a year or so, but I said, we will not part now. And so we bid you farewell; and may the God that through our long lives has anticipated all our wants, bless and comfort you, and may He prove to you the Staff of sure help as He ever hath been to us.

Dr. HEPBURN then resumed his seat by the side of his wife. Throughout the evening many expressions of warm regard and sincere regret at their approaching departure were addressed to the venerable pair. The function closed shortly after ten o'clock.

THE CAPTAIN OF THE "MARY ROSE."

A TALE OF TO-MORROW.

By W. LAIRD CLOWES.

GOLD MEDALIST, UNITED STATES NAVAL INSTITUTE.
(FROM "THE ENGINEER.")

VI.—THE SAILING OF THE "MARY ROSE."

It is true that Mr. Thomas Bowling was engaged to be married to Mary Rose, youngest daughter of Admiral Sir Taffrail Stormer, G.C.B. That may be why he renamed the *Valdivia* the *Mary Rose*; but on the other hand it may not; for, for nearly four hundred years, *Mary Rose* has been a good old ship-name in the Royal Navy of England, and it is a name as historically venerable as *Dragon* or *Lion*, and more so than *Royal Sovereign*, *Antelope*, *Unturn*, *Falcon*, *Phoenix*, *Triumph*, or *Victory*. A *Mary Rose*, of 600 tons, capsized during the action with the French at Spithead in 1545, and from fifty years before that time until the close of the last century, there was nearly always a *Mary Rose* in the Navy List. Moreover, when she figured there, she generally figured there to some effect.

One thing, however, is certain. Sir Taffrail, accompanied by his daughter, ran down to Newcastle while the ship was preparing for sea, and lunched with Bowling in his half-fitted cabin; and there being on the luncheon table an unopened bottle of champagne, Bowling carried it on to the fore-castle, and persuaded Miss Stormer to fling it against the gilt scroll work on the cruiser's bows, and to say: "I re-christen you *Mary Rose*." All of which she did very prettily, and with many smiles and some blushes.

That was on Wednesday, May 6th, the day preceding the night on which torpedo boat No. 18 made the unsuccessful attempt to get out of Gibraltar and attack the French fleet. All that day and all the following night the Elswick people worked like bees on board; and next morning Bowling, who had scarcely taken off his clothes or even slept for four days, was able to telegraph to London, "I shall be ready to sail this evening." Later in the day he had the satisfaction of receiving a private dispatch from Sir Humphrey Thornbeigh. In the meantime, the ship took on board her shells and her ammunition, including, for all weapons, cordite as well as ordinary powder.

Bowling had succeeded in collecting a much better ship's company than he had dared to hope for. Germany and America, and indeed nearly all countries, had issued formal proclamations of neutrality, but these did not prevent a certain number of excellent German and American seamen from shipping with him; and, some of each nationality, had, he was delighted to find, served in their own navies, and, if not quite up to his standard of what bluejackets should be, knew what man-of-war discipline was, and had a certain acquaintance with modern guns and modern conditions. He obtained most of his engine-room staff with much less difficulty than he had anticipated. The slower merchant steamers, harassed by the numerous fast cruisers which the French Government chartered, armed and sent to sea immediately after the outbreak of war, had already begun to lie up, and, although the Admiralty took over many of their engineers and stokers, Bowling managed, with the assistance of agents at Hull, Glasgow, and Liverpool, to engage all he wanted, and even to pick and choose a little. His chief engineer, a rugged Scot, named Macpherson, had volunteered into one of the Congressional ships during the Civil War of 1891 in Chili, and had then, on more than one occasion, evinced his complete coolness and his fulness of resource. He came, surrounded by a legend, which he professed to laugh at as utterly baseless, that once, when a shell burst in his engine-room causing a frightful outburst of steam, he ordered all his juniors away, went in alone, shut off every-

thing and was found so badly burnt as to have his life despaired of; but the frightful white scars with which his hands and face were nearly covered lent probability to the story, and helped to inspire a confidence, which it may be said at once, was never misplaced.

Bowling saw no necessity for cutting loose from all the traditions in which he had been brought up. He therefore assumed for himself the title of captain, and gave his executive officers the title of lieutenant. The *Mary Rose's* staff, when completed, and set down as it would have been had the cruiser been one of her Majesty's ships in the Navy List, was:—Captain, Thomas Bowling (late R.N.); lieutenant, John K. Maintruck, R.N. (retired); lieutenant (N), Benjamin Binnade, R.N. (retired); lieutenant (G), Henry B. Tompion, R.N. (retired); lieutenant (T), James Walter Tripper (late R.N.); lieutenant, Frederick Day; lieutenant, William Salthorse, R.N. (retired); surgeon, Arthur Rhubarb, M.D.; paymaster, Noah Nipcheese, R.N. (retired); chief engineer, Alexander Macpherson; sub-lieutenant, Henry Echo (late R.N.A.V.); gunner, George Prism Brown (late R.N.); boatswain, Benedict Tiller (late R.N.); carpenter Michael Plane.

There were also of course, subordinate engineer officers, and there were three young gentlemen, Messrs. Williams, Roberts, and Harris, who had been senior cadets in the *Worcester* or the *Conway*, and who at the urgent request of their parents, who were retired naval officers without interest, were permitted to join the *Mary Rose* as midshipmen. Each of these had had a little experience at sea in a merchant ship.

Mr. Maintruck was an admirable all round officer, whose only service fault was that he had no influential friends. He had seen service in all parts of the world, and after having been twenty-two years a lieutenant, had been obliged, on the score of age, to retire. Like several of his fellow lieutenants, he insisted upon sinking his seniority in favour of Bowling. He was a somewhat old-fashioned man in his notions, and, in common with Mr. Salthorse, who was very little his junior, he affected greatly to regret the days of masts and sails, and to think that modern naval officers were very indifferent seamen. With these supposed opinions of the two old lieutenants Mr. Binnade agreed. They were really his opinions, though not really theirs. He fervently believed that seamanship and navigation, save in so far as they were preserved in his own person, were nearly lost arts. They merely grumbled as a matter of principle, and in their hearts—although they would never admit it—were staunch admirers of what is called the "new navy." Mr. Tompion and Mr. Tripper were thoroughgoing scientific officers of the modern school. Tompion had fallen in love, and retired in order to marry; but having retired had almost immediately lost his innamorata, who had faithlessly married a subaltern in the Buffs. This blow, while it had soured Tompion so far as the whole fair sex was concerned, had rendered him more than ever devoted to his lost profession; and he had therefore seized with avidity the opportunity of going afloat again. Tripper had, in a moment of disgust, retired in order to become manager to a firm which promised, in its prospectus, to provide the world with a torpedo of new and subtle dirigible type; but the company having collapsed before its torpedo had been adopted by any Government, Tripper had found himself thrown without occupation upon his resources. The Admiralty, annoyed at losing him, had insisted upon his returning his commission, and had thus surrendered all claim upon his services. Otherwise, no doubt, their Lordships would have been glad enough to get back so good a torpedo officer.

Mr. Day, barrister-at-law, has already been introduced to the reader as a determined amateur yachtsman. Salthorse declared that he would not join the *Mary Rose* at all unless he was allowed to join as junior lieutenant; for he urged that he had not been to sea for many years, and, in the quasi-retirement of a coast-guard billet, had grown very rusty. Thus it was that he ranked junior even to Day; although in his time he had been first-lieutenant of an ironclad in the Channel, and of a guardship in one of the Scottish ports, and had commanded a gunboat on the West Coast. His modesty met its reward in the respect with which he was regarded by everyone on board.

Dr. Rhubarb was a civilian, young and enthusiastic, and a clever surgeon as well as learned physician. He threw up a rapidly-growing London practice in order to accompany Bowling; and, as he was a bachelor, no one had a right to prevent him. Mr. Nipcheese, the oldest officer in the ship, was a gentleman who sincerely believed that the bone and marrow of the Royal Navy was represented by the accountant branch of the service, and this being his opinion, he was of, course, although retired, a very superior person in his own estimation, and invariably belittled himself as such, except, on occasions, after

dinner, when, if he had been able to lay hands on any Madeira, he would sleep in the ward-room with his feet on the stove, and by turns snore and mumble incoherencies, some of which sounded suspiciously like blasphemies, aimed, however, at nobody and nothing in particular. He would sometimes, when awake, unbend sufficiently to listen to a good story, and even to smile at it in a superior kind of way; but he was never known to tell one. Mr. Echo, by profession a barrister, was a keen officer of a type which was by no means uncommon in the unfortunate Royal Naval Artillery Volunteers. He was an enthusiastic all-round yachtsman, and had, moreover, devoted full attention to gunnery work. Ever since the disbandment of his corps he had continued to keep himself *au courant* with naval matters, in hope that some day the R.N.A.V. would be re-established. He was fully equal to a lieutenant's duties, he was smart and tireless, he volunteered to do any work for which a volunteer was required, and his good nature and ingenuous character rendered him a general favourite. Of Mr. Brown and Mr. Tiller it need only be said that they were pensioned warrant officers, barely over fifty, and as good as the Navy has ever produced. As for Mr. Plane, he had been carpenter in a crack Cunarder, and belonged to the Royal Naval Reserve.

Thursday, May 7th, when the *Mary Rose* sailed, was a great day on the Tyne. Sir Taffrail Stormer and his daughter lunched on board again and remained by the ship until she had dropped down to the Narrows, below North Shields, where they were put on board one of the several tugs and steamers that had come out to bid the cruiser goodbye. As they went over the side, Tompion, who was on the bridge, heaved a sigh of relief.

"I beg your pardon, sir?" said Echo.

"Oh! I didn't say anything," answered the gunnery lieutenant: "I was only pleased to see the last of that little petticoat. I was half afraid that the skipper wouldn't be able to cast off from it. Thank heaven! That's gone! A ship is never a ship while there's a petticoat on board."

Bowling was shaking hands with the Admiral at the starboard gangway. "And look here, Bowling," said Sir Taffrail, "if, with a ship like this under you, you don't come back a bigger man than you sail, I shall think that the Admiralty dealt with you as you deserved. And remember, she shan't marry a man who's not in the service. My father was in the service and my grandfather. I'm in the service, and I'll have my grandsons in the service if I live to have a word to say to their mother. God bless you, my boy." And the Admiral, very red in the face, went over the side after his daughter, sat down in the sternsheets of the boat which was to carry him to the tug, took the tiller-lines, swore at the crew, just as if Miss Stormer had been a hundred miles away, and, when he thought he was unobserved, brushed a tear from his eye and muttered "God bless him!" in so loud and angry a tone that the men at the oars thought that the oburgations had begun anew, and pulled as if his Satanic Majesty himself was coxing them. Mary Rose, who had stood up to wave her handkerchief to Bowling, was captivated by the suddenly-increased impetus of the boat, and fell upon her father's knees, whereupon the Admiral picked her up very tenderly, placed her at his side, and frowned around him as if to say:—"Who dares to tell me that the daughter of Sir Taffrail Stormer, G.C.B., can't stand up in a boat and wave a handkerchief? If there be any such person, let me get at him."

It is therefore fortunate that he did not hear Tompion's ungallant exclamation to Echo:—"There, didn't I tell you so? Serves her right, poor little beggar, for not having stayed on shore."

Bowling ran up to the bridge as soon as his friends were fairly away. In the pleasure of having so fine a ship as the *Mary Rose* under his command, he forgot alike the disappointment of his removal from the Navy, the personal sacrifices which he had made, the terribly hard work of the past week, and the pain of parting with the girl he loved. He felt that untold possibilities were within his grasp; he believed that, while he might render his country splendid services, he might also reinstate himself. And it was in the highest spirits that he took command, ordered full speed ahead, and steamed out against the salt breeze of the North Sea—the first English privateer to leave a British port in the service of Sovereign and country for many a long year. But he was not only in the service of Sovereign and country; he was in the service also of himself and his *Mary Rose*, and it was his business as much to make prizes from as to do damage to the foe. He was, moreover, to some extent in the service of Sir Humphrey Thornbeigh personally; for, but for Sir Humphrey, the ship could not have been officered as she was. Bowling was beginning to congratulate himself that, though he was serving so many interests, he was still mainly

his own master—when he recollected that, enclosed with Sir Humphrey's dispatch of that day, there was a sealed envelope marked, "To be opened only after you have left port. Private and confidential. On her Majesty's service."

He took the dispatch from his pocket, and pulling out the envelope opened it. Within were a letter and another envelope, the latter being addressed to the Admiral Superintendent, Malta Dockyard. Bowling read the letter, which ran:—

"My dear Bowling, I haven't the least idea where you are going to cruise or what you propose to attempt, and it is not my business to inquire; but if you find yourself in the Mediterranean, and will deliver this, you may render the country and yourself a considerable service. Of course I am taking other measures to get the letter, a copy of which I enclose, delivered at Malta; but the enemy seems to be holding the Strait pretty closely, and my messengers may not get through, while you may. I don't advise you one way or another. You have duties to yourself and to your owners. But the Mediterranean used to be a fine privateer cruising ground, and may be so still, and there's honour to be gained there. You have all my good wishes, and I suspect you will not disappoint them. But, again I say, remember your duties to your owners and yourself, and don't be influenced by your sincere friend, H. T."

Bowling whistled and gazed up speculatively at the foretop, over which peeped the covered muzzle of a gun. "He wants me to go to Malta," thought he, "and yet he doesn't want to formally advise me to do so. I should surely pick up more prizes in the Channel. But Uncle Humphrey has something in the wind, and, if I don't take his suggestions, I feel that I shall be a fool. He's not the man to throw out these hints without an object; nor is he the man to mislead me. He has helped me, so, by Jove, if I can possibly see my way in it, I'll help him. But how we shall get into the Mediterranean, heaven only knows!"

He thrust the papers back into his pockets, and looking round and seeing that the ship had by this time steamed well clear of the river's mouth, he ordered the course to be altered eight points to starboard.

It was nearly three bells, and the sun was setting over the land in a blinding blaze of golden splendour. The sea was perfectly smooth; such light breeze as there was came from the north-west, and the ship came round so gently and sped southward so quietly that it was difficult to believe that she was making even the 10 knots which the captain had ordered.

"Running at this speed, when shall we be off Dover, Mr. Binnacle?" asked Bowling of the second lieutenant, who stood by his side.

Mr. Binnacle went into the chart-house, set to work with his ruler and dividers, and in half a minute came out again, touching his cap, with the reply, "At about three o'clock to-morrow afternoon, sir."

"Thank you; very good. Messenger, run down and ask the chief engineer to be so good as to speak to me."

A boy who was in waiting sprang down the ladder, and very speedily Mr. Macpherson came upon the bridge.

"She runs very easily," said Bowling. "We will keep her at ten knots for the present. But I should like steam, if you please, for seventeen knots at eleven o'clock to-morrow morning, and after that time you must be prepared, until further, to use forced draught, if necessary, while we are running down the Channel. Is everything going well below?"

"Couldn't go better, sir," said the chief. "I never had better engines."

"Very good, Mr. Macpherson; I won't try them more than I can help. Thank you."

"We must make shift to get the men smart with the guns, Mr. Maintruck," said Bowling.

"They must be practised at general quarters as much as possible, and I shall go to night quarters to-night, though you needn't let anyone know it. I don't want to tire out the crew, and I hope they will understand that; but we are all rather fresh to our work, and we have no time to waste. Who knows whether we shan't have to fight an action to-morrow? So we must lose no opportunities. Perhaps you will be so good as to speak to Mr. Tompion on the subject. For the present I don't see how we can manage to run any torpedoes; but you may tell Mr. Tripper that I shall bear him in mind, and give him a chance when I can."

Mr. Tompion needed no inciting to duty. Assisted by the Gunner, he had long since made out his quarter bill, and had already exercised his men at the guns, though, of course, he had not yet been able to fire, except on the morning of the 5th, when the ship had been out to test her gun-mountings. In all departments the

regular sea routine of a man-of-war was observed, and it was astonishing with how little friction the men fell into their places, and how rapidly things settled down. From the first the ship was kept partially cleared for action, and the guns were always loaded; but, as all the guns were on the upper-deck, where there was but little protection from the weather, Bowling did not think it necessary to make the men sleep at their quarters. That night, at half-past eleven, he went up on to the bridge and ordered the ship to general quarters, and when less than four and a-half minutes later everything was reported ready, he felt that he had with him the material for an extraordinarily smart ship's company, and that it would be very bad policy on his part either to unnecessarily expose, or to unnecessarily weary a very willing crew.

There were no further alarms during the night. The sun rose at about twenty minutes past four, but already Mr. Maintruck was busy on deck; and all the morning, with but rare intervals, drills of one kind or another were going on. At ten Bowling ordered targets to be dropped, then exercised his guns' crews for an hour at firing at a mark. The practice, especially with the 4.7 in. guns, was much better than could fairly be expected, but naturally it was not very brilliant. In all directions, however, there were signs of improvement, and as officers and men alike were exceedingly keen, the captain was more than satisfied. Soon after three in the afternoon, the speed having already for some hours been increased to nearly 17 knots, the ship was off Dover, and exchanged signals with the shore. Bowling altered course very little, and headed diagonally across the Strait, making for the direction of Havre, so that by ten o'clock at night he was off the mouth of the Seine. Many craft of all kinds were sighted in the Channel, but very little attention was paid to them. They were chiefly British and German vessels, and the captain's immediate idea was to leave as quickly as possible those waters in which he could not expect to encounter something well worth the trouble of capturing. Both Mr. Echo and the carpenter knew almost every steamer that traversed the Atlantic. Bowling therefore ordered them to keep watch on the bridge that night, and having altered course to the westward reduced his speed to 10 knots, and began to look out for a homeward bound French liner.

The French Government, with marvellous promptitude, had issued as early as April 30th a code of private signals copies of which had been given to all outward-bound vessels leaving French ports on and after that date. Captains were directed to communicate with all French ships which they might meet at sea, apprise them of the outbreak of war, and deliver to them a copy of signals. They were directed also to sink or destroy the signal-books in the event of their capture being probable; and, as the adoption of these measures had been reported in England several days before the sailing of the *Mary Rose*, Bowling felt pretty confident that, although hostilities were less than a fortnight old, he would have to depend, not upon ruse, but upon speed and force, for any prize which he might be so fortunate as to take. While, therefore, reducing his speed to ten knots, he still kept steam for seventeen.

Day and Echo relieved Salthorse and the carpenter at midnight. There was a clear moon, and the sea was still smooth. The dark mass of Cape La Hogue was visible to the south-west, and behind it Alderney was just opening out, like a black cloud upon a field of silver.

Day took his station on the bridge; Echo, glass in hand, climbed into the foretop, and had not been there more than a quarter of an hour when he hailed Day with the information that he had sighted three sail in company, at a distance of about eight miles on the port bow, coming up Channel, one, at least, being evidently a big passenger vessel.

Day went into the chart-house and roused the captain, who was sleeping there as best he could, coiled up on some bunting and coats in a corner. Bowling was upon his legs and wide awake in a moment, and in half a minute more was in the top by Echo's side. He had no difficulty in perceiving the strangers, though he could not make out what they were.

"One of them looks uncommonly like the *Normandie* of the Compagnie Générale Transatlantique air," ventured Echo.

"And one is a man of war, if I'm not mistaken," added the captain; "and not one of ours either. Keep your eyes open, Mr. Echo, and report all their movements." And Bowling scrambled down again, and mounted to the top of the chart-house, where he was not too far removed from the bridge to be able to give his orders. No sooner was he there than he directed the crew to be sounded off to quarters. Almost at the same moment two rockets went up from the centre ship of the three, and glittered for

a second against the dark blue of the sky. This was clearly a private night signal, for several lights were also shown, and then suddenly extinguished.

"Full speed, if you please, Mr. Day," shouted Bowling, keeping his glass on the strangers, "and keep her a point nearer in." Day gave the necessary directions to the engine room and to the quarter-master at the wheel, but by that time Mr. Maintruck and Mr. Binnacle, both looking very sleepy, were on the bridge, and he was free to go to his station at the quick-firing guns aft.

The strangers, which had clearly been making for Havre, altered course a little when the signal was not answered, and seemed to be about to attempt to get into Cherbourg; but as Cherbourg was already broad on the port beam of the *Mary Rose*, they soon recognised this as hopeless, and, rounding Alderney, headed southward for St. Malo or Cancale Bay. The one which looked like the *Normandie* took station ahead, and the one which looked like a man-of-war took station astern, the three vessels thus steaming in column. In ten minutes' time they were shut out from view by the land, but already it was plain that the *Mary Rose* was rapidly gaining on them.

The three ships were, in fact, the *Normandie*, 6,217 tons, homeward bound from New York; the *Paraguay*, 3,450 tons, homeward bound from South America, and owned by the Chargeurs Réunis; and the cruiser *Duguay Trouin*, of the French navy. The cruiser, detached from the Division Légère de l'Atlantique, had been sent to the mouth of the Channel to look out for homeward bound ships and to see them safely into port, and having fallen in with the *Normandie* and *Paraguay* almost simultaneously off Ushant on the previous afternoon, was conveying them at the speed of 13 knots—all that the *Paraguay* could manage—to Havre, which was their normal destination.

In an hour the privateer rounded the cape, and enjoyed once more the view of the chase. At half-past two the *Mary Rose* was off Cap de Fiamanville, and was well within gunshot of the cruiser, which still kept station at the rear of the column.

"She has a lot of guns, sir," said Tompion, who, for a few minutes, had been consulting a book by the light of the binnacle lantern. "There are five 6.4 in. and five 5.4 in. besides four quick-firers, and five revolving cannon; and she has a couple of torpedo-tubes stowed somewhere."

"I'm glad that you know so much about her. Probably she can't make head or tail of us. If she is really the *Duguay Trouin*, as you make out, I ought to know something about her myself, for I lunched on board her some years ago at Brest. She's an iron ship with no protection whatever, and we could blow her out of the water. Now, I'm going to pass her, Mr. Tompion; and if she doesn't fire at me I shan't fire at her. I want the other ships first."

But the gallant Frenchman had determined to make an effort to save his charges. Just then the *Duguay Trouin* yawed a little, and, at about two thousand yards fired as much of her port broadside as would bear at the *Mary Rose*. No projectile struck, but the spray from more than one splashed across the privateer's deck.

"Give her the bow 9.4 in. gun, Mr. Tompion," said Bowling. "I don't want to sink her; but perhaps you can disable her screw or steering gear. Don't fire, however, until we are a little closer to her. Let the men lie down, Mr. Maintruck. And, by the way, Mr. Tompion please keep the starboard midship gun trained on her as we come up on her quarter."

Again the *Duguay Trouin* yawed to port, and delivered her broadside. A storm of projectiles shrieked past the *Mary Rose's* bridge; a few splinters flew from the woodwork of the charthouse; and a shell burst harmlessly against the base of the sponson of the starboard barbettes. Had the officers remained on the bridge, some of them would doubtless have been hit, but, at the first sign of the enemy's yawing, Bowling had made them take shelter behind the conning-tower.

The privateer was now coming up so rapidly that the Frenchman dared not again yaw to port for fear of being rammed; but he began to circle round to starboard, so as to bring his starboard broadside to bear; whereupon Bowling ordered the two big barbettes guns, of which he had already spoken, to be fired. They were discharged almost simultaneously at the cruiser's stern; and, when the smoke had cleared away, it was evident that at least one of them had spoken with effect, for the enemy's mizen topmast was seen to have toppled over her starboard quarter, and to be hanging with all its hamper in such a position that, as the cruiser continued to circle, it must infallibly foul her screw. And this is indeed what happened a minute later.

But the *Duguay Trouin*, though temporarily disabled, did not cease to fire as the privateer

passed under her stern, and beyond her, in hot chase of the convoy.

"Leave her alone for the present," said Bowling; "I intend to pass the next ship, and stop the leading one. Don't use the big guns again without orders. We can tackle these gentlemen with the small quick-firers and machine guns."

The *Paraguay*, the centre ship, was easily overhauled and passed; but the *Normandie*, having increased her speed to 15 knots, was not so easily come up with, and she was off St. Catherine's Bay, Jersey, ere the *Mary Rose* ran along side her and hailed her to strike. She of course had no alternative; and Bowling, having hastily lowered a couple of boats and put Mr. Williams, an assistant-engineer, and five-and-twenty well-armed men on board of her, returned to look after the other ships. The *Paraguay* immediately after having been passed, had altered her course sixteen points and fled again to the northward. The *Duguay Trouin* had made sail, but the wind being light she had scarcely moved, and before daybreak the privateer was once more within shot of her. Bowling fired a gun across her bows, whereupon she replied with a broadside, which did a little damage and wounded three men; but a couple of well-aimed rounds at 750 yards from the privateer's 9.4in. guns brought the French captain to his senses; and at a quarter past four, being on fire and having thirty men killed or wounded by the bursting of a shell in his battery, he surrendered. Lieutenant Tripper and fifty men went on board and took possession; 150 of the cruiser's crew were, for safety's sake, removed into the *Mary Rose*, and the *Paraguay* having got into Cherbourg and given the alarm, Bowling and his two prizes made the best of their way to Plymouth, where they dropped anchor soon after noon on Saturday, May 9th.

VII.—THE FORCING OF THE STRAITS.

Plymouth Sound was a scene of great bustle and activity, and it was by no means easy for a ship like the *Mary Rose*, which had no claim upon the services of a single man in the place, to get anything done. By night-fall, however, Bowling had not only handed over his two prizes to the proper authorities for adjudication, and communicated his agents concerning the vessels, but had filled up with coal, and put to sea again.

To make up for the time which he had lost, he steamed out of the soundings at a speed of fifteen knots, and, heading for Cape Finisterre, determined for the present to think no more of making any prizes beyond those which he could not do without. By breakfast time on the morning of the 10th he had passed Brest without sighting any French warship, and very early on the morning of the 11th Cape Finisterre was visible, distant about ten miles on the port beam. That evening at sunset, in lovely weather, the privateer passed Lisbon, and on the morning of the 12th she was in the latitude of the Straits, but about two hundred miles to the westward.

Bowling had decided to run at all hazards into the Mediterranean, but he was not disposed to attempt so bold an undertaking without first replenishing all his coal bunkers. He knew that, if he got through the French fleet that was engaged at Gibraltar, he would probably be chased, and he had no mind to be taken owing to lack of fuel. He therefore reduced his speed to 10 knots, hoisted French colours, and, keeping a little outside those waters which he felt were likely to be patrolled by the French scouts and cruisers, he set to work to look for a vessel that would serve his turn.

She came sooner than Bowling had ventured to hope. That afternoon at about six o'clock a trampish-looking steamer was sighted, labouring along at a speed of between seven and eight knots from the southward. The *Mary Rose* passed close to her and hailed her, and her skipper, a little old man whose face was of the texture and almost of the colour of a dried raisin, replied in French that his ship was the *Gédion*, of Rochefort, homeward bound from Gabon with a cargo of palm oil, copal, and caoutchouc. The man was ordered to heave-to, and Day, who spoke French like a native, went with a boat's crew to him.

The dried skipper met Day at the gangway, and unsuspectingly informed him that he had heard down the coast some rumours of war. "Were they," he asked, true?"

Day told him that they were quite true, and that a French fleet was at that moment busy in an attack upon Gibraltar, whereat the Frenchman looked very proud and happy.

"But there are a great many English cruisers about," continued Day: "and if you don't look very sharp, you'll be snapped up before you get into the Charente. Are you steaming so slowly because you are short of coal?"

"Oh, no," said the man: "I have plenty of coal. The reason is that I can't steam any faster. But come to my cabin and take a glass of wine,

and let us drink to the confusion of these English."

"I'm much obliged to you," replied Day; "but really it isn't wine but coal that I've come in search of. That ship is an English privateer, and."

The Frenchman's face grew black. "This is a trap, then?" he asked.

"As you please. You perceive that my ship is now flying her own colours. You cannot escape from her. You must therefore allow her to take such coal as she requires."

"I will allow nothing of the sort. Quit my deck, sir!" And the little dried man assumed an attitude so well expressive of the direct and most contemptuous wrath that he looked positively noble.

"My ship will take you in tow," said Day, not replying to the Frenchman's outburst.

"Never!" cried the little man; and flying at Day, he flung his arms round the lieutenant's waist as if he intended to leave him overboard.

Day's men were all in the boat; and therefore, although he could have very easily tackled the irate master mariner alone, the officer was at a great disadvantage, when a couple of stalwart Frenchmen sprang forward to reinforce their chief. Day lost his glasses, without which he was as blind as a bat; but he was too proud to cry for help, and he struggled manfully against the overwhelming odds; until at last, hot, dishevelled, and angry, he found himself tied ignominiously to the bits at the foot of the steamer's mizen.

During this time Day's boat alongside was hanging on, and suspecting no evil.

"Now, sir," said the French skipper to the prisoner, "I will give your friends coal. Ho, there, Francois and Jacques! Go below and bring up the largest and finest piece of coal you can find."

Day bit his lip but said nothing. "They must see me from the cruiser," he thought; but he was so shortsighted that he did not perceive that the bulwarks of the *Gédion* were too high for anyone on the bridge of the *Mary Rose* in her then position to be able to see over them. In a couple of minutes Francois and Jacques appeared staggering beneath a lump of coal which may have weighed nearly a hundredweight.

"C'est beau, ce gros bloc, n'est ce pas?" asked the French skipper, with a leer. "Croyez-vous que ça suffira? Moi je le crois bien. Essayons-nous! Déroulez moi ce charbon dans le canot de monsieur. Suis étonné qu'on envoie un canot si fragile pour une telle cargaison. Vite! Laissez tomber!"

And before poor Day, with his bad sight, had realised what was in the wind, Francois and Jacques had hoisted the coal over the bulwarks and dropped it clean through the bottom of the *Mary Rose's* boat.

It has been noted that the crew of the privateer was drawn from several nationalities. Cosmopolitan, in consequence, was the bad language which, as the boat filled and sunk, arose from the men who were left floundering in the water. Bowling, from the *Mary Rose's* bridge, saw what had happened, and at once ordered out another boat, but long before it was under way for the *Gédion* the men from the water had by some means managed to scramble up to the Frenchman's deck, to send the little dried skipper sprawling, to release Day, and to haul down the tricolour. No one but the French captain dreamt of resisting.

By this time the privateer had come under the Frenchman's stern, and Bowling was able to see for himself how matters were going. "Send a hawser to us, Mr. Day," he cried, "and we will take you in tow. You shouldn't have let yourself be caught napping in that way. Ha! ha! No one is any the worse, I hope. Can you take charge of her?"

Day, who had recovered his glasses, and who, with them on his nose, was equal to anything, sang out, "Aye, aye, sir! No one hurt!" and sent the end of the hawser, by the second boat, to the *Mary Rose*, which in a few minutes passed ahead, and, with the Frenchman in her wake, steamed off to the southeast.

By daybreak next morning the privateer and her prize were off the mouth of the Wadi Gloug, a little stream which comes down from the mountains of Morocco and enters the Atlantic about twenty miles to the southward of El Araish. There, in seven fathoms, Bowling anchored, and, having brought the *Gédion* alongside, set to work to take out of her as much coal as his own ship could hold. He adopted the precaution of putting the *Gédion* outside the *Mary Rose*, so that, if he were attacked while coaling, his prize would afford him some protection, while he, in consequence of his superior height out of the water, could fire over her, but he was not disturbed. A few boats from the wretched shore came off, and curiously observed what was going forward. Others brought fish, milk, fruits, and vegetables for sale. The natives, however, seemed to know nothing of war, and to realise the existence of no difference

between British and French; and if the *Mary Rose* has arrived to seize their country they would apparently have been equally ready to do a little business with her; for even in that far-away spot her Majesty's image, on a gold or silver coin, was recognised and duly honoured. In the meantime Lieutenant Tripper was able to try most of his torpedoes.

Bowling invited the French skipper to breakfast with him and the honest man, who felt that he had done all that duty and patriotism demanded, graciously accepted.

"I don't know what to do with your ship," said Bowling. "It seems barbarous to set you and your men ashore on such a place as this, and to scuttle the *Gédion*; but I don't see any alternative."

"I am your prisoner, sir," said the skipper, "and I can do nothing, but I warn you that my country will promptly avenge this insult."

"Yes, I know. And of course, if I were to let you go, you would, as soon as possible, find out the nearest French cruiser and set her on my track."

"I should have that honour," assented the little Frenchman.

"Then I can't let you go; that's all. You must remain here!"

"Sir! It is an outrage, an indignity, a barbarism, a piracy!"

"I can't help it. I'm very sorry. Will you remain here ashore or afloat?"

"Sir, you may put me ashore and destroy my ship. That is as you please! But if you leave me master of my ship, nothing shall prevent me from steaming as fast as possible to denounce your dastardly interference with me—your unheard-of robbery."

Bowling touched the bell at his elbow, and when his servant appeared, sent to beg the chief engineer to speak to him.

"I want to know, Mr. Macpherson," he said, when that officer arrived, "whether, without doing the *Gédion* any permanent damage, you can so deal with her engines that she shall be unable to move from here for a week?"

"Certainly, sir."

"Then be so good as to do so, and let me know when the business is finished."

And thus it happened that late that afternoon, when the *Mary Rose* steamed proudly away to the northward, the little dried skipper stood stamping and cursing on his quarter-deck, with the knowledge that the engines beneath him had been deprived of half-a dozen small pieces of metal, without which they were useless. The little pieces of metal were not far off. Mr. Macpherson himself had dropped them overboard, and the depth was only seven fathoms. The local natives, moreover, were capital divers, and the bottom was pretty clean, so that valuable fragments were not lost. But they would require a good deal of looking for. And no wonder that the little dried Frenchman stamped and swore until the *Mary Rose*, steaming with his coal, was below the horizon.

Mr. Macpherson also swore. "This is," he said, "the very dirtiest and vilest coal that I have met with in the whole course of my experience." And Mr. Maintruck, as he saw his white decks growing blacker and blacker, and watched the plumes of funereal smoke above the cruiser's funnels, swore too, but solaced himself by remarking to Salthorse, "Well, they may take us for anything but an Englishman. This is a deuced sight more deceptive than flying a dozen French ensigns. I never saw anything like it, unless it was the smoke from the German squadron at Spithead in '89. Whew! I got a whiff of that, and I shall never forget it."

It is but about eighty miles from the mouth of the Wadi Gloug to the mouth of the Strait of Gibraltar. Maintaining a speed of ten knots, but having ordered steam for full speed to be ready by ten o'clock, Bowling followed the coast as far to the northward as Arzilla, and then, altering course four points to port, kept away to seaward. At eight o'clock, and again at half-past nine, he increased speed until he was running at sixteen knots, until at midnight Cape Spartel bore S.S.E., eighteen miles. He was therefore about fifty miles due west of the narrowest part of the Strait.

The men, excepting the watch, had turned in at the usual hour, but at midnight Bowling turned up all hands and briefly addressed them. He said that, so far as he knew, the French fleet was still bombarding Gibraltar; but that, whether or no, he was going to rush the Strait. If the French were there he intended to do them as much harm as possible in his passage. He was going through at full speed. He did not purpose to use the ram, as he had no desire to damage himself, and as he knew how difficult it was to use the ram with effect. Whatever work might be done must therefore be done with the guns and torpedoes. If he got through, he would, no doubt, be chased—perhaps all the way to Malta, whither he was

Original from

bound. The men, consequently, must be prepared for a long spell of hard work. He had absolute confidence, however, in their willingness to stand by him and his officers. They had already made two very valuable prizes, the due proportion of the proceeds of which, upon their return home, would be at their disposal, and in the Mediterranean there would doubtless be other prizes not less worth having, but that night he was not looking for prizes but for glory. The men, who received the address with enthusiasm, were then dismissed to their quarters, and Bowling, mounting to the bridge, ordered speed to be further increased to seventeen knots, and headed his ship to the eastward.

It was a cloudy and rather dark night. There was but little wind, but there was a heavy swell from the Atlantic, and the *Mary Rose*, as she bounded away before it, took the water over her bows in great showers of spray, and pitched pretty deeply, although, as she had plenty of freeboard, she seldom or never absolutely buried her nose.

"It's not much of a night for torpedo-boats," said Bowling to Tripper. "I doubt whether we shall be troubled with them. They will all have run for shelter."

"Well, even if they are out," answered the torpedo lieutenant, "they will steam very badly in this swell, and we shall have the legs of the best of them."

"I think that we won't use our above-water torpedo tubes," continued Bowling. "I don't quite like the risk of having such quantities of explosives where a chance shell from the enemy may get at them and blow us up. In case of our having an opportunity, I will manoeuvre so as to enable you to use the bow and stern under-water tubes, and these must suffice for to-night. But please, Mr. Tripper, be ready with a second and third torpedo for each. I'm going to do all the damage I can; and it won't be my fault if our friends in the Strait don't remember this 13th of May."

"Sail right ahead!" hailed the look-out in the foretop.

"Kindly go up and have a look at it, Mr. Salt-horse," said Bowling.

Salthorse, who, in spite of his seniority in the Navy, was not lacking in activity when serious business was doing, went up with an agility worthy of a midshipman, and reported that the stranger looked like a cruiser, but was still too far off to be exactly made out.

"Now for the rush, then," cried Bowling, "as he bent over the engine-room speaking tube. "Put on the forced draught," he shouted down, "and give me all the speed you possibly can." To a messenger he said, "Take my compliments to the chief engineer, and beg him to make the best arrangements for getting plenty of coal and for keeping plenty of steam. We shall probably want forced draught all night." And to the gunnery lieutenant, "Please, Mr. Tompion, have every gun that will bear trained on this ship as we come up with her, and be ready to fire at my direction, but not before. Make your men lie down when you safely can, and see that there is plenty of ammunition on deck."

Then he glued his eyes to his night-glass, and with legs apart and greatcoat flapping in the wind made by the ship, gazed over the spray washed bows into the pregnant darkness.

When a vessel is moving by night at a speed of about twenty statute miles an hour she very quickly closes any stationary or nearly stationary objects that may be sighted lying near her course. Soon, therefore, Bowling saw a huge masted mass looming up ahead of him: and his familiarity with the outward appearance of most of the ships of the French *Escadre de la Méditerranée* at once told him that this dark monster was the great protected cruiser *Tage*, the largest unarmoured cruiser in the French Navy. She was a vessel of 7,045 tons displacement and 12,410 indicated horsepower, built at St. Nazaire in 1884, and carrying, in addition to numerous lighter weapons, six 6.4 and ten 5.4 guns. She was moving very slowly diagonally across the *Mary Rose's* course, with her nose to the south-west, and she did not appear to see the privateer until the latter was within a mile of her. Having seen her, she increased speed a little, and came towards the intruder, whereupon Bowling, who by that time felt quite sure that it was the *Tage*, and no other craft that was approaching him, starboarded his helm a bit, and as his ship came round, ordered the starboard 9.4-in. gun to be fired at the Frenchman, who, when the word was given, was barely three cables away.

The *Tage* was clearly taken by surprise, and before she returned the compliment the *Mary Rose's* people had fired their big starboard gun a second time, and had poured in a perfect hail of projectiles from their 4.7-in. and smaller guns. The enemy, who had sent up three rockets, then replied

with a broadside, which being badly aimed did no damage, and with a dropping fire, which had scarcely begun to be effective ere it ceased.

The ships had been moving on two ever-nearing arcs, and were nearly broadside to broadside, when the *Tage* ceased firing. At the same instant she appeared to lose her way.

"Look out, sir," cried Echo suddenly to Bowling, "she has fired a torpedo. I saw it enter the water. There!" and he pointed to a luminous streak which was lengthening out from the *Tage's* side and rapidly approaching the *Mary Rose*.

Bowling put the helm hard over to starboard, and reversed one engine, so that he quickly showed his stern to the enemy, and so handy was the ship, that, to his delight, almost as much as to his relief, he was able to let the torpedo pass harmlessly along her whole length, and slowly vanish into the gloom beyond.

The few seconds during which the danger was imminent were trying ones for all who were aware of it; but the men at the guns were in blissful ignorance, and they continued to pound the *Tage* and to make excellent practice at her. Bowling completed the small circle which the discharge of the torpedo had forced him to begin, and while he was completing it the enemy resumed her fire, although she now fired feebly and in a desultory manner. Several of the *Mary Rose's* men had fallen and had been carried below, and the captain, anxious to make an end as soon as possible of the unsatisfactory combat, put himself in the Frenchman's wake, and almost immediately discovered that in that position he was very little exposed to the enemy's fire, and was, indeed, comparatively safe.

But, since first sighting the *Mary Rose*, the *Tage* had greatly improved her pace, and although cinders and flame as well as smoke, were pouring from the privateer's funnels, and the ship was throbbing like some wild thing burdened with a heart too big for it, the British vessel was little, if at all, superior to her opponent in speed. The *Tage* was heading direct for the narrow part of the Strait, and there Bowling realised that he must expect to find nothing but enemies, while the other would probably find nothing but friends.

Mr. Binnacle, with his sextant to his eye, carefully watched the chase. "I think we are coming up a little, sir," he would say at one moment, and at another: "I believe she is gaining a trifle again, sir."

"What is her distance, do you think?" asked Bowling.

"Well, sir, I haven't the height of her spars, but I should imagine not more than four cables."

"Too far for a torpedo, I'm afraid," remarked Bowling regretfully. "Surely we ought to be able to stop her with our guns. Where is Mr. Tompion?"

In less than a minute Tompion saluted the captain. "We're not making very good practice, Mr. Tompion, I'm afraid," said the latter. "I know it's very difficult shooting with so much water coming over our bows and with the ship pitching so freely, but we must stop the enemy if we can."

"We can only hope for a lucky shot, then, sir," returned Tompion. "I have fired two or three rounds myself, and I know the difficulty. Perhaps if you were to yaw a little so that I could bring one of the sponson guns to bear I might be more successful. I don't like to fire them right ahead for fear of damaging the ship, but if you would yaw two points I could manage it, though, of course, we should lose ground. However, there is much less motion with the sponson guns, and the shooting would certainly be better."

"No! I won't yaw yet," decided Bowling. "I should lose too much. For the present, please, go on firing as before with the bow gun, but see that they don't waste the ammunition."

Below on the privateer's fore-castle the scene was an exciting one. Not only the 9.4-in. gun was engaged, the four 4.7-in. guns immediately abaft it were firing too. But every few seconds, as the staggering ship pitched into the water, sea and spray flew tempestuously over her bows, and threatened to wash the men from their quarters. The guns had no chance of getting hot. They were kept far too wet for that, but that was the only advantage of the situation. The dark object which represented the *Tage* was now hoisted high on the swell, and now nearly hidden by it; and even had there been no spray it would have been exceedingly hard to hit so unstable a mark.

Meanwhile the flying enemy was sending up signal rockets at frequent intervals, and the same time firing desultorily. Tompion was sent for again to the bridge, Macpherson and Tripper were also summoned thither. But Tompion could make no better practice than before; Macpherson could not provide an ounce more steam than he was already providing; and Tripper held out no hope

that a torpedo, discharged at so great range and at a fast-retreating target, would reach its mark. "The torpedo will make its 27 knots, sir," explained the last named officer; "but the enemy is doing her 19, and is already four cables ahead of us. We should only waste the torpedo, for it would have to run over a mile and a-half at full speed to catch up the chase, and I never yet knew a torpedo run more than fourteen or sixteen hundred yards before stopping altogether."

It was therefore tolerably certain that, barring accidents, the *Tage*, if her friends were still off the Rock, must escape. Bowling, whose temper was usually very equable, could not conceal his annoyance; but his attention was suddenly distracted by an unexpected hail from the look-out in the top. "Two sail in chase on the starboard quarter," sang out the man, who had lungs of brass. And there, truly enough, coming out from under the shadow of Cape Spartel were a couple of black hulls from whose funnels were trailing sheets of flame, and sparks, and shrouds of smoke of the very blackest hue. They were a good two miles off, when first sighted, but a brief break in the thick clouds let the moonlight down to them, and Bowling speedily recognised them as two cruisers of the *Surcouf* class. There was no room for doubt. Everyone who saw the *Surcouf* herself at Spithead in the summer of 1891, and who recollects her, must agree that a craft of her type is not easily to be taken for anything else that floats and steams. They were, as afterwards appeared, the *Cosmos* and the *Coetlogon*, third-class cruisers of about 1,850 tons displacement and 600-horse power, each mounting four 5.4-in. breech-loading, three quick-firing, and four machine guns, carrying five torpedo tubes, and having a speed nominally about half a knot superior to that of the *Mary Rose*.

Bowling looked at the chase, half expecting to see her turn, and mentally calculating whether, if she did so, it would be worth while to endeavour to ram her; but he quickly decided that it would not. He recollected that never, up to that time, in the history of modern naval warfare, had the ram been effectively used while the enemy still had sea-room and control of her machinery and steering gear. If he could first disable his opponent, the ram might, he concluded, be his proper weapon, but not unless.

The two vessels astern had already opened fire, but they did no harm, the distance being too great and the swell too heavy. The projectiles, however, came near enough to the bridge to make themselves heard; and as the *Tage* was now firing freely from several revolving cannon which she had got up on to her poop, as well as from the few larger guns that would bear, Bowling determined not to expose himself and his officers more than was absolutely necessary, and to fight the ship, for the present, from the quarter-deck, instead of from the neighbourhood of the conning tower. He still kept the tops manned, of course, with a midshipman in each of them; and, as a matter of fact, the men, even had he ordered them to come down, would have been very unwilling to do so, for in such circumstances the tops are the most exciting positions in a ship.

But although Bowling nominally fought his ship from the quarter-deck, he did not continuously remain there. Followed by a bugler and a couple of messengers, he went everywhere, now watching the firing of the guns on the fore-castle, now mounting upon the hammock nettings to get a wider view, and now revisiting the bridge, in order to consult the chart with Binnacle. For half-an-hour the relative positions of the ships did not apparently vary by a couple of cables' lengths.

Then in the west were seen innumerable lights, as of a floating city; and above them in the black night, shone patches of red, green, and violet stars as the great French fleet—stretching half across the Strait—came westward, alarmed by the repeated signals of its scouts, and signalled in return promises of succour.

Bowling saw that sight first from the bridge. Soon he could see it from the fore-castle, as the ship rose on the swell. His heart beat, one may suspect, a little faster than usual; but his voice was only a trifle rougher and harder than his ordinary voice when, having summoned his officers, he said briefly:

"Gentlemen, there is the French fleet. I want you to help me to take the *Mary Rose* through it. If I fall, the officer who commands must carry her to Malta, and hand over to the Admiral there a dispatch which is now in my pocket. I have weighted it so that it may be sunk, if necessary. But, God forbid! If necessary also, the private signals must be sunk. Mr. Tripper, I shall use the underwater bow and stern tubes. I confide in you to have everything ready; Mr. Macpherson you have done nobly, so far, in your department. Give us, please, all the help you can; Mr. Tompion, (and Binnacle) and tell the officers of quarters

not to lose a shot, and not to fire at a greater range than a thousand yards. Gentlemen, to your quarters, and may our work be well done."

Owing to the fact that she carried nearly all her guns on the upper deck, the *Mary Rose* had been fitted with a considerable number of shot-hoists, which worked through scuttles in that deck. These were, of course, open in time of action, and Bowling had already made up his mind that, rather than trust to mechanical or electrical signalling apparatus, he would pass all orders to the main deck by word of mouth or bugles through the scuttles. Instructions were given for the orders to be handed on in the same way to their destinations, and thus, independent of wires, tubes, bars, and levers, the captain was able to communicate pretty promptly with every department, no matter where he might be. Not the least advantageous feature in the arrangement was that an officer standing near a scuttle could obtain a certain amount of protection from the shield of the gun for the service of which the scuttle was designed, and could thus derive from the shelter some of the benefits of a conning-tower, the same time the real conning-tower, the natural target for all hostile projectiles, was unoccupied.

It was at first impossible to distinguish the order in which the French fleet was steaming, for across the privateer's bows stretched a confused row of lights that bobbed upon the swell, and that seemed to have little or no order at all, but soon Bowling made out that the cruisers, in line abreast, were about a couple of miles ahead of the battleships, which were in similar formation. The entire fleet was coming out in a body. It, therefore, evidently believed that it was being attacked in force, and that a general action might be expected. The *Tage* held on, heading straight for the centre of her friends, and pouring forth more flame, sparks, and smoke than ever. The *Mary Rose*, three or four cables astern of her, held on also, the quartermasters at the wheel having general directions to follow the *Tage* into the enemy's line. All firing at the cruiser had ceased, although the *Tage* continued to fire as before; and *Mary Rose's* men worked silently at their guns, training them on the high hulls that were so rapidly approaching, and eagerly awaiting the word to begin.

The speed of the advancing French was not more than eleven knots; but that of the privateer's was nineteen. The two were thus closing upon one another at a speed of about thirty knots, or, as nearly as possible, 100 yards a minute. At first, it was quite clear the French did not know what to make of the situation, but it may be assumed that the *Tage* made some kind of signal to them, for, when their first line was a mile or so from the privateer, their cruisers began to converge towards the *Mary Rose*, and, as was evident from their augmented smoke, to endeavour to greatly increase their speed.

Bowling stood immediately above the maindeck wheel from which his ship was being steered. He had unsheathed his sword, and he leant upon it as he stooped from time to time over the scuttle to shout down his orders. His face was bloodless, but his lips were set. Behind him stood the bugler, who looked as if, at that moment, he could not have blown a call to save his life. The enemy, on both bows, began to fire. Once or twice the projectiles from their machine guns swept across the deck like hail, until the range was again lost. Then the bigger guns opened, at about a thousand yards, and splinters began to fly from the woodwork above, and from the boats.
